A TRIBUTE TO PROVIDENCE COLLEGE AND ITS VICTORIOUS BASKETBALL TEAM

Mr. PASTORE. Mr. President, "the Providence College basketball team, the conquering heroes of Madison Square Garden came home to a roaring, screaming welcome in Providence on Sunday afternoon."

I use the calm, considered sentence of the observant newsman to sum up the triumph of a team with the will to win—to win in the name of a school with the Dominican doctrine of clean sportsmanship.

Millions of Americans on their television sets the country over watched the drama as it developed through basketball's most exciting week.

No television writer of the drama would quite have dared to frame in fiction what these Providence players with desire and determination made a fantastic fact of history.

That is the word—"fantastic." The simple line, "Providence College won the National Invitation Basketball Tournament," will always be translated into what national sportswriters have called the most fantastic achievement in their memory.

I like the comment of Ray Meyer, coach of DePaul, speaking the night before Providence College won over his team in a first-round game:

> You have five men on each side, and the side that wants it most, wins it.

The Friars, as the Providence players are known, must have wanted it most. They won it.

Few basketball fans could live through the excitement of another Providence College, Holy Cross game. Tied at the end when a foul try could have won for Providence—and failed—the Friars' spirit picked the victory out of the overtime tremendous tensions.

If that Holy Cross game meant such excitement to the fans, think what it meant to the Providence College players. Wise officials said the game was a match for any ever played at the Garden. Equally wise officials said that Providence College had left its best game there that night. You could not make the gallant team of St. Louis University believe that as the Friars came from behind and clinched the final victory 62 to 59.

Who will ever forget the roar of the crowd as the 5-foot-8-inch Friar, Vin Ernst, was chosen as the most valuable player of the tournament. It is a lasting cheer to the littler men of basketball. Beyond that, Vin Ernst and Capt. John Egan were chosen for the all-tournament first team and Jim Hadnot was chosen for the second.

And every bit of praise is a tribute to the genius and gentlemanliness of the Providence coach, Joe Mullaney.

Not carelessly is the Providence College team called the Friars. It is a title of affection that belongs to the Dominican order of preachers for whom Providence College is a stirring monument of educational excellence and superlative manhood.

Their pride is in the character of the play, not in the conquest. Their pride of their school attracts to its campus ambitious youth from every direction prepared to accept the discipline and to share the destiny of this great and good school.

The graduates of Providence College adorn every avenue of life's effort with credit to themselves, service to their communities and glory to their school.

Of their graduates, as of their players, it may be said that they have the desire to win and the discipline to win with faith and fairness.

This is a proud day for Providence College and its Dominican faculty. For this is not merely a victory of the score. It is a victory of the spirit—the victory of clean sportsmanship. It is victory in the setting of man's responsibility to his fellow man and recognition of the source of all his gifts and responsibilities—his God.

THE FOREIGN AID PROGRAM

Mr. FULBRIGHT. Mr. President, lest our historians fail to note a good—but belated—example of Senate influence in the field of foreign policy, I call attention to the fact that the President's foreign aid message of last week incorporates a substantial number of recommendations submitted in 1957 by the Senate's own Special Committee To Study the Foreign Aid Program.

Members will recall that in 1956 the Senate created a special committee to make exhaustive studies of U.S. foreign assistance programs. Under the chairmanship of the late Walter George, and subsequently under the chairmanship of Senator Green, the full membership of the Committee on Foreign Relations and ranking members of the Committees on Appropriations and Armed Services examined our aid programs, and submitted a unanimous report with a series of specific recommendations. The activities of the special committee were under the immediate direction of an executive committee consisting of Senators Green, Fulbright, Russell, Bridges, Smith of New Jersey, and Knowland.

The special committee utilized the services of a number of research institutions, and asked a number of distinguished private American citizens to conduct on-the-spot surveys of the aid programs around the world.

Reports and recommendations were received from Ambassador Norman Armour, retired; Ambassador David K. E. Bruce, then retired; Ambassador Jefferson Caffery, retired; Dr. John Hannah, president of Michigan State University; William Randolph Hearst, Jr.; Clement Johnston, chairman of the board of the U.S. Chamber of Commerce; Dr. Lewis Jones, president of Rutgers University; James Minotto, former MSA Chief in Portugal; and Allan B. Kline, former president of the American Farm Bureau Federation.

On the basis of most extensive study and hearings, the special committee recommended the creation of a development fund to put economic development assistance on a repayable basis; it recommended a reduced rate of expenditures for military assistance; it recommended that military assistance be administered by the Department of Defense, subject to the foreign policy direction of the Secretary of State; it recommended unification of aid and foreign policies abroad, to provide better coordination of activities; and it called for a reexamination of the personnel policies of the foreign aid administraton. Practically all of these recommendations—now nearly 4 years old—are found in the President's foreign aid message.

In order that Members may review the unanimous recommendations of their special committee, I ask unanimous consent that the recommendations of the special committee be reprinted at this point in the CONGRESSIONAL RECORD.

There being no objection, the recommendations were ordered to be printed in the RECORD, as follows:

V. RECOMMENDATIONS ON FOREIGN AID PROGRAMS

A. CLARIFICATION OF OBJECTIVES OF POLICY

The objectives of the various foreign aid programs should be separated, refined, and restated, as necessary, by the executive branch and the Congress.

All foreign aid undertaken by the United States should serve the national interests of the United States. There are, however, diverse national interests involved in our relations with other nations and various types of foreign aid programs by which these interests may be served.

The committee recommends that the following be regarded as appropriate objectives of foreign aid, to be pursued, as necessary, by separate aid programs:

1. To increase the effectiveness of the military defense of the Nation and to lower its total cost to the people of the United States.

2. To stabilize situations in other countries to the extent that such situations involve the critical security and political interests or the humanitarian concern of the United States.

3. To promote friendly cooperation with countries seeking technical assistance in modernizing their societies.

4. To encourage the evolution of free political and economic systems in other independent nations by assisting them, on a self-liquidating basis, in their economic development.

B. MILITARY AID POLICY

Military aid should be continued and efforts consistent with national security should be made to reduce the rate of expenditures.

The committee finds that military aid is essential to the national defense and recommends that it be continued. On the basis of its inquiry, it believes immediate reductions in costs are possible and notes that in recent weeks the President has proposed a saving of $500 million in his January budget estimates. The committee urges the President to continue to examine the budgetary estimates for military aid for fiscal year 1958 with a view to additional reductions. In this connection the committee calls attention to three specific questions: (1) The suitability of the level of military aid and the types of arms being provided to less developed countries; (2) the possibility that competition for arms aid among recipients is adding unduly to the cost of the program; (3) the possibility that, in planning foreign aid programs, insufficient consideration is given to the impact of arms aid as a factor in generating increased needs for supporting aid.

The committee further recommends that the appropriate standing committees of the Senate make a broad inquiry into the present relationship of military aid to the strategic concept of the defense of the United States in order to determine the effectiveness of the interrelationship and to make recommendations on permanent policy with respect to military aid.

C. NON-MILITARY-AID POLICY

1. Supporting aid should be continued and efforts consistent with national security should be made to reduce the rate of expenditure.

The committee believes that the continuation of supporting aid, which goes in large part to peoples under critical threat of Communist aggression or subversion, is in the national interest. It also believes that reductions in the budgetary estimates for fiscal 1958 are possible, and to that end urges the President to reexamine immediately those estimates country by country. In this connection, it calls special attention to the following: (1) The question of unrealistic exchange rates as they affect the cost of supporting aid; (2) the question of the adequacy of the criteria now being employed by the executive branch in determining areas of critical importance to the United States and emergency situations; and (3) the question of separating from what is now defense support that aid which in fact should be classified as development assistance.

The committee further recommends that the Committee on Foreign Relations study in detail the operation of supporting aid in countries where it has assumed significant proportions and an apparently continuing status, with a view to recommending measures for orderly reduction of such aid and, where possible, its elimination through more intensive economic development of such countries over a definite period of time.

2. Technical assistance should be continued substantially as at present.

The committee recommends full support of this program. It recommends further that the executive branch begin now to consider additional ways in which this program, now named technical cooperation, may actually be made more cooperative in fact.

3. Economic development assistance should be put on a repayable basis through the mechanism of a development fund.

For reasons noted in its conclusions, the committee recommends discontinuance of grants for development assistance, except insofar as technical aid may contribute to this end. It urges, further, that all funds for development assistance be centralized in the proposed development fund. The concept of this fund must not be that of a new name for grants or solely that of a new source of loans on easy terms. The concept should be such as to permit the fund to supplement the lending operations of the Export-Import Bank and the International Bank, to promote the flow of private capital abroad and to encourage the development of private enterprise within recipient countries. As already noted, there are banking and financing devices in addition to loans which might well be encompassed in this concept. It is possible, for example, to envisage the revolving fund being used for joint investments with private enterprise for the acquisition of debentures in national and regional development banks of a quasi-public nature established by other countries. The fund should be so operated as to encourage expanding participation by private enterprise in international development.

D. ADMINISTRATION OF AID PROGRAMS

1. Military aid should be administered by the Department of Defense with foreign policy direction of this aid vested in the Secretary of State.

Present legislation does provide for an administrative arrangement of this kind. In practice, the Department of Defense does carry out the military aid program. As noted, however, the responsibilities of the Secretary of State for providing foreign policy direction to military aid have been delegated to the Director of the International Cooperation Administration. The committee doubts that the Director is in an influential enough position to provide the type of foreign policy direction which must be provided if military aid is to work harmoniously with other aspects of foreign aid and foreign policy. It strongly urges that the Secretary of State assume responsibility for giving foreign policy guidance to military aid.

2. Responsibility for supporting aid should rest with the Secretary of State.

Supporting aid must be responsive to continuing changes in the international situation and to events in recipient countries. Primary responsibility for registering and interpreting these changes into foreign policy rests with the Secretary of State.

The committee is aware of the reluctance of the present Secretary of State to include operating functions in the Department of State. It is also aware of the already heavy burdens of his office in making and administering policy. Operating functions connected with foreign aid will increase these burdens. The committee notes, however, that the instruments of government can hardly be designed effectively if they must be continually reshaped to meet the changing predilections of changing incumbents.

The committee does not, at this time, recommend that Congress insist upon a full merger of the International Cooperation Administration with the Department of State. The logic of such a move is in any event already compelling such mergers in many U.S. diplomatic posts abroad, notably in Europe. The committee believes these mergers are in the interest of more effective and efficient operations and it invites the attention of the executive branch to them. It suggests that the Secretary of State reexamine his position on this question with a view to continuing and speeding up the process of integration of the International Cooperation Administration into the Department.

So long as the International Cooperation Administration continues to exist, the committee urges clarification of its present ambiguous status as a semiautonomous agency within the Department of State. It recommends, in this connection, that responsibility for supporting aid rests with the Secretary of State.

3. Consideration should be given to separating the administration of technical assistance and the proposed development fund from the administration of other forms of foreign aid.

These two types of aid do not normally have immediate political or military impact. Their long-range effect on our relations with other nations, however, may be of the greatest significance. If technical assistance and development assistance continue to be administered together with supporting aid, as at present, their long-range purposes are likely to be obscured and their impact reduced by their being confused with more urgent needs of foreign policy. Furthermore, the committee sees little prospect of placing all development assistance on a repayable basis, as can and should be done, if the intermingling persists.

To make the maximum economic use of the proposed development fund, its operations must be closely coordinated with those of other sources of capital which flows abroad. The committee recommends therefore that consideration be given to vesting control of the proposed development fund in a Government corporation which would include on its board of directors representation drawn from the Export-Import Bank, from the U.S. directorate on the International Bank, from the Department of State, and from the Department of Commerce.

4. Present coordinating arrangements for interrelating foreign aid policies with other activities abroad should be reexamined by the President and the Senate and revised as necessary to insure greater effectiveness.

The committee calls attention to the fact that activities of the Department of Agriculture, the U.S. Information Agency, the Export-Import Bank, and other agencies and departments as well as those of U.S. delegations to various international organizations bear a close relationship to the administration of foreign aid. The committee believes that the need exists to study, clarify, and improve existing procedures for coordination of these various activities and urges both the appropriation authorities in the executive branch and the appropriate committees of the Senate to examine this problem in detail.

5. Personnel policies for foreign aid administration should be reexamined by the executive branch in the light of the committee's other recommendations with a view to securing satisfactory conditions of employment for essential personnel while limiting the number of this personnel by utilizing, where appropriate, private contractors and universities and skilled personnel from other Government departments in carrying out the aid programs.

To the extent that the committee's other recommendations are applied, the committee believes that a substantial contraction in the number of officials engaged in foreign aid operations can be anticipated and, with it, increased effectiveness in these operations. So long as foreign aid is continued, however, the need will exist for capable Government employees—military and civilian—of high competence in these operations. These employees should have satisfactory conditions of employment and tenure as in fact those from the Department of Defense now have and those of the International Cooperation Agency would have if this agency were fully integrated into the Department of State.

To minimize the number of aid personnel, the committee urges that maximum utilization be made of technically competent employees from other departments of the Government on a temporary basis in connection with foreign aid operations. It also urges improvement of present contracting procedures to encourage wider participation on the part of universities and private organizations and firms in these operations.

E. LEGISLATION

1. Future legislation should make clear the distinction of purpose and function as between these principal categories of aid: military aid, supporting aid, technical assistance, and economic development assistance.

The committee notes that the legislative question involved in this recommendation is not so much one of whether these various types of aid are provided for in a single piece of legislation or in two or more. The important point is that whatever form the legislation takes, the purposes of each type of aid should be clearly demarcated and expenditures of funds earmarked for each type should be directed to its specific purposes. Unless this is done, it will not be possible for the people of the United States or the Congress to understand either the distinct objectives or the magnitude of the various programs. It will not be possible to form an evaluation of their varying efficacy. It will not be possible, in short, to control these programs in a responsible fashion.

With particular reference to the proposal which has been made to place funds for military aid in the Department of Defense appropriation the committee believes that, if the President so desires, this change should be carefully considered. If the

change is made, however, the committee believes that such funds should continue to be clearly earmarked for foreign military aid and that Congress should continue to authorize such appropriations annually, pending a clear determination of the role of military aid in the total strategy of national defense.

2. An economic development fund should be established to provide assistance on a repayable basis to other independent nations for economic development purposes.

The committee does not believe that such a fund can be established on a businesslike basis unless it is treated apart from the other types of aid. The one possible exception is technical assistance, whose purposes while presently distinct, in the long run dovetail with those of economic development.

Further, the committee believes that this fund is too important to be set up in haste. Interim measures may be necessary but the fund should not be established in permanent form until its implications have been fully examined by the executive branch and the appropriate committees of the Congress. On the basis of its consideration of this question, the committee recommends that the following criteria should guide the formation of such a fund:

1. All bilateral development assistance, other than that extended by the Export-Import Bank, should be provided through the proposed revolving fund.

2. All development assistance should be extended on the basis of reasonable expectation of repayment. Such assistance must of course involve financial risks but it should not be a camouflaged form of grant aid.

3. The concept of the fund's function should be broader than the extension of soft loans as heretofore described. It should encompass the use of other financial devices for encouraging the flow of capital abroad, including joint undertakings with private enterprise and direct and indirect investments abroad out of the funds resources.

4. The policies of the revolving fund should be closely coordinated with those of the Export-Import Bank and the positions taken by the U.S. representatives in the International Bank. To that end U.S. representation from both sources should be brought into the direction of the fund.

5. The operations of the fund should help to encourage the flow of private capital abroad. Ideally, it should help to bring about the day when private enterprise can carry the responsibility for supplying capital for economic development. To that end representation from the Department of Commerce should be brought into the direction of the fund.

6. The fund should be operated with an awareness of foreign policy considerations. To that end, representation from the Department of State should be brought into the direction of the fund.

7. The fund's working capital should not be provided in a lump sum by Congress but should be built up in an orderly fashion by payments into its capital over a period of years, as the needs become clearer and as Congress has an opportunity to determine how soundly it is being operated.

VI. CONCLUDING COMMENTS

The committee recognizes that the recommendations it has proposed involve far-reaching changes in the concept and the operation of the foreign aid programs. It recognizes that these changes cannot be brought about in a moment. Nevertheless, it believes they can and should be brought about promptly if the foreign aid programs are to continue to serve the national interests.

The committee anticipates that many of its recommendations can find expression in the foreign aid legislation for the fiscal year, beginning July 1, 1957. It believes that there can be a clarification of the purposes and the types of aid programs. It believes that a beginning can be made on the administrative improvements which it has proposed. It believes that there can be an immediate and discriminating reduction in aid provided on a grant basis but it warns against the adverse consequences inherent in indiscriminate cuts to the safety and the international position of the United States.

The committee recommends, therefore, that the Senate consider the President's proposals for mutual security legislation for the fiscal year beginning July 1, 1957, in the light of these immediate expectations. It is convinced that they are reasonable expectations.

Further inquiry into certain aspects of foreign aid programs is desirable and necessary. The need still remains to examine in detail the relationship of military aid to the strategic concepts of national defense, if not those concepts themselves. The need remains to study in depth the operation of supporting aid in many countries. The need remains to study the coordination of aid programs with various oversea activities of other departments and agencies of the Government. The need remains to examine fully the financial and other economic implications of a revolving fund for development prior to its establishment in final form, the examination to include the question of the accumulation of large holdings of local currencies by the United States. The need remains to examine the question of tax incentives and other devices for encouraging the flow of private investment abroad.

The special committee has not examined these questions in detail, partly out of limitations of time and because some of them fall clearly within the competence of standing committees of the Senate. Despite these limitations, the committee is satisfied that it has substantially discharged the responsibility vested in it by the Senate to make a thorough study of the foreign aid programs. It has found that these programs do serve the interest of the United States but that they can be made to serve those interests at a lower cost, and a much higher degree of effectiveness than is now the case.

The committee wishes to make it abundantly clear that foreign aid is not an end in itself but is an instrument of national policy. The objective of our aid policy is to help create conditions in the world which will permit the termination of foreign aid programs, to the end that they will no longer constitute a burden on the American people. The final proof of able administration of the aid programs will be evidenced by the speed with which this end is achieved.

MISSOURI RIVER BASIN DEVELOPMENT

Mr. LONG of Missouri. Mr. President, for the past 17 years, people up and down the Missouri River basin have cooperated on power development, flood control, navigation, and irrigation. Today, that cooperation is threatened as the public power interests press their demand to seize the main benefits of the upstream reservoirs for the upriver States.

If the flow of impounded waters were shut off by the upriver States, it would be disastrous for Missouri, Kansas, Nebraska, and Iowa, so far as benefits from the Missouri River program are concerned.

The industrial growth of these States depends on a bountiful supply of water, providing low-cost barge transportation for the bulk commodities used by industry. If the flow of sufficient water for navigation were stopped, the lower States would be left with nothing but the benefits of flood control. These are important, but they are far less than what was promised by the Pick-Sloan plan.

Prior to the enactment of the Pick-Sloan program, the upper and lower river States fought for their special interests, but got nowhere. Later, the two conflicting groups got together and, with the help of Congress, adopted the Pick-Sloan plan. The result has been an unprecedented series of manmade dams. These reservoirs extend all the way from the South Dakota-Nebraska line to the upper reaches of northern Montana.

Ironically enough, the most impressive gains under the program have been made by the States which now are trying to seize all of the benefits. In the early 1940's when the cooperation program was first proposed, it was suggested that electrical facilities be constructed to provide 758,000 kilowatts. Today, the current capacity of the upstream dams totals 905,000 kilowatts. The estimated capacity under the present Pick-Sloan plan calls for over 2 million kilowatts.

To permit the upriver States of the Missouri River basin to seize all of the benefits of the Pick-Sloan plan would result in destruction of the very meaning of the word "cooperation," to say nothing of the destruction of the Pick-Sloan plan itself.

Mr. President, I ask unanimous consent that two editorials from the Kansas City Star, dated March 21 and March 23, be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Kansas City Star, Mar. 21, 1961]

LOWER MISSOURI BASIN UNDER ATTACK

After many months of threats the public power interests of the upper Missouri basin have moved to seize the main benefit of the upstream reservoirs for the upriver States. Speaking through their Senators, they have asked the President to shut off the flow of impounded waters for use downstream in Missouri, Kansas, Nebraska, and Iowa.

The attack, specifically, is aimed at stopping the flow of water for navigation. But the scope of the assault is much broader. The Missouri River program (the Pick-Sloan plan) was set up for the development of the Missouri basin through all the benefits that come from flood control and the impounding of water behind the big dams. To the upriver States hydroelectric power is the basis for industrial development and irrigation is the means of developing agriculture.

Farther down the river, the hope for industrial growth depends on a bountiful supply of water for industries and low-cost barge transportation for the bulk commodities used by industry.

The proposal for shutting off the flow of water would deny the downriver States their share in the growth promised by the tremendous tax investment in the greatest series of reservoirs ever built by man. Of course, it would leave the downriver States with the benefits of flood control which is very important. But far more was promised by the Pick-Sloan plan.

If this move succeeds it will be a conspicuous failure to keep faith by upriver States. The dams were made possible only because the whole basin joined in a common effort.

Prior to the Pick-Sloan plan the upper and lower river States fought for their special interests and got nowhere. The dry Northern States tried to sell the Department of Interior plans for irrigation and public power with the participation of the States downstream. Their spokesman was W. G. Sloan of the Interior Department.

At the same time the downstream interests gave their support to the Corps of Engineers plan for Missouri River development. The Corps of Engineers concentrated on flood control and the stored water that could be used for navigation and industrial growth. The spearhead of this plan was Col. Lewis A. Pick (later Chief of Engineers and a lieutenant general).

At the end of World War II, the two conflicting groups faced the fact that neither could succeed alone. They joined forces and Congress put the two plans together into the one big program known as the Pick-Sloan plan.

Working together for their mutual purposes, the two groups and the two departments of Government were able to achieve an unprecedented series of manmade dams. The reservoirs now extend all the way from the South Dakota-Nebraska line to the far reaches of the river in northern Montana.

This great public works project is a monument to cooperation. It has already virtually ended the threat of big floods on the main stem of the Missouri. Several more years may be required to give the reservoirs the amount of water intended for permanent storage.

Already it has been possible to raise the commitments for hydroelectric power above the original plan. The lower-river States are beginning to feel the benefit of an assured supply of water. But the overall development expected from the Pick-Sloan plan is still in its early stages. If it continues as planned the future is almost limitless.

Now the big job is to keep the principle that made the Pick-Sloan plan possible. That principle is cooperation—cooperation for the benefit of the whole Missouri basin. If the upriver States were permitted to get by with their destructive maneuver the whole cause of American river development would suffer. No part of the country would be able to count on any commitments that might be made by an administration or Congress.

We would say this is the time for all Congressmen and Senators in this part of the country to start fighting. And the challenge should stir action among all other Members of Congress who believe in the multiple purposes of sound river development.

[From the Kansas City Star, Mar. 23, 1961]

ELECTRIC POWER FROM THE PICK-SLOAN PLAN

The effort of the upstream public power crowd to blow up the whole cooperative plan of Missouri basin development comes at a time when the production of public power at Pick-Sloan dams is expanding rapidly. This is a move to destroy the plan that is showing results for the whole Missouri basin. And the most impressive gains are being made in the States that are now trying to seize all the benefits of the Pick-Sloan program except flood control.

In the early 1940's when W. Glenn Sloan of the Interior Department proposed his river plan, he suggested construction of facilities to produce 758,000 kilowatts of electricity. Today the current capacity of four big upstream dams—Fort Peck, Garrison, Fort Randall and Gavins Point—totals 905,000 kilowatts. And much more is coming.

The ultimate capacity under the Pick-Sloan plan of cooperation calls for 2,048,000 kilowatts, nearly three times the original proposal. Next year, the first units of a new 595,000-kilowatt installation will be available with completion of the big Oahe Reservoir. Big Bend, to be completed in 1964, will provide additional capacity of 468,000. It is interesting to observe that Big Bend originally was planned as a 100,000-unit operation. But changes were made and a new site selected to provide for a far greater capacity. Thus two new dams will more than double the present power output.

Of course, water is required to run the generators. It is true that for several years precipitation in the northern areas has been less than normal. Still, the reservoirs aren't about to run dry. And it isn't a case of using separate, distinct quantities of water for each dam. The same flow runs through all generating facilities. The main additions will come from more generators, not from a huge storage of water.

People up and down the river have supported power development—together with the other essentials of basin development, flood control, navigation and irrigation—for 17 years. But if the public power interests now intend to press their demand for sole benefits from the river, they can hardly expect the continuing cooperation from people interested in the industrial growth of Missouri, Kansas, Nebraska and Iowa.

It strikes us that this is a poor time for the power group to move to wreck the very foundations of the succeeding Pick-Sloan program.

WRITINGS OF FELIX S. COHEN

Mr. HUMPHREY. Mr. President, shortly after my first election to the U.S. Senate, I had the privilege of becoming acquainted with Mr. Felix Cohen, the outstanding legal authority on American Indians. I came to value his counsel greatly, not only on Indian affairs, but also on immigration legislation and on other problems affecting underprivileged groups. I was greatly saddened by his premature death in 1953.

To make certain that his writings are kept alive, Mr. Cohen's widow, Mrs. Lucy Cohen, has over the years patiently and persistently worked on the preparation of a volume of Mr. Cohen's most important articles. The book which she produced, and which has just been published, is a reflection of Felix Cohen and his life. His devotion to the causes in which he believed, his inner drive, and the discipline with which he ordered his life, made it possible for him to crowd into the years that were allotted to him three distinct careers—that of a legal philosopher, that of the outstanding expert on American Indian law, and that of a respected citizen spokesman for liberal democratic thought. The new book serves indeed as a monument to his achievements in each of these fields. I believe my colleagues will be interested in the review of the book which appears in the New York Times Book Review. The review was written by Justice William O. Douglas; and I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

SOME PERTINENT REFLECTIONS ON DEMOCRATIC INSTITUTIONS

THE LEGAL CONSCIENCE: SELECTED PAPERS OF FELIX S. COHEN. EDITED BY LUCY KRAMER COHEN. FOREWORD BY FELIX FRANKFURTER. INTRODUCTION BY EUGENE V. ROSTOW.

(By William O. Douglas)

This volume is a collection of a few of the articles and reviews that Felix S. Cohen wrote in the brief years he was with us. Son of the distinguished philosopher Morris R. Cohen, the author spent most of his career (after obtaining both doctorate and law degrees before he was 25) as Assistant Solicitor of the Department of the Interior, where he was concerned with drafting legislation dealing with our natural resources, immigration and resettlement programs, and, especially, with the American Indian. After entering private practice in 1948 he became general counsel of the Association on American Indian Affairs and continued to teach and write about the law. He died in 1953 at the age of 46.

Materials from Cohen's published books are not included. Neither are the illuminating briefs he filed in the Court when he was on the Solicitor's staff of Interior or in private practice. In other words, many of the original creations of this amazing young man are missing from this volume. That is not a criticism, for the book includes articles and reviews largely unavailable to the average reader.

They are organized into three books: "Logic, Law, and Ethics"; "The Indian's Quest for Justice"; "The Philosophy of American Democracy." The first book—"Logic, Law, and Ethics"—reveals the author as a worthy companion of his eminent father. These essays emit penetrating shafts of light into troubled fields: "property is a function of inequality"; the "actual value" of the property of a public utility is "a function of the court's decision"; one may suspect that a court would not consistently hide behind "a barrage of transcendential nonsense" about due process if "the grounds of its decisions were such as could be presented without shame to the public"; the Restatement of the Law is "the last long drawn-out gasp of a dying tradition," etc.

Bentham, Langdell, Cardozo, Holmes, Veblen, Kant, Spinoza, Frank and many other jurists and philosophers are put to the test of logic, nonsense and commonsense. He sees in lawyers' and judges' talk not logic but feelings, not immutable principles but the visceral reactions of differing individuals. He is devastating in his analysis of court decisions when he uses what he calls "word magic." The stimulating first book in this volume might be summed up in one of the closing sentences, "We are all blind men reporting on an elephant."

The second book—"The Indian's Quest for Justice"—reflects the philosophy behind Cohen's monumental work "Handbook of Federal Indian Law" (1941). It is in this field that I knew the man best. No mind that ever delved into Indian affairs was keener, more discerning, more enlightened. There is wisdom, compassion and depth of understanding. The job of "Americanizing the white man" seemed to him to come ahead of "Americanizing the Indian."

There are sentences that should stop the dogmatist in his tracks: "None of us knows enough about the other fellow's way of life to have a right to wipe it out." There are illuminating analyses that end in statements such as this: "It is plain to see that Indians are not second-class citizens; they are not wards; they are not under guardianship; they are entitled to the enjoyment of all the rights of other citizens, not eventually but now." No minority ever had a more faithful advocate.

The final book—"The Philosophy of American Democracy"—is a penetrating analysis of the institutions of government and of business. The mucilage of the social order and of international relationships is examined with freshness and courage. The problems of the pluralistic society at home and across the world are put in new perspective. There is down-to-earthness in such a statement as, "Americans * * * have generally been more interested in avoiding the worst government than in achieving the best."

Colonialism is subjected to a shattering criticism. The role of the immigrant is given new dimensions. Puerto Rico is reappraised, and the dragons of overpopulation, dearth of natural resources and racism are exposed. Relations with the Communist blocs in the world are questioned and new approaches suggested, such as dropping parachutes of rice and corn over Red China. In numerous reviews near the end of the book he chases away many hobgoblins which we tend to fear, and he teaches us the high cost of prejudice.

This is a book for students of sociology, political science, philosophy, and law. It is provocative to the lawyer or official who is willing to have his favorite prejudices disrobed. It makes a mockery of judges who insist that if they were not imprisoned by the law they could do justice.

PHI DELTA KAPPA NATIONAL PROFESSIONAL FRATERNITY IN EDUCATION ENDORSES FEDERAL AID TO SCHOOLS PROGRAM

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the RECORD a statement of position by the board of directors of Phi Delta Kappa, endorsing President Kennedy's program of Federal aid to education.

As a cosponsor of S. 1021, the administration's Federal aid to schools proposal, I am highly pleased that this well-informed organization is supporting this proposed legislation.

I ask unanimous consent to have the text of the statement of position printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Phi Delta Kappa, the 90,000-member professional fraternity in education, views most favorably the President's proposals for general aid to education as presented in the Presidential message of February 20 and through the provisions of S. 1021. In all categories of Federal assistance we believe the amounts called for are modest and represent the absolute minimum at which the new program should be initiated.

We agree that the individual States should determine how grants for elementary and secondary education shall be divided between school-building construction and teachers' salaries, and we particularly applaud the equalization feature that would help those States of lesser ability to pay for better educational services. Further, we agree that grants or loans from any governmental source to nonpublic elementary and secondary schools would repudiate the long-established principle of separation of church and State and would constitute a threat to our free tax-supported public school system.

Finally, we would encourage a substantial increase in the appropriation for support of the cooperative research program of the Office of Education. The improvement of education in all phases and on all levels depends on the discovery and development of new knowledge and new techniques. This can be accomplished only through educational research. The immediate pressures on State and local school authorities for support of the existing program and the demonstrated neglect by these units of government to provide funds for educational research prove that this is an area which demands Federal attention.

Signed: Charles R. Foster, president; A. G. Clark, first vice president; Gordon I. Swanson, second vice president; Russel Merkel, recording secretary; Arthur E. Arnesen, comptroller.

Mr. MANSFIELD. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

NAVAJO IRRIGATION AND SAN JUAN-CHAMA PROJECTS, NEW MEXICO

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of Senate bill 107, Calendar No. 72.

The motion was agreed to; and the Senate resumed the consideration of the bill (S. 107) to authorize the Secretary of the Interior to construct, operate, and maintain the Navajo Indian irrigation project and the initial stage of the San Juan-Chama project as participating projects of the Colorado River storage project, and for other purposes.

Mr. MANSFIELD. I ask unanimous consent that at this time the absence of a quorum may be suggested, without having the time required for it charged to the time allotted under the agreement which was entered on yesterday.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I now suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ANDERSON. Mr. President, I ask unanimous consent that the committee amendments may be adopted en bloc.

The PRESIDING OFFICER. Is there objection?

There being no objection, the committee amendments were agreed to en bloc.

The committee amendments agreed to en bloc are as follows:

On page 6, line 5, after "(70 Stat. 105)", to insert "as amended by section 9 of the Act of June 27, 1960 (74 Stat. 277)"; on page 13, after line 12, to insert a new section as follows:

"SEC. 9. In the operation and maintenance of all facilities, authorized by Federal law and under the jurisdiction and supervision of the Secretary of the Interior, in the basin of the Colorado River, the Secretary of the Interior is directed to comply with the applicable provisions of the Colorado River compact, the Upper Colorado River Basin compact, the Boulder Canyon Project Act, the Boulder Canyon Project Adjustment Act, and the treaty with the United Mexican States, in the storage and release of water from reservoirs in the Colorado River Basin. In the event of the failure of the Secretary of the Interior to so comply, any State of the Colorado River Basin may maintain an action in the Supreme Court of the United States to enforce the provisions of this section, and consent is given to the joinder of the United States as a party in such suit or suits, as a defendant or otherwise."

On page 14, at the beginning of line 4, to change the section number from "9" to "10", and at the beginning of line 15, to change the section number from "10" to "11".

Mr. ANDERSON. Mr. President, are there any additional amendments to be offered?

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendments to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

Mr. WILLIAMS of Delaware. Mr. President, before we approach third reading, the Senator from New Mexico is in charge of the time on his side. Does he wish to speak further on the bill?

Mr. ANDERSON. No. I occupied the floor for an hour and a half last night. I would be prepared to answer questions on the bill. I understood that the Senator from Delaware desired to speak on the bill. If there are other Senators who desire to speak on it, we could allot some time to them.

Mr. WILLIAMS of Delaware. The time is controlled. What is the time situation?

The PRESIDING OFFICER. The minority leader controls the time in opposition.

Mr. KUCHEL. Mr. President, I ask unanimous consent that the Senator from Delaware be given such time as he desires to use.

Mr. WILLIAMS of Delaware. How much time is available?

The PRESIDING OFFICER. One hour is available on each side.

Mr. DIRKSEN. Mr. President, what is the parliamentary situation?

The PRESIDING OFFICER. The bill is open to amendment.

Mr. DIRKSEN. How much time has been used?

The PRESIDING OFFICER. The proponents have used 22 minutes, and the opponents have used 3 minutes.

Mr. DIRKSEN. Mr. President, I yield 20 minutes to the distinguished Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, yesterday the Senate passed a bill which contained appropriations of approximately $3 billion for the Department of Agriculture, practically all of which will help that Department to keep supporting various agricultural commodities of which we have an overabundance.

Several hundred million dollars of that $3 billion will be used by the Department of Agriculture to make payments under what is called the soil bank plan—payments to American farmers to take out of production some of our good agricultural productive land.

We now have a bill before us which proposes to appropriate $221 million, most of which will go to irrigate land, thereby increasing the productivity of 230,000 acres of land.

It does not make any sense on one day to pass a bill appropriating $3 billion, a substantial part of which will be paid to farmers to take out of production some of our present productive land and then today to turn around and pass another bill authorizing the payment of $220 million which will increase the production of 230,000 acres of land

at a cost to the taxpayers ranging as high as $1,000 an acre.

I know, as the Senator from New Mexico has pointed out, that part of these costs will be allocated to industrial and municipal service of water. Even so, we have very little indication that that will be repaid. In that connection, I will take the figures in the committee report. The report shows that 110,630 acres, which are allocated in the so-called Navajo tract, are represented as expected to cost about $135 million.

In the committee report, it is admitted that only $21 million is on the basis of being repayable in from 50 to 100 years. If I am in error, I hope the Senator from New Mexico will correct me.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. ANDERSON. That amount is repayable; but under the Leavitt Act, those amounts which are advanced to the Indians for irrigation projects are not reimbursable until the Indians dispose of the land, if they dispose of the land, or until the tribe disposes of the land. Then the amounts might be reimbursable. I do not believe that will happen. Therefore, I agree with the Senator from Delaware that the great bulk of the $134 million is not reimbursable.

Mr. WILLIAMS of Delaware. I thank the Senator from New Mexico; that was as I understood it. Therefore, we have a situation under which we are paying approximately $135 million to bring into production this 110,000 acres of land, or an average cost of $1,227 an acre.

In addition, I understand that this project is presented on the basis that it will provide work for about 18,000 to 20,000 Navajos and will provide an improved standard of living. But, again, if we use a figure of 20,000, this would represent a cost of $6,750 per capita. If such an expenditure is necessary why not make such an expenditure directly through the Indian service appropriations?

Then we find there are 120,900 acres which are to get water under the bill, none of which is in the Navajo Indian tract at all. Altogether there are 230,000 acres of new land being brought into production under this bill at a cost to the taxpayers of from $445 to $1,200 per acre.

Mr. ANDERSON. The Senator from Delaware knows that this has nothing to do with the Navajo tract it relates to another part of the bill.

Mr. WILLIAMS of Delaware. The Senator is correct. There are two sections to the bill.

Mr. ANDERSON. This is not a per capita charge against Navajo land alone, because the $134 million involves a canal wnich will bring water for municipal purposes down to the city of Gallup. It will be for the enlargement of a canal to bring water down to a community to be called Navajo, where the Navajos are planning to expend $7½ million for the erection of a sawmill. All the water which will be used in that community and for the sawmill, is also to be served by the canal. Nor does it involve a portion to be charged to the Arizona Power Co., which is building a large plant in the Four Corners area, from which it will carry power to the city of Phoenix. Those projects must be included in the general outline of the bill, even though they are not chargeable to the agriculture feature of the bill.

Mr. WILLIAMS of Delaware. That is true, but the Senator has spoken of only the part of the bill dealing with the Navajo Reservation.

Mr. ANDERSON. Yes; that comes to $134 million.

Mr. WILLIAMS of Delaware. Yes.

Mr. ANDERSON. I do not believe that it all should properly be charged against the 110,000 acres that will be served, because additional facilities will be served. I used last night the figure of $1,000 an acre. I will stand by that figure.

Mr. WILLIAMS of Delaware. A substantial part of that will go for irrigation costs, as explained by the committee report.

Mr. ANDERSON. Yes, but I want the Senator from Delaware to understand that all the land which the Navajos will farm, with the exception of about 7,000 acres, is now inside the Navajo Reservation. It is contemplated that those 7,000 acres will also be brought inside the reservation on an exchange basis.

Mr. WILLIAMS of Delaware. That is true; but we still cannot get away from the fact that at a minimum approximately $1,000 an acre will be spent toward irrigating this particular 110,000 acres of land.

Mr. ANDERSON. With that statement, I agree.

Mr. WILLIAMS of Delaware. We are paying $1,000 an acre in that area for this 110,630 acres to bring it into production, or to increase its productive capacity, at a time when under the bill we passed yesterday we will pay $3 billion to support agricultural commodities, or to dispose of them at a great loss, and then in addition pay farmers to take some of their productive land out of production.

It is a contradictory policy to pass on one day a bill to pay from $40 to $50 an acre per year under the soil bank plan, to have farmers take land out of production, and then turn around and advance $1,000 an acre to bring other land into production.

Mr. ANDERSON. Except that this proposal is for the purpose of producing crops which will not compete with crops in production at all.

Mr. WILLIAMS of Delaware. I disagree with the Senator from New Mexico, because even though the land proposed to be brought into production is not for the purpose of raising corn or wheat, it will produce sorghum and other types of feed grains. It will increase supplies of agriculture commodities.

By the same line of reasoning, when it was said that we could increase the acreage of sugar in this country by a million acres it would take out of production a million acres of some other crops.

Mr. DIRKSEN. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. DIRKSEN. I should like to ask the Senator from New Mexico if it is true that out of the $136 million, only $21 million is reimbursable.

Mr. ANDERSON. I explained before the able minority leader came into the Chamber that $134 million or $135 million—I shall not quibble over the difference—under the Leavitt Act is not reimbursable. But this proposal does not apply only to this project. Any Indian irrigation project is not reimbursable until the Indian sells the land. If the Indian disposes of the land, or if the tribe disposes of the land, it then becomes reimbursable. But so long as the Indian owns the land, the amount is not reimbursable. This fact is based on a long series of actions under the Leavitt Act, which has been on the statute books for a generation.

Mr. DIRKSEN. I was interested only in this question: What is the net amount which will be taxed against the Treasury of the $135 million, if only $21 million is reimbursable as such?

Mr. ANDERSON. About $110 million will not be reimbursable and is a direct charge to the Treasury, until the Indians make some disposition of the land.

I have said repeatedly that I hope the Navajos will never dispose of this irrigation district. Therefore, I think it would be fair to say that this is a long-time charge against the Treasury of the United States.

Mr. DIRKSEN. What has been the record in other districts? Have there been comparable situations, and how much actually was recaptured?

Mr. WILLIAMS of Delaware. What the Senator from New Mexico has said is correct, but he is speaking only of the Navajo irrigation project, which is the first part of the bill. If we move over to the other part of the bill, which deals with the proposed irrigation projects on the San Juan-Chama districts to provide water for another 120,000 acres of land, not a part of the Navajo Reservation, we would get a truer picture in answer to the question of the Senator from Illinois, and a better comparison of the payments on other irrigation projects.

Mr. ANDERSON. I understood the distinguished minority leader to ask what has been the record of repayment. I was ready to admit that the record of repayment is poor. But it is not confined to one particular section of the country. It is everywhere over the whole country. Some of them have been undertaken in accordance with treaty obligations. When that happens, the United States does have a loss when it fulfills treaty requirements.

Mr. DIRKSEN. Is there a treaty involved in this instance?

Mr. ANDERSON. The Navajos have been suing the Federal Government for a long time. There has been a removal of the Navajos physically from their reservation, and then a moving back to the reservation. In that treaty, the Federal Government agreed to provide schools for every 30 Navajos. It has never done so. It is approaching that problem now. The Federal Government has never fulfilled that treaty obligation.

It has many other obligations, including the providing of homes for the Navajos. We hope that providing homes for some 10,000 or 15,000 Navajos will remove that part of the litigation from the courts and permit the Navajos to stay on the ground. We hope that will be done. I do not represent that that will be a complete offset of their claims against the Government, but that is being done through agreement in response to a long-standing treaty obligation.

Mr. DIRKSEN. Has any opinion been rendered by the Department of Agriculture with respect to this matter?

Mr. WILLIAMS of Delaware. I have failed to see any report in which the Secretary of Agriculture has approved this bill. It is my understanding—and the Senator from New Mexico can correct me if I am wrong—that an opinion of the Secretary of Agriculture was not requested by the Senator's committee. Is that correct? Has the Secretary of Agriculture made any recommendations in connection with this proposal, or has his opinion been asked in connection with the bill before us today?

Mr. ANDERSON. I would not say whether anyone in the Department of Agriculture was asked again in connection with the bill. I think not. This is a bill which twice passed the Senate and in the early stages the opinion of the Department of Agriculture was requested.

The Department of Agriculture has parties which have been out surveying the ground as to its usability.

I think I should have to answer the Senator from Delaware by saying on this particular bill, S. 107, the opinion of the Department of Agriculture was not asked.

Mr. WILLIAMS of Delaware. That is my understanding.

Mr. ANDERSON. But before the committee there was testimony by the Navajo Tribe that the crops they would grow are not now in surplus production in the United States.

Mr. WILLIAMS of Delaware. I also understand that when the Department of Agriculture was asked about the previous bills on this same project they opposed such legislation.

Mr. ANDERSON. They opposed it?

Mr. WILLIAMS of Delaware. So I understand.

Mr. ANDERSON. Oh, I do not think so.

Mr. WILLIAMS of Delaware. Is there any record to the effect that the Department ever endorsed this bill?

Mr. ANDERSON. I think so.

Mr. WILLIAMS of Delaware. I was talking this week to officials in the Department. Certainly I would not for a moment question what the Senator from New Mexico has stated. But it was my understanding from talking with officials in the Department just the other day that they are opposed to it; and I did not get the impression that previously they had endorsed it. I may be in error about what their position will be, but they strongly indicated that they had grave questions about the increased productivity of the new acreage which would be brought into production.

I think the position of the Department of Agriculture on this matter should be obtained, and we should have from the Department a report showing a breakdown of the crops expected to be produced.

We have been referring to the first part of the bill which deals with the Navajo Reservation. Of course, I recognize there is a great deal of sympathy in regard to doing something to improve the living standards of the Navajos. But section 6 of the bill and the remainder of the bill have nothing at all to do with the Navajos. This last portion of the bill provides for bringing water to 120,900 acres in New Mexico divided as follows: approximately 39,300 acres of land in one irrigation unit and approximately 81,600 acres of land in the existing Middle Rio Grande Conservancy District. This project is to cost $86 million. Of this, $29,200,000 has been allocated to municipal and industrial water supply uses; $53,400,000 is allocated for irrigation, but all of this $53,400,000 is not expected to be paid back by those who would use the water for irrigation.

The committee report very clearly sets forth that approximately $8 million of that amount is reimbursable.

I should like to have the Senator from New Mexico comment on that point if he disagrees with these figures.

Mr. DIRKSEN. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. DIRKSEN. Why would it not be a good disposition of the bill to have it recommitted to the committee, and then obtain an opinion from the Secretary of Agriculture, and investigate the whole matter a little more thoroughly?

Mr. WILLIAMS of Delaware. I think that would be excellent, and I think all of us could vote more intelligently on the bill if we had the benefit of a report by the Department of Agriculture giving us a breakdown in regard to the crops which are expected to be produced on this 230,000 acres of land. If we are to spend Federal funds to increase the productivity on the 230,000 acres of land by bringing water to that land, we should know what crops will be produced. Why pay approximately $1,000 an acre to irrigate the 110,630 acres in the Navajo tract and why pay as much as $445 an acre to bring water to 120,000 acres in the adjacent tract—the San Juan-Chama tract—and not know what crops will be produced. By all lines of reasoning we should know what is going to be produced on that land.

Mr. DIRKSEN. Let me respectfully suggest to the Senator from Delaware that he now make his motion to recommit; and if he wishes to have a record vote taken on that question, at this time he could request the yeas and nays.

Mr. WILLIAMS of Delaware. Mr. President, I now move that the bill be recommitted; and if there are enough Members on the floor at this time, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second of the request for the yeas and nays on the question of agreeing to the motion of the Senator from Delaware that the bill be recommitted?

The yeas and nays were not ordered.

Mr. WILLIAMS of Delaware. Mr. President, later I shall renew my request for a record vote.

Mr. LAUSCHE. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. LAUSCHE. The Senator from Delaware has just now pointed out that the cost of the San Juan-Chama project would be $86 million, and that $53 million is assigned to the cost of developing the irrigation facilities.

Mr. WILLIAMS of Delaware. That is correct.

Mr. LAUSCHE. If this bill is enacted, we shall be authorizing the expenditure of $53 million on the San Juan-Chama development, to increase the production of farm crops. May I ask the Senator from Delaware how this measure, this week—a measure which calls for the expenditure of this much money, in order to increase the production of farm crops—compares with the measure passed 2 weeks ago by the Senate, when it voted for the expenditure of funds to decrease the production of farm crops?

Mr. WILLIAMS of Delaware. I referred to that argument at the beginning of my remarks; I said the two actions cannot be reconciled, for the two programs are contradictory.

On the previous occasion, the Senate voted to authorize the payment of hundreds of millions of dollars in order to take out of production good productive soil in the United States; but in this instance it is proposed that $445 per acre be spent to increase the productivity of the 120,000 acres and over $1,000 an acre to irrigate another 110,000 acres. Nor will these costs be repayable; I read from page 9 of the committee report:

> Irrigation water users probably would repay about $8 million of the allocation to irrigation.

I do not quite understand how that figure was arrived at, but on one project we are told $53 million is to be allocated to the irrigation projects. This is set forth on the other page of the committee report—I do not quite understand how that can be reconciled with the repayment of only $8 million. Nevertheless, that is what the report states.

I am referring here specifically to that project which is not a part of the Navajo Reservation.

Mr. CHAVEZ. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. CHAVEZ. The reason is that the bulk of the land to be irrigated belongs, or will belong, to the Indians. The land which goes to the non-Indians is the minimum land, and the cost of irrigating it can be paid. So far as the Indians are concerned, they do not have to pay one penny.

Mr. MANSFIELD. Mr. President, at this point will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. MANSFIELD. Mr. President, in connection with the motion to recommit, I ask for the yeas and nays.

Mr. ANDERSON. Has the Senator from Delaware moved that the bill be recommitted?

Mr. WILLIAMS of Delaware. Yes.

The PRESIDING OFFICER. Is there a sufficient second of the request for the ordering of the yeas and nays?

The yeas and nays were ordered.

Mr. WILLIAMS of Delaware. Mr. President, in reading the committee report, I find that the entire bill calls for $221 million, with $135 million of that amount allocated to cover the cost of irrigating 110,630 acres on the Navajo project. Of that amount, $21 million is said to be reimbursable over a period of 50 to 100 years.

Then it is proposed to bring water to 120,900 acres of the San Juan-Chama tract, and $53,400,000 is allocated as the cost of irrigation in this area.

But in the same committee report it is stated that the same "irrigation water users" probably "would repay about $8 million of the allocation to irrigation." I cannot reconcile those two statements; and I should like to have the Senator from New Mexico state which will be repaid—either the $8 million or the $53 million.

Mr. ANDERSON. Last night I tried to state, again and again—and I repeat now—that we think most of this water will be used for municipal purposes. Once the Department of the Interior works up a project—and this one was prepared years and years ago—it does not change the allocations as to how much will be developed for irrigation and how much will be developed for municipal water.

Last night I pointed out to the able Senator from Ohio [Mr. LAUSCHE] that in 1920 the population of Albuquerque was 15,000; in 1930, it was 22,000; in 1940, it was 36,000; in 1950, it was 96,000; and in 1960, it was 200,000. As a result of that very rapid growth, there has been a demand for municipal water; and that is the highest use that can be had, insofar as repayment capacity is concerned.

We intend that a great deal of water will be sold for municipal water, not only in Albuquerque, but at Santa Fe, Socorro, Belen, and there will be use of it not only at Los Alamos, but at Sandia, Kirtland Base, and the project known as the White Sands development area. When that municipal water is used, it is repayable at a much higher price, and every gallon so used is reimbursable. We anticipate that nearly all of the $86 million will be repaid. We expect very little of it will be used for irrigation in the Middle Rio Grande Conservancy District.

The Senator has been using the figure of 81,000 acres. I doubt whether any of that water is going to meet the irrigation demand, but the other, which deals with the 39,000 acres in northern New Mexico, will be made available, and only a small amount will be reimbursed, because there is great poverty in that area. There has been a great amount of relief payment. People are on relief. It has been declared a distressed area, and the Department of Agriculture is taking its food program there on a test basis. Therefore, the people there who will be served with water will probably pay only a very small amount and will be charged with only a small part of the $86 million.

Mr. CHAVEZ. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I would like to reply to the Senator from New Mexico briefly, but I yield to the Senator.

Mr. CHAVEZ. The reason for the distress in that northern area, in order that the Senator from Delaware may understand, is that the San Juan flows west and the Chama flows southeast and then south into the Gulf of Mexico. My colleague from New Mexico talks about the water in northern New Mexico. The distress that has been brought about is due to the lack of water. The people were there before the time the Pilgrims landed in New England. There would not be this distress if the people could use the water that actually belongs to New Mexico. That is the reason for the San Juan-Chama project, plus taking care of the Navajos.

Mr. WILLIAMS of Delaware. I go back to what I said in the beginning. I think the Senator from New Mexico is slightly confused on this point. I want to get it straight because it is important. I am speaking now only of the San Juan-Chama project, not the Navajo project.

There are involved in this tract 39,300 acres and 81,600, or a total of 120,900 acres. The total cost of the San Juan-Chama project as reported by the committee is $86 million. The committee report, on page 8, has broken down the $86 million cost as follows, and I am reading from the report:

> Of the estimated project construction costs, reimbursable allocations of about $29,200,000 have been made tentatively to municipal and industrial water supply.

That is, $29,200,000 have been allocated to municipal and industrial supply. I read further from the report:

> Fifty-three million four hundred thousand dollars to irrigation and three million dollars to future uses.

Fifty-three million four hundred thousand dollars is to go to irrigation.

Reading from page 9 of the same report, beginning about the second paragraph, I read further:

> Irrigation water users probably would repay about $8 million of the allocation to irrigation.

I am asking somebody to reconcile those statements. If this report is to be accepted there will not be full repayment for the irrigation on this land. In fact, the committee report claims only $8 million to be repaid over the next 50 or 100 years.

Mr. ANDERSON. I tried to answer, and I will try to answer again. If the amount of water involved in irrigation of 81,000 acres of land was all to be applied to irrigation, the people who got that water would not be able to stand the burden, because the water that is put through the transmountain diversion is at a very high cost rate. Therefore, rather than get it all on irrigation, they have tried to reconcile, within that proposal, the provision for municipal water far beyond what the original proposal contemplated. At that time Albuquerque was a rather small city of 35,000.

Mr. WILLIAMS of Delaware. There has already been allocated $29,200,000 to municipal and industrial use. Where is it indicated in the report that any part of the $53,400,000 will be collected from municipal or industrial use?

Mr. ANDERSON. The Senator has overlooked the word "tentatively." The report reads:

> Twenty-nine million two hundred thousand dollars have been made tentatively to municipal and industrial water supply * * *.

Mr. WILLIAMS of Delaware. All of this would have to be tentative, but we have a a right to expect it to be allocated with a reasonable degree of accuracy. These are not rounded figures.

Mr. ANDERSON. It is not allocated with a reasonable degree of accuracy; it can be secured only tentatively until contracts are entered into with the municipalities. When contracts are entered into, it will no longer be tentative; there will be a firm commitment.

We expect that of the $86 million at least $50 million, and we expect as much as $70 million, will come from municipal water use. The portion which is allocated to 39,000 acres is exchange water. I agree that only a small portion of that will be repaid.

Mr. WILLIAMS of Delaware. I think this discussion only illustrates the importance of sending the bill back to committee until we can get a more complete report from the Department of Agriculture.

Mr. ANDERSON. The Senator knows that that action is not going to produce anything. He knows that when he proposes to send the bill back to committee.

Mr. WILLIAMS of Delaware. If we are going to spend $445 an acre we need all the information available. Under the second part of the bill $53,400,000 is to be allocated to irrigation; that water will be put on 120,900 acres at a cost of $445 an acre.

In the same report, on page 9, it is stated that users of this water would probably repay $8 million of the allocation to irrigation. The difference will amount to $378-an-acre subsidy, and I do not see anything provided in the bill to collect except to collect it from the taxpayer. The taxpayer would be paying $378 an acre over and above the reimbursable items to bring that land into production or to increase its productivity. I am quoting from the committee report. Certainly, if such money as that is going to be spent for water to be used on this land it is expected to increase its productivity, and if the productivity of the land is increased on the 120,000 acres, more agricultural products are going to be produced.

The Senator from New Mexico knows that.

Mr. ANDERSON. Surely, except for one thing. Over and over again, when the bill was up for debate, the same statement has been made, that the 81,000 acres included the Middle Rio Grande Conservancy District, against which has been charged $400-an-acre cost, would

not participate in the San Juan transmountain diversion, which is in there because the projects are needed there. If it has the water available in the next 5 years, it will try to sell it, as is being done in the Norman project, in the Amarillo project, in the Cheney division of the Wichita project. It is not going to be charged against them because the water is going to be taken out for municipal use. That is what is going to happen.

Mr. WILLIAMS of Delaware. I have great respect for the Senator from New Mexico. Momentarily let us withdraw the 81,600 acres from the discussion and speak of the remaining 39,000 acres. If we allocate all the cost to the 39,000 acres, as I read the bill there will be allocated $53,400,000 to irrigate that land. If we are not going to include the other acreage in the allocation of the cost there would be a cost of over $1,000 an acre. I do not think the Senator wants to say we are going to apply all the benefits of the bill to that one area.

I give the Senator the benefit of the broad breakdown, which would bring the cost down to $445 per acre.

Mr. ANDERSON. I hope the Senator from Delaware realizes that when one does not put water upon land one does not allocate charges to the land. If the 81,000 acres are to be taken out, it would be necessary to take out the share of the 81,000 acres in regard to the $53 million, and to put that share upon the municipal water.

This is not a new approach. This procedure has been followed in bill after bill after bill passed by the Congress. It is not new in this instance at all.

I say to the Senator from Delaware, I tried to explain last night to the able Senator from Ohio that in the original concept of the Middle Rio Grande Conservancy District there was a tract of land of 1,706 acres. I eventually bought that tract of land. That tract of land is not being used, in this particular instance, for a bit of the water. A great deal of the land is in a subdivision. No water is being put on it. We are pumping water to it.

In a short time my tract of land will have shrunk to less than 23 acres, on which I have my own house, my own stables, and my own property. The rest of the land is all in a subdivision, which I have owned recently.

Therefore, we would not start assessing against the irrigation benefits at $400 and some an acre. We would sell the municipal water, charge the higher price, and liquidate the entire debt. That is what will happen in this project.

Mr. WILLIAMS of Delaware. I do not question for a moment what the Senator from New Mexico says. I merely point out that if that was the intention of the committee and if it is going to happen, then why, out of the sum of $86 million, is there an allocation of only $29,200,000 to municipal and industrial water supply? Why did the committee not give us a more accurate estimate as to how the costs will be apportioned?

Mr. ANDERSON. I have tried to explain to the Senator.

Mr. WILLIAMS of Delaware. I am simply quoting from the committee report.

Mr. ANDERSON. We cannot make that allocation until we know what contracts will be made with the municipalities, any more than we can build the San Juan transmountain diversion until a contract is made.

We finished, only a short time ago, the Amarillo project. The Congress authorized the Amarillo project in the late 1940's, I think it was. It may have been 1950. I am not sure exactly what year it was. It was passed by the 81st Congress, in any event; and I believe the date was 1950.

The Amarillo project involved a cost of approximately $90 million. A great portion of the project was allotted to irrigation, but that much was not spent for irrigation. A great deal was spent for municipal water for the area. The water will not be charged off as an irrigation cost, but the cost will be reimbursable, with interest, to be paid by Amarillo and the surrounding communities.

The Senator from Delaware could have picked up a copy of the bill for that project and said, "This is terrible. You are charging hundreds of dollars an acre to the land." The project did not work out that way.

The same principle applies with respect to the Norman project, in Oklahoma. The same principle applies with respect to the Wichita project, in Kansas. This is not a bit different.

Mr. WILLIAMS of Delaware. All I point out to the Senator is that if we needed the extra production in agriculture I would say it was a wonderful thing to have this reservoir of potential productive capacity. We could then irrigate and increase our agricultural yields. I think it is great that we have such a reservoir.

The point I make is, Why should we bring such land into production now, and then put it into the soil bank so that the Government can pay men $40 or $50 an acre not to use it? Why should we pay $300 or $500 or $1,000 an acre—whatever figure the Senator wishes to use—of the taxpayers' money to make this land productive and then turn around, in another program, and permit another agency of the Government to give farmers $40 or $50 an acre to take the land out of production? It does not make sense to do so at a time when we do not need the increased production.

Mr. LAUSCHE. Mr. President, will the Senator yield to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. LAUSCHE. Last night in the discussion I had with the Senator from New Mexico the opinion was expressed that the Navajo desert land had a value of between $5 and $10 an acre. If we take the median of those figures, the value would be $7.50 per acre.

Under the provisions of the bill the Government would have to spend $136 million to provide water for land which is worth $7.50 an acre. In other words, if the Government spends approximately $1,200 per acre for the provision of water, the land can be made productive. Is the Senator familiar with that fact?

Mr. WILLIAMS of Delaware. The Senator is correct. We pointed that fact out. As the Senator from New Mexico pointed out, even after we subtract from the $136 million project cost the cost of that water which is expected to be used by the municipalities or the towns in the area, we still have a cost of around $1,000 an acre which it will be necessary for the Government to spend to bring the land into production, to increase the productivity of the land.

The cost of irrigating the second area dealt with in the bill is $445 per acre.

I was not present when the Senator from Ohio pointed out the land value. The land, as the Senator says, sells today for perhaps $10 an acre. I certainly do not object to helping the Indians, but this project is not all for the Indians.

The Senator from New Mexico says that the bulk of the collection will be from industrial and municipal uses of water. I disagree with that conclusion. I am simply quoting from page 8 of the committee report, in which it is specifically pointed out that only $29.2 million has been allocated to municipal and industrial water supply.

It is true that in the same report it is pointed out that money will be collected from municipal and water users over a period of time, totaling an estimated $55,622,000. I simply point out that the figure of $55 million, which it is stated will be collected, is arrived at by amortizing the loan over a period of 50 or 100 years. Both of those year terms are mentioned in the bill. I do not know which term of years will be used. With the interest added on for 50 or 100 years the sum of money the Government may collect in that period of time may be $55 million, but that does not change the irrigation cost figures.

I simply invite attention to the fact that in the meantime the Government will be paying at least 4 percent interest on the $29 million because it is necessary for the Government to borrow the money. In addition, the interest the Government will collect will be at the rate of only 2.63 percent.

Mr. ANDERSON and Mr. LAUSCHE addressed the Chair.

Mr. WILLIAMS of Delaware. I yield first to the Senator from New Mexico, and then I will yield to the Senator from Ohio.

Mr. ANDERSON. I hope the Senator will state he recognizes that the figure of 2.63 percent, which was used by the able Senator from Ohio last night, is a figure which represents the average interest cost to the Government on its long-term debt.

Mr. WILLIAMS of Delaware. No; I do not.

Mr. ANDERSON. Just a minute, please. If the cost should go up to 4 percent, that would be the charge against the land. It is so provided in the bill. There is the same provision in regard to the upper Colorado storage project, and every participating project comes under the provision.

I was the author of Senate bill 500. I think I know what is in the bill.

The Senator from Delaware must know, when he refers to 4 percent, he is saying that the long-term interest rate paid by the United States on its seasoned bonds will be 4 percent, and that it is not 4 percent now. The figure now is 2.63 percent. The interest which would be charged against the district is 2⅝ percent, which is the rate to the nearest one-eighth percent of the average cost to the Government of the United States.

Does the Senator have anything to say to contradict my statement?

Mr. WILLIAMS of Delaware. I certainly do.

Mr. ANDERSON. What is it?

Mr. WILLIAMS of Delaware. I ask the Senator from New Mexico to show me any specific instance in the last 2 years in which the Government has been able to sell its long-term bonds at any interest rate such as he mentions.

Mr. ANDERSON. The Senator is switching his position again.

Mr. WILLIAMS of Delaware. I am not. I said the Government could not borrow this money for less than 4 percent.

Mr. ANDERSON. I said it was the average cost of the long-term debt.

Mr. WILLIAMS of Delaware. I know what the Senator said. I point out that the Senator said he referred to the average interest cost on long-term bonds, which takes into consideration that the Government has some 2½-percent bonds on the market which are selling far below par. The Government may have some 1½-percent bonds out.

Mr. ANDERSON. If the Senator will permit me to interrupt——

Mr. WILLIAMS of Delaware. Just a moment. All of those bonds, at stated rates of interest, are taken together and averaged out, and that gives the rate of 2.63 percent. The Senator from New Mexico knows very well that if the Government goes to the market to sell its bonds today—and that is what it will have to do in order to raise the money for this project—the Government cannot sell its bonds today for 3¾ percent or 4 percent interest. That is the case today, and a year ago the interest rate was higher than it is today.

The Senator from New Mexico knows as well as I that the Government cannot today sell long-term bonds at the rate of 2.63 percent, or borrow money at such a rate. We are speaking of money the Government will have to borrow.

I do not propose to amend the existing law. I know how the law was written. The Senator from New Mexico has accurately stated it.

But the Senator from New Mexico knows as well as I that the average interest rate is not the rate which the Government will have to pay for the money. I do not think the Senator would argue that point.

Mr. ANDERSON. I would argue that point.

Mr. WILLIAMS of Delaware. Does the Senator think the Government can borrow money at 2.63 percent interest?

Mr. ANDERSON. I say that the Senator from Delaware cannot tell me what the interest rate will be 10 years from now. The Senator from Delaware and I have seen the bond interest rate go up and down.

Mr. WILLIAMS of Delaware. We are talking about interest rates today. The interest rate today, if the Government goes to the market to sell bonds today, is such that the Government cannot sell long-term bonds at 2.63 percent interest, and the Senator from New Mexico knows it as well as I.

Let us not kid ourselves that the Government is going to finance this project at a rate of 2.63 percent. The Government will lose a minimum of 1 to 1½ percent interest.

Mr. ANDERSON. I simply say to the Senator from Delaware, if he can find a banker who knows that for a fact he would have no business working in an ordinary job, because all of the people in the universe cannot predict it accurately.

These long-term rates go up and down. Already we have seen a drop, and we may see some more.

Mr. WILLIAMS of Delaware. I know they go up and down. I am not talking about the future; I am talking about conditions today.

Mr. ANDERSON. The rate has gone to 4 percent, it has dropped to 1½, then to 3, and then it has dropped back to 2. The Senator from Delaware cannot predict the rate.

Mr. WILLIAMS of Delaware. I can prove the rate by one of the ablest bankers in the United States—the Senator from New Mexico [Mr. ANDERSON] himself—who knows that a long-term Government bond today cannot be sold at 2.63. We are speaking of 50-year financing here. The bill calls for a 50-year amortization, and I venture to say that the Senator from New Mexico, who is one of the ablest bankers in the Senate, would not subscribe to a single bond if the rate was even 3.62 percent.

Mr. ANDERSON. A short time ago I bought some at that rate, and the Senator from Delaware can go into the market and do likewise.

Mr. WILLIAMS of Delaware. Did the Senator from New Mexico pay par for these 50-year bonds which had low rate coupons?

Mr. ANDERSON. I call for this morning's issue of the Washington Post. We shall bring the Senator up to date.

Mr. WILLIAMS of Delaware. I shall be glad to ask that the current rates be printed in the RECORD. To save confusion, I shall have printed in the RECORD the list of long-term Government bonds and their yields, as quoted in the Wall Street Journal today. We shall not find a single long-term bond at 2.63. I do not believe we will find many issues within 1 percent of the 2.63 rate in the bill.

Mr. ANDERSON. Oh, yes, the Senator will.

Mr. WILLIAMS of Delaware. The list will show approximately 3.6. The rates are approximately 3.5 to 3.75, but the Senator will not find one at the rate of 2.63.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield to the Senator from Ohio.

Mr. LAUSCHE. As I understand, the Senator from Delaware takes the position that the statement which appears on page 5, describing the allocation of costs with regard to the San Juan-Chama project, is erroneous.

The PRESIDING OFFICER. The time of the Senator from Delaware has expired.

Mr. ANDERSON. Mr. President, I am sure that if the Senator from Illinois were present, he would yield an additional 15 minutes to the Senator from Delaware. Since the debate is on a motion, I believe the time would come from the time limitation on such motion.

The PRESIDING OFFICER. Without objection, the Senator from Delaware is recognized for an additional 15 minutes.

Mr. WILLIAMS of Delaware. I yield to the Senator from Ohio.

Mr. LAUSCHE. If my statement is correct, then the statement on page 9 is wrong. On the other hand, if the statement on page 9 is correct, then the statement on page 5 is wrong.

Has the Senator followed what I have said?

Mr. WILLIAMS of Delaware. Yes.

Mr. LAUSCHE. Both statements cannot be correct.

Mr. WILLIAMS of Delaware. I have made that point. I do not see how those two statements can be reconciled. I do not question for a moment that there may be variance, and I do not question the sincerity of the Senator from New Mexico. The point I make is that I do not think we should pass a bill in which there are conflicting statements on the one hand that we would allocate $53 million as the cost of the project and, on the other hand, that the estimated recoverable costs would probably be $8 million. I believe we should get that point straight.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. ANDERSON. When the Senator said that those two statements are in conflict, it sounded a little like the man who said he could find in the Bible the statement that there is no God. The statement in the Bible is, "The fool hath said in his heart, There is no God." The entire statement must be read.

Consideration of this section is no different. It speaks of the $8 million and provides that the cost to irrigation in excess of the irrigators' ability to pay would be repaid from New Mexico's apportionment of the Upper Colorado River Basin fund revenues as provided in the act. That is money that would come into the Treasury from the use of water supplied by a great dam and the use of the land. That is a proper return to the State of New Mexico. We have chosen to pay a portion from irrigation and a portion from other revenues. But all of that sum becomes reimbursed.

Mr. LAUSCHE. Is it possible that, realizing that the proposed authorization must have some relationship to irrigation, on page 5 irrigation was made the principal expenditure, but on page 9, after authority would be achieved, the project would be changed from irrigation into one of providing waters for municipal and industrial uses?

Mr. WILLIAMS of Delaware. The Senator is correct. Apparently they reserve the right to allocate a substantially larger proportion of expenditures to municipalities, and if the municipalities do not contract for the water, then they can then sit back and let the taxpayers provide the funds.

Earlier we had a little discussion about long-term interest rates. I should like to have printed in the RECORD at this point from page 23 of today's issue of the Wall Street Journal the list of long-term bonds along with their current yields.

This column is headed "Treasury Bonds."

There being no objection, the list was ordered to be printed in the RECORD, as follows:

	Bid	Asked	Previous bid	Yield
2½s, 1964-69, December	90.26	91.2	90.28	3.70
2½s, 1965, February	96.30	97.2	96.30	3.44
2½s, 1965-70, March	90.12	90.20	90.16	3.74
2½s, 1966-71, March	89.16	89.24	89.18	3.74
3¼s, 1966, May	101.6	101.10	101.6	3.47
3s, 1966, August	97.28	98.2	97.26	3.40
3⅜s, 1966, November	98.31	99.1	98.31	3.56
3½s, 1967, November	99.11	99.13	99.11	3.72
2½s, 1967-72, June	88.14	88.22	88.16	3.75
2½s, 1967-72 September	88.10	88.18	88.12	3.73
2½s, 1967-72 December	88.12	88.20	88.14	3.71
3⅞s, 1968, May	101.0	101.4	101.0	3.69
4s, 1969, October	101.30	102.6	102.0	3.70
3⅞s, 1974, November	100.16	100.24	100.20	3.79
4¼s, 1975-85, May	104.2	104.10	104.6	3.85
3¼s, 1978-83, June	91.24	92.0	91.26	3.78
4s, 1980, February	102.10	102.18	102.12	3.80
3½s, 1980, November	95.18	95.26	95.20	3.80
3¼s, 1985, May	91.14	91.22	91.16	3.77
3½s, 1990, February	93.18	93.26	93.22	3.86
3s, 1995, February	88.0	88.8	88.4	3.61
3½s, 1998, November	93.10	93.18	93.13	3.82

Fractions represent thirty-seconds; 101.1 means 101 1/32.

Mr. WILLIAMS of Delaware. Reading from the bottom up, the bond issue of 1998 is listed as yielding 3.82. No yields are listed anywhere near the 2.63 percent rate that the Senator from New Mexico has quoted. Short-term rates are down to 2.83, but the long-term rate—and we are speaking of long-term bonds—range from 3.40 to 3.86.

Mr. ANDERSON. I do not object to the printing of the list. If we had looked at the same table a year ago, we would have seen such bonds in the 4-percent bracket.

Mr. WILLIAMS of Delaware. I presume that the statement is true, but we are talking about today's rates.

Mr. ANDERSON. The Senator cannot predict what the rate will be. It may be 2 percent in the future.

Mr. WILLIAMS of Delaware. I am not predicting what the rate may be in future years. I am and was speaking of what it is today.

I understood the Senator from New Mexico to say that the Government had no trouble in selling bonds yielding 2.62 percent.

Mr. ANDERSON. The Senator from Delaware can search the record for hours and he will not find a statement which comes remotely close to that figure.

Mr. WILLIAMS of Delaware. If the Senator now states we will not come remotely close to being able to sell long-term Government bonds at such low rates as 2.62 percent then I believe we are in agreement.

Mr. ANDERSON. The Senator from Delaware has quoted me on this subject. I hope he will examine the record carefully.

Mr. WILLIAMS of Delaware. The Senator has quoted himself. I was pointing out that in financing the project over a period of 50 years the Government would have to pay 1 to 1½ percent more than the proposed 2.62 in order to cover the charges which are provided in the bill, and I stand on that statement.

Mr. ANDERSON. That is the statement that I object to.

Since the project will be finished in about 12 years, I do not believe that the Senator from Delaware will be able to look into a crystal ball and know what the interest rates will be 12 years from now.

Mr. WILLIAMS of Delaware. No, and neither will the Senator from New Mexico know whether the proposed $220 million expenditure will come close to covering the cost of the project.

Mr. ANDERSON. No.

Mr. WILLIAMS of Delaware. Regarding the proposed $220 million cost the Senator added, "or whatever may be necessary." So the amount is wide open. The cost is only based upon a 1958 estimate.

Mr. ANDERSON. All I can say to the Senator from Delaware is that the Glen Canyon Dam was let for bids and was built for an amount below the cost estimates. There has been some slight change. I cannot predict what the bids will be. Neither can the Senator from Delaware predict what they would be. I say only that the construction costs for the portion of the Glen Canyon Dam and the Navajo Dam projects which has been let so far were below the estimates, and we may be facing a period in which heavy construction will tend downward in cost. I should not attempt to make that prediction, but I think we can stay within the estimates.

Mr. WILLIAMS of Delaware. I do not quarrel with the estimates submitted by the committee. My whole discussion has been around that estimate and its allocation. I am not pulling figures out of the air. The average interest will be about 2.63 based upon committee report. That interest rate is stated in the Senator's report. I say that we could not sell a bond for 50 or 100 years at a rate of 2.62 percent. The Senator from New Mexico is one of the ablest Senators on this subject, and I am confident he would not buy a single one of such bonds through his banking institutions at such yields.

Mr. ANDERSON. May I return to the Department of Agriculture situation?

Mr. WILLIAMS of Delaware. Yes.

Mr. ANDERSON. There is a document—House Document No. 424—entitled "San Juan-Chama and Navajo Indian Projects."

I refer to page 448 of that document, on which appears a letter from the Department dated March 17, 1958. The letter continues to pages 448, 449, 450, 451, 452, 453, and 454. The Senator from Delaware has suggested that the bill had better be recommitted to the committee so that the Department of Agriculture may obtain the report. If the Senator wishes to find this letter, I suggest that ought to satisfy him and he should withdraw his motion to recommit.

Mr. WILLIAMS of Delaware. I should like to read the report. I have a copy of the transcript of the hearings here. To what page does the Senator refer?

Mr. ANDERSON. I said to the Senator that we did not ask the Department of Agriculture for a report on this particular project in these hearings, nor did we have one at the hearings.

Mr. WILLIAMS of Delaware. The point I make is that the Department of Agriculture representative states that since we have spent billions of dollars in the disposal of surplus agricultural commodities we cannot justify bringing more land into production at such exorbitant costs.

Does the Department of Agriculture give a breakdown of the commodities which will be raised on the 220,000 acres of land?

Mr. ANDERSON. Let me submit a question to the Senator from Delaware. A short time ago we passed the Cheney project in Kansas. That was never referred to the Department of Agriculture. Did the Senator move to recommit that bill?

Mr. WILLIAMS of Delaware. I do not remember that I did; however, I did not vote for it.

Mr. ANDERSON. Then we passed what is called the San Luis project in California, in which the distinguished minority whip, the Senator from California [Mr. KUCHEL] was interested. Did the Senator ask that that bill be recommitted?

Mr. WILLIAMS of Delaware. I made the same argument on that bill that I am making here today. I opposed the bill at that time. I do not recall the first bill the Senator has mentioned. I know I made the same argument on the last one he has mentioned.

Mr. ANDERSON. The point is that the Senator from Delaware did not ask the Department of Agriculture about it.

Mr. WILLIAMS of Delaware. Yes, I did. I had a report from the Department of Agriculture in the case of the San Luis project, sponsored by the Senator from California. I had a report showing a breakdown as to the potential crops to be produced. Senators will find that was put in the RECORD at the time. That is not the situation here today. We have no such breakdown. The point I make is that we are being asked to spend up to a thousand dollars an acre to increase the productivity of 220,000 acres of land in order to produce more crops which are already in overabundance.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. LAUSCHE. I am inviting the Senator's attention to page 4 of the committee report under the heading, "Navajo Indian Irrigation Project." I read:

> It is estimated that the repayment ability of the water users over a 50-year period would be approximately $21 million of the total construction cost. The remaining costs would be nonreimbursable.

It is my understanding from a member of the staff that the Navajo Indians will not have to pay anything for the cost of construction of the $136 million project. If they are not to pay anything, is it not a fact that the statement in this paragraph is incorrect?

Mr. WILLIAMS of Delaware. The Senator from New Mexico will correct me if I am in error, but it is my understanding that out of the $135 million estimated cost of the Navajo project, $21 million of it is classified to be repayable, but this repayment is recognized as doubtful.

Mr. LAUSCHE. By whom?

Mr. WILLIAMS of Delaware. I believe the Senator will find that the repayable record, based on past performance, on these Indian reservation projects has been very poor. As I believe the Senator from New Mexico has pointed out earlier in his statement, while this is technically repayable, not too much of $21 million is expected to be repaid.

Mr. LAUSCHE. I should like to ask on that point——

Mr. WILLIAMS of Delaware. Although technically it is proper to say that it is reimbursable, I understand payment from the Indians is not expected.

Mr. LAUSCHE. I would like to ask whether under the law any of the cost can be allocated to the use that the Navajo Indians will put it to. We could have the staff member testify on that point.

Mr. ANDERSON. The staff member does not have to testify to anything. This is not anything new. The language in the bill is the same as in every other bill dealing with an Indian irrigation project in the United States ever since the passage of the Leavitt Act. It has not been reimbursable since the passage of the act.

Mr. LAUSCHE. I ask whether under the law, as it has been written into various bills, any part of the cost can legally be charged to the Indians. If it can, I would like to know. If it cannot, I would also like to know.

Mr. ANDERSON. I have answered the Senator's question. Under the Leavitt Act, when there is an Indian irrigation project involved anywhere in the United States, as long as the Indian is a ward of the Government and owns the land, the Federal Government cannot collect money from its own ward.

Mr. LAUSCHE. That is correct.

Mr. ANDERSON. That is absolutely the situation. That has been in existence ever since the Leavitt Act was passed. It has not been changed in any Indian irrigation act, so far as I know, ever since the Leavitt Act was passed.

Mr. LAUSCHE. Therefore the sentence on page 4—that it is estimated that the repayment ability of the water users over a 50-year period would be approximately $21 million of the total construction cost—should be changed to read that none of the costs is reimbursable so long as the property remains a part of the reservation in the ownership of any ward of the Government, in trust for him. Is that correct?

Mr. ANDERSON. I believe there might be an exception to that rule, and that is why the language is somewhat indefinite. The Navajo Dam was built to greater capacity than originally contemplated by the Department of the Interior and by the original report. It was constructed to greater capacity than had been originally contemplated in passing the upper Colorado River storage pact. The Arizona Power Co.—the Utah Construction Co. originally—applied for the right to construct a power station. The canals will be larger, in order that they may serve them. Subsequently, the Navajo Indians decided to build a lumber mill. They already had one lumber mill, but they decided to build a second one at what is to be known as Navajo, N. Mex. There is no town there now, but the Navajo Indians are spending $7½ million from their tribal funds which they have received in royalties on oil, and they are building a sawmill, so that people can find employment in the sawmill. When that sawmill is completed, they will need a municipal water supply, which will be brought in by large canals to serve the community.

It is contemplated that the Department of the Interior will charge for these specialized services, which will supply the water to the municipality, to Colorado, to the new town of Navajo, to the Arizona Power Co., and I believe to the Public Service Co. of New Mexico, which contemplates building a plant there, and they will pay for that water. To the extent that the water is sold to individuals, that will be reimbursable and will come from the total appropriation of $134 million. Nobody knows how much that figure will be, and no one has the ability of knowing.

The PRESIDING OFFICER. The time of the Senator from Delaware has expired.

Mr. ANDERSON. I yield an additional 15 minutes to the Senator from Delaware. There is an hour allotted to each side. I am sure if the able majority leader were here, he would yield some time.

Mr. WILLIAMS of Delaware. I have been left in control of the time allotted to the minority leader.

Mr. ANDERSON. I am glad to yield the Senator additional time. If he runs out of time, we will allot him more time.

Mr. WILLIAMS of Delaware. I thank the Senator.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. PROXMIRE. What has been stated consistently and repeatedly during the argument on the bill is that the land which would be brought into substantial production through irrigation would not be put in surplus crops. Yesterday, in support of this stand, the distinguished Senator from New Mexico made that statement. I will read from what the Senator said in answer to a question from the Senator from Ohio, when he quoted from a statement by Maurice McCabe, executive director, Navajo Tribal Council, which appears in the hearings at page 39:

> We have found that 3 crop-years of alfalfa will build up the soil, and that thereafter, without missing a single crop-year, the lands can be sown to a number of grasses and will produce superior irrigated pasture capable of supporting 2 cows or 10 to 12 sheep per acre. Our training farm produces 6 tons per acre of alfalfa. The proposed Navajo Indian irrigation project should be just as productive.
>
> The actual crop of the farmers will be the livestock they feed from their pasture crops and certain truck farm products.

They will not be actually growing, perhaps, surplus feed grains, but they will be doing exactly the same thing, because a product exactly equivalent to feed grains will be sold through the milk pail and through the livestock—hogs, or beef, and so forth. So, as I understand from reading the testimony in the hearings, they will produce exactly the same kind of ultimate crop—livestock—which the bill we passed the other day was designed to reduce production of, to wit, feed grains. To be fed to livestock. In this case, today it will be grasses, which will be fed to the livestock. The difference is that in the case of this bill the livestock will graze on grass for which this bill would provide irrigation, under the bill which we passed 2 weeks ago, the livestock would not be fed because feed grain land would be taken out of production.

I should like to raise one more question. Although the distinguished Senator from Delaware and I believe the bill would result in producing more livestock at a time when we already have serious dairy and poultry problems. The justification given by the distinguished Senator from New Mexico for providing more than $1,000 an acre in Navajo land is as follows:

The U.S. Government, under a treaty, guaranteed that it would do certain things for the Indians. However, many of those things have not been done. The Navajos have been and are currently maintaining suits against the Federal Government because of the failure of the Federal Government to fulfill its treaty obligations.

It seems to me that this is a disorderly way for the Federal Government to comply with the treaty. There is no showing of how much the Navajos are suing for. There is no way of showing whether this proposal would be a partial compensation of the Navajos or whether the Government would be excessively compensating them.

We are told that the Federal Government owes something to the Indians, and therefore it is proposed to pay them $1,000 an acre. I think, as the Senator from Delaware has shown, the Senate might provide a more sensible way to compensate the Indian than this bill would provide. It seems to me that the

method provided in the bill is disorderly, imprecise, and almost certainly inequitable. The fact is this would be worth $6,750 per Navajo. Is this the way to compensate for $50 or $500? How much do we owe? There is no showing.

Mr. WILLIAMS of Delaware. I agree with the Senator from Wisconsin. I have great respect for our obligations to the Indians, whether they are Navajos or others. There is no difference of opinion as to what we as a nation owe them. However, I do not see how we would help them in this instance if we paid from $1,000 to $1,200 an acre to enable them to increase the productivity of land which today is valued at only $10 an acre.

According to the bill, 18,000 to 20,000 Navajos would be affected. Dividing that, the amount to be paid is $6,750 a person. There are about 85,000 Navajos all together in that particular area. On a per capita basis, $1,585 would be spent per person. I think we ought to know more about what we are doing when we move into such heavy costs.

Then there is another part of the bill which has nothing to do with the Navajo Reservation. The San Juan-Chama proposal will increase the productivity of 120,900 acres. According to the committee report it will cost $86 million. Of the $86 million total cost, $53 million is allocated to irrigation. That is according to the committee report. Dividing that, based upon 120,000 acres, gives $445 an acre which will be spent to increase the productivity of this 120,000 acres. That acreage has nothing to do with the Navajo reservation.

I quote from page 9 of the report:

> Irrigation water users probably would repay about $8 million of the allocation to irrigation.

If it is proposed to pay back $8 million, then dividing that, it means that there will be a recovery of $67 per acre, or a net taxpayers' subsidy of $378 an acre.

I shall repeat what I said earlier and then conclude my argument. It does not make sense to me to have the Senate pass a bill today to increase the productivity of 230,000 acres of land at a cost to the taxpayers ranging from $445 to $1,000 after having passed only a few days ago a bill under which the Government can pay as high as $50 an acre to keep similar acreage out of production. That does not make sense. I do not believe the taxpayers can put enough money in Washington to keep such a contradictory program operating.

We have not received any information from the Department of Agriculture which has indicated that they approve this project or that they believe it is feasible at this time in the light of the tremendous agricultural surplus. I think we ought to have such information before we act.

Mr. BUSH. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. BUSH. Looking at the estimated cost-benefit ratio in connection with this project, I read from the report, on page 5:

> The benefit-cost ratio of the initial stage development is 1.26 to 1 for a 100-year period of analysis and 0.81 to 1 if direct benefits only are used in a 50-year period of analysis.

Mr. WILLIAMS of Delaware. That is correct.

Mr. BUSH. I should have thought, as a former member of the Committee on Public Works, that this project would be regarded as one having a very poor or unsatisfactory or unconvincing benefit-cost ratio. Would that statement apply in a case like this, in the Senator's judgment?

Mr. WILLIAMS of Delaware. It would apply. My understanding is that the reason the 100-year reimbursable period was used was to make the project halfway feasible from a mathematical standpoint. But even that does not suffice, because as the committee report points out, the reimbursement under the $135 million provision of the bill is only $21 million, and everyone recognizes that even that amount may well never be repaid.

As the Senator from Ohio pointed out in connection with the other section of the bill, the $86 million part of the bill, $53 million is allocated as an estimated irrigation cost, but of that amount the committee report states that probably only $8 million will be collected.

For these reasons, Mr. President, I think the bill should be recommitted until the Senate gets more information.

Mr. LAUSCHE. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. LAUSCHE. To summarize, is it the position of the Senator from Delaware that under the bill the Federal Government will be spending $221 million to place approximately 230,000 acres of land into farm production?

Mr. WILLIAMS of Delaware. That is correct, except that from the $221 million, there is an allocation of $29,200,000 as a potential to be reimbursed from industrial and municipal uses. Other than that, the rest of the amount is to be allocated to irrigation. It will increase the productive capacity of land presently valued at only $10 per acre.

Mr. LAUSCHE. The taxpayers will be spending $221 million, less $29,200,000, for the purpose of putting about 230,000 acres of land into farm production.

Mr. WILLIAMS of Delaware. The Senator is correct.

Mr. LAUSCHE. That will be spent in spite of the fact that approximately 2 weeks ago we authorized the payment of about $40 an acre to farmers who agreed to take acreage out of the production of feed grains, so as to bring consumption into some relationship with production.

Mr. WILLIAMS of Delaware. That is correct. So far as any Member of the Senate knows, once water is put on the land proposed to be irrigated, at a cost to the taxpayers of $445 to $1,000 an acre, the same land may well be put back into the soil bank, and the Government would then pay the farmer from $40 to $50 an acre not to cultivate this land.

Mr. LAUSCHE. Two weeks ago we passed a bill which provided for the payment of money to take land out of production; today it is proposed to pass a bill to pay money to put land into farm production.

Mr. WILLIAMS of Delaware. That is correct.

Mr. LAUSCHE. The Senator from Delaware has used a figure of $10 as the per-acre value of the land. Does the Senator know that last night the Senator from New Mexico [Mr. ANDERSON] stated that the Navajo Indian Reservation land had a value of between $5 and $10 an acre?

Mr. WILLIAMS of Delaware. That was the basis of using the outside figure of $10.

Mr. LAUSCHE. I used the median figure of $7.50. Why does the Senator from Delaware say that the per-acre cost of the Navajo project would be $1,000 when, in fact, dividing 110,000 into $136 million results in a cost of $1,200 an acre?

Mr. WILLIAMS of Delaware. The Senator from New Mexico pointed out—and I accepted his explanation—that of the $135 million allocation of cost to that project, a portion would be allocated to the bringing of water to a couple of areas for drinking purposes. That water would not be used on the land. Therefore, I accepted that reservation.

Mr. LAUSCHE. I find no such statement in the report.

Mr. WILLIAMS of Delaware. No, neither do I; but the Senator from New Mexico is familiar with the area, and I accepted his explanation. However, even by accepting his explanation, it still leaves approximately $1,000 an acre as the cost of the irrigation. We are paying $1,000 or $1,200 an acre by either set of figures and increasing the productivity of land today, which based upon the committee report has a present valuation of $5 to $10 per acre. It does not make sense.

Mr. CHAVEZ. Mr. President, will the Senator from Delaware yield to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. CHAVEZ. That is the story of the West. At the beginning of this century, land in the Central Valley, San Joaquin, and Sacramento, Calif., and in the Rio Grande and Las Cruces areas of New Mexico, and around El Paso, Tex., was not worth 30 cents an acre. Land which in the early 1900's could be bought for $3 an acre, could not be bought now for $2,000 an acre, because today there is water on the land. But some persons seem to be very exercised about the fact that we are going to put the land into production. It is true that only the other day we passed a bill because of the surpluses which now exist. But those surpluses will not always exist. I have more confidence in the United States. If those who today are out of work could afford to buy the groceries they need, the existing surpluses would no longer exist.

We want to have enough productivity in the United States. Twelve or fourteen years from now, when this project is finished, we may need that productivity.

I am sorry to impose further on the time of the Senator from Delaware; but I wish to state that we owe something to the Indians. That obligation is based on a treaty which was made between our Government and the Indians during the administration of Abraham

Lincoln. Today the Government is carrying out part of what it agreed to do then. For many years, the Government neglected to do what it should have done under that treaty; but today the Indians are going to school and are coming into their own and are demanding their rights. That is why the Indians should be treated properly.

Mr. WILLIAMS of Delaware. Mr. President——

The PRESIDING OFFICER. All time available on the motion has expired.

Mr. WILLIAMS of Delaware. Mr. President, I yield myself some of the time available on the bill.

In reply to the statement made by the Senator from New Mexico, let me say I have as much respect for the Indians and realize our responsibility to them as he does. However, I do not see that we shall accomplish much by paying $1,000 to $1,200 an acre to increase the productivity of land which today is valued at only $5 or $10 an acre.

In addition, I emphasize that only half of the land involved in these projects is in the Indian reservation—120,900 acres of the land is off the reservation and has nothing whatever to do with the Indians. But, here again, it is proposed that the Government pay $445 an acre to increase the productivity of that land, with $378 per acre charged to the American taxpayers. There would be reimbursement as stated in the report of only $67 an acre.

As the Senator from New Mexico has stated, of course this land will produce more crops if it is irrigated.

I also recognize the importance of the great West. But I remind the Senator that the great West was settled by our ancestors who moved out there and proceeded on their own; they built their own homes, and they did not expect the U.S. Government to spend $500 or $1,000 an acre to bring that land into production. If they had waited for that to happen, the West would not have been settled.

Mr. CHAVEZ. Similarly, in those days those who lived in the East did not ask the Federal Government to deepen the channel of the Delaware or the channel of the Hudson River; but today the Federal Government is doing just that. Likewise, in those days the people did not ask the Federal Government to pay the cost of constructing public roads.

Mr. WILLIAMS of Delaware. If we have more harbors than we need, it would be foolish to spend money to dredge other harbors.

What is now proposed is that the Government spend $135 million to increase the productivity of 110,630 acres of land in New Mexico in order to enable more crops to be produced from that land. Today there is a surplus of agriculture commodities so great that there are not enough warehouses to hold all of it. Furthermore, only a short time ago the Senate voted for the expenditure of large sums of money to be used to take land out of production. Yet this proposal calls for bringing more land into production.

When I was in school, my teacher once said that only a fool would attempt to develop perpetual motion. But in this case it is proposed that we try to have the Senate run in two directions at the same time.

Mr. CHAVEZ. The only trouble with that argument is that this land will not be put into production at this time. It is contemplated that it will take at least 12 years, or perhaps more, to complete the project.

I am quite sure the Senator from Delaware will want this body to vote for the expenditure of funds to control industrial pollution on the Delaware River. That request will be made in connection with a bill which soon will be before us.

That problem does not exist in the West. But the Indians in the West do have the problem to which we have been referring. Many of the pioneers who came to this great area in the West came from Utah, and settled on land which once was almost worthless. But by their hard work they developed that land in the early 1900's, and today much of that land cannot be purchased for $2,000 an acre.

We are only attempting to make possible the development of our natural resources; we are not requesting anything new from the Government. This has been done again and again.

Ten times the amount being requested for these projects is being spent on the Glen Canyon project, on the Colorado River, between Utah and Arizona. In Utah there are projects that cost more than this one will cost. Former Senator Watkins, of Utah, a Republican, knew about this project when we first began it. It was during the period of time when the Republicans had a majority of the membership of the Senate that Senator Watkins, of Utah, helped us with the initial conception of this project.

Mr. President, this project is a worthy one.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Delaware that the bill be recommitted.

Mr. ANDERSON. Mr. President, I yield 5 minutes to the Senator from California [Mr. KUCHEL].

The PRESIDING OFFICER. The Senator from California is recognized for 5 minutes.

Mr. KUCHEL. Mr. President, half a century ago, when a great American President, Theodore Roosevelt, laid down a new reclamation policy for the people of the United States, the Congress approved it. It has ever remained the law of this land.

I come from the West. The West is semiarid. The West would not have the economy which it is so proud to have today if it had not been for the assistance given to the West by the Government of the United States.

I come from California. Today, California is on the way to having a population of 20 or more million people. California could not support the economy it now enjoys if it were not for the fact that a fearless Congress approved and underwrote the repayable cost of the Central Valley project, in northern California, and the repayable cost of the Hoover Dam project, in southern California.

In those days there were obstacles which had to be overcome. Obstacles also exist today, while this session of Congress is proceeding with its work. The obstacles were overcome in the past; and the obstacles are going to be overcome now.

I object to the motion to recommit the bill. I shall vote against the motion, and I trust that the Senate will do likewise.

Mr. President, in California we have a problem which is shared equally by the people of New Mexico, the people of Colorado, the people of Arizona, the people of Nevada, the people of Wyoming, the people of Texas, the people of Utah—indeed, by all the people who inhabit that great, farflung region of the United States. That problem is insufficient water. That is why Congress in its wisdom has tried to find other ways—by investigation and scientific research—to augment our dwindling water supply.

Mr. President, many years ago the States through which the Colorado River wends its long way into the Gulf of California designated representatives to meet and to try to agree upon a basis for allocating the all-too-little Colorado River water which they know would, in the years to come, represent the difference between economic life and economic death in the States they represented. They agreed to the Colorado River compact. It is the law of the river today.

I am grateful to the chairman of the committee and to the other members of the committee for writing into the bill, proposing the great project which is before the Senate today, an amendment which I offered, and which is a part of the bill. I wish to read that amendment, because it is important to all the States in the Colorado River Basin. I read section 9 of the bill:

> SEC. 9. In the operation and maintenance of all facilities, authorized by Federal law and under the jurisdiction and supervision of the Secretary of the Interior, in the basin of the Colorado River, the Secretary of the Interior is directed to comply with the applicable provisions of the Colorado River compact, the Upper Colorado River Basin compact, the Boulder Canyon Project Act, the Boulder Canyon Project Adjustment Act, and the treaty with the United Mexican States, in the storage and release of water from reservoirs in the Colorado River Basin. In the event of the failure of the Secretary of the Interior to so comply, any State of the Colorado River Basin may maintain an action in the Supreme Court of the United States to enforce the provisions of this section, and consent is given to the joinder of the United States as a party in such suit or suits, as a defendant or otherwise.

That is the law of the river, and into the pending bill, this mandatory directive to follow it is clearly written.

I am grateful that section has been written into the bill. It was written into the bill to provide that, with respect to the upper Colorado River storage projects, the means were given to any State which might feel aggrieved to walk across the street to the Supreme Court and litigate the question of whether or

not waters were properly being allocated under the compact itself.

The people of New Mexico have a right to use every drop of water which the Colorado River compact gives them, and the people of California likewise have an equal right to use what the Colorado River compact has given to them for use—no more and no less. This is an honest attempt to provide in the bill sufficient safeguards for all States in the upper and lower basin to have the compact enforced, in the fashion in which that compact, the attendant compacts, and the Mexican Treaty provide.

I am grateful for the discussion we had in the Interior and Insular Affairs Committee the other day. A dark cloud hangs over the full development of the waters of the Colorado River in the Upper and the Lower Colorado Basin. Two sister States, two friends, two neighbors, have joined in a lawsuit.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. KUCHEL. Will the Senator yield me a little more time?

Mr. ANDERSON. I yield 5 additional minutes.

Mr. KUCHEL. Arizona and California are involved in a lawsuit to determine what allocation of water, under the Colorado River compact, should be made to each of those States.

I regret exceedingly that the special master in the Supreme Court of the United States in Arizona against California has walked away from that problem and has said, in so many words, that the contention which the government of California makes is irrelevant, because the Congress has indicated a top level of development of water projects in the Upper Colorado River Basin, and that therefore there is no hazard to the people in the lower basin, for their full rights to water under the compact.

That is not so, Mr. President, and it will be a tragic thing for the Senate and the House of Representatives, in any future Congress, to have to face the dog-eat-dog controversy when one State would oppose development in another State because it wanted to take care of its own first. We have a compact. It ought to be determined judicially how the compact divides the water. That is the only reason for the lawsuit.

The proposed legislation we have before us today has been approved by the Department of the Interior. As the Senator from New Mexico iterated a few minutes ago, it was, in the last session, approved by the Department of Agriculture. And the compact will control.

I regret with all my heart that we from the West are required, on the floor of the Senate, to justify the use of funds out of the Federal Treasury for repayable projects, for without Federal authorizations there would still be semiarid and barren deserts in the West.

Many of my colleagues from the Middle West have come to Congress asking for agricultural assistance, and the Congress has given it. Many of my colleagues from the East Coast States have come to Congress with a request for help in rivers and harbors development, and the Congress has appropriated money. Many of my colleagues from States needing help as the result of floods have made requests for help, and the Congress has appropriated money to rehabilitate that which they had lost. And I hope we do not need to feel overly burdened for our coming here and asking that we be given legislative approval of projects recommended by the executive branch of the Government to develop the scarce water supplies in western America, particularly when we guarantee to repay them—a rather unique difference, my colleagues, with respect to the use of public moneys generally for the States of the American Union.

I speak here as an American. I know what is done to help the people of New Mexico helps me. I know what is done to help the people of California helps us all. I know what we do to help the people on the eastern seaboard helps the strength of our country and helps all our citizens.

I hope the motion will be voted down, as I feel it should be.

Mr. HICKENLOOPER. Mr. President, will the Senator from California yield?

Mr. KUCHEL. Yes.

Mr. HICKENLOOPER. The Senator has said repeatedly that this project, or these projects—and I presume he is speaking of the project which is contained in the amendment—provide a guarantee of repayment. It is my understanding that there is only a very small portion of the expenditure which has any possibility of ever being repaid, and that is speculative; and that some $64 an acre may be paid, over several years, as to a part of the project, when the cost of the project is $400 an acre, that the rest of the cost will be borne by the Federal Government, and that as to other areas, there is no possibility of substantial repayment.

I wondered about the Senator's statement in connection with the guarantee of repayment. I have supported many projects in the past. I have supported self-supporting projects. I think Congress has not been negligent in the fantastic amounts of money we have spent in developing waterpower and water resources in the West; but I have tried to limit my support to those that are reasonably repayable. What is an important element with me is the fixed period of time, and the reasonable certainty, that economic developments will be repaid.

I had another reason why I question this project, but I return to my first question. Where is the guarantee of repayment of the project, amounting to some $250 million?

Mr. KUCHEL. Mr. President, my able friend from Iowa is what he says he is. He has been a friend of the West. I acknowledge his friendship.

Generally speaking, Mr. President, the history of repayment to the Federal Government by reclamation projects for reimbursable costs is a good one. My recollection is that the projects in California, now going through the process of repayment by the water users and by the powers users, have actually paid into the Treasury excess moneys which are available for such expenses of the Government as may be necessary.

Specifically, with respect to the project which is now before the Senate, I have listened a half dozen times to the specific answer to the question of the Senator. Because the able junior Senator from New Mexico has the arithmetical figure before him, I shall ask him to indicate specifically what are the provisions with respect to repayment. Generally, however, the history of repayment, I say to my friend from Iowa, has been good.

Mr. HICKENLOOPER. The history of repayment is not the question. What are the provisions in the bill which are safeguards in this respect?

Mr. ANDERSON. In the original bill we had a provision which made the Navajo project reimbursable, exactly as the other projects were reimbursable, to be paid partly by the farmers and partly by the Glen Canyon Dam and the sale of electricity.

There was an objection because the Navajos are the wards of the Government. Therefore, we changed the provision in regard to the Navajo land subsequently, to conform to the provisions in the Leavitt Act, which provides the cost in nonreimbursable until the Indian sells the land or until the tribe disposes of the land. All of this relates to the land on the Navajo Reservation. There are some 7,000 exchange acres related to the 110,000 acres on the Navajo project.

This is over and beyond the Navajo land. This portion is not reimbursable until the Navajo tribe disposes of the land, when it will become reimbursable to the Treasury. This is the same as the provision in the Leavitt Act, which provides the cost is nonreimbursable so long as the Indians own the land.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. WILLIAMS of Delaware. There are 110,630 acres on the Navajo tract, but there are 120,900 acres on tracts which have nothing to do with the Navajo provision.

Mr. ANDERSON. I am simply trying to deal with the Navajo situation. The Navajo unit is 110,000 acres. All but 7,000 acres of it is on the Navajo Reservation. This 7,000 acres of the public domain will be exchanged for Indian land and become a part of the reservation which will be in addition, which will be not reimbursable because it will come under the provision of the Leavitt Act.

The remaining acreage, as the Senator from Delaware clearly pointed out, is some 120,000 acres. Eighty-one thousand of those acres are in the Middle Rio Grande Conservancy District. I have stated repeatedly, time and time again, I believe that the water which might be used on that land as supplementary irrigation water will be sold instead to the cities and the defense establishments and will be fully reimbursable. There are no contracts now, any more than there were contracts in regard to the Amarillo project or the Canadian River project.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. ANDERSON. Mr. President, I yield myself 5 more minutes.

The contracts waited 10 full years before they were signed by the municipalities.

In addition, when the Cheney division of the Wichita project was approved, there was a provision for irrigation. The municipality of Wichita will pay most of the cost. I think the same will apply in this instance. We will find, eventually, that of the $86 million more than $60 million will be repaid by municipal water, although the present provision is only for some $20 million.

Mr. HICKENLOOPER. I should like to ask the distinguished Senator from New Mexico, who is as well qualified as, if not better qualified than, any other Senator in regard to agriculture, as a result of experience and background in the field, a question in this regard.

We are in the process now of seeing whether a so-called emergency farm program will work, and we are proposing a long-range farm program which will take land out of production, and the Government will pay for doing so.

As I understand the proposal, the cost for this proposal will be nearly $1,000 an acre, to bring land into production. Why would it not be better to pay the usual rate for keeping land out of production, by simply giving $40 or $50 an acre to the owners, rather than to spend $1,000 an acre to bring the land into production?

Mr. ANDERSON. I had intended to discuss that situation with my longtime friend, the Senator from Vermont [Mr. AIKEN], with whom I have worked on agricultural legislation.

A safeguard was written into the upper Colorado River storage project, somewhat as the basis of suggestions made by the Senator from Vermont [Mr. AIKEN] to me about this land. I shall deal with it first, and then with the construction period.

The Senator from Vermont will remember that we put a provision in the upper Colorado River storage project which applies to every participating project. It applies not alone to this project, but to all the projects in Wyoming, to all the projects in Utah, to all the projects in Colorado, and to all the projects in New Mexico.

The language is:

Provided further, That for a period of ten years from the date of enactment of this Act, no water from any participating project authorized by this Act shall be delivered to any water user for the production on newly irrigated lands of any basic agricultural commodity, as defined in the Agricultural Act of 1949, or any amendment thereof, if the total supply of such commodity for the marketing year in which the bulk of the crop would normally be marketed is in excess of normal supply as defined in section 301(b)(10) of the Agricultural Adjustment Act of 1938, as amended, unless the Secretary of Agriculture calls for an increase in production of such commodity in the interest of national security.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. ANDERSON. May I finish, please?

The Navajo Indians have stated that they do not intend to grow any crop which is now in surplus. In fact, I know enough about the project to say that the Navajo Indians certainly would not produce any cotton, because they could not. The Navajos would not produce rice or peanuts, which are basic commodities, because they could not. The Navajos would not produce corn, because corn does not grow well in the area.

There could be some production of silage, for the animals, to be sure. The Senator from Wisconsin worries about that, but I say that the per capita income of the Navajo Indian is only $467 annually, while the per capita annual income for the rest of the Nation is $1,940. Navajo Indians need the crops for their own use.

Mr. HICKENLOOPER. What will the Indians produce?

Mr. ANDERSON. The Navajos will produce truck gardens and alfalfa, which will be fed to their own stock and dairy animals, because their dietary problems are severe.

Mr. HICKENLOOPER. Is it not pretty expensive to pay $1,000 an acre to grow alfalfa?

Mr. ANDERSON. No, it is not, because the Indians can produce 6 tons of alfalfa an acre when the land gets into production.

I remind the Senator that the schedule under which the land will be developed involves some 14 years. There are 2 years for preconstruction planning and 12 years for actual construction. That is a total of 14 years.

Nobody knows what will be the agricultural situation in this country at the end of 14 years. The project will take a long time, as I mentioned, and as the Senator from Vermont will recognize.

Mr. AIKEN. Mr. President, will the Senator yield to me?

Mr. ANDERSON. I am happy to yield.

Mr. AIKEN. What is the estimated increase in the population of the United States for the next 14 years?

Mr. ANDERSON. It will be millions. I do not have the exact figure, but the population keeps increasing.

Mr. AIKEN. The population increase will be something over 40 million, in addition to the people we have at the present time.

Mr. ANDERSON. Yes.

Mr. AIKEN. These people will need food and fiber by the time the project is completed; is that correct?

Mr. ANDERSON. The Senator is correct.

Mr. AIKEN. The project will take 14 years?

Mr. ANDERSON. Yes.

Mr. AIKEN. It has been said that the land is eligible to be put in the soil bank. Does the Senator from New Mexico understand that this land could be put in the soil bank?

The PRESIDING OFFICER. The time of the Senator has again expired.

Mr. ANDERSON. Mr. President, I yield myself an additional 5 minutes.

Mr. AIKEN. Could the land of the Navajo Indians be put in the soil bank?

Mr. ANDERSON. It is not being put into a soil bank. It is grazing land. It would be eligible, I suppose, if the Indians wished to do so. The answer to the question of the Senator is "Yes." The Indians could put this land under the program. It is worth only a few dollars an acre, but they could put it in the soil bank if they wished to.

Mr. AIKEN. What soil bank?

Mr. ANDERSON. They could put it in the program.

Mr. AIKEN. There is not any soil bank for the land.

Mr. ANDERSON. The Senator is correct. It is not a soil bank.

Mr. AIKEN. There is a 1-year proposal.

Mr. ANDERSON. Yes. The Navajos have not done that, either. They have not done it, if they could have, and they would not do it if they could.

Mr. AIKEN. If the Navajo Indians put the land in the soil bank, would they be paid upon the basis of the present productive capacity of the land or upon the basis of the anticipated productive capacity of the land 14 years from now?

Mr. ANDERSON. The Navajos would be paid upon the basis of the present production of the land. That is all they could get now.

Mr. AIKEN. In enacting legislation such as this we seek to provide for a population of 225 million or 230 million, rather than 180 million.

Mr. ANDERSON. The Senator is correct.

Mr. AIKEN. We are looking ahead 14 years. This land cannot possibly go into the soil bank at the present time, because there is not any soil bank for that type of land.

Mr. ANDERSON. My longtime friend from Vermont, who knows more about agriculture, I think, than any other Senator in the Chamber, knows that when irrigated land is developed it is not put into production immediately. It is necessary to level the land first. After the land has been leveled, a healing crop or a cover crop is put on the land. That crop grows for several years, and is plowed up repeatedly, until humus is put back into the soil.

Mr. AIKEN. In all probability there will be perhaps a 50 million increase in the population of the United States before this land can be used?

Mr. ANDERSON. Surely. That is why we have not regarded this project as being competitive in any way with other crops.

Mr. President, it would be surely a tragedy to send the bill back to the committee, which has studied the proposal four times. It was studied once under the able former Senator from Colorado, Mr. Millikin, when the general project was under consideration, and it has been studied twice subsequently under the late Senator Murray of Montana, at which times the bill was reported to the Senate, passed by the Senate, and sent to the House of Representatives. It has been considered the fourth time this year by the Committee on Interior and Insular Affairs.

Certainly no additional period of study is required in order to find out what needs to be done. I am ready to vote.

Mr. ELLENDER. Mr. President, will the Senator yield for a question?

Mr. ANDERSON. I yield.

Mr. ELLENDER. I am sorry I was not present to hear all the debate. I was informed that the project would cost a little more than $1,200 an acre in order to bring water to the land. Is that statement correct?

Mr. ANDERSON. That estimate is a subject of some argument. I say the cost would be nearly $1,000 an acre. There are some additional costs involved.

We have some obligation to build homes for Navajos on the reservation. We are now transporting hundreds of Navajo children as far away as Los Angeles in order to afford them schooling.

Mr. ELLENDER. I am not arguing against the bill. I only wish to learn the cost.

Mr. ANDERSON. There is a cost estimate of $1,000 an acre.

Mr. ELLENDER. How is that money proposed to be repaid to the Government? Is it on a 40- or 50-year basis?

Mr. ANDERSON. I have already stated to the Senate, and I repeat to the Senator from Louisiana, that the land under discussion is Indian land. The one established rule under the Leavitt Act is that when improvements are made on Indian lands, they remain in the Treasury until the Indians alienate the land. When the Indians sell the land, the assessment must be paid.

Mr. ELLENDER. Otherwise, the Government pays the entire cost?

Mr. ANDERSON. As it does on every other Indian irrigation project in the United States.

Mr. WILLIAMS of Delaware. Mr. President, I shall take but 1 minute. I do not think we should permit the debate to close with the thought that all of the land covered in the bill is Indian land. As the Senator from New Mexico has ably pointed out, from the $220 million potential cost of the bill, $155 million would be allocated to the cost of bringing water to 110,000 acres on the Navajo Indian Reservation. The cost would be $1,000 to $1,200 an acre in order to bring in the water. He has properly pointed out that there is in effect no repayment expected on this tract.

Over and above that point, under section 6 of the bill it is proposed to bring water down to 120,900 acres of additional land in New Mexico at a cost of $86 million. Of that $86 million $29 million would be allocated as potentially being reimbursable cost for municipal and industrial use. That calculation would leave $53,400,000 as allocated based upon the committee report as the cost of the irrigation.

Based upon the committee report, $53,400,000 would be allocated in the New Mexico area of the San Juan-Chama project to the cost of bringing water to 120,900 acres.

Then I quote from page 7 of the report:

> Irrigation water users probably would repay about $8 million of the allocation to irrigation.

That is the statement in the committee report. That would be a reimbursement of $67 an acre. Anyway one might wish to figure it, it would leave $378 an acre, as a direct Government subsidy to bring this land into production.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield to the Senator from Ohio whatever time he wishes.

Mr. LAUSCHE. The argument has been made that the cost of these projects will be reimbursed to the taxpayers of the United States.

Examination of the law and the arguments made in the Senate Chamber yesterday and today will disclose that none of the costs of the Navajo irrigation project would be reimbursable, so long as the 110,000 acres remained in the possession of the Indian reservation. Reimbursement could come to the Federal Government only if and when the subject lands might be sold by the Navajo Indians.

With regard to the San Juan-Chama project, which would cost approximately $86 million, taking the arguments in their most favorable light, only $26 million would be repayable. Thus it is clear that in an expenditure of $221 million, $26 million would be reimbursed to the Federal Government. One hundred and ninety-five million dollars would be paid by the taxpayers for those two projects. What are they? The Navajo project consists of 110,000 acres of land which would be provided with water for irrigation purposes. The cost of the project would be $136 million. One thousand two hundred dollars an acre for water would be expended to supply land that is now worth $7.50.

I respectfully submit to the Senate that there is no economic feasibility in the proposal contained in the bill. The land is worth $7.50 an acre now. It is desert land. The taxpayers of the United States are requested to expend $1,200 an acre to provide water to produce food of which we already have an overabundance, and in the face of the fact that 2 weeks ago we passed a bill to pay farmers $50 an acre to take their acreages out of feed grain production.

The second part of the project, the San Juan-Chama district, would cost $86 million. Reimbursement would be in the amount of $26 million, leaving a cost of $60 million to be borne by the taxpayers; 120,000 acres are involved. The Senator from Delaware has pointed out that it would cost the taxpayers about $300 an acre to make the land food producing.

Finally, I ask how we can justify to the taxpayers of the United States the argument made 2 weeks ago that we must pay the farmer to stop producing, and today the argument that we must spend money to induce production. The two legislative efforts simply do not go hand in hand. Perhaps there is a magic wand with which we can change principles every 2 weeks. But even with all our erudition and ability we do not have the deep ability required to change what we declared 2 weeks ago to be green and now say that it is red.

I cannot return to the taxpayers of my State and say, "Last week I voted for a farm bill providing a payment of $50 an acre to farmers in order to take acres out of production, and this week I voted to spend $195 million to induce production." I cannot explain that course to them, and since it cannot be explained, I do not contemplate supporting the bill, although I would like to serve the Senators from New Mexico [Mr. ANDERSON and Mr. CHAVEZ]. I could not support the bill if it applied to my own State, the State of Ohio.

The PRESIDING OFFICER. The question is on agreeing to the motion to recommit.

Mr. KUCHEL. Mr. President, I am informed that no further time is desired. I am ready to yield back the remaining time.

The PRESIDING OFFICER. There is no time remaining on the motion.

Mr. ANDERSON. There is time remaining on the bill. I yield back all remaining time.

Mr. WILLIAMS of Delaware. I yield back all remaining time. If the motion to recommit fails I shall vote against the bill.

The PRESIDING OFFICER. All time has been yielded back.

Mr. KUCHEL. Mr. President, I suggest the absence of a quorum.

Mr. LAUSCHE. Mr. President, before the absence of a quorum is suggested, I make a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. LAUSCHE. If any amendment is offered, there will be available to each side the time originally prescribed in the unanimous-consent agreement. Is that correct?

The PRESIDING OFFICER. Under the unanimous-consent agreement, that is correct.

Mr. ANDERSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. KUCHEL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. The question is on the motion to recommit the bill. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN (when his name was called). On this vote I have a pair with the distinguished Senator from Colorado [Mr. CARROLL]. If I were at liberty to vote, I would vote "yea." If he were present and voting, he would vote "nay." I therefore withhold my vote.

Mr. SALTONSTALL (when his name was called). On this vote I have a pair with the Senator from Arizona [Mr. GOLDWATER]. If he were present, he would vote "nay"; if I were permitted to vote, I would vote "yea." I withhold my vote.

The roll was concluded.

Mr. HUMPHREY. I announce that the Senator from North Dakota [Mr.

BURDICK], the Senator from Tennessee [Mr. GORE], the Senator from Oregon [Mrs. NEUBERGER], the Senator from West Virginia [Mr. RANDOLPH], the Senators from Georgia [Mr. RUSSELL and Mr. TALMADGE], and the Senator from New Jersey [Mr. WILLIAMS] are absent on official business.

I also announce that the Senator from Colorado [Mr. CARROLL] and the Senator from Minnesota [Mr. MCCARTHY] are absent because of illness.

I further announce that the Senator from Texas [Mr. BLAKLEY] is necessarily absent.

I further announce that, if present and voting, the Senator from Texas [Mr. BLAKLEY], the Senator from North Dakota [Mr. BURDICK], the Senator from Tennessee [Mr. GORE], the Senator from Minnesota [Mr. MCCARTHY], the Senator from Oregon [Mrs. NEUBERGER], and the Senator from West Virginia [Mr. RANDOLPH] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER] and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The Senator from Maryland [Mr. BEALL] is detained on official business.

The pair of the Senator from Arizona [Mr. GOLDWATER] has been previously announced by the Senator from Massachusetts [Mr. SALTONSTALL].

The result was announced—yeas 17, nays 68, as follows:

[No. 24]

YEAS—17

Boggs	Hickenlooper	Proxmire
Bridges	Holland	Robertson
Bush	Keating	Scott
Byrd, Va.	Lausche	Thurmond
Capehart	Miller	Williams, Del.
Douglas	Prouty	

NAYS—68

Aiken	Fong	Magnuson
Allott	Fulbright	Mansfield
Anderson	Gruening	Metcalf
Bartlett	Hart	Monroney
Bennett	Hartke	Morse
Bible	Hayden	Morton
Byrd, W. Va.	Hickey	Moss
Cannon	Hill	Mundt
Carlson	Hruska	Muskie
Case, N.J.	Humphrey	Pastore
Case, S. Dak.	Jackson	Pell
Chavez	Javits	Schoeppel
Church	Johnston	Smathers
Clark	Jordan	Smith, Mass.
Cooper	Kefauver	Smith, Maine
Cotton	Kerr	Sparkman
Curtis	Kuchel	Stennis
Dodd	Long, Mo.	Symington
Dworshak	Long, Hawaii	Wiley
Eastland	Long, La.	Yarborough
Ellender	McClellan	Young, N. Dak.
Engle	McGee	Young, Ohio
Ervin	McNamara	

NOT VOTING—15

Beall	Dirksen	Randolph
Blakley	Goldwater	Russell
Burdick	Gore	Saltonstall
Butler	McCarthy	Talmadge
Carroll	Neuberger	Williams, N.J.

So the motion of Mr. WILLIAMS of Delaware to recommit the bill was rejected.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

The PRESIDING OFFICER (Mr. HICKEY in the chair). The bill having been read the third time, the question is, Shall it pass?

The bill (S. 107) was passed.

Mr. LAUSCHE. Mr. President, I should like to have the RECORD show that on the passage of the bill I voted "nay."

Mr. MANSFIELD. Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. HUMPHREY. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I am about to move that the Senate proceed to the consideration of executive business, for the consideration of certain nominations on the Executive Calendar.

Mr. DIRKSEN. Mr. President, before the Senate proceeds to the consideration of executive business, I wish to ask the majority leader what the schedule is for the remainder of the day and also for tomorrow and the remainder of the week.

Mr. MANSFIELD. It is the intention to have the Senate consider various nominations during the remainder of the afternoon. It is hoped that the Senate will convene at an early hour tomorrow, to begin consideration of the measure to extend the Sugar Act, which recently was reported by the Finance Committee. If the Senate finishes its action on that measure by tomorrow night, there will be no business for the rest of the week. If the Senate does not complete its action on that measure tomorrow, it will meet on Thursday, to take final action on that measure, because in connection with it we are faced with a deadline.

Mr. DIRKSEN. I should like to ask whether there will be any more record votes this afternoon; I make this inquiry for the information of all Members.

Mr. MANSFIELD. So far as I am concerned, I know of no other record votes to be taken today, and I do not think there will be any other record votes today. However, we cannot make an ironclad promise.

Furthermore, following the response to the previous question, I would say that there is a unanimous-consent agreement for the Senate to consider tomorrow, following the morning hour, the measures on the calendar to which there is no objection.

Mr. DIRKSEN. I thank the majority leader.

ORDER FOR ADJOURNMENT TO 10 O'CLOCK A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate concludes its session today, it adjourn until tomorrow at 10 o'clock a.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana [Mr. MANSFIELD] that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

MR. A. W. HUBBARD'S REPORT ON CARIBBEAN AND LATIN AMERICAN COUNTRIES

Mr. HUMPHREY. Mr. President, during the month of February, at my request, Mr. Alfred W. Hubbard, of Minneapolis, a distinguished research analyst, editor, and businessman, took careful notes during his visit in the Caribbean area. The results of these notes appear in the form of a report prepared for me, which is both illuminating and challenging.

I believe, Mr. President, that it well illustrates the point that we should be gathering information on the relationships of our Nation with other nations through making use of private citizens as well as through our regular diplomatic channels.

I am making Mr. Hubbard's report available to the Secretary of State, to the Director of the International Cooperation Administration, and to the Administrator of the food for peace program. It will be a valuable document, and I know that it will be most carefully studied.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a report prepared by Mr. A. W. Hubbard, entitled "A Report on Caribbean and Latin American Countries, January 27 to February 28, 1961."

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT ON CARIBBEAN AND LATIN AMERICAN COUNTRIES

(Conducted by Alfred W. Hubbard, especially for Senator HUBERT H. HUMPHREY, January 27 to February 28, 1961)

The following report and observations were to originally have covered the Leeward and Windward Islands of the Caribbean, and the South and Latin American countries of Venezuela, Colombia, Cost Rica, and Nicaragua. However, at the conclusion of the Venezuela phase the airline strike intervened causing a delay at Caracas, Venezuela, and eventually necessitating the termination of the investigation and a return to the United States.

The specifications as to the areas of information desired were delineated as follows:

1. To obtain information on the medical problems in the Caribbean and Latin American countries.
2. The doctor shortage.
3. The quality of medical care in general.
4. The number of hospital beds available.
5. The quality of hospitalization.
6. Medical research being undertaken.
7. The food shortage insofar as it applies to the common people.
8. Whether or not there has been any improvement in medical care for the average and lower classes.
9. How many public health clinics there are and how well used.
10. Adequacy of classrooms in the school program.
11. If school lunches are provided, and how.
12. Could surplus American foods be used for school lunch programs.

GENERAL OBSERVATIONS

Some general observations of our present and proposed programs of surplus food distribution brings up the matter in the choice of "Foods for Peace" as a slogan. This is probably a catchy and useful slogan in the United States where the aid is to come from; unfortunately a number of persons commented on this in a critical manner. It appears to be an unhappy choice of slogan in the Caribbean and Latin American countries, where the aid is to be distributed for consumption.

The connotation carried with the slogan "Food for Peace," seems to be allied with dollar diplomacy of buying of peace neutrality or time, in the cold war. At the point of use, a proper slogan must have a connotation which will permit a proud people to participate wholeheartedly in its distribution and consumption, for a worthy contributive purpose in a dignified manner. This is not to imply that peace is not a worthy objective, but that it does not carry the close personal feeling of what another type of slogan might accomplish.

After considerable pondering and questioning of a number of responsible persons in the area traveled, the slogan, "Food for Health," appears to be one that might more acceptably provide a better connotation. Also, that a symbol of a U.S. map outline with the words "U.S.A. Food for World Health" would probably not be subject to, or generate as much, criticism. The exception, of course, would come from cold war enemies of the United States. It is possible that these enemies may be at the bottom of these situations where certain populations refused to use powdered milk surplus provided, because the idea was injuriously implanted that the product contained a birth-control factor.

It would seem that the providing of such food surplus might better be planned on the basis of a loan to the country, which could in some way or another be liquidated in the future in actual and full repayment with interest. Or, at least, be shown to be liquidated by social, economic, industrial, and political advances so that there will be in the future an upgrading in the country and that eventually its national income will enable an equitable taxation for future reduction and/or liquidation of such food loans.

This adds to the complexity of the problem. In fact, it is not just simply a matter of making food available; the whole economy must be considered. Handouts, or charity of foodstuffs we have in surplus and do not need is repugnant. Nonetheless, foodstuffs we can charitably make available to poorer countries always run afoul of the appearance of a handout, or an attempt to try to buy their good-will alliance or neutrality. Such countries need to have help and direction to enable them to progress economically, if they are to liquidate the loans of needed food rather than to be placed in the position of accepting them as charity.

The wealth of such countries must come from its natural resources and the efforts of its people. Therefore, it behooves us to help show the way they may take to improve their position. And, of course, at the same time not contribute or aggravate further unbalance, an instability of world surplus and trade which in the end could affect not only the United States but the world, unfavorably.

In areas like Venezuela, minerals and petroleum make the problem somewhat less complicated insofar as the economic growth of the country is concerned. In this case it is the social and political climate which has aggravated the situation. This situation is entirely different in the Caribbean islands such as Anguilla, Mevis, Antigua, etc. There are no discovered mineral or petroleum bonanzas. The economies of these islands are based on an agricultural approach of sugar (already much in surplus), cotton, oil, nuts, and foodstuffs. The encouragement and establishment of processing industries for all types of products which can be grown from this soil would aid the economic progress of these countries.

One point common to both the Caribbean and Venezuela is that there is widespread malnutrition. This is especially true of the middle, low, and no income classes. It appears that about 25 percent or more of the total population is affected with subclinical and definitely clinical states of malnutrition. In the clinical states, emaciation, enteritis, gastroenteritis, and other conditions are rampant. The food deficits are most prevalent in the rural areas. In Venezuela conditions with respect to undernutrition are truly pitiful by U.S. standards. Some 50 percent of the total population are poverty stricken, with such low incomes or lack of any income as to invite hunger and malnutrition, which is truly vast.

Medical care in the Caribbean areas is from fair to poor to nonexistent, with about 2,000 to 5,000 or 6,000 persons per physician. Venezuela has a ratio for the country as a whole of about 1,500 persons per physician. Unfortunately, those physicians who are not in government service practice only in the cities, so the ratio becomes about 800 per physician in the cities and up to 5,000 per physician in the rural areas. And even in the cities there is much lack of care because the independent practicing physicians will only care for those who can afford to pay.

Another generalization concerns the timing of any program of assistance. In both the Caribbean areas, and especially so in Venezuela speed is extremely essential. Lofty words and aims are sweet to hear, but these must be implemented rapidly. The matter should be dealt with in days and weeks, not in months or years. If no real action is forthcoming at once in assisting the present government toward its worthy objective, Venezuela will become a much greater problem than now exists in Cuba. The Caribbean territories are experiencing much more favorable and stable governments but the need exists now, and the threat is ever present.

THE CARIBBEAN AREA

The territories covered in this report consist of St. Kitts, Nevis, and Anguilla administered as a single colony; St. Lucia, and Trinidad. Some observations indicate that conditions are similar in Antigua, Montserrat, and other islands in the West Indies Federation.

The population of St. Kitts-Nevis-Anguilla is about 57,472. (St. Kitts 38,624; Nevis 12,916; Anguilla 5,932). Sugarcane and cotton are the chief crops. St. Kitts, the largest of the three islands, is relatively flat, possesses a very fertile soil and is almost entirely devoted to the production of sugar. There is a large and efficient sugar factory connected with sugar estates by means of light railways. It is from the sugar industry that the main economic upkeep of the entire colony is maintained. The main crop on Nevis is cotton, but the production of sugarcane in small quantities and also vegetables and produce provide bare subsistence for what is largely a peasant community. Anguilla is agriculturally almost barren, and the inhabitants depend mainly upon the sea, fishing, and emigration for support.

For climatic and historical reasons, agriculture is the backbone of the territory's economy. Its financial returns, however, are insufficient to support a growing population and to supply the higher standards of living desirable for the majority of the community. Agriculture, therefore, needs to be supplemented by other sources of revenue. The establishment of light manufacturing industries is both necessary and desirable. The long-term problem is to secure such industrial development as will enable the territory eventually to support itself, and provide the social services and amenities it requires.

Within the past 2 years U.S. interests organized and established an edible oil factory on Nevis. This factory is to process copra and cottonseed from the territory. Unfortunately not enough such oilseeds are available, so the factory has been operating intermittently and at a financial loss. The same people have acquired a large plantation and are planting coconuts and peanuts as demonstration to other landholders on the island. This is a long term project and will probably not come into full fruition until 1968. Surplus peanuts from the United States on terms and prices to make this project economically feasible is urgently required at once. A similar experience is taking place on Montserrat, a nearby island, in the case of a factory to process tomato paste. Agricultural aid and know-how for raising tomatoes is urgently needed, otherwise the factory will be in a sorry condition financially.

Meanwhile, the need for certain minimum standards of social services is urgent and can only be fully provided with external assistance. Social services in all three islands are limited by the small economic resources of the territory. Nevertheless, it must be pointed out that during the past 15 years or so these services have been consideraly improved. This is especially so in the field of education, where there has been extensive school building programs. As is so often the case the staffing of the classrooms lags considerably behind the actual physical building program. Aid here could be in the form of assisting in educating more teachers.

For purposes of medical care, the three islands are divided into medical districts. And for each, financial provision is made for a medical officer who is a general practitioner. The main and most difficult problem is the recruitment and ability to pay specialist services. There is often difficulty in recruitment of district medical officers on a general practitioner level, but on the whole the districts are more or less adequately served. By less adequately, is meant that one district medical officer has too many persons to provide the type of care which would in some way compare to U.S. standards. There is at present, no surgeon, eye, ear, nose and throat, internist, or diagnostician. Assistance in the provision of the services of such specialists would be greatly appreciated by the people of these islands. Though less urgently required, the services of a radiologist and pathologist are also desirable.

Mental illness, as an example of the type of care provided, is typical. Since there are no psychiatrists or psychologists, there is a panel of two of the general practitioners called in when a case of mental illness is brought in. These two doctors examine and certify the case to the area mental hospital, which is in effect an insane asylum. Ambulant or outpatient care of mental illness does not appear to be practiced. Nor does the use of electro-shock or insulin-shock treatment appear to be employed. In asking about the extent of use of tranquilizers for ambulant treatment of mental disturbances, this also met with an inconclusive response indicating that this is not generally employed as a general treatment.

The status of physicians in the Caribbean areas is exactly opposite that of the States. The general practitioner receives the greatest income, the largest practices, and the greater general regard, as compared to the States where the specialists occupy the higher income positions. Medical care for the masses here is accomplished through government medical officers who are contracted for and paid out of government

funds. The income of government doctors is not attractive so the recruitment of them is difficult. Most physicians prefer independent private practice. As a result, the government services usually get the less able men. The rural areas are most deficient in decent medical care.

The only solution to this problem would be greater financial inducements for government services. Without aid in the form of grants, this is not possible until the economic situation of the territory is such that more funds could be budgeted to increased effectiveness of medical care. It might be wise for the examination of a program of scholarships to qualified students for medicine, and the specialties—nursing and technicians, in U.S. schools. This would be a long-term program, but definitely desirable.

The same type of program in the field of education might be examined. Difficulty in the recruitment of teachers is frequently mentioned.

There is some indication that there has been some improvement in the standards of nutrition. It is reported to be better among the masses than it formerly has been. Nonetheless some 25 percent of the population are substandard in nutrition. This would distribute 10 percent subclinical states of malnutrition and 15 percent definitely clinical signs of malnutrition. The reasons are several. Lack of income, ignorance of proper nutrition, and lack of proper foods. Regular school lunches are the exception. In recent years an agency of UNICEF has made some distribution of powdered milk. There is a disturbing rumor that the supply of this UNICEF milk is likely to be discontinued.

This program has met with varying degrees of success. In some areas the powdered milk was distributed to the schoolchild to take home. The parents would bring it to the stores for resale to add to their income. Poor use success was also present because of ignorance in the need and desirability of use of the milk. In some instances, the local custom of not drinking milk precluded its use. And several stories of its nonuse, because of the rumor that it contained something to prevent births, were picked up.

The diet of a schoolchild for the midday meal is a penny loaf and a sweet drink. That is, if there is money for this. Where no money is available, no lunch. A school feeding program in these islands should top the list of urgent programs. Not only should milk be made available, but also other elements of a better balance in nutritional meals.

Due to the drawbacks of powdered milk and the difficulty in educating the people for its proper use, it would be much better if a central milk reconstituting program were established and fluid milk and lunch delivered to the schools. This would assure that the child in school would receive and eat, or drink, the food under the eyes of the teaching staff. It would be preferable if the reconstituted milk were to be fortified with a 3-percent fat content in the form of copra, cottonseed, or peanut oil, and the basic amount of necessary vitamins and minerals required for proper nutrition. This could all be set up under the "U.S.A. Food for World Health," and so indicated.

As to quantity, on the islands of St. Kitts, Nevis, and Anguilla territory there are upwards of 14,000 school-age children. If the entire West Indies Federation were to be considered there would be in the area of 300,000 school-age children. If the milk reconstituting plant approach were considered, it would require at least one plant per island and several on the larger islands, such as Trinidad.

The nurse administrator of one of the hospitals requested that if there be a program of milk and lunches available, that the hospitals be included in this, especially for prenatal, obstetric, and pediatric cases.

Conditions on St. Lucia are not dissimilar to that described for St. Kitts-Nevis-Anguilla. Agriculture here provides the basis for their economy. The medical care situation is indeed more critical than it is for St. Kitts. The attached clipping provides the best indication of the urgency.

Trinidad is fortunately in a slightly better situation insofar as medical care is concerned, but in both St. Lucia and Trinidad the nutritional levels are far below accepted standards. Another newspaper clipping herewith attached, points up the problem as seen by Mr. Kenneth Sylvester, general secretary of the Trinidad and Tobago Teachers Union.

All in all there is much that a program of aid in medical care, education, and nutrition can do to alleviate distress in the West Indies. I realize Senator HUMPHREY, that you are aware that some need exists and that something should be done. But may I point out that the problem is urgent, and further, that an overall program dealing with not only the matters you specified in your letter, but a general economic approach should also be considered. If not, the aid will be in the category of a charitable handout with its eventual lag and perhaps discontinuance, with no improvement in the long-range betterment toward self-help due to more favorable economic stability in the future.

There could be some programs of financial aid to industries organized by U.S. interests, providing all equipment, materials, and supplies be purchased in the United States. Sort of an FHA program to accomplish the task of building the economy of specific islands, and based on what they can produce to be processed for internal area consumption.

VENEZUELA

At the outset the investigation here was started on the points requested, dealing with medical care, education, and nutrition. The matter soon developed into a most complex problem dealing with all phases of the economy, social and political, so that the entire situation required study.

On purely basic principles, it appears that Venezuela neither needs or deserves assistance. Here is a country of vast natural wealth. In minerals, such as iron ore, and in petroleum it is being actively exploited. The royalties are vast, so there are funds available. However, due to the political climate there is much squandering, theft, and inefficiency in handling such funds. It is reported that previous dictators decamped with hundreds of millions of dollars. Should the United States make good these deficits? The only justification for aid here is to combat the ideological warfare of the cold war for fear this country should fall within the Communist fields, and of purely human compassion for human suffering from want and deprivation. How far shall we go in asking the U.S. taxpayer to make good on the duplicity and depravity of unconscientious politicians? If we do nothing, Venezuela will surely fall within the Red orbit just as Cuba has done.

A vast complex of pressures are operating within Venezuela. Two of these of course, are inspired from outside the country. It is a seesaw of international communism and international democracy. Both of these are affected by trade and world power struggles. From within, we have the large landowners entrenched businessmen who do not want to see any changes which might challenge their domination of the business economy. Also from within we have the power hungry politicians struggling for local power, and opportunities for graft and grab of the country's resources before they too will be forced to decamp with a generous slice of the accumulated ill-gotten gains. This extends from the far left of downright communism to the near right, in all shades and degrees. Each of these are aided and abetted by the outside powers, alined both for and against each other. There are instances for both opposing outside powers aiding the same group, or trying to win over this same group.

In the large cities of Caracas, Valencia, and Maracaibo about one-half the population are housed in ranchitos or hovels. These are extremely crowded and without water or sanitation facilities. These are built on the mountainsides, and during rainstorms filth washes down from the top to the bottom. Infant mortality is very high, intestinal parasites, venereal disease, gastroenteritis, malnutrition, and other health problems are increasing rapidly.

It is reported that Communist-inspired movements are abetting the movement of the population from poverty stricken rural areas to the ranchito areas in the cities, so that they can be used to cause riots and embarrassment to the present government.

The total population of Venezuela is about 7 million. Two percent or less are the very wealthy of inherited fortunes, large landowners, and successful professional and businessmen. Ten percent are among the middle class. Thirty percent are in the lower middle class, and the remaining 50 percent are low income to poverty stricken.

Ten percent of the laborers are unemployed, 30 percent are underemployed. Over half are ill-housed. It is estimated that over 1,250,000 would be qualified for Public Law 480 aid.

Hunger and malnutrition are vast. There are large deficits in schools, water supply, clinics and hospitals, and other public facilities. With the large population increase overtaxing opportunities and facilities in the farm and rural areas, families flock to the large cities in search of work and food. This movement is aided by the Red groups in that they will be able to point to their misery and say that the government is doing nothing for them, and that they should demonstrate and riot to force the government to do something.

Only recently has Venezuela begun a land reform program. But, in this there is a woeful lack of proper planning, implementing, and execution of plans.

Dr. Arnaldo Gabaldon, Minister of Health, and a proven friend of the United States, says, "Venezuela is in the momentum of change. If our efforts toward change by evolution and using democratic principles fail, then the momentum of change will resort to revolution and the Castro Communists will step in."

After a failure of coalition with the present government, the leftwingers and dissidents withdrew. This leaves the Betancourt support limited to the rightist COPEI party and the middle-of-the-road AD party. In the last election Betancourt was supported in the outer rural areas, but only by 40 percent in Caracas. It is a very precariously situated government, with frequent uprisings occurring against his regime.

Venezuela has 293 hospitals and a reported 26,029 beds. In 39 general hospitals of 14,598 beds, there were 151,981 admissions. The average length of stay appears to be about 10 days, as compared to the United States at 5 or 6 days. Chronic long-term cases occupy many beds. Obstetric and pediatric cases take over 50 percent of all beds. There is an urgent need for a total of 32,000 beds in short-term general hospitals and 6,000 beds in long-term special hospitals. Thus it is readily evident that a large deficit exists. To compound this problem, the statistics are faulty. The university hospital is reported to have 600 beds. However, due to lack of equipment and staff, only 175 of these are now activated. The military hospital reported with 1,100 beds, has 300

activated for military personnel and 500 for social services. Some 310 are not activated because of lack of equipment and personnel. There are 5,182 physicians in Venezuela. However, most of these are in private, independent practices in the large cities, or in industrial or plantation clinics. The government has some physicians staffing the clinics.

There are a reported 6,735 nurses in the country. Upon repeated questioning, it was admitted that few of these nurses would qualify in any way for a registered nurse in the United States. Many are little better than our practical nurses and those who are considered practical nurses are more or less of the hospital orderly or maid classification. Training programs are in existence in the various hospitals, but due to lack of basic education in this population there is a great shortage of prospective students. They are now dropping requirements to 2 years of high school and in some instances less qualifications.

It should be of interest to note that while the price of drugs is controlled by government, anyone can, without a prescription, go into any parmacia (drugstore) and purchase over the counter almost any drug that is produced anywhere in the world. Having a stomach upset, the writer purchased a bottle of "sulfasuxidina" Merck, by simply asking for it. The price was under what one would pay in the States.

Since the Betancourt administration, there has been a significant program of constructing and equipping elementary and high schools, both in urban and rural areas as well as the university facilities. The great need is for the development of teaching staffs, faculties, and textbooks, etc. The previous dictator did nothing to augment education, preferring to construct hotels, monuments, parks, apartments, and such which was more productive of kickbacks and graft to decamp with.

The Institute of Nutrition maintains 467 rural stations where they provide a milk in powdered form, fortified with additional proteins, minerals, and vitamins. An example of this is being sent herewith. Dr. Eduardo Paez takes the stand that they would not distribute powdered milk unless it were so fortified. His reasoning on this is that he wants to get a complete nutritioned food in this glass of powdered milk to assure basic requirements. He also prefers animal proteins in the mixture. Incaparina, which is basically cottonseed meal fortified with yeast, etc., was rejected.

Dr. Paez estimates that mortality from malnutrition is as follows:

Rated per 100,000 population: 100,000 and over, 48.8: 50,000 to 100,000, 134.3: 15,000 to 50,000, 155: 5,000 to 15,000, 214. Thus it is apparent that malnutrition, as serious as it is in all city sizes, is five times that in the rural areas as it is in the very large cities.

There are now 85,000 children out of some 400,000 getting school lunches. Also there are 700 dispensaries providing preschoolers with 30 tons of milk food preparation, mainly in the interior of Venezuela. About 1 million need such nutritional help, and 900,000 of these are in rural areas.

The Institute of Nutrition also operates a program of popular restaurants for adults of the working class, so that they might have sufficient nutrition to work. There are about 31 of these popular restaurants. The program applies only to parents, and not to children. Dr. Paez is endeavoring to get the industries to take this over for their own workers. However, these were started with a price to the worker of $1 (Bolivar), and now the cost of living is about doubled and Government assumes the difference. The industries do not want to assume this program, but it is likely it will be legislated into existence. The oil companies and ore companies now have to provide such facilities, and also company stores at a low cost for employees. If Paez is successful to any degree, other indutries will be providing the same nutritional support.

The land reform program consists of the Government taking over large land areas and assigning small acreages, buildings, and farming equipment, along with an allotment, to persons they hope to move from the ranchitos. As stated before the left wing elements try to prevent this move because it doesn't serve their purpose.

One of the difficulties in a land reform program is that of technical assistance to the potential farmers. There are fewer than 100 agricultural extension officers. These should be expanded greatly, to assure success in the land resettlement program. The United States could aid best in this program by providing technical assistance and instituting a training program for agricultural extension officers, so that they may be taught how to get the most effective results out of the resources they have. This is preferable to large amounts of money in grants.

Any program of sending technical personnel for training purposes, is going to have to be handled very carefully. Should a number of technical men be sent to Venezuela for training agricultural extension officers, physicians, nurses, etc., it might look like an invasion of people from the United States. Therefore, it would be better if such technical instructors would be of Spanish origin if possible.

* * * * *

In any event, it is my opinion that the ICA program of the United States should be expanded with regard toward furnishing technical assistance. Any program instituted should have a real troubleshooter, who should be assigned this job for not less than 6 months, preferably a year or so to get the program underway and see that all stumbling blocks are effectively surmounted.

I do hope this report will be of help to you. Given more time I could perhaps cover the subject in greater depth, particulars, and comprehensiveness, but this was not possible. Should you chance to be in Minneapolis at any time in the near future, I would be happy to discuss the whole matter further.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of nominations on the Executive Calendar.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate proceeded to consider executive business.

COMMISSIONER OF EDUCATION

The Chief Clerk read the nomination of Sterling M. McMurrin, of Utah, to be Commissioner of Education.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

FEDERAL MEDIATION AND CONCILIATION DIRECTOR

The Chief Clerk read the nomination of William E. Simkin, of Pennsylvania, to be Federal Mediation and Conciliation Director.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. DIRKSEN. Mr. President, at this point in the RECORD, I should like to ask the chairman of the Committee on Labor and Public Welfare to place in the RECORD the biographies of these two gentlemen, because they are interesting.

Mr. HILL. Mr. President, I ask unanimous consent that biographies of these two gentlemen may appear at this point in the RECORD.

There being no objection, the biographies were ordered to be printed in the RECORD, as follows:

BIOGRAPHICAL SKETCH OF STERLING M. MCMURRIN, COMMISSIONER OF EDUCATION-DESIGNATE, OFFICE OF EDUCATION, U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Born in Woods Cross, Utah, January 12, 1914.

Education: Undergraduate education at University of California at Los Angeles and University of Utah. BA University of Utah, 1936. Graduate education at University of Utah and University of Southern California. MA University of Utah, 1937. Ph. D, (philosophy) University of Southern California, 1946. Post doctoral education: Columbia University, 1952–53, Union Theological Seminary, 1952–53, Princeton University, 1953.

Married to Natalie Barbara Cotterel, five children.

Experience: Assistant professor of philosophy, University of Southern California, 1946–48. Professor of philosophy, University of Utah, 1948 to present. Dean of the College of Letters and Science, University of Utah, 1954–60. Academic vice president, University of Utah, 1960 to present. Membership in the following organizations: Consultant—Ford Foundations Fund for the Advancement of Education, 1958, Faculty Fellow of the Fund for the Advancement of Education, 1952–53, for postdoctoral study. Member: American Philosophical Association, Mountain Plains Philosophical Conference (past president), Utah Academy of Sciences, Arts and Letters, etc., Phi Beta Kappa, Phi Kappa Phi, etc. Past president of Utah Conference on Higher Education, past member of executive committee on Pacific Northwest Conference on Higher Education, etc. Author of numerous articles on philosophy, religion, and education, specializing in the history of philosophy, contemporary philosophy, and the philosophy of history. Coauthor of "A History of Philosophy" (2 vols.), Henry Holt & Co.; "Contemporary Philosophy," Henry Holt & Co. Sample monograph publications: "Patterns of Our Religious Faiths," University of Utah Press; "Is There Freedom of the Will?" University of Utah Press. Since 1942 author of the article "Philosophy" for the Encyclopaedia Britannica Book of the Year. Travel: Europe, Russia, Middle East, and Orient. Government Service: Adviser to the University of Tehran, Iran, under arrangement with the U.S. Department of State.

BIOGRAPHICAL SKETCH OF WILLIAM E. SIMKIN, DIRECTOR, FEDERAL MEDIATION AND CONCILIATION SERVICE

Mr. William E. Simkin was born January 13, 1907, in Merrifield, N.Y. He is married to the former Ruth Commons, of Richmond, Ind., and has two sons.

Following receipt of a B.S. degree from Earlham College, Richmond, Ind., in 1927, he became principal of Central High School, Sherwood, N.Y. He also taught science and mathematics.

In 1930, he transferred to the staff of the Brooklyn (N.Y.) Friends School in order to pursue a part-time postgraduate course in economics at Columbia University.

His teaching career and graduate studies were interrupted by 5 years' service as a field representative in West Virginia for the American Friends Service Committee, working on a project of retraining unemployed miners in furniture manufacturing.

In 1937 he resumed his postgraduate education at the University of Pennsylvania and

also was a full-time instructor in industry at the university in the Wharton School of Finance and Commerce.

His career in labor relations began on July 1, 1939, when he became associate impartial chairman in the full-fashioned hosiery industry working under Dr. George W. Taylor who was then impartial chairman.

In 1942, he left the field of arbitration temporarily to enter the service of the National War Labor Board. He served successively as special mediation representative, chairman of the Shipbuilding Commission, and cochairman of the Steel Commission. His last service to the Government during this period was as a member of the fact-finding board appointed in the Greyhound bus dispute of 1946.

Following the war, he resumed full-time work in arbitration and, in 1950, was elected president of the National Academy of Arbitrators. At various times he has served as so-called permanent arbitrator in the shipbuilding industry (Bethlehem, Sun Ship, and Cramp Ship), the rubber industry (Goodyear and Firestone), the steel industry (Crucible and National Can), the rayon industry (American Viscose), the apparel industry (Men's Clothing & Dress in Philadelphia), and in transportation (Greyhound). He has also done an extensive amount of ad hoc arbitration work in a wide variety of industries, including arbitration of new contracts.

He also authored two books: "Arbitration of Grievances" (with Van D. Kennedy) and "Acceptability as a Factor in Arbitration Under an Existing Agreement."

Mr. Simkin is affiliated with the National Academy of Arbitrators and the Industrial Relations Research Association.

DEPARTMENT OF AGRICULTURE

The Chief Clerk read the nomination of John C. Bagwell, of South Carolina, to be General Counsel of the Department of Agriculture.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. JOHNSTON. Mr. President, the nominee happens to be from my hometown, and I want to thank the Senate for confirming the nomination.

BOARD OF DIRECTORS, COMMODITY CREDIT CORPORATION

The Chief Clerk read the nominations of Charles S. Murphy, of Maryland; John P. Duncan, Jr., of Georgia; Frank J. Welch, of Kentucky; James T. Ralph, of California; Horace Godfrey, of North Carolina; and Willard Cochrane, of Minnesota, to be members of the Board of Directors of the Commodity Credit Corporation.

The PRESIDING OFFICER. Without objection, the nominations are confirmed en bloc.

DEPARTMENT OF STATE

The Chief Clerk read the nomination of J. Kenneth Galbraith, of Massachusetts, to be Ambassador Extraordinary and Plenipotentiary to India.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Edward G. Stockdale, of Florida, to be Ambassador Extraordinary and Plenipotentiary to Ireland.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of William McCormick Blair, Jr., of Illinois, to be Ambassador Extraordinary and Plenipotentiary to Denmark.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of John S. Rice, of Pennsylvania, to be Ambassador Extraordinary and Plenipotentiary to the Kingdom of the Netherlands.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Kenneth Todd Young, of New York, to be Ambassador Extraordinary and Plenipotentiary to Thailand.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Edwin O. Reischauer, of Massachusetts, to be Ambassador Extraordinary and Plenipotentiary to Japan.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of William Attwood, of Connecticut, to be Ambassador Extraordinary and Plenipotentiary to the Republic of Guinea.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Anthony J. Drexel Biddle, of Pennsylvania, to be Ambassador Extraordinary and Plenipotentiary to Spain.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Aaron S. Brown, of New Hampshire, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to Nicaragua.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. MANSFIELD. Mr. President, I ask that the President be immediately notified of the nominations confirmed by the Senate.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

DEPARTMENT OF THE INTERIOR

The Chief Clerk read the nomination of John M. Kelly, of New Mexico, to be an Assistant Secretary of the Interior.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. DIRKSEN. Mr. President, I have made no comment on the ambassadorial nominations. I simply want the RECORD to show that, insofar as I am advised, the nominations have been voted out of the Foreign Relations Committee by unanimous vote in every case. If that is not the case, then the RECORD ought to show it.

Mr. FULBRIGHT. Mr. President, we had a meeting. No Senator called for a record vote. There was only one case in which a Senator said he would prefer to withhold his vote as to one nomination. That was the only objection of any kind.

Mr. DIRKSEN. Sometimes a question arises as to the celerity with which the nominations move through the Senate, and people are not always advised of the work that has been done in committee and the fact that quite often there has been long interrogation into the nominees' qualifications and background for the position, and that the nominations are brought to the floor of the Senate only after such consideration by the committee.

Mr. FULBRIGHT. The Senator is correct. We had 2 days of hearings on the nominations. Several of the nominees were interrogated at length. The committee went into every angle of the inquiry. The committee was satisfied as to the qualifications of the nominees. One or two of the nominees had statements made about them in the press. The questions raised were gone into fully. There was no objection.

Mr. MANSFIELD. Mr. President, what nomination is before the Senate at this time?

The PRESIDING OFFICER. No nomination is before the Senate.

Mr. MANSFIELD. What is the status of the nomination of Mr. John M. Kelly to be an Assistant Secretary of the Interior?

The PRESIDING OFFICER. That nomination has been confirmed.

Mr. MANSFIELD. Mr. President, I move that the action of the Senate in confirming the nomination of Mr. Kelly be reconsidered, and that the nomination be placed before the Senate for consideration.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana. The motion is agreed to, and the vote of the Senate in confirming the nomination is reconsidered.

The clerk will state the nomination.

The Chief Clerk read the nomination of John M. Kelly, of New Mexico, to be an Assistant Secretary of the Interior.

The PRESIDING OFFICER. The question is, Shall the Senate advise and consent to the nomination?

Mr. PROXMIRE. Mr. President, I object to this nomination with great reluctance. Mr. Kelly is a man who has had extensive experience as an oil producer. He has been in the oil industry for a long, long time, and it is a part of his qualifications. He still has, as I think I can show, very substantial oil holdings. He is still a very substantial oil producer, and in my judgment this disqualifies him to hold this office of all offices in the Federal Government. If the leaders of the oil industry sat down to decide which of all the offices they would want to occupy with their man, this would be it.

Mr. Kelly described his job very well in the second paragraph of page 2 of his testimony before the Interior and Insular Affairs Committee, when he said this:

> As you know, the field of activity that would be under my supervision will include the Bureau of Mines, Geological Survey, the Oil Import Administration, the Office of Mineral Exploration, the Office of Coal Research, the Office of Oil and Gas, the Office of Minerals Mobilization, and the Office of Geography.

I consider this nomination in the light of the background of the man and his present financial holdings. I call to the attention of the Senate the responsibilities Mr. Kelly will have in his new assignment.

BUREAU OF MINES

The Bureau of Mines was the first office to which he referred. In the U.S. Government Organization Manual for this year, on pages 243 and 244, is a description of the responsibilities and activities that this man will discharge as head of the Bureau of Mines. I call attention to the fact that one of the activities directly under this oil producer will be as follows:

Fuels Technology: Programs of fuels research and development are designed primarily to minimize waste of these essential resources, to increase efficiency, to promote the use of hitherto uneconomic fuels resources, and to promote economic stability in the fuels industries, with the objective of assuring adequate sources of energy for economic expansion and national security.

In other words, the responsibility of this man, who is now an oil producer in a big way, and who is holding onto his own ownership of oil production facilities, will include responsibility for Government research for oil and competing fuels. Is not a conflict of interest involved in this connection? He has had very extensive oil holdings, and, I think I can show, still has.

GEOLOGICAL SURVEY

The second position to which the Assistant Secretary referred and over which he will have authority is the Geological Survey. I read a short sentence from page 245 of the same manual regarding the responsibilities of that office. The Assistant Secretary would have the power to—

Enforce departmental regulations applicable to oil, gas, and other mining leases, permits, licenses, and operating contracts; and publish and disseminate data relative to the foregoing activities.

Once again, Mr. President, I suggest that Mr. Kelly would be involved in the administration of a Government program which would seem to be in conflict with his interest as an oil producer.

OIL IMPORT ADMINISTRATION

The third office over which the nominee would have top authority is the Oil Import Administration. The Oil Import Administration is described on page 240 of this Government Manual very briefly as follows:

The Oil Import Administration discharges the responsibilities imposed upon the Secretary of the Interior by Presidential Proclamation 3279 of March 10, 1959, "Adjusting Imports of Petroleum and Petroleum Products Into the United States." This proclamation, in the interests of national security, imposes restrictions upon the importation of crude oil, unfinished petroleum oils, and finished petroleum products. The Administration allocates imports of these commodities among qualified applicants and issues import licenses on the basis of such allocations.

Mr. President, I think it is to the interests of almost every domestic oil producer to see that there is a restriction upon importation of crude oil, unfinished petroleum oils, and finished petroleum products. It seems to me in this capacity the interests of oil producers directly conflict with those of oil consumers, particularly in New England, in my own State, and, indeed, in the entire section of the United States where the people are exclusively oil consumers and not producers. To put in charge of the Oil Import Administration a man who is an oil producer—to say nothing about his whole background, viewpoint, and orientation being toward the oil industry—seems to me to build a guaranteed conflict of interest directly into this administration. He would, as I say, adjust the imports of petroleum into the United States. He would have authority to impose restrictions upon the importation of crude oil, unfinished petroleum oils, and finished petroleum products. His authority and responsibility could hardly be more complete in this particular area.

OFFICE OF MINERALS EXPLORATION

The fourth position over which the oil producer would have authority is the Office of Minerals Exploration. Once again in the Government Manual I read very briefly from a fairly lengthy description of what the particular Office has to do:

Through the Office of Minerals Exploration the Government furnishes financial assistance in exploration for 32 mineral commodities. It contracts with eligible applicants to pay up to one-half of the cost of work authorized for the exploration. The Government's contribution may not exceed $250,000 in any single contract. The period for completion of contract work seldom exceeds 2 years; and in most contracts, varies from 6 months to 1 year.

The contract provides for repayment of the Government's contribution with interest by a royalty on production from the land described therein. If there is no production, there is no obligation to repay. Royalty payments of 5 percent of the gross proceeds or value are required on any production from the date of the contract until the Government notifies the operator, not later than 6 months after an acceptable final report and accounting have been furnished, either that it certifies that mineral or metal production may be possible as a result of the exploration or that it does not intend to issue a certification.

Mr. President, the Office of Minerals Exploration can furnish financial assistance in exploration and can pay up to one-half of the cost of exploration. Of course, that cost would have to be reimbursed out of royalties, if there were royalties. Nevertheless, it is perfectly clear that the Assistant Secretary who was nominated, who is an oil producer, would have a very great discretion in this regard. It seems to me that for an oil producer as Kelly is, this would be a direct conflict of interest.

OFFICE OF MINERALS MOBILIZATION

The fifth position over which the nominee would have authority is the Office of Minerals Mobilization. I read briefly from the Government Manual a partial description of that particular Office:

The Office is concerned with the adequacy of the supplies of certain metals, minerals, solid fuels, and facilities to fulfill both civilian and military requirements under partial and full mobilization, and performs the following functions:

On pages 237 and 238 the Office of Minerals Mobilization is described in some detail, and it is made clear that here, too, is a sharp and direct conflict of interest, involving a responsibility to develop not only oil but also other competing sources of fuel and sources of energy which would, it seems to me, result in very possibly prejudicing the position of the new Assistant Secretary as an oil producer, and prejudicing the position of the oil industry generally, if what I would view as the national interest were pursued.

The functions of the Office of Minerals Mobilization are given. One function, for this Office under the independent oil producer, is:

Formulates necessary foreign mineral exploration and development programs.

I ask Senators if an oil producer would have the same interest in formulating necessary foreign mineral exploration and development programs as a man who did not have these financial interests, these associations, and these connections in the past.

OFFICE OF COAL RESEARCH

The sixth office over which the Assistant Secretary would have administration and responsibility is the Office of Coal Research. Obviously, coal is a competing fuel for oil. Obviously, it would be against the interests of the oil industry or of any oil producer to see coal research developed in a way which would advance the competing fuel and therefore diminish or hurt or injure the position of the oil industry.

OFFICE OF OIL AND GAS

The seventh position over which the Assistant Secretary would have jurisdiction is the Office of Oil and Gas. On page 238 of the Government Organization Manual this is set forth quite clearly:

The Office of Oil and Gas, * * *.

1. Provides staff advice and assistance to the Assistant Secretary in the development, coordination, and management of oil and gas programs and functions which are assigned to the Department by the President or the Congress.

2. Provides leadership in obtaining coordination and unification of oil and gas policies and related administrative activities of all Federal agencies and enlists their cooperation to assure adequate development, distribution, and utilization of petroleum and gas resources and facilities to meet civilian, industrial, and military requirements in time of peace or national emergency.

3. Serves as the principal channel of communication between the Federal Government and the Interstate Oil Compact Commission, State regulatory bodies, and the petroleum and gas industries.

Mr. President, it seems to me peculiarly unwise to put in charge of the Office of Oil and Gas a man whose whole experience—certainly his primary experience—has been in the oil industry operating as a producer, a man who continues to be, in what I think I can show in a substantial way, an oil producer. If the spirit of the conflict of interest

statutes means anything, it would seem to me this man would certainly be disqualified for the Office of Oil and Gas; as, in my judgment, there would be a clear conflict of interest in regard to the other offices.

OFFICE OF GEOGRAPHY

There is only one other office mentioned, and it is the Office of Geography. With respect to the Office of Geography I think the Assistant Secretary could discharge his functions without a conflict of interest.

SUMMARY OF RESPONSIBILITIES

There are eight offices and eight responsibilities with which the Assistant Secretary is charged, and seven of them involve directly the oil industry, the petroleum industry. In seven of the eight cases it seems to me the nominee would be involved in a direct conflict of interest. This may be a bonanza for the oil industry. It is murder for the consumer.

NOMINEE'S OIL HOLDINGS

Mr. President, I should like to turn to the nominee and to his testimony before the committee. The nominee came before the committee and said:

I will sell all my stockholdings in oil and mining companies.

He went on to say:

In regard to any Federal leases, wells on Federal lands, overrides and payments, I will set up a trust and transfer all such interests to a trustee who will sell all such interests. Any such interests which the trustee has been unable to sell he will convey to the Elk Oil Co.

I will resign as president of the Elk Oil Co. and make an irrevocable gift to my minor children of all the stock that I own in this company pursuant to the Gift to Minors Act of New Mexico.

I intend to maintain my current operations on State and fee lands.

Mr. President, the nominee has disposed of some extremely valuable companies.

I ask unanimous consent that a memorandum to the Senate Committee on Interior and Insular Affairs from the Assistant Secretary-designate, John M. Kelly, be printed in the RECORD at this point.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 24, 1961.

To: The Senate Interior and Insular Affairs Committee.

From: Assistant Secretary-designate, John M. Kelly.

In order to comply with any real or apparent conflict of interest that I might have, I have agreed to do the following, which plan was approved by the Secretary of the Interior on February 15, 1961:

"Inasmuch as you have asked me to serve as a consultant to you prior to being appointed as an Assistant Secretary of the Interior and because of provisions in 43 CFR, part 7, I would like you to approve my entrance on duty under the following arrangements:

"1. I will sell all my stockholdings in oil and mining companies.

"2. In regard to any Federal leases, wells on Federal lands, overrides, and payments, I will set up a trust and transfer all such interests to a trustee who will sell all such interests. Any such interests which the trustee has been unable to sell he will convey to the Elk Oil Co.

"3. I will resign as president of the Elk Oil Co. and make an irrevocable gift to my minor children of all the stock that I own in this company pursuant to the Gift to Minors Act of New Mexico.

"4. I intend to maintain my current operations on State and fee lands.

"JOHN M. KELLY.

"Approved February 15, 1961.

"STEWART L. UDALL,
"Secretary of the Interior"

I therefore plan to dispose of all my interests in the following oil, gas, and mining companies as soon as possible: Ashland Oil & Refining, Aztec Oil, Conoco, National Fuel Gas, Newmont Mining, Ohio Oil Co., Pacific Gas & Electric, Socony Mobil Oil, Standard Oil (N.J.), Tennessee Gas Trans., Texas Gulf Producing, United Gas Corp., Bralorne Pioneer Mines, Cand Petrofina Preferred, Canada Southern Petroleum, Coastal Caribbean Oils, Eureka Corporation, Giant Yellowknife Mines, Hudson Bay Oil & Gas, Hugoton Production, Lake Shore Mines, Miss. River Fuel, Pan Coastal Petroleum, Potash Company of America, Rare Metals, West, Natural Gas Co., 1952 preferred, West, Natural Gas Co., 1955 preferred, West, Natural Gas Co., Wright-Hargreaves Mines, Western Development, United Canso Oil & Gas, San Antonio Gold, San Jose Petroleum, Sterling Oil of Oklahoma, Western Gas Service, Consolidated Emjay Petroleum, Elk Oil Co.

With regard to Mrs. Kelly's and my holdings in the Elk Oil Co., I will resign as president of this company and Mrs. Kelly will resign as secretary-treasurer of the company and we will make an irrevocable gift of all the stock of the Elk Oil Co. to our four minor children, pursuant to the Gifts to Minors Act of New Mexico.

I intend to retain shares in companies either listed or unlisted that do not engage in oil and mining activities. My present stockholdings in these companies follow: ABC Vending, American Rad. & Standard, Eversharp, Inc., Holly Corp., Murray Ohio Manufacturing, FIF Fund, Security National Bank, Roswell, N. Mex., Yucca Water Co.,[1] director.

I will divest myself of my producing and nonproducing Federal oil and gas leases as per the requirements of the Department of the Interior. I intend to do that by entering into a trust agreement. This trust agreement will be substantially in the form as follows:

"TRUST AGREEMENT

"Whereas John M. Kelly of Roswell, N. Mex., has been appointed Assistant Secretary of the U.S. Department of the Interior; and

"Whereas John M. Kelly and Esther L. Kelly, his wife, are prohibited by law from owning or deriving benefit from the properties described herein; and

"Whereas John M. Kelly and Esther L. Kelly now own or derive benefit from said property; and

"Whereas John M. Kelly and Esther L. Kelly are desirous of divesting themselves of said properties in order that John M. Kelly may serve his country as an executive officer in its Government without violation of law;

"Now, therefore, know all men by these presents, that John M. Kelly and Esther L. Kelly, his wife, hereinafter referred to collectively as grantors, for in and consideration of the above stated premises, do hereby grant, convey, set over and assign unto James T. Jennings of Roswell, N. Mex., all of the properties described in schedule A attached hereto and incorporated herein by reference, together with any other Federal oil and gas leases or portions thereof or interests therein which grantors now own, to have and to hold, in trust, nevertheless, for the benefit of the persons herein named to the extent herein provided, upon the following terms and conditions, to wit:

"1. The trustee shall undertake to sell, assign, transfer and convey all of the properties herein granted to him within a period of time not to exceed 120 days from the date of this instrument.

"2. Any of the properties herein granted to the trustee which are not disposed of in accordance with the provisions of the foregoing paragraph No. 1 shall be offered by the trustee to the Elk Oil Co., a New Mexico corporation.

"3. Any of the properties herein granted to the trustee which are not disposed of in accordance with the provisions of the foregoing paragraphs numbered 1 and 2 shall be conveyed by the trustee to the children of the grantors in equal undivided shares in accordance with the provisions of the New Mexico Uniform Gifts to Minors Act, naming J. T. Jennings as custodian as provided in said act.

"4. This trust shall terminate when all of the properties herein granted to the trustee have been disposed of by him and paid in full in accordance with the foregoing paragraphs numbered 1, 2, and 3.

"5. During the term of this agreement and until the trust herein created shall terminate, the trustee shall have title to and possession of all properties coming within the terms hereof, with full power and authority, except as expressly limited by this instrument, to manage, exchange, control, sell, convey, assign, transfer, and quitclaim the properties herein transferred or portions thereof or interests therein and to deal therewith in all respects and particulars as though he were the absolute owner thereof; and all limitations and duties now or hereafter imposed by statute, rule of law, rule of Court, or other administrative bodies are hereby waived and declared to be inapplicable to this trust. It is expressly intended that this provision shall relieve the trustee from the necessity of giving bond or security and the necessity of making periodic or other legal accountings. By way of illustration only, and not by way of limitation either expressed or implied, the trustee shall have and may exercise the following powers:

"(a) To retain the trust property in the form in which it is received whether the same might or might not be considered a prudent investment.

"(b) Advertise, offer, and negotiate for the sale or exchange of trust properties or any portion thereof or any interest therein upon such terms, cash, credit, or both, and under such conditions, public, private, or both, as the trustee may deem best.

"(c) Grant, convey, transfer, assign, and quitclaim, with or without warranty, any of the trust property or portions thereof or interest therein.

"(d) Exchange trust property or portions thereof or interest therein for other property of similar or dissimilar nature; provided, however, no exchange shall be made for properties which fall within the prohibition of law stated in the premises hereof unless such acquired property is disposed of in accordance with the provisions hereof.

"(e) Receive, receipt for and hold, according to the terms of this instrument, all income or proceeds from the trust property.

[1] With respect to the Yucca Co., a water pipeline company, operating by permit granted by the State Water Engineer of New Mexico, and producing water for resale under lease contracts on State lands of the State of New Mexico, I intend to resign as director of this company, but will retain my stockholdings in the company.

"(f) To obtain or hold investments of any part of the trust property in common or undivided interest with other persons, corporations, or trusts.

"(g) To demand, receive, receipt for, sue for, and collect any and all rights, money, properties or claims to which the trust may be entitled and to compromise, sell, arbitrate, or abandon any claim or demand in favor of or against the trust.

"(h) To employ agents, legal counsel, brokers, and assistants and to pay their fees and expenses, as he may deem necessary or advisable to carry out the provisions of the trust.

"6. In the event of the death, resignation, or incapacity of the trustee, James T. Jennings, Lawrence C. Harris of Roswell, N. Mex., shall be the successor trustee and as such, he shall have and may exercise all of the rights, powers, duties, and discretions conferred or imposed upon the original trustee.

"7. No one dealing with the trustee need inquire as to the validity of anything which the trustee purports to do or see to the application of any money paid or property transferred to or upon the order of such trustee.

"8. The trustee or his successor shall not be liable for any act or omission unless the same be due to his own willful default.

"9. Upon the termination of the trust as provided herein, the trustee shall deliver to the grantors all of the property which he has received in carrying out the provisions of this trust agreement less such expenses as he may have incurred.

"In witness whereof, the grantors have executed this agreement and conveyance, and to evidence his acceptance of the terms and conditions of the trust, the trustee has executed this agreement."

SCHEDULE A

I

Kelly producing Federal oil and gas leases: Burton Federal, Jack Federal, Stewart Federal, Stewart 28 Federal, Hodges Federal.

II

Kelly interest Cave Field waterflood project: Kelly owns approximately 29 percent interest in this waterflood project, which is located in the Cave Field, Eddy County, N. Mex. Continental Oil Co. is the operator of this project.

III

Nonproducing Federal leases: NM-013574, NM-A-088593, NM-062865, NM-021008, NM-047084, NM-020980, NM-0743, NM-04770, NM-07910, NM-08658, LC-069319, NM-015594, BLM-A-032326, NM-021009, BLM-A-032327, NM-05602, NM-02330A, NM-02282C, NM-02272B, NM-06034-A, NM-05827-A, NM-05827-B, NM-06027, NM-0149958, LC-070687, LC-069817, NM-046616, NM-02328-A.

These leases approximate 13,282.16 acres.

IV

Overrides and oil payments on Federal leases: LC 068345, LC 060643, LC 070687, LC 069107-A, LC 069817, NM 046616, NM 01244, NM 01244, NM 01244, NM 04539, NM 04843, Colo. 03655, Colo. 03374, NM 07910, NM 012898, NM 014510, NM 013528, NM 03258, NM 04180, NM 02383, NM 03467, Colo. 0238.

These leases approximate 19,865 acres.

With reference to my producing properties and nonproducing oil and gas leases located on State and fee lands, it is my intention to retain ownership of these properties and these properties will be operated and fully managed by my production superintendent. I do not believe that there will be a conflict of interest or a conflict with the departmental regulations in my retaining ownership of these properties.

Due to the fact that oil and gas leases and producing properties have to be sold by negotiation, I request that the trustee be given a minimum of 90 days in order to fulfill his obligation.

Mr. PROXMIRE. On page 2 of the letter 20 or 25 companies are listed, all of which are oil or gas companies. As the nominee-designate has said, obviously he has substantial holdings in all of them, and he is divesting himself of all such holdings.

In paragraph 3 of the first page of the letter the nominee stated:

I will resign as president of the Elk Oil Co. and make an irrevocable gift to my minor children of all the stock I own.

In the course of the hearings it was brought out that the gift to the children indeed is irrevocable. It was brought out further that a trustee, one of two individuals in charge of managing the trust, is the personal attorney of the nominee.

It seems to me that this conveyance of the Elk Oil Co. by the nominee to his minor children raises a particular point. The nominee was questioned as to why he divested himself of this particular holding, and in view of the fact that he is holding on to his operations on State and private lands, he said that under the regulations of the Department of the Interior he had no alternative. In order to make clear exactly what that situation is I should like to read briefly from title 43 of the Regulations of the Department of the Interior, part VII, subparagraph 7.3:

§ 7.3. Officers and employees of the Department of the Interior and their spouses prohibited from acquiring voluntarily, or retaining, an interest in any lands or resources administered by the Bureau of Land Management. Every officer and employee of the Department of the Interior and the spouse of every such person, except as provided in § 7.4, is prohibited from acquiring voluntarily, or retaining, an interest of any kind in any of the public lands or other lands or resources administered by the Bureau of Land Management. This prohibition includes the buying, selling, or locating of any warrant, scrip, lieu land selection, soldier's additional right, or any other right or claim under which an interest in the public lands may be asserted. The prohibition also extends to the voluntary acquisition by purchase or otherwise of any land, water right, or livestock, or any interest in land, water right, or livestock, which in any manner is connected with or involves the use of the grazing resources or facilities of the public land, or other lands or resources administered by the Bureau of Land Management.

In other words, there was a very narrow and precise basis in the regulations for the actions of the Assistant Secretary-designate.

NOTHING IN REGULATION PREVENTS MAJOR CONFLICT

I make this point because it is very clear that the nominee is prohibited by the regulations of the Department of the Interior from engaging in operations on Federal lands, or lands under the jurisdiction of the Office of Land Management. There is nothing in the regulations of the Interior Department which would require him to divest himself of his holdings on State lands or any private holdings that he may have. In spite of this divestiture, it is clear that it is not merely a selling. The regulations provide that neither he nor his spouse, his wife, may hold such lands. So there has been a technical acquiescence in the statute by conveying the ownership of property using Federal lands to his children.

Notwithstanding this conveyance, the fact is that the nominee-designate still has very substantial oil holdings. I refer to page 4 of the transcript of the hearings on the nomination of Mr. Kelly. In reply to a question Mr. Kelly responded as follows:

Mr. KELLY. Senator, I do not believe that I will continue to operate my properties, I do not intend to continue to operate my properties. I will hold ownership of them. But the actual operations would be carried on by other people.

A little further on he said:

I operate as a very small independent producer. I do not operate as a driller or refiner or a transporter or a marketer. I am divesting myself of probably 50 percent or better of my properties in order to place myself in the position in which I feel that I can assume the duties of my office with complete impartiality toward the decisions that I might make as Assistant Secretary. As you understand, I operate as an individual——

NOMINEE'S LARGE PRESENT OIL HOLDINGS

Those statements in the hearings of the nominee's holdings are referred to as his "great holdings," and there is no question that the holdings of this nominee were very great before his divestiture. On page 4 of the transcript of hearings he specified that he is disposing of probably 50 percent or more. It would seem to me the only logical construction would be that he is holding on to 50 percent or maybe a little less. Therefore, his operations on State lands, his operations on private holdings, not under the jurisdiction of the Office of Land Management, are obviously still substantial.

CONTROL OF PRESENT OIL HOLDINGS

It is interesting to me that the nominee said the actual operations would be carried on by other people. Of course they would. I am sure the nominee recognized he would have a full time job as Assistant Secretary of the Interior, but he would continue to own his interest. He would continue to receive benefit from it. He would continue to hold full ownership.

The nominee met this specific point when he said further on:

I am divesting myself of probably 50 percent or better of my properties in order to place myself in the position in which I feel that I can assume the duties of my office with complete impartiality toward the decisions that I might make as Assistant Secretary.

If 50 percent of a man's property is still involved in oil, if 50 percent of what this man owns is still involved in the production of oil which would be directly under the jurisdiction and authority of his office, it seems to me that there would still be a very serious question as to partiality toward decisions that he might make as Assistant Secretary.

I am sure the nominee is a man of excellent character. He has been vouched for by two of the finest Senators in the U.S. Senate, two very splendid men of very great character themselves.

However I believe that in all cases it is necessary for us, although sometimes

it is painful, to examine the background and to examine the interest and to examine the financial holdings and to consider these matters just as objectively as we can, and without regard to the personal affection which every Senator feels for both Senators from New Mexico.

NOMINEE VIEW ON TAXATION OF OIL

In this case we have before us a man who spoke out quite forthrightly and vigorously on his views on a question of public policy involving the oil interest. While I recognize that this is not completely pertinent to the inquiry, nevertheless this was disclosed at the hearings, and I believe it relates to the attitude of the nominee with respect to his questions on public policy which affect oil.

The Senator from Iowa [Mr. MILLER], at page 9 of the hearings asked the following question:

Senator MILLER. Now, in connection with your policy of trying to stimulate the development of our mineral and oil interests, of course you are familiar with the facts that there is a divergence of opinion on whether we should maintain or decrease the percentage depletion under our tax laws. Do you have any views on that?

Mr. KELLY. Again, I will not be asked on policymaking matters on taxes. But speaking as an individual, I do have views on it. I believe the depletion allowance for all minerals have been in the best interests of the citizens of the United States, in that we have been able to produce the mineral resources when needed in times of emergency. Also we have been able to produce our mineral resources in times of peace to maintain the growth curve in this country.

Senator MILLER. So if perchance you were asked, because of your position and also of your background, by the Treasury Department for a policy statement by the Department of the Interior on any proposed changes in the percentage depletion allowances, do I gather from your answer that your position would be that you recommend that it not be changed, at least downward?

Mr. KELLY. I recommend that a thorough study be made, and I believe that the results of that study would show that the depletion allowances, perhaps, have been on the low side.

On the low side, Mr. President.

Of course, Mr. Kelly is entitled to his views. Incidentally those views are shared by a number of distinguished Senators. In fact, they are shared by a majority of the Senators, because whenever we have tried to reduce the depletion allowance to some level in conformity with the depletion allowance on other minerals, we have been defeated in our attempts.

Therefore, even in areas in which the nominee would not have direct responsibility—such as on tax policy—his views are exactly what one would expect an independent oil producer to have, and exactly what one would expect a man to have who still has control over large holdings in oil and petroleum. His views are, if anything, that the depletion allowance should not be decreased, but, instead, raised.

There is no question that in administering the office of Assistant Secretary of the Interior for Mineral Resources, which has a very great responsibility over the oil industry, that the interests of the producers should be recognized and understood. There is no question that in this particular respect the nominee qualifies.

CONSUMER INTERESTS FORGOTTEN

However, it is just as important that the viewpoint of the consumer be understood. There is no question, when it comes to representation before the Assistant Secretary with respect to oil policy matters, that the viewpoint of the gas industry will be extremely well represented by the industry itself. It is one of the most obvious aspects of the American Government that when the administration enforces its laws, the industry involved sees to it that it is fairly and consistently capable, ready, and willing to go to any regulatory agency of the Government, and to go to Congress, and even to the President, if necessary, for recourse.

No one represents the consumer. Here we have the situation in which the man who is going to be in charge of the Bureau of Mines, the Geological Survey, the Oil Import Administration, the Office of Mineral Exploration, the Office of Coal Research, and the Office of Minerals Mobilization is a man who represents the oil industry viewpoint and is himself a substantial owner in oil.

It seems to me that it is particularly important in the administration of the oil import regulation laws of this country that the consumer viewpoint have some representation. But where is it? Certainly not in this nomination. Of course it may be possible when the situation becomes most intolerable for Senators to speak out. But this is a feeble, usually after-the-fact protest. The administrator has acted. The consumer has lost by that time.

So far as mineral exploration is concerned, again the viewpoint of the consumer is that we should do all we can to encourage mineral exploration, because we want to do all we can to provide a steady, stable, long-term, low-cost fuel system in America. It is to the great interest of every consumer to have that done. However, it is not to the interest of the oil producer to have that accomplished.

In the Office of Oil and Gas, again we have the same kind of conflict.

NATIONAL DEFENSE FORGOTTEN

I am sure that Mr. Kelly is not only a gentleman of character and decency and honor, but I am sure that he is also a completely patriotic American citizen. Nevertheless, the fact is that there are occasions when the national defense of the country, the interests of the national defense, may very well be in conflict with the interests of the private oil producer, because the interests of national defense may be on the side of conserving our domestic oil reserves by importing as much oil as possible, and developing as much as we can by exploration, and developing as many oil producing wells as we can. This may directly contradict the interests of the private oil producer, the man who will be making the crucial decisions.

The Office of Minerals Mobilization, as I have said, is engaged in administering foreign exploration. There, too, it is to the interest of the country from the standpoint of national defense to see to it that the administration is vigorous. It is to the interest of the oil industry to see that it is not. But the nominee as decision-maker is up to his ears in the oil industry.

TAXPAYERS FORGOTTEN

Then we also have the interests of the taxpayers. It is to the interest of the taxpayers—except those taxpayers who have oil holdings—to see to it that the oil depletion allowance is brought into line with the depletion allowance on other minerals, instead of having it remain at 27½ percent. It is to their interest to have it brought down to, perhaps, 15 percent, so that it will be possible to recapture the $400 million a year which the Internal Revenue Service loses because of this great loophole.

Finally, I oppose the nomination with great regret. It is never pleasant to do so. It is always much more pleasant to approve a nomination. That is particularly true because we are going to work with this gentleman if his nomination is confirmed. Also, because this is a man of fine character. However, I do not see that I have any alternative in this case but to oppose the nomination.

NOMINATION LIKE CONNALLY'S AGAIN SERVES OIL

The nomination ranks with the nomination of John Connally to be Secretary of the Navy, and is the nomination of a man who will be placed in a position of great power and authority in the Federal Government with respect to the oil industry. It is the nomination of a man who has an interest which will virtually guarantee that the interests of the oil industry will not only be protected, but in my judgment, will also very possibly be advanced at the expense of the public interest, at the expense of the consumer interest, and conceivably, although certainly not deliberately, at the expense of the defense of our country.

OIL LOBBY RIDES HIGH

Mr. President, there is no question that the most powerful lobby in America is the oil lobby. They have gotten their way repeatedly. They have their way with the Federal Power Commission. That is notorious. That has been documented on the floor of the Senate and elsewhere. The oil lobby has been successful in persuading the Federal Power Commission not to enforce the laws as the Supreme Court interprets them—against their interest.

Now, I regret to say, it appears that the great petroleum industry has been successful in seeing to it that the two crucial, critical positions in the Government as they affect the oil industry are both occupied by persons who have clear financial connections with the oil industry.

The fact is that John Connally, as I pointed out earlier on the floor, remains as the executor of one of the richest oil estates in America and will receive benefits from that holding as soon as he resigns as Assistant Secretary of the Navy.

The fact is that John Kelly will continue, even while he is administering the duties of his position, to receive a substantial income from the oil industry.

My reason for rising to object to this nomination is not that I expect to have success in doing so, but that I feel it is imperative that at least one Senator rise in the Senate to protest the kind of power, the kind of influence, the kind of domination which the oil industry has in the Federal Government, especially in offices which have a responsibility for administering this great industry.

I wish to make it clear, if there is any doubt about it, that I object to any unanimous approval of the nomination. I wish to make certain that on the nomination I am recorded as voting "nay."

Mr. ANDERSON. Mr. President, I have listened with great interest to the brilliant statement of the distinguished Senator from Wisconsin [Mr. PROXMIRE] about Mr. Kelly. I compliment the Senator on the temperate way in which he discussed a situation which I know is disturbing to him.

Mr. Kelly has served for a long time in my State and bears an extremely fine reputation. In the conduct of all his affairs, no matter what his position might have been, I have never heard the faintest intimation that he has not been an efficient, effective administrator and a fair and impartial person when he had decisions to make involving the sometimes divergent interests of different groups of our citizens.

I wish to comment on the section which the Senator from Wisconsin selected from the hearings, in which the nominee expressed himself on the subject of depletion allowances. I think it is a rather important statement.

The distinguished Senator from Iowa [Mr. MILLER], who propounded the question to Mr. Kelly concerning depletion, is a new member of the Committee on Interior and Insular Affairs. Despite the fact he did not come to the committee with all the background which many of us from the West have regarding the responsibilities of the committee, he is an extremely able and valuable member and has contributed greatly to our accomplishments in the brief time he has served with us.

The Senator from Iowa asked Mr. Kelly about his position on depletion allowances.

Mr. Kelly replied:

> Again, I will not be asked on policymaking matters on taxes. But speaking as an individual—

And then he gave his point of view.

After that, the Senator from Iowa [Mr. MILLER] asked this question:

> So if perchance you were asked, because of your position and also of your background, by the Treasury Department for a policy statement by the Department of the Interior on any proposed changes in the percentage depletion allowances, do I gather from your answer that your position would be that you recommend that it not be changed, at least downward?

I would say, in the beginning, that it is unlikely that the Assistant Secretary of the Interior for Minerals would be asked by the Treasury for his views on that matter. The Secretary of the Interior might be asked for his views; but I doubt that any Cabinet officer would ask a person who, I might say, belongs to the "Little Cabinet" to give his opinion. At least, I do not think that would be done.

I do not mean to infer that the Senator from Iowa asked an improper question in any way. But I believe that if an inquiry on the subject of depletion allowances went from the Treasury Department to the Department of the Interior, unquestionably it would be handled by Secretary Stewart Udall himself, who has a very clear record in regard to depletion allowances; and I may say that his record is not completely satisfactory to the oil interests of the country.

So it is unlikely that Mr. Kelly, in his new position in the Department of the Interior, will affect to any great degree, if at all, any report on depletion allowances given by the Department of the Interior to the Treasury Department.

Mr. PROXMIRE. Mr. President, will the Senator from New Mexico yield?

The PRESIDING OFFICER (Mr. PELL in the chair). Does the Senator from New Mexico yield to the Senator from Wisconsin?

Mr. ANDERSON. I shall yield in a moment.

First, let me say that, furthermore, I am a member of the Senate Finance Committee, and the question of depletion allowances comes to that committee. Our committee has on many occasions received from the Treasury Department testimony on depletion allowances; but I cannot recall a single instance when we turned to the Department of the Interior and requested guidance from that source.

Now I yield to the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, I think the Senator will recall that when I said this matter was irrelevant to the inquiry, I referred to it only in order to point out that the nominee has a viewpoint which we might expect him to have in regard to a public policy question, inasmuch as he has been an independent oil producer. But I said that this matter did not relate to the question of his qualifications to serve in the position to which he has been nominated.

Mr. ANDERSON. Yes; and I tried to say that, too.

I also said that the Senator from Wisconsin was extremely temperate in his viewpoint.

I point this out only because I do not want anyone to worry or have any fear that Mr. Kelly will begin his service in the Department with an effort to deal with depletion allowances. Certainly that is not a matter with which he would deal; the duties of the office to which he has been nominated do not involve taxation matters at all.

Mr. Kelly is a relatively young man. Because he is Irish, I suppose he has a tendency to look on the brighter side of life, and very likely he believes that during his service in the Government he will be able to earn enough for the support of his family.

However, his service in the position to which he has been appointed will not give him any great advantages; but rather it will require him to do a great deal of hard work.

Many persons in the Department of the Interior are responsible for the activities of the Government in connection with mineral developments. Because of Mr. Kelly's background and experience, he is well qualified in that field. All of us are greatly concerned that our mineral resources be developed.

For instance, in regard to the production of lead and zinc, there are now before the Interior Committee three bills—one measure introduced by the Senator from Utah [Mr. BENNETT]; one bill introduced by the Senator from Oklahoma [Mr. KERR]; and a third sponsored by the junior Senator from New Mexico. In their approach to the problem, all three of these bills are as different as they could possibly be. We shall need to have serving in the Department of the Interior someone who will be able to coordinate these proposals, someone who has practical knowledge of the problems which we must face and try to solve.

So I believe this nomination is a most fortunate one. I am happy that the Committee on Interior and Insular Affairs was unanimous in reporting Mr. Kelly's nomination to the Senate.

I believe that Mr. Kelly will make an excellent Assistant Secretary of the Interior for Mineral Resources.

The members of the Interior Committee took a most keen interest in this appointment; I refer to both the members on the majority side and the members on the minority side. In addition, we all checked very carefully the facts and proposals set forth in the memorandum Mr. Kelly had prepared for the committee on his holdings and the disposition of them. The members asked him some very pertinent and searching questions.

I call attention to the fact that at the conclusion of the hearing the senior Senator from Colorado [Mr. ALLOTT] pointed out that if the Federal Government is to find persons who can handle the problems of oil, gas, coal, and various other minerals, we sometimes will find qualified persons who have made a success in the field of mineral resource development. We have to take that fact into consideration, and have to say, "Very well; in that connection they may have developed some opinions and some conflicts. If they get the conflicts out of the way, we have to take them with whatever established opinions they may have."

I believe that Mr. Kelly does not vary from that rule. I predict that when he finishes his tour of duty, a great many persons will be happy that a man of such broad experience has been placed in this position of great responsibility.

Again I wish to thank the Senator from Wisconsin [Mr. PROXMIRE] for the temperate way he has discussed this somewhat troublesome problem, which faces every man who comes into public life and has a previous background of business activity, with the result that he might seem to have a conflict of interest.

The Joint Committee on Atomic Energy approved unanimously the appointment to the Atomic Energy Commission of the former president of the Standard

Oil Co., Mr. Wilson. Anyone who deals with the Commission realizes the breadth of view Mr. Wilson has in regard to commercial and industrial matters. I have steadily been surprised at the contributions he makes to the discussions, because of his long background as a scientist. Of course we recognize that such a long background might have caused him to have some points of view in regard to whether certain things should be done by private industry or by the public route; and some persons might not agree at all times with his views on those matters. However, we have found that his experience of almost a lifetime has been of great benefit to us.

Similarly, I believe that the background of Mr. Kelly will be of great benefit to the Department of the Interior and therefore to our Nation.

The PRESIDING OFFICER. The question is, Will the Senate advise and consent to the nomination of John M. Kelly, of New Mexico, to be an Assistant Secretary of the Interior?

The nomination was confirmed.

ST. LAWRENCE SEAWAY DEVELOPMENT CORPORATION

Mr. MANSFIELD. Mr. President, there are at the desk two nominations, from the Committee on Public Works, for membership on the St. Lawrence Seaway Development Corporation. I ask that these nominations be stated.

The PRESIDING OFFICER. The nominations will be stated.

The Chief Clerk read the nomination of Joseph H. McCann, of Michigan, to be Deputy Administrator of the St. Lawrence Seaway Development Corporation.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Martin W. Oettershagen, of Illinois, to be Administrator of the St. Lawrence Seaway Development Corporation.

Mr. DIRKSEN. Mr. President, some years ago, when the administration was seeking to find a man to do this administrative job on the St. Lawrence Seaway, I was asked to make a search to find a very competent person who I thought could do this job.

We went to the engineering firms in Chicago and to the engineering publications and to every other source which we thought could give us an unbiased judgment in regard to a proper person who had the touch and the administrative capacity to perform successfully in this difficult operation. Generally speaking, nearly all of them submitted the name of Martin Oettershagen, who, as I recall, was then director of the port authority of the city of Chicago. He has lived up to every expectation. He has requited every faith I had in him when he took that position; and today I am delighted to say a word in his behalf, as his nomination comes before the Senate.

I believe he is one of the greatest public servants who ever has entered the service of our Government; and his works and his endeavors will bear out that statement. He has truly and nobly carried on in the public interest.

The PRESIDING OFFICER. The question is, Will the Senate advise and consent to this nomination?

Without objection, the nomination is confirmed.

FOREIGN CLAIMS SETTLEMENT COMMISSION OF THE UNITED STATES

Mr. MANSFIELD. Mr. President, there are at the desk two nominations, from the Judiciary Committee, which have been unanimously reported. I ask that they be considered at this time.

The PRESIDING OFFICER. The nominations will be stated.

The Chief Clerk read the nomination of Edward D. Re, of New York, to be a member of the Foreign Claims Settlement Commission of the United States.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Theodore Jaffe, of Rhode Island, to be a member of the Foreign Claims Settlement Commission of the United States.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of all these nominations.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

TERMINATION OF SERVICE OF SCOTT McLEOD AS AMBASSADOR TO IRELAND

Mr. HICKENLOOPER. Mr. President, this week one of the younger Ambassadors of the United States is terminating his ambassadorial service and is returning to the United States. He will change his occupation from that of Ambassador to a position on the staff of the Senate. I refer to Ambassador Scott McLeod, who has completed almost 4 years as Ambassador from the United States to Ireland.

I have followed Mr. McLeod's career for many years. I first knew him many years ago when he was a young newspaper reporter in my hometown. Then he joined the FBI as a special agent. Later he became administrative assistant to the distinguished senior Senator from New Hampshire [Mr. BRIDGES].

Thereafter, Scott McLeod became Assistant Secretary of State, and was the first administrator of the Bureau of Security and Consular Affairs in the Department of State.

Mr. McLeod, in his experience as a newspaperman and as a special agent in the Federal Bureau of Investigation, became greatly concerned with subversive activities in the United States and in Government. In his capacity as Assistant Secretary of State and as administrator of the Bureau of Security and Consular Affairs, he was very zealous in attempting to purge our Government of subversive elements among the employees, especially in the State Department. For this zeal in behalf of his Government and in behalf of the sanctity and security of his Government, he incurred the enmity of a great many persons who thought it was not right that some more or less erratic individuals, from the standpoint of the security of the country, should be put upon by investigations of any kind, or by the questioning of their particular attitudes. To some persons, that seemed to be something heinous.

Mr. McLeod enjoyed considerable criticism from certain sectors in this country. Nevertheless, he was nominated by President Eisenhower 4 years ago to be Ambassador to Ireland. Some of his activities and his zeal in attempting to smoke out of the Government certain subversive elements were criticized, and a fight was made against the confirmation of his nomination. However, his nomination was confirmed, and Mr. McLeod went to Ireland.

Some dire predictions were made about him. It was said that he was a comparatively young man, not schooled in diplomacy, and that he had very few, if any, qualifications to serve as Ambassador. However, in the 4 years which have passed, he has, I am quite certain, completely dispelled any doubts along that line.

I think he became and remained one of the most popular and effective Ambassadors the United States has ever sent to the Republic of Ireland. I have been interested, because of my personal acquaintance and long-time friendship with Mr. McLeod over the years, and I have learned from many sources that he is very highly thought of, and that many comments have been made about the great success of his mission in Ireland.

Mr. McLeod's resignation was accepted by the new President. This is not surprising. In fact, the resignations of many other Ambassadors and appointive public officials have been accepted with the change of administration.

I desired to make this statement in recognition of what I believe to be outstanding service, and in behalf of a record which I think completely refutes the criticism of 4 years ago, at the time of Mr. McLeod's appointment.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the following items: First, an article entitled "Envoy With the Human Touch, and What He Means to Ireland," written by Seamus Brady, and published in the London Daily Express.

Second, an article entitled "The Last Hurrah," published in the Evening Press of March 13, 1961.

Third, an article entitled "The End of the McLeod Saga," published in the Ballina Herald, a weekly newspaper, of February 11, 1961.

Fourth, an article entitled "Honored Envoy," published in the Irish Independent, a national newspaper, of Sunday, February 19, 1961.

Fifth, an article entitled "Clare Loses a Friend," published in the Clare Champion, of County Clare, Ireland, of November 2, 1960.

Then three different letters, one written by an alderman, and published in the Evening Press of January 26, 1961; the other two apparently written by

private citizens and published in the Evening Press of January 30, 1961, and February 2, 1961, respectively.

There being no objection, the articles and letters were ordered to be printed in the RECORD, as follows:

[From the London Daily Express]

ENVOY WITH THE HUMAN TOUCH AND WHAT HE MEANS TO IRELAND

(By Seamus Brady)

The possibility that Ambassador Scott McLeod may leave Dublin to take a job with the Senate Appropriations Committee reaches deep into the heart of many an Irishman. For, like the Norman invaders of the 12th century, he has, in many ways, become more Irish than the Irish.

Scott McLeod arrived in the liner *America* at Cobh, County Cork, nearly 4 years ago. There was a blaze of publicity. And it was unwelcome. Some of the taint of the McCarthy scandals had rubbed off on to his broad Republican shoulders.

But he was off to a good start even before he stepped ashore. There he was, confiding in newspapermen that he was more interested in beating the drums with his family in a jazz session than in following the McCarthy antics.

And from then on, he continued to do a first-class job.

President Kennedy, as a Senator 4 years ago, had strongly opposed the McLeod appointment.

He did so as a Democrat—the party which took the political view at the time that "the Irish are too nice to send them an ex-FBI man."

Forty-five-year-old Mr. McLeod, a well-built, crewcut product of the same generation and background that has produced President Kennedy, proved the Democratic Party wrong.

A REAL HOME

He transformed the cold formality of the American Embassy building in Dublin's Phoenix Park into a real home.

And in the past 4 years more ordinary people have seen the inside of the Embassy than in the previous 20.

For Scott McLeod is an American with the knack of making himself at home not only with the stuffed shirts of the diplomatic world, but with the local characters in Morrissey's pub in Lahinch, County Clare.

With his wife, Patti, and their children, Ann, 16, Van, 15, and Dan, 14, he has spent all his holidays getting to know Ireland.

Last year it was Kilkee, the County Clare seaside resort. The year before, Mountshannon, where he took over tourist boss Brendan O'Regan's hideaway cottage on the shores of Lough Derg.

American McLeod likes the Irish bacon and cabbage lunch. He drinks only Guinness and Irish whisky with water.

He likes nothing better than to slip down to Ennis, County Clare, for a drink in Derry Honan's pub in the square.

Or to drop into Paddy Burke's oyster bar in the Galway village of Clarenbridge.

[From the London Evening Press, Mar. 13, 1961]

THE LAST HURRAH

It was "the last hurrah" for Scott McLeod, his wife, and children, in the American Embassy last night, and some 500 people came along to say goodby.

It was the biggest indoor party ever, only to be compared with the famous garden party to which 1,500 people came along on the day of the sunken shoes. (It had rained, you see, and the ladies' heels were disappearing like skeletons in a bog.)

The official farewell (this was a house cooling party), ended at 7. Whereupon the party after the party began, and at this stage certain members of the 3d U.S. Air Force Band (or it could have been that certain people had dressed up to look like them), produced trombones and trumpets and prepared to play anything but the American anthem.

The party went on till * * * never mind.

Many guests brought presents to the McLeods. Many more just brought their heartfelt good wishes and it was quite understandable that there were some tears.

It may be remembered that Scott McLeod, before he came here, had a very bad press, and the agency material from New York promised us a dour and hunted man, apparently with a lot on his conscience.

UNORTHODOX

Looking back on the press preliminary to his arrival here is to remember, with some trepidation, the meaning of the cliche, "the power of the press." In some circles the man was damned before he ever got here. Worse still, he was damned with faint praise.

The 500 who came to say goodby last night represented thousands. There has never before been an American Ambassador who walked the ground of Ireland as did Scott McLeod, who rubbed shoulders with so many of the people of Ireland, and who brought with him such an irresistibly charming wife.

The McLeods were here only a few months before the legend had melted away, and we in Ireland had accepted them as just nice people. When the American Ambassador became as familiar a shape on every racecourse as the finishing post, then, perhaps unconsciously, Scott McLeod had done more to integrate his country with ours than any previous Ambassador.

He had some of the accomplishments which are unusual in an Ambassador—for instance, his ability to play the drums in a dance band. He also, we remember, was the only host who has ever invited his guests to take the spoons away—on the occasion of a grapefruit party—when the spoons had been sent to him by his citrus growing friends in Florida.

BIG HEART

Then there was the time, last summer, when the committee of the Dublin International Festival of Music and the Arts approached him, greatly daring, for the loan of his beautiful gardens for a garden party.

Scott McLeod was in Rome. A telephone call to Rome brought the immediate agreeable answer and then Scott McLeod came home and turned his garden staff loose on the beautiful lawns, repainted the lovely Embassy home, called over the band of the 3d U.S. Air Force in their special aircraft * * * all to do a good turn.

His parties in the park were frequent and irresistible, but the most prized invitation of all was to his annual family Christmas party.

Just a few days before Christmas, it was the McLeod custom to ask along most of the Cabinet Ministers and the top brass of the State Departments and the semi-State groups, to watch his children perform in a morality, written by themselves.

And, then, sitting on the floor, the grave and reverend seigneurs would sing Christmas carols, reading from typed sheets the slightly unfamiliar words of the Lutheran, Anglican, Church of England, Baptist, and what have you versions of the old familiar tunes.

Scott McLeod sails away next Wednesday, and we can say: There goes a man. Whence comes such another?

[From the Ballina Herald, Feb. 11, 1961]

THE END OF THE MCLEOD SAGA

There can have been fewer diplomatic representatives better tuned to the way of life of the country they resided in than genial American representative Scott McLeod who is shortly returning to the United States from Dublin. Mr. McLeod did more to take the starch out of diplomacy at public level than any man before him, and to reveal the human and more likable side of Ambassadors with hobbies and traits, families and problems like everybody else. A relaxed, easygoing personality, he entered immediately into the tension-free tempo of life in Ireland and proceeded to get to know the people in the quickest way possible by mixing with them socially in a bewildering number of appearances. Whether it was attending a race meeting in Killarney or fishing quietly on Lough Mask, Scott McLeod had the happy knack of making himself liked, and I suspect that few people were as well informed on current thought in Ireland as this former newspaperman who never lost his appreciation of the problems of the profession.

My favorite story about him concerns the young Dublin fashion writer who sought him out on the second day of a Kerry race meeting, and making no bones about her assignment, asked him about Mrs. McLeod's outfit on the occasion. Since the Ambassador's wife was in Dublin just then, this little avenue for copy seemed sealed off, but Mr. McLeod, informing her that Mrs. McLeod would attend the meeting the next day, reeled off a sartorial description that fulfilled the requirements.

To make a long story short when the Ambassador contacted his wife he asked her to be sure to wear the identical outfit and accessories he had described to the reporter. And she did—making at least one fashion writer very happy and adding another link to the long chain of McLeod good-will deeds.

I also remember him on an occasion at a school prize-giving ceremony in Limerick coming out with a strong statement on the advantage of the Irish educational system which he compared humorously with the American system. The story made quite a splash at the time but demonstrated again the McLeod liking for the Irish way of life.

[From the Irish Independent, Feb. 19, 1961]

HONORED ENVOY

The beautiful rose must have its thorns. Midst the rejoicing in Ireland at the election of an Irish-American, John Fitzgerald Kennedy, to be President of the United States of America, comes another change that is tinged with sorrow—the return to Washington of the U.S. Ambassador to Ireland, Mr. Scott McLeod.

His friends are legion in all parts of the country. He mixed with the people, went to their race meetings, was ever ready to honor with his presence the opening of an art exhibition, or an industrial plant. He came to know the Irish people in a way that no other Ambassador, American or otherwise, has done.

That the Irish liked him is shown by the tributes already paid to him, and planned to be paid to him before he leaves Dublin on March 15.

He has made no secret of the fact that he would have liked to stay in Ireland. But that cannot be. At Washington, however, Ireland will have in him a man ever ready to help our cause, be it politically or industrially.

Regretting his leaving, we feel that he will make his presence felt in his new and important role in Washington. For Ambassador McLeod is a man who wins both friends and success quickly.

[From the Clare Champion, Nov. 2, 1961]

CLARE LOSES A FRIEND

Clare has lost a very real friend in the retirement of U.S. Ambassador to Ireland, Mr. Scott McLeod.

Mr. McLeod was a frequent visitor to County Clare and, while he could not officially favor the county or Ennis, its capital, he did help in its industrial drive in recent years.

The Ambassador's first public function in this country was to attend the Muintir na Tire Rural Week in St. Flannan's College, in July 1957. Since then he has come to Clare regularly, to visit seaside resorts like Kilkee and Lahinch, and to tour the "O'Brien country" of North Clare with his wife and family. He was an honorary member of the Ennis Chamber of Commerce and was a witty afterdinner speaker at all their annual dinners. Due to illness, he was unable to attend the last function of the chamber some weeks ago.

A keen fisherman, Mr. McLeod and his two sons, Dan and Van, enjoyed the sport on Lough Derg. Two years ago one of his sons caught an 18-pound pike, fishing from Mountshannon. His daughter, Ann, took part in the jumping competitions at Ennis and Kildysart shows.

Speaking at a press conference, in Dublin during the week, Mr. McLeod said "We have been received with warm hospitality in the 26 counties. We can never begin to express in an adequate way the appreciation which we feel. I will miss your trout fishing, horse racing and the accessibility of a very high standard of cultural events."

Mr. McLeod leaves on March 15 to take up an appointment as minority counsel to the U.S. Senate Appropriations Committee.

[From the Evening Press, Jan. 26, 1961]

DIPLOMAT McLEOD

Our former Ambassador from the U.S., Mr. Scott McLeod, proved himself to be one of the finest diplomats yet accredited to this country.

He added very considerably to the prestige of his country, and became one of the most popular diplomats in Ireland. He has done more to enhance Irish-United States relations than anyone in recent years. Why then can we not, as a people, ask President John F. Kennedy to leave us the services of this very fine man who seems to have adopted Ireland as his second country? The new President has shown great wisdom in his choice of Cabinet members; he could show still more in reappointing Mr. McLeod as U.S. Ambassador. He will not find better.

P.O'S.

[From the Evening Press, Jan. 30, 1961]

DIPLOMAT McLEOD

Me, too. Let's all get together as P. O'S. (Ballybunion) suggests and ask President Kennedy to leave Mr. Scott McLeod with us for at least 4 more years. He is a thorough gentleman and a regular guy into the bargain; we could never match him.

PETER E. MURPHY.

[From the Evening Press, Feb. 2, 1961]

DIPLOMAT McLEOD

I would like to endorse the remarks of my friends from Ballybunion and Dublin regarding the Honorable Scott McLeod.

I had the pleasure of inviting Mr. Scott McLeod to Wexford for a race meeting in Wexford during my term as mayor, and have met him since on a few other occasions.

I, also, found him a regular guy and a proper gentleman. We should endeavor to use our influence to have him retained as long as he wishes to stay.

(Ald.) KEVIN C. MORRIS, P.C., *Wexford.*

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate return to legislative session.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

PROHIBITING COLLECTION OF FEES FOR SERVICES TO AMERICAN VESSELS AND SEAMEN

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 77, Senate bill 1358. Before the clerk reads the title of the bill, let me say it has been cleared with the minority leadership. It has been reported from the Committee on Foreign Relations unanimously and, so far as I know, is absolutely noncontroversial.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 1358) to repeal section 12 of the act of June 26, 1884, prohibiting a charge or collection of fees by consular officers for official services to American vessels and seamen, and to repeal the provision of the act of June 4, 1920, authorizing the free issuance of passports to seamen.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that excerpts from the report on the bill may appear at this point in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

The Committee on Foreign Relations, having had under consideration S. 1358, to repeal section 12 of the act of June 26, 1884, prohibiting a charge or collection of fees by consular officers for official services to American vessels and seamen, and to repeal the provision of the act of June 4, 1920, authorizing the free issuance of passports to seamen, reports the bill and recommends that it pass.

BACKGROUND

S. 1358 is identical to S. 2232 of the last Congress which was submitted by the Department of State on June 23, 1959. The committee held hearings on S. 2232 on July 6, 1959. The provisions of S. 2232 passed the Senate on September 9, 1959, as part of S. 2633, containing amendments to the Foreign Service Act. S. 2633 became law on September 8, 1960, but the provision relating to consular fees and passport fees which originated in S. 2232 had been dropped out in the Senate-House conference because it had not been considered in the House.

S. 1358 was submitted by the Department of State on January 19, 1961, and has been fully supported by the present administration.

Because neither the facts nor the policy on which the bill is based have changed since the earlier consideration by the committee and the Senate on the same bill in 1959, the committee did not hold new hearings. The committee considered S. 1358 in executive session on March 21 and ordered the bill favorably reported.

REASONS FOR THE BILL

Section 12 of the act of June 26, 1884, prohibited a charge or collection by consular officers for official services for American vessels and seamen. This was considered necessary in 1884 because consuls at that time were frequently merchants engaged in business overseas and they sometimes charged excessive fees. Today consular officers are part of the Foreign Service and are appointed on merit. The fees for consular services are established by the Secretary of State after appropriate notice and the collection of them is subject to strict accountability. It is estimated that the cost to the Government of providing consular services for American shipping and seamen abroad is over $400,000 a year.

An example of a consular service to an American vessel is the filing in consular offices abroad of "notes of protest" which are depositions made by a master of a ship for insurance purposes. An example of a service to individual seamen is notarial service.

The 1884 law is not only obsolete, it is inconsistent with later congressional policy (5 U.S.C. 140) which requires that each Federal agency charge a fee for services performed on behalf of the public.

During the hearings on the previous identical bill in 1959 a representative of the American Merchant Marine Institute expressed concern about the policies to be followed by the Department of State in fixing fees for consular services. That concern was removed upon the reaching of an understanding that the Department of State will establish a reasonable schedule of fees for such services, and give reasonable notice to the parties affected, but it will not make a charge for services required by law or services which are primarily in the public interest.

The act of June 4, 1920, authorized the free issuance of passports to seamen. The original idea was to thus benefit merchant shipping. The Department of State representative testified, however, that seamen rarely ask for passports because they use their seaman identification cards for the same purpose. When seamen need passports for tourist travel, they come within the congressional policy stated above and should pay the regular passport fee. No objection was registered with the committee to the repeal of the act of June 4, 1920.

CONCLUSIONS

The Committee on Foreign Relations concludes that the two laws in question are obsolete and are inconsistent with more recent legislative policy and recommends that the Senate give its approval to S. 1358.

"HARVEST OF SHAME" FILM

Mr. HOLLAND. Mr. President, I should like to read into the RECORD a dispatch from the Associated Press ticker of about an hour ago which I think may reflect some additional light on the so-called "Harvest of Shame" matter which I have discussed, I believe, three times heretofore on the floor of the Senate. The Associated Press dispatch reads as follows:

WASHINGTON.—White House Press Secretary Pierre Salinger said today he took steps to make sure the TV film "Harvest of Shame" was not interpreted by British viewers as an official U.S. Government document.

Salinger said he wanted that made clear since Edward R. Murrow was the commentator for the film about migratory farmworkers.

Murrow now is Director of the U.S. Information Agency, but was employed by Columbia Broadcasting System at the time the film was made.

Murrow himself telephoned the British Broadcasting Corp. in an unsuccessful effort to halt its recent showing of the film.

Salinger said that after BBC decided to go ahead with the showing, he telephoned Richard S. Salant, president of the CBS News Division.

Salinger said he expressed the hope that BBC would include an announcement that it was not an official U.S. Government film. He said Salant agreed that there would be such announcements in connection with the showing of the film and that he assumes this was done.

Salinger said he called Salant after the State Department had expressed concern to him lest the film be interpreted as an official Government document.

Salinger also told a news conference that at the time he called Salant there was no question of stopping the showing of the film by BBC. Salinger said Salant explained to him the arrangement CBS has with foreign TV networks under which they can buy what are known as public service films. He said Salant told him that "Harvest of Shame" would not be offered to foreign networks, but that if any asked to buy it each request would be reviewed individually.

CBS first showed the film on its own network last year. It is what is known in the industry as a documentary—an exploration of a situation or subject.

Several Members of Congress, notably Senator SPESSARD L. HOLLAND, Democrat, of Florida, have contended it did not fairly present the condition of workers who move about the country to harvest crops as they ripen.

That concludes the Associated Press dispatch, which I am advised is a rather careful résumé of a longer statement made by Mr. Salinger at his press conference this morning, which I did not have the privilege to hear.

I have inserted the dispatch into the RECORD for the reason that I thought it would tend to clarify this matter, which has become a little clouded by reason of certain statements in the press and over the radio, most of them correct but some of them very far from correct.

The first point I make is, as stated in my earlier appearance, that my telephone calls on this matter were to Governor Collins, former Governor of Florida, and now president of the National Association of Broadcasters, and to the State Department, where I spoke two or three times to Mr. Lincoln White and twice to Assistant Secretary Roger Tubby.

The next point I make is that I did not call Mr. Murrow; that Mr. Murrow called me on two occasions; and that his expressions of his very great discomfiture because this film was being shown in England, and later telling me of his effort with the British Broadcasting Corp. to stop the showing of the film, were made by Mr. Murrow, on his own initiative, to me, and not after a call by me to Mr. Murrow. I made no such call.

The third point I want to make is that Mr. Salinger called CBS not at my request, but apparently, from the press release which I have just read, at the request of the State Department, or on his own initiative, after having heard from the State Department.

He had not heard from me at the time he made his call to CBS, as reported in the press dispatch.

The next point I make relates to the assurance given by CBS, which, as stated in the press release, reads as follows:

He [Mr. Salinger] said Salant told him that "Harvest of Shame" would not be offered to foreign networks, but that if any asked to buy it each request would be reviewed individually.

That statement was apparently made by Mr. Salant, and certainly made by Mr. Salinger to my office and later directly to me, and he, Mr. Salinger is the source from which it came to me. In my earlier statement on the Senate floor I did not mention Mr. Salinger. I simply stated that my information came from a high Government official. He had not authorized me to use his name.

Mr. Salinger told my office, and I called him again yesterday to refresh my memory on it, that, in the event any other country should, on its own initiative, attempt to purchase this film from CBS, CBS would, in such a matter, not only review the situation individually, but also discuss it with Mr. Salinger before action was taken.

Mr. DIRKSEN. Mr. President, will the distinguished Senator yield?

Mr. HOLLAND. I yield.

Mr. DIRKSEN. I gathered, from the earlier stories, Mr. Murrow allegedly called BBC in London; but I think it is pretty clear, from the latest accounts, that Mr. Salinger, at the White House, also called Mr. Salant, of the British Broadcasting Co., with respect to this matter; and one would normally infer from that the protest uttered in the Senate and in the House by many Members certainly registered along the line with respect to this particular documentation.

Mr. HOLLAND. My understanding is that Mr. Salant is an official of the CBS, and not of the British Broadcasting Co. I believe the press release states Mr. Salinger states he did not call the British Broadcasting Co. At any rate, the release speaks for itself.

Mr. DIRKSEN. There was a polite kind of intervention, whether it was a direct or indirect intervention. So it makes it rather official business.

Mr. HOLLAND. Mr. President, whether direct or indirect, I think the intervention was thoroughly responsible and was thoroughly in order. If there ever was a false presentation of a subject, it was that which is contained in a large part of the film. I repeat, I have called attention to seven instances in which the film is completely false, and there has been no refutation of my statements.

What makes it worse, Mr. President, is that some of those very representations of falsity in the film have been the things seized upon by the British commentators, by the British columnists, and by the Kremlin in the reports they are making about the broadcast in Britain. So far as the Kremlin is concerned, the Senator from Florida does not have any word except what appears in the press reports. The Senator from Florida regrets that the thing he predicted would come to pass has come to pass, in that Russia has seized upon this broadcast. The British commentators and the Russian comments seize upon one feature or another of the telecast which was false and which should not have been permitted to go upon the screen, where it could be viewed by millions of our good friends as well as by an ample number of those who are not at all friendly to us.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the Senator from Illinois.

Mr. DIRKSEN. Does not the Senator from Florida feel now is an opportune time for another documentary, which we might call "Harvest of Embarrassment"?

Mr. HOLLAND. Mr. President, I hope the people who were responsible for the filming of the picture, for the cutting out of thousands and thousands of feet which were accurate, and for the putting together of much of the irresponsible and false material are embarrassed. I hope they are sufficiently embarrassed that they will not offend the public conscience and the national interest by doing this kind of thing again.

Mr. President, there is one more thing I wish to make very clear for the RECORD, because some of the press dispatches have, through error, carried the statement that I said Mr. Bunker—who is, I believe, an executive vice president of CBS—was the person who told me he had called to the British Broadcasting Co. or had made to me certain representations with reference to CBS's intentions in the matter. Mr. Bunker represents CBS in Washington, D.C. He is a very fine young man. I certainly would not want to leave this statement unquestioned.

Mr. President, I have never made any such statement. My statements appear rather clearly, I think, in the RECORD. Someone has made a mistake in reporting. For fear Mr. Bunker may have been occasioned some embarrassment by these misstatements of fact, I wish to make it very clear that his call to me was simply to report that he was advised by top officials in CBS that there was nothing they could do about the matter because of the lateness of the hour. His statement was most courteous, and was not accompanied by any other thing than that.

Mr. President, I hope that we are sufficiently through with this unpleasant incident that it will not appear of record again, though already there is a great file of additional statements from the British of similar substance to those I placed in the RECORD the other day—I believe six—showing an immediate misunderstanding of the situation and an immediate attribution to this country of things humiliating to us, based on untruths in the film. These followed immediately the showing of the film in Britain. I am sure the statements in the British papers were made in good faith by the columnists, by the correspondents, by the news reporters, and others who reported on the film the day after its showing in Britain, to the readers of the British papers, for whom these people were writing.

Mr. President, I hope we shall not have any further incidents such as this. The word "documentary" gives some indication the film is documented, is truthful, speaks of fact, and gives a representative and proven statement on the matters assumed to be covered.

Mr. President, when a film goes as far afield in trespassing on the truth as this one did, it certainly should not have the term "documentary" applied to it. It certainly should never have been foisted upon our own people. We should

not betray good people who are producers in this country, as well as those who are workers in this country, by bringing out inaccuracy, which untruthfully reflects upon both producers and workers in such a way as to, in effect, create shame when there should be no shame.

Mr. President, the name, "Harvest of Shame," instead of referring to a harvest of crops from the soil as being shameful, should really refer, when used, to shameful exploitation by the creators of the film, to shameful departure from the facts, and to the shameful humiliation of good people which tactics were employed in order to gain a little notoriety or to make a little money for someone.

Mr. President, I do not think we can too greatly discourage and repudiate such handling, particularly when it comes from a great and influential agency which depends for its very existence upon the good will of the people of the United States. The network does not have a single channel, either one it owns itself or one with which it has contracts to carry its program, other than through the functioning of the very generous laws enacted by the Congress for the protection of the people of the United States and for the protection of those agencies which properly use the channels, of which there are many.

I dare say that many of the individual stations which used the film are among those who most greatly regret, now that they see what has been occasioned, that which has been foisted upon them.

One more comment, Mr. President, and I hope this will be the last I shall have to say on the subject. I have noted quite a number of editorials from generally well informed papers, written by scholars and gentlemen who try to correctly state their consciences upon many subjects. Each of them has made one critical mistake in commenting upon this film and upon the unpleasant series of incidents which has occurred connected with it. That is, each has assumed the film is true.

Each has assumed the film is true, and upon that assumption has felt it was quite proper for the film to be played here and replayed in Britain. These writers have felt it was quite proper for the film to be played in the United States in the first instance. Mr. President, it is not proper for any film to be played in this country to any audience, or beyond the seas to an audience of friends or enemies, when it is full of untruths and when the false things are so fully calculated to reflect discredit upon good people and upon the Nation which we love.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SCHENECTADY, N.Y.

Mr. KEATING. Mr. President, several days ago I received a copy of Resolution No. 7170 from the Council of the City of Schenectady, urging that cities be accorded the right to obtain Federal surplus property in the same way that schools, health, civil defense, and certain other organizations receive such property.

Mr. President, I have long urged the liberalization of our Federal domestic surplus property statutes and regulations to include other worthy organizations and instrumentalities of government. I have already introduced a bill this year in the Senate (S. 1069) to permit the distribution of surplus property to certain welfare agencies. These worthy groups certainly deserve such assistance and have time and again earned our thanks and commendation.

The resolution of the city of Schenectady is certainly of interest in connection with proposed legislation before the Congress to broaden our Federal surplus property rules and regulations. I therefore ask unanimous consent that it be printed at this point in the RECORD in order that the appropriate committee of the Congress may study the several arguments so ably presented by the City Council of Schenectady, N.Y.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION 7170

Whereas the Federal Government now possesses and will continue to acquire considerable quantities of property no longer needed for their original governmental purposes; and

Whereas much of this property, declared surplus, is stored and ultimately sold through the offices of the General Services Administration; and

Whereas certain rights and privileges to the acquisition of this surplus property are accorded to nonprofit organizations and to school jurisdictions, and the rights and privileges of cities to acquire such surplus property are severely restricted and are generally limited to purposes of civil defense; and

Whereas much surplus property is purchased by private individuals for speculative purposes, in effect, municipal jurisdictions do not have the same rights and privileges now enjoyed by school districts and by certain nonprofit groups; and

Whereas all such surplus property has been purchased with public funds and paid for by the taxpayers, and it is generally deemed equitable that city governments should enjoy the same rights and privileges, insofar as surplus property is concerned, now accorded to school districts and to nonprofit organizations; and

Whereas the rights and privileges of cities should in all justice take precedence over the rights and privileges of private speculators: Now, therefore, be it

Resolved, That the City Council of the City of Schenectady, N.Y., hereby goes on record as favoring the adoption of legislation and administrative rules and regulations which will vest in cities the same rights and privileges now vested in school districts and other nonprofit organizations, with respect to the acquisition of Federal surplus property, and that the city clerk of the city of Schenectady, N.Y., is hereby directed to forward a copy of this resolution to Senators JACOB K. JAVITS and KENNETH B. KEATING, and Representative SAMUEL S. STRATTON.

WVET–TV VIEWERS URGE ELECTORAL REFORMS

Mr. KEATING. Mr. President, Mr. Tom Decker, of station WVET–TV in Rochester, N.Y., recently conducted a survey as to the opinions of his viewers on the present method of selecting the President and Vice President of the United States.

He received a heavy and enthusiastic response from viewers throughout the Rochester area. Letters and postcards were received from 1,074 persons in Rochester and surrounding communities.

I think the response was quite amazing.

These letters have been turned over to me and I have gone through them carefully. I was very much interested in the results of this poll and in the thoughtful comments of those who responded.

Of the 1,074 who responded, 1,065 called for some type of reform of the electoral college. Almost all of those who are dissatisfied with the present system, stated that the electoral college should be abandoned altogether and that the President and Vice President should be elected by direct popular vote of all the people.

I favor the complete elimination of the electoral college. I agree that the election of the President and Vice President should be by direct popular vote. In this manner, every American will have the same voice—the same weight in the selection of the men to fill the highest offices of our land. To sum up my position in a nutshell, I favor "one American—one vote." In conjunction with this position, I am proud to be a cosponsor of a bill with the majority leader, the Senator from Montana [Mr. MANSFIELD] to eliminate the electoral college.

I am impressed by the active interest which station WVET–TV, Tom Decker, and his viewers have taken in this issue, which I believe is one of the most important facing the Congress. This is indeed an excellent illustration of public-service-oriented broadcasting at its best. It is with pleasure that I call attention today to the widespread feeling in favor of electoral reform.

I ask unanimous consent to have printed at this point in the RECORD a copy of a report which I issued on November 18 spelling out in detail my position in favor of the elimination of the electoral college.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT FROM WASHINGTON BY SENATOR KENNETH B. KEATING

Many proposals now are being made by Members of Congress, other persons, and organizations to reform the electoral college system. These proposals are made after nearly every presidential election and now, because of the closeness of the national popular vote, more attention than usual is being centered on the peculiarities of the present system.

It is clear to almost everyone that it is possible for a candidate to receive a majority of the popular vote, and still lose the election. In fact, this has happened twice in our history. The basic reason for this is that the people of our country do not vote directly for the President. Instead, they vote for presidential electors.

All of the electors in a State are bound by custom, although not by law, to vote as a bloc for the candidate who received the largest popular vote in the State. This is done regardless of how small that winning candidate's margin of votes may have been.

Here in New York State, for example, a candidate who wins by 1 vote out of the more than 7 million votes cast, gets all of New York's 45 votes. His opponent gets none. The same thing is true if the winner's margin is 1 million votes.

Then there is another reason why a candidate can win a national election with less than a majority of the popular votes. This reason is not well understood. This reason is that the number of electors in each State is not distributed in the same proportion as the number of voters in each State.

Explaining this in simple terms, the smaller States have a much larger proportion of electors compared with their population than do the larger States. This disparity is compounded in those States which discriminate against certain voters on a mass scale, as, for instance, in Mississippi. Each voting-age resident is counted in determining the number of State electors, regardless of how many such people actually do vote.

Here is an example of this: In 1956, about one and a quarter million voters in Connecticut and a quarter of one million in Mississippi were represented by eight electors. In New York State, about 7 million voters were represented by 45 electors. This means that each voter in Mississippi had the same weight in choosing a President and Vice President as five voters in New York, and four and one-half voters in Connecticut. This is disgracefully unfair and undemocratic as far as the New York State voters are concerned.

Nothing short of a complete elimination of the electoral college and a direct popular vote for President and Vice President will give each voter in our Nation the same influence in choosing our national leaders. The difficulty with this proposal is that it can only be accomplished by a constitutional amendment which, even if it could be approved by Congress by a two-thirds majority vote, still would have to be ratified by three-fourths of the 50 States. The smaller States, which now have a distinct advantage under the present electoral college system, would not be likely to vote to ratify such an amendment.

A system of allocation of State electors, in direct proportion to the popular vote, is being widely hailed as a great reform. The fact is, however, that such a system would not serve in any way to remedy the present imbalance in the voting strength of citizens in the small and large States. Nor would it prevent the election of a President by a minority vote. In fact, this proportional allocation system might elect a minority President.

Let me give you an example: In the election of 1900, William McKinley had a total popular vote of 7,219,000, or 52.8 percent. William Jennings Bryan had a popular vote of 6,358,000, or 47.2 percent. McKinley won the 1900 election with an electoral college vote of 292 to Bryan's 155. If the proportional allocation system had been used, Bryan would have had 218 electoral votes, and McKinley 214. Yet Bryan carried only 17 States in that election, 11 of them in the South, 2 border States, and 4 Western States, while McKinley carried 28 States, including all of the Eastern, Middle Western, and Pacific Coast States, 3 border States, and 2 Western States.

Our electoral college system certainly needs reform. We cannot indefinitely perpetuate a system which allows the possibility of a minority President. Nor can we be comfortable with a system which, in case of a tie or of no candidate receiving an electoral college majority, gives the more than 7 million voters in New York 1 vote, and the 90,000 voters in Nevada 1 vote each in an election of our President by the House of Representatives. Nor can we entrust our posterity to a system which places no legal control over how the electors shall cast their votes once they are selected by the people.

The present electoral college system is full of hazards and I cannot agree with those who say it should not be changed. But great care must be taken in framing and considering the precise language of the necessary constitutional amendment. Our objective must be to guarantee the election of a President by a majority of all the people, and to eliminate what has been described as the "whim or accident" which is inherent in the present process.

I am the Republican member of the three-man Senate Subcommittee on Privileges and Elections, and also a member of the Senate Committee on the Judiciary, the two committees which could consider a reform in our electoral system. I intend to do everything I can as a member of these committees to make certain that this subject is not quietly shelved when the impact of the election has dimmed. I believe that exhaustive study of this problem should be undertaken by Congress as soon as possible after we convene in January, and I intend to request such a study at a very early date.

Our aim should be: "One American, One Vote."

Mr. KEATING. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROHIBITING COLLECTION OF FEES FOR SERVICES TO AMERICAN VESSELS AND SEAMEN

The Senate resumed the consideration of the bill (S. 1358) to repeal section 12 of the act of June 26, 1884, prohibiting a charge or collection of fees by consular officers for official services to American vessels and seamen, and to repeal the provision of the act of June 4, 1920, authorizing the free issuance of passports to seamen.

Mr. MANSFIELD. Mr. President, has the bill (S. 1358) passed?

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 1358) was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (1) section 12 of the Act of June 26, 1884 (23 Stat. 56; 22 U.S.C. 1186), shall be and the same is hereby repealed, and (2) that the second proviso of section 1 of chapter 223 of the Act of June 4, 1920, as amended (41 Stat. 750; 22 U.S.C. 214), shall be and the same is hereby further amended by striking out the phrase "or to seamen,".

LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, for the information of the Senate, there is one nomination on the Executive Calendar which we hope to call up tomorrow. There are a number of private bills, none of which are controversial, which we shall consider after the morning hour tomorrow. Except for those items of business the calendar will be clear, although the sugar bill, reported by the Committee on Finance, will be on the desks of Senators tomorrow and will be made the pending business at the conclusion of the consideration of the noncontroversial items on the Private Calendar.

ADJOURNMENT UNTIL 10 O'CLOCK A.M. TOMORROW

Mr. MANSFIELD. Mr. President, if there be no further business to come before the Senate at this time, I move, pursuant to the order previously entered, that the Senate adjourn until 10 o'clock a.m. tomorrow.

The motion was agreed to; and (at 4 o'clock and 34 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Wednesday, March 29, 1961, at 10 o'clock a.m.

NOMINATIONS

Executive nominations received by the Senate March 28, 1961.

DIPLOMATIC AND FOREIGN SERVICE

Joseph C. Satterthwaite, of Michigan, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Union of South Africa.

UNITED NATIONS

Mrs. Jane Warner Dick, of Illinois, to be the representative of the United States of America on the Social Commission of the Economic and Social Council of the United Nations.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 28, 1961:

U.S. ATTORNEYS

Newell A. George, of Kansas, to be U.S. attorney for the district of Kansas for a term of 4 years.

Robert E. Maxwell, of West Virginia, to be U.S. attorney for the northern district of West Virginia for a term of 4 years.

DEPARTMENT OF THE INTERIOR

John M. Kelly, of New Mexico, to be an Assistant Secretary of the Interior.

ASSISTANT ATTORNEY GENERAL

Burke Marshall, of Maryland, to be an Assistant Attorney General.

DIPLOMATIC AND FOREIGN SERVICE

AMBASSADORS

William Attwood, of Connecticut, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Guinea.

Anthony J. Drexel Biddle, of Pennsylvania, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Spain.

William McCormick Blair, Jr., of Illinois, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Denmark.

Aaron S. Brown, of New Hampshire, a Foreign Service Officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Nicaragua.

J. Kenneth Galbraith, of Massachusetts, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to India.

Edwin O. Reischauer, of Massachusetts, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Japan.

John S. Rice, of Pennsylvania, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Kingdom of the Netherlands.

Edward G. Stockdale, of Florida, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Ireland.

Kenneth Todd Young, of New York, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Thailand.

COMMODITY CREDIT CORPORATION

The following-named persons to be members of the Board of Directors of the Commodity Credit Corporation:

Charles S. Murphy, of Maryland.
John P. Duncan, Jr., of Georgia.
Frank J. Welch, of Kentucky.
James T. Ralph, of California.
Horace Godfrey, of North Carolina.
Willard Cochrane, of Minnesota.

DEPARTMENT OF AGRICULTURE

John C. Bagwell, of South Carolina, to be General Counsel of the Department of Agriculture.

COMMISSIONER OF EDUCATION

Sterling M. McMurrin, of Utah, to be Commissioner of Education.

FEDERAL MEDIATION AND CONCILIATION DIRECTOR

William E. Simkin, of Pennsylvania, to be Federal Mediation and Conciliation Director.

FOREIGN CLAIMS SETTLEMENT COMMISSION

Edward D. Re, of New York, to be a member of the Foreign Claims Settlement Commission of the United States.

Theodore Jaffe, of Rhode Island, to be a member of the Foreign Claims Settlement Commission of the United States.

ST. LAWRENCE SEAWAY DEVELOPMENT CORPORATION

Joseph H. McCann, of Michigan, to be Deputy Administrator of the St. Lawrence Seaway Development Corporation.

Martin W. Oettershagen, of Illinois, to be Administrator of the St. Lawrence Seaway Development Corporation.

HOUSE OF REPRESENTATIVES

TUESDAY, MARCH 28, 1961

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

The verse of Scripture which Martin Luther spoke of as "the Gospel in miniature," John 3:16: *For God so loved the world that he gave his only begotten Son that whosoever believeth in Him should not perish but have everlasting life.*

O Thou who art the source of every noble impulse and every lofty aspiration, we beseech Thee to bestow upon us those gifts of the Holy Spirit which make for strength and beauty of character.

Grant that in these strange and troubled days, which try men's souls, we may be girded with Thy grace and power to safeguard us against all weakness and weariness, all anxiety and fear.

Lift and lead us into the glorious fellowship of those who are sensitive and responsive to Thy gracious providence which enfolds us always and everywhere with Thy loving kindness.

Bless the lonely of soul with Thy companionship and the wounded of heart with Thy healing and in every humanitarian cause may we labor together as partners and friends.

In Christ's name we bring our petition. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Ratchford, one of his secretaries, who also informed the House that on March 24, 1961, the President approved and signed a bill of the House of the following title:

H.R. 5075. An act to provide temporary extended railroad unemployment insurance benefits, and for other purposes.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment bills of the House of the following titles:

H.R. 3980. An act to amend the transitional provisions of the act approved September 6, 1958, entitled "An act to protect the public health by amending the Federal Food, Drug, and Cosmetic Act to prohibit the use in food of additives which have not been adequately tested to establish their safety", and for other purposes; and

H.R. 4363. An act to amend Public Law 86-272 relating to State taxation of interstate commerce.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 5188. An act making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes.

The message also announced that the Senate insists upon its amendments to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. HAYDEN, Mr. RUSSELL, Mr. CHAVEZ, Mr. ELLENDER, Mr. HILL, Mr. MCCLELLAN, Mr. MAGNUSON, Mr. BRIDGES, Mr. SALTONSTALL, Mr. YOUNG of North Dakota, and Mr. MUNDT to be the conferees on the part of the Senate.

The message also announced that the Vice President has appointed Mr. JOHNSTON and Mr. CARLSON members of the joint select committee on the part of the Senate, as provided for in the act of August 5, 1939, entitled "An act to provide for the disposition of certain records of the U.S. Government," for the disposition of executive papers referred to in the report of the Archivist of the United States No. 61-5.

SUPPLEMENTAL APPROPRIATION BILL ENDING JUNE 30, 1961

Mr. THOMAS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 5188) making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes, with Senate amendments thereto, disagree to the amendments of the Senate, and agree to the conference asked by the Senate.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The Chair appoints the following conferees: Messrs. THOMAS, KIRWAN, CANNON, JENSEN, and TABER.

LAW DAY, U.S.A.

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent for the immediate consideration of House Joint Resolution 32 to designate the first day of May of each year as Law Day, U.S.A.

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the joint resolution, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the first day of May of each year is hereby designated as Law Day, U.S.A. It is set aside as a special day of celebration by the American people in appreciation of their liberties and the reaffirmation of their loyalty to the United States of America; of their rededication to the ideals of equality and justice under law in their relations with each other as well as with other nations; and for the cultivation of that respect for law that is so vital to the democratic way of life.

The President of the United States is authorized and requested to issue a proclamation calling upon all public officials to display the flag of the United States on all Government buildings on such day and inviting the people of the United States to observe such day with suitable ceremonies and other appropriate ways, through public bodies and private organizations as well as in schools and other suitable places.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. CORMAN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. CORMAN. Mr. Speaker, the resolution offered for our consideration here today, which would establish a National Law Day to be marked on each May 1, is one for which I have a particular appreciation and fondness. Last year, when I served as a member of the Los Angeles City Council, representing the seventh district of that great community, I joined in the sponsorship of a similar bill to pay tribute to our Nation's heritage of rule by law. I felt then, as I feel now, that no creation of mankind is more exalted, or more divinely touched, than that of justice and law.

Further, the date selected for this commemoration could not have been more appropriate. If adopted, this annual memorial would become America's

moral answer to another symbol that has been associated with May Day: that of man's most fearful tyranny, communism. If adopted, Law Day would counter the Communist image of deceit and tyranny with an affirmation of our own belief in truth, fairness, and justice. It would demonstrate our faith in rule by law, and our contempt for communism's rule by corrupt and willful men.

National Law Day would also pay tribute to an honored profession. It would be a fitting salute to the men and women throughout America who struggle selflessly for correction of wrongs, redress of grievances, and the equality of man. Here, in the battleground of America's courts, is found a basic truth that ultimately all men and nations must discover: that decisions reached through conflict or power are self-destructive—destroyer becomes destroyed, betrayer becomes betrayed, and aggressor ultimately falls victim to his own aggression. The power of law is not the power of arms and men; it is the incontrovertible power of logic and reason. These inexorable forces will one day rule men everywhere. These will out.

Mr. Speaker, I urge passage of this resolution.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

THE LATE HONORABLE LEROY JOHNSON

The SPEAKER. The Chair recognizes the gentleman from California [Mr. McFALL].

Mr. McFALL. Mr. Speaker, the news that former Representative Leroy Johnson, of Stockton, Calif., passed away on Sunday last is indeed a sad message to deliver to this distinguished body.

Leroy Johnson died in the State of California which he so dearly loved. He represented the 11th Congressional District during the 78th through the 84th Congress, from 1943 through 1956.

Leroy Johnson was a true friend to his colleagues on both sides of the aisle in the House of Representatives. The House of Representatives is an austere judge of the character and ability of its Members and the reputation that our late colleague held bespoke of his sincere and friendly personality and his excellent character.

He enjoyed the reputation of giving sincere and detailed attention to the legislative duties that faced him. He was fair and responsive to individual problems.

In 1943 when Leroy Johnson entered the House of Representatives he was assigned to the Military Affairs Committee. It has been recorded that in 1947 when the old Military Affairs Committee and the Naval Affairs Committee were combined into the present Armed Services Committee, the first chairman of the newly formed committee stated that he was anxious to have Leroy Johnson assigned to the Armed Services Committee, as he was desirous of having "this highly decorated and combat-tested aviator on the committee because of his background and wide experience in military affairs and legislation affecting all of the armed services." Leroy Johnson contributed untold hours to military matters which were vitally connected with the Reserve and National Guard legislative program.

Born in Wausau, Wis., Congressman Johnson was graduated from the University of Wisconsin and the University of California. He served during World War I as a pilot in the 104th Aero Squadron, participated in the St. Mihiel and Argonne drives and was awarded the Silver Star Medal.

His public service also included service as city attorney in Stockton, Calif. prior to and following his years in the Congress.

To his wife, Elizabeth Alpers Johnson, and his family, I extend deep and sincere sympathy in their loss, which is also ours.

Mr. BALDWIN. Mr. Speaker, will the gentleman yield?

Mr. McFALL. I yield to the gentleman from California.

Mr. BALDWIN. Mr Speaker, when I first came to Congress, Leroy Johnson was most helpful to me. He represented the district next to mine. Formerly he also represented a portion of the district which I now represent.

Mr. Speaker, Leroy Johnson was very helpful to all new Members of the House. He was particularly helpful to me, representing the district next to mine, for we had many similar problems. My wife and I came to know Leroy Johnson and Mrs. Johnson very well. We admired them. We admired his integrity. I join in extending my deepest sympathy to his widow.

Mr. McFALL. I thank the gentleman.

Mr. JUDD. Mr. Speaker, will the gentleman yield?

Mr. McFALL. I yield to the gentleman from Minnesota.

Mr. JUDD. Mr. Speaker, it was my privilege to enter Congress on the same day as the Honorable Leroy Johnson in January 1943, at the beginning of the 78th Congress. Of course, Members who belong to the same class, get to know each other better and develop closer personal relationships. Leroy Johnson was an outstanding Member of our class, a fine Christian gentleman, of high character and great industry. He served effectively on the Committee on Armed Services. He was active in veterans' activities. He was always faithful and diligent in performing his congressional duties.

Especially to those of us who got to know him most intimately he was a warm and treasured personal friend. We regret his passing although we know he has not been in good health these last years and perhaps welcome release.

Mr. Speaker, Leroy Johnson left a record of public service of which any man and any family can be very proud. Mrs. Judd and I join in sending to his wife and family our deep sympathy and affectionate regards.

Mr. McFALL. Mr. Speaker, I thank the gentleman. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in the RECORD on the life and accomplishments of the late Honorable Leroy Johnson.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. AUCHINCLOSS. Mr. Speaker, I am greatly saddened to learn of the death of Leroy Johnson whose friendship I have always treasured. He came to Congress the same year that I did and he was one of the first men that I had the privilege of meeting. He was chosen the first president of the 78th Club, made up of those who were elected to the 78th Congress, and as I was active in that organization, I had many opportunities to confer and learn something about him.

He was an outstanding American who served his country in World War I with real distinction and he devoted his service in the Congress to what he conceived to be for the best interests of his country.

Leroy Johnson made many friends in Congress and commanded the respect of everyone. He was a real student of legislation and when he discussed a subject, he knew what he was talking about.

My deepest sympathy goes to his wife, who was his great companion, and his loved ones at this time of their bereavement.

Mr. GEORGE P. MILLER. Mr. Speaker, I, perhaps, knew Leroy Johnson longer than any man in the House of Representatives.

I first met him in 1919 just after World War I, when he was the local agent or representative of the Federal Board for Rehabilitation—later absorbed by the Veterans' Administration. I was a training officer working in the same area.

At that early date Leroy Johnson gave evidence of his great and abiding faith in his fellow ex-servicemen. His devotion to them and the solution of the complex problems that confronted the wounded and disabled veterans who returned to private life with only limited needs.

Leroy Johnson through the medium of the American Legion threw himself into the fight to get the medical attention, hospitalization, and just compensation. His was a great influence in this field. I worked with him and know well the value of his contribution.

Coming to Congress, Leroy Johnson joined with the Members from California who were fighting for the Central Valley project. His experience of post attorney and city attorney of Stockton, Calif., he again was in the forefront of the fight for those things that best served the vast majority of his constituents.

Leroy Johnson was always concerned with the Defense Establishment. He had the distinction of being one of the few American fliers who got into combat during the First World War—a rare man. It was natural that he should gravitate to the Military Affairs Committee. His personal combat experience was valuable to the committee during World War II.

Until he left Congress he continued to work hard and intelligently in the field of national defense.

I want to join with others in extending my sympathy to his good wife Mrs.

Betty Johnson—a helpmate who stood stanchly beside him during his political life.

Leroy Johnson, a patriot and honorable public officials, has made a lasting contribution to his loved country.

Mr. SIKES. Mr. Speaker, I have been saddened by the news that my close friend and former colleague, Leroy Johnson, has passed away.

Leroy came to the House of Representatives with the opening of the 78th Congress in 1943 and served consecutively with unusual distinction through the 84th Congress.

Born in Wausau, Wis., he moved to California and represented the 11th Congressional District of California. A graduate of the University of Wisconsin and of the University of California with a degree of doctor of jurisprudence from the latter, he was a lawyer by profession. For 11 years he served with distinction as city attorney for the city of Stockton, Calif.

A veteran of World War I, Leroy Johnson served as a pilot with the 104th Aero Squadron and saw action in the St. Mihiel and Argonne drives. He was awarded the Silver Star Medal for outstanding performance of duty during World War I.

Leroy Johnson made many friends on Capitol Hill. I came to know him well when we served together on the Armed Services Committee. It was here that I watched him give untiringly of himself to his duties as a legislator. Foremost in his mind at all times was the welfare and security of our beloved Nation. At the same time he served his district and State with distinction. I have maintained a close personal relationship with him since he left the House and feel a particular personal loss at his passing.

To his family, Mrs. Sikes and I offer our sympathy and hope that they will find peace in the assurance that he served us all well. He has gone to a well-earned rest.

Mr. HOEVEN. Mr. Speaker, I regret to learn of the passing of my good friend Leroy Johnson. He and I came to Congress together in January 1943, at the convening of the 78th Congress. He and I were instrumental in organizing the 78th Club, made up of Republican Members of the new Congress. He became the first president of the 78th Club and I became the first secretary.

I had a close association with Leroy Johnson throughout his service in the Congress. He was a good legislator and a fine Christian gentleman. He served well his day and generation.

Mrs. Hoeven joins me in extending our deepest sympathy to Mrs. Johnson and all members of the family.

Mr. HARVEY of Indiana. Mr. Speaker, I wish to express my own sympathy to the wife and family of our former colleague from California, Leroy Johnson. He was my good friend, and his counsel when I first came to Congress was of considerable assistance. As an aviator during World War I, he brought to the Congress an invaluable experience especially to the Armed Services Committee where he served with distinction. A devoted servant to his district and country, he was likewise devoted to his wife Betty and their family.

Our hopes are that the passing of time will soften the loss and bring to them a sense of satisfaction because of his great contribution to his country.

Mr. PHILBIN. Mr. Speaker, I was greatly shocked and most profoundly grieved to learn of the untimely passing of my dear, esteemed and beloved friend, former Congressman Leroy Johnson of California.

I served with Roy Johnson for many years on the House Military Affairs Committee and later on the House Armed Services Committee, and he was my devoted and valued colleague and friend.

Never in my public service, or in my lifetime, have I known a finer, more dedicated American, a more amiable, humane human being, or a more loyal friend.

Roy Johnson was a man of superb intellectual powers, possessed of a keen, penetrating, legal mind, endowed with complete awareness of the critical public problems with which he had occasion to deal.

There was a broadness and a depth to his searching mind, a comprehending sweep to his training and his interests that made him an exceptionally valuable member of our military committees and a truly outstanding Member of the House.

His lofty character, his exhalted idealism, his profound sense of humanity and justice and his unalterable fidelity to country, to duty and to every worthy, inspiring value of our national life, brought this noble son of the great State of California the respect, admiration, and affection of all those who knew him, especially of those of us who had the great privilege and honor of his friendship and of sharing with him public service in this great historic and world-renowned body.

Courageous, strong of conviction, independent minded and animated always by a rugged sense of justice and deep, abiding faith in American institutions, Roy Johnson exemplified the noblest attributes of a dedicated public servant and a noble Christian gentleman.

Great war hero, highly decorated and lauded for his loyal, magnificent service to the Nation in time of grave peril, honored in many ways and raised by his admiring fellow citizens to high public office, Roy Johnson nevertheless retained his basic sense of true values and his innate humility and simplicity of heart and manner that endeared him to all.

A great American has passed to the Great Beyond. A very dear friend has departed from this life. But his spirit, his devotion, his dedication, and the stirring example of his good life and splendid public service will long remain with us.

With a heavy heart, I join his lovely wife, his family, and many friends in mourning his loss and tender my most heartfelt sympathy to them.

May our beloved friend, Roy, find rest and peace in his eternal, heavenly home.

Mr. YOUNGER. Mr. Speaker, we are all saddened to learn of the death of former Congressman J. Leroy Johnson, of Stockton, Calif.

For 14 years he ably represented the Stockton area in the House. Because of his excellent record in the 104th Aero Squadron, American Expeditionary Force of World War I, he was assigned to the committee that later became the House Armed Services Committee. He was a strong and effective advocate of the universal military training program.

It can truly be said that Leroy Johnson devoted all of his adult life to the service of his district and the Nation, because shortly after he returned from his service in World War I he became deputy district attorney of San Joaquin County in California and later was city attorney for Stockton, Calif. He came to Congress in 1942 and served until 1956.

Mrs. Younger and I extend our deepest sympathy to Mrs. Johnson, their daughter, Mary E. Parr, and son, William, in their loss, which is a loss to the community, the State, and the Nation.

THE DEFENSE BUDGET—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 123)

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Appropriations and ordered to be printed:

To the Congress of the United States:

In my role as Commander in Chief of the American Armed Forces, and with my concern over the security of this Nation now and in the future, no single question of policy has concerned me more since entering upon these responsibilities than the adequacy of our present and planned military forces to accomplish our major national security objectives.

In January, while ordering certain immediately needed changes, I instructed the Secretary of Defense to reappraise our entire defense strategy, capacity, commitments, and needs in the light of present and future dangers. The Secretary of State and others have been consulted in this reappraisal, and I have myself carefully reviewed their reports and advice.

Such a review is obviously a tremendous task and it still continues. But circumstances do not permit a postponement of all further action during the many additional months that a full reappraisal will require. Consequently we are now able to present the most urgent and obvious recommendations for inclusion in the fiscal 1962 budget.

Meaningful defense budget decisions, however, are not possible without preliminary decisions on defense policy, reflecting both current strategic assumptions and certain fundamental principles. These basic policies or principles, as stated below, will constitute the essential guidelines and standards to be followed by all civilian and military personnel who work on behalf of our Nation's security. The budget which follows, if enacted by the Congress under its own solemn duty "to provide for the common defense," is designed to implement these assumptions as we now see them, and to

chart a fresh, clear course for our security in a time of rising dangers and persistent hope.

I. BASIC DEFENSE POLICIES

1. The primary purpose of our arms is peace, not war—to make certain that they will never have to be used—to deter all wars, general or limited, nuclear or conventional, large or small—to convince all potential aggressors that any attack would be futile—to provide backing for diplomatic settlement of disputes—to insure the adequacy of our bargaining power for an end to the arms race. The basic problems facing the world today are not susceptible to a military solution. Neither our strategy nor our psychology as a nation—and certainly not our economy—must become dependent upon the permanent maintenance of a large military establishment. Our military posture must be sufficiently flexible and under control to be consistent with our efforts to explore all possibilities and to take every step to lessen tensions, to obtain peaceful solutions, and to secure arms limitations. Diplomacy and defense are no longer distinct alternatives, one to be used where the other fails—both must complement each other.

Disarmament, so difficult and so urgent, has been much discussed since 1945, but progress has not been made. Recrimination in such matters is seldom useful, and we for our part are determined to try again. In so doing, we note that, in the public position of both sides in recent years, the determination to be strong has been coupled with announced willingness to negotiate. For our part, we know there can be dialectical truth in such a position, and we shall do all we can to prove it in action. This budget is wholly consistent with our earnest desire for serious conversation with the other side on disarmament. If genuine progress is made, then as tension is reduced, so will be our arms.

2. Our arms will never be used to strike the first blow in any attack. This is not a confession of weakness but a statement of strength. It is our national tradition. We must offset whatever advantage this may appear to hand an aggressor by so increasing the capability of our forces to respond swiftly and effectively to any aggressive move as to convince any would-be aggressor that such a movement would be too futile and costly to undertake. In the area of general war, this doctrine means that such capability must rest with that portion of our forces which would survive the initial attack. We are not creating forces for a first strike against any other nation. We shall never threaten, provoke or initiate aggression—but if aggression should come, our response will be swift and effective.

3. Our arms must be adequate to meet our commitments and insure our security, without being bound by arbitrary budget ceilings. This Nation can afford to be strong—it cannot afford to be weak. We shall do what is needed to make and to keep us strong. We must, of course, take advantage of every opportunity to reduce military outlays as a result of scientific or managerial progress, new strategic concepts, a more efficient, manageable and thus more effective Defense Establishment, or international agreements for the control and limitation of arms. But we must not shrink from additional costs where they are necessary. The additional $650 million in expenditures for fiscal 1962 which I am recommending today, while relatively small, are too urgent to be governed by a budget largely decided before our defense review had been completed. Indeed, in the long run the net effect of all the changes I am recommending will be to provide a more economical budget. But I cannot promise that in later years we need not be prepared to spend still more for what is indispensable. Much depends on the course followed by other nations. As a proportion of gross national product, as a share of our total budget, and in comparison with our national effort in earlier times of war, this increase in defense expenditures is still substantially below what our citizens have been willing and are now able to support as insurance on their security—insurance we hope is never needed—but insurance we must nevertheless purchase.

4. Our arms must be subject to ultimate civilian control and command at all times, in war as well as peace. The basic decisions on our participation in any conflict and our response to any threat—including all decisions relating to the use of nuclear weapons, or the escalation of a small war into a large one—will be made by the regularly constituted civilian authorities. This requires effective and protected organization, procedures, facilities and communication in the event of attack directed toward this objective, as well as defensive measures designed to insure thoughtful and selective decisions by the civilian authorities. This message and budget also reflect that basic principle. The Secretary of Defense and I have had the earnest counsel of our senior military advisers and many others—and in fact they support the great majority of the decisions reflected in this budget. But I have not delegated to anyone else the responsibilities for decision which are imposed upon me by the Constitution.

5. Our strategic arms and defenses must be adequate to deter any deliberate nuclear attack on the United States or our allies by making clear to any potential aggressor that sufficient retaliatory forces will be able to survive a first strike and penetrate his defenses in order to inflict unacceptable losses upon him. As I indicated in an address to the Senate some 31 months ago, this deterrence does not depend upon a simple comparison of missiles on hand before an attack. It has been publicly acknowledged for several years that this Nation has not led the world in missile strength. Moreover, we will not strike first in any conflict. But what we have and must continue to have is the ability to survive a first blow and respond with devastating power. This deterrent power depends not only on the number of our missiles and bombers, but on their state of readiness, their ability to survive attack, and the flexibility and sureness with which we can control them to achieve our national purpose and strategic objectives.

6. The strength and deployment of our forces in combination with those of our allies should be sufficiently powerful and mobile to prevent the steady erosion of the free world through limited wars; and it is this role that should constitute the primary mission of our oversea forces. Nonnuclear wars, and sublimited or guerrilla warfare, have since 1945 constituted the most active and constant threat to free world security. Those units of our forces which are stationed overseas, or designed to fight overseas, can be most usefully oriented toward deterring or confining those conflicts which do not justify and must not lead to a general nuclear attack. In the event of a major aggression that could not be repulsed by conventional forces, we must be prepared to take whatever action with whatever weapons are appropriate. But our objective now is to increase our ability to confine our response to nonnuclear weapons, and to lessen the incentive for any limited aggression by making clear what our response will accomplish. In most areas of the world, the main burden of local defense against overt attack, subversion and guerrilla warfare must rest on local populations and forces. But given the great likelihood and seriousness of this threat, we must be prepared to make a substantial contribution in the form of strong, highly mobile forces trained in this type of warfare, some of which must be deployed in forward areas, with a substantial airlift and sealift capacity and prestocked oversea bases.

7. Our defense posture must be both flexible and determined. Any potential aggressor contemplating an attack on any part of the free world with any kind of weapons, conventional or nuclear, must know that our response will be suitable, selective, swift, and effective. While he may be uncertain of its exact nature and location, there must be no uncertainty about our determination and capacity to take whatever steps are necessary to met our obligations. We must be able to make deliberate choices in weapons and strategy, shift the tempo of our production and alter the direction of our forces to meet rapidly changing conditions or objectives at very short notice and under any circumstances. Our weapon systems must be usable in a manner permitting deliberation and discrimination as to timing, scope, and targets in response to civilian authority; and our defenses must be secure against prolonged reattack as well as a surprise first strike. To purchase productive capacity and to initiate development programs that may never need to be used—as this budget proposes—adopts an insurance policy of buying alternative future options.

8. Our defense posture must be designed to reduce the danger of irrational or unpremeditated general war, the danger of an unnecessary escalation of a small war into a large one, or of miscalculation or misinterpretation of an incident or enemy intention. Our diplomatic efforts to reach agreements on the

prevention of surprise attack, an end to the spread of nuclear weapons—indeed, all our efforts to end the arms race—are aimed at this objective. We shall strive for improved communication among all nations, to make clear our own intentions and resolution, and to prevent any nation from underestimating the response of any other, as has too often happened in the past. In addition, our own military activities must be safeguarded against the possibility of inadvertent triggering incidents. But even more importantly, we must make certain that our retaliatory power does not rest on decisions made in ambiguous circumstances, or permit a catastrophic mistake.

It would not be appropriate at this time or in this message to either boast of our strength or dwell upon our needs and dangers. It is sufficient to say that the budgetary recommendations which follow, together with other policy, organizational and related changes and studies now underway administratively, are designed to provide for an increased strength, flexibility and control in our Defense Establishment in accordance with the above policies.

II. STRENGTHENING AND PROTECTING OUR STRATEGIC DETERRENT AND DEFENSES

A. Improving our missile deterrent: As a power which will never strike first, our hopes for anything close to an absolute deterrent must rest on weapons which come from hidden, moving, or invulnerable bases which will not be wiped out by a surprise attack. A retaliatory capacity based on adequate numbers of these weapons would deter any aggressor from launching or even threatening an attack—an attack he knew could not find or destroy enough of our force to prevent his own destruction.

1. Polaris: The ability of the nuclear-powered Polaris submarine to operate deep below the surface of the seas for long periods and to launch its ballistic, solid fuel, nuclear-armed missiles while submerged gives this weapons system a very high degree of mobility and concealment, making it virtually immune to ballistic missile attack.

In the light of the high degree of success attained to date in its development, production, and operation, I strongly recommend that the Polaris program be greatly expanded and accelerated. I have earlier directed the Department of Defense, as stated in my state of the Union message, to increase the fiscal year 1961 program from 5 submarine starts to 10, and to accelerate the delivery of these and other Polaris submarines still under construction. This action will provide five more operational submarines about 9 months earlier than previously planned.

For fiscal year 1962, I recommend the construction of 10 more Polaris submarines, making a total of 29, plus 1 additional tender. These 10 submarines, together with the 10 programed for fiscal year 1961, are scheduled to be delivered at the rate of 1 a month or 12 a year, beginning in June 1963, compared with the previous rate of 5 a year. Under this schedule, a force of 29 Polaris submarines can be completed and at sea 2 months before the present program called for 19 boats, and 2 years earlier than would be possible under the old 5-a-year rate. These 29 submarines, each with a full complement of missiles, will be a formidable deterrent force. The sooner they are on station, the safer we will be. And our emphasis upon a weapon distinguished primarily for its invulnerability is another demonstration of the fact that our posture as a Nation is defensive and not aggressive.

I also recommended that the development of the long-range Polaris A–3 be accelerated in order to become available a year earlier, at an eventual savings in the procurement of the A–2 system.

This longer range missile with improved penetration capability will greatly enhance the operational flexibility of the Polaris force and reduce its exposure to shore-based antisubmarine warfare measures. Finally, we must increase the allowance of Polaris missiles for practice firing to provide systematic "proving ground" data for determining and improving operational reliability.

The increases in this program, including $15 million in new obligational authority for additional crews, constitute the bulk of the budget increases—$1.34 billion in new obligational authority on a full funded basis, over a 4-year period though only $270 million in expenditures in fiscal 1962. I consider this a wise investment in our future.

2. Minuteman: Another strategic missile system which will play a major role in our deterrent force, with a high degree of survivability under ballistic missile attack, is the solid fuel Minuteman. This system is planned to be deployed in well-dispersed hardened sites and, eventually, in a mobile mode on railroad cars. On the basis of the success of tests conducted to date and the importance of this system to our overall strategy, I recommend the following steps:

(1) Certain design changes to improve the reliability, guidance accuracy, range and reentry of this missile should be incorporated earlier than previously planned, by additional funding for research and development.

(2) A more generous allotment of missiles for practice firing should, as in the case of the Polaris, be provided to furnish more operational data sooner.

(3) The three mobile Minuteman squadrons funded in the January budget should be deferred for the time being and replaced by three more fixed-base squadrons (thus increasing the total number of missiles added by some two-thirds). Development work on the mobile version will continue.

(4) Minuteman capacity production should be doubled to enable us to move to still higher levels of strength more swiftly should future conditions warrant doubling our production. There are great uncertainties as to the future capabilities of others; as to the ultimate outcome of struggles now going on in many of the world's trouble spots; and as to future technological breakthroughs either by us or any other nation. In view of these major uncertainties, it is essential that, here again, we adopt an insurance philosophy and hedge our risks by buying options on alternative courses of action. We can reduce leadtime by providing, now, additional standby production capacity that may never need to be used, or used only in part, and by constructing additional bases which events may prove could safely have been postponed to the next fiscal year. But that option is well worth the added cost.

Together, these recommendations for Minuteman will require the addition of $96 million in new obligational authority to the January budget estimate.

3. Skybolt: Another type of missile less likely to be completely eliminated by enemy attack is the air-to-ground missile carried by a plane that can be off the ground before an attack commences. Skybolt is a long-range (1,000 mile) air-launched, solid-fuel, nuclear-warhead ballistic missile designed to be carried by the B–52 and the British V bombers. Its successful development and production may extend the useful life of our bombers into the missile age—and its range is far superior to the present Hound Dog missiles.

I recommend that an additional $50 million in new obligational authority be added to the 1962 budget to enable this program to go forward at an orderly rate.

B. Protecting our bomber deterrent: The considerably more rapid growth projected for our ballistic missile force does not eliminate the need for manned bombers—although no funds were included in the January budget for the further procurement of B–52 heavy bombers and B–58 medium bombers, and I do not propose any. Our existing bomber forces constitute our chief hope for deterring attack during this period prior to the completion of our missile expansion. However, only those planes that would not be destroyed on the ground in the event of a surprise attack striking their base can be considered sufficiently invulnerable to deter an aggressor.

I therefore recommend the following steps to protect our bomber deterrent:

1. Airborne alert capacity: That portion of our force which is constantly in the air is clearly the least vulnerable portion. I am asking for the funds to continue the present level of indoctrination training flights, and to complete the standby capacity and materials needed to place one-eighth of our entire heavy bomber force on airborne alert at any time. I also strongly urge the reenactment of section 512(b) of the Department of Defense Appropriation Act for 1961, which authorizes the Secretary of Defense, if the President determines it is necessary, to provide for the cost of a full airborne alert as a deficiency expense approved by the Congress.

2. Increased ground alert force and bomb alarms: Strategic bombers standing by on a ground alert of 15 minutes can also have a high degree of survivability provided adequate and timely warning is available. I therefore recommend that the proportion of our B–52 and B–47 forces on ground alert should be increased until about half of our total force is on alert. In addition, bomb

alarm detectors and bomb alarm signals should be installed at key warning and communication points and all SAC bases, to make certain that a dependable notification of any surprise attack cannot be eliminated. Forty-five million dollars in new obligational authority will pay for all of these measures.

C. Improving our continental defense and warning systems. Because of the speed and destructiveness of the intercontinental ballistic missile and the secrecy with which it can be launched, timely warning of any potential attack is of crucial importance not only for preserving our population but also for preserving a sufficient portion of our military forces—thus deterring such an attack before it is launched. For any attacker knows that every additional minute gained means that a larger part of our retaliatory force can be launched before it can be destroyed on the ground. We must assure ourselves, therefore, that every feasible action is being taken to provide such warning.

To supplement the ballistic missile early warning system (BMEWS), on which construction is now proceeding as fast as is practical, the satellite-borne Midas system, now under development, is designed to provide about 30 minutes of warning by detecting missiles immediately after launching. Together with BMEWS, Midas would greatly increase the assurance and reliability of timely warning. I recommend that an additional $60 million in new obligational authority be added to the 1962 budget to accelerate completion of the development phase of the Midas program, with the goal of achieving an operational system at an earlier date.

For the next several years at least, however, we shall have to continue to provide a defense against manned bomber attack. Such an attack is most likely to coincide with, or follow, a ballistic missile attack seeking to incapacitate our antibomber defense system. Measures must therefore be taken to enhance the ability of the air defense system to cope with a combined attack. I recommend $23 million in new obligational authority be added to the 1962 budget for this purpose.

D. Improving the command and control of our strategic deterrent. The basic policies stated at the beginning of this message lay new emphasis on improved command and control—more flexible, more selective, more deliberate, better protected and under ultimate civilian authority at all times. This requires not only the development and installation of new equipment and facilities, but, even more importantly, increased attention to all organizational and procedural arrangements for the President and others. The invulnerable and continuous command posts and communications centers provided in these recommendations (requiring an additional $16 million in new obligational authority) are only the beginning of a major but absolutely vital effort to achieve a truly unified, nationwide, indestructible system to insure high-level command, communication and control and a properly authorized response under any conditions.

E. There are a number of other space and research programs related to our strategic and continental air defense forces which I find require additional support. These include missile defense and penetration aids, Dynasoar, Advent, Defender, Discoverer and certain other programs. An additional $226 million in new obligational authority is requested to finance them.

III. STRENGTHENING OUR ABILITY TO DETER OR CONFINE LIMITED WARS

The free world's security can be endangered not only by a nuclear attack, but also by being slowly nibbled away at the periphery, regardless of our strategic power, by forces of subversion, infiltration, intimidation, indirect or nonovert aggression, internal revolution, diplomatic blackmail, guerrilla warfare or a series of limited wars.

In this area of local wars, we must inevitably count on the cooperative efforts of other peoples and nations who share our concern. Indeed, their interests are more often directly engaged in such conflicts. The self-reliant are also those whom it is easiest to help—and for these reasons we must continue and reshape the military assistance program which I have discussed earlier in my special message on foreign aid.

But to meet our own extensive commitments and needed improvements in conventional forces, I recommend the following:

A. Strengthened capacity to meet limited and guerrilla warfare, limited military adventures and threats to the security of the free world that are not large enough to justify the label of "limited war." We need a greater ability to deal with guerrilla forces, insurrections, and subversion. Much of our effort to create guerrilla and antiguerrilla capabilities has in past been aimed at general war. We must be ready now to deal with any size of force, including small externally supported bands of men; and we must help train local forces to be equally effective.

B. Expanded research on nonnuclear weapons. A few selected high priority areas—strategic systems, air defense and space—have received the overwhelming proportion of our defense research effort. Yet, technology promises great improvements in nonnuclear armaments as well; and it is important that we be in the forefront of these developments. What is needed are entirely new types of nonnuclear weapons and equipment—with increased firepower, mobility, and communications, and more suited to the kind of tasks our limited war forces will most likely be required to perform. I include here antisubmarine warfare as well as land and air operations. I recommend, therefore, an additional $122 million in new obligational authority to speed up current limited warfare research and development programs and to provide for the initiation of entirely new programs.

C. Increased flexibility of conventional forces. Our capacity to move forces in sizable numbers on short notice and to be able to support them in one or more crisis areas could avoid the need for a much larger commitment later. Following my earlier direction, the Secretary of Defense has taken steps both to accelerate and increase the production of airlift aircraft. A total of 129 new, longer range, modern airlift aircraft will be procured through fiscal year 1962, compared with the 50 previously programed. An additional $172 million new obligational authority will be required in the 1962 budget to finance this expanded program.

These additional aircraft will help to meet our airlift requirements until the new specially designed, long-range, jet-powered C–141 transport becomes available. A contractor for this program has been selected and active development work will soon be started. Adequate funds are already included in the January budget to finance this program through the coming fiscal year.

I am also recommending in this message $40 million in new obligational authority for the construction of an additional amphibious transport of a new type, increasing both the speed and the capability of Marine Corps sealift capacity; and $84 million in new obligational authority for an increase in the Navy's ship rehabilitation and modernization program, making possible an increase in the number of ship overhauls (as well as a higher level of naval aircraft maintenance.)

But additional transport is not enough for quick flexibility. I am recommending $230 million in new obligational authority for increased procurement of such items as helicopters, rifles, modern nonnuclear weapons, electronics and communications equipment, improved ammunition for artillery and infantry weapons, and torpedoes. Some important new advances in ammunition and bombs can make a sizable qualitative jump in our limited war capabilities.

D. Increased nonnuclear capacities of fighter aircraft. Manned aircraft will be needed even during the 1965–75 missile era for various limited war missions. Target recognition, destruction of all types of targets when extreme accuracy is required, and the control of airspace over enemy territory will all continue to be tasks best performed by manned aircraft.

Expected phaseout of Navy and Air Force fighters by 1965, together with reduced numbers and increasing obsolescence of the remaining aircraft, make necessary the development of an advanced tactical fighter emphasizing nonnuclear capabilities. I am requesting $45 million in new obligational authority for this purpose.

Meanwhile, I am recommending $25 million in new obligational authority for the modification of the F–105 tactical fighter to improve its capability to handle conventionally armed ordnance items, and to increase its suitability for airstrips of all types of areas.

E. Increased personnel, training, and readiness for conventional forces. I am recommending $39 million in new obligational authority for increases in Army personnel strength to expand guerrilla warfare units and round out other existing units, and an increase in the Marine Corps to bring it up closer to authorized strength levels. (In addition, personnel

is being added to the Navy for Polaris crews, and to the Air Force for the ground alert expansion.) The sum of these personnel additions is 13,000 men. I am also recommending $25 million additional in new obligational authority for pay of retired personnel of the military forces.

But more personnel alone is not enough. I am recommending an additional $65 million in new obligational authority for increased readiness training of Army and Air Force units. These funds will provide for additional field training and mobility exercises for the Army and test exercises for the composite air strike forces and MATS unit. We recognize the role of exercises and deployments in demonstrating to our friends and opponents our ability to deploy forces rapidly in a crisis.

IV. SAVINGS MADE POSSIBLE BY PROGRESS

The elimination of waste, duplication, and outmoded or unjustifiable expenditure items from the Defense budget is a long and arduous undertaking, resisted by special arguments and interests from economic, military, technical, and other special groups. There are hundreds of ways, most of them with some merit, for spending billions of dollars on defense; and it is understandable that every critic of this budget will have a strong preference for economy on some expenditures other than those that affect his branch of the service, or his plant, or his community.

But hard decisions must be made. Unneeded facilities or projects must be phased out. The Defense Establishment must be lean and fit, efficient and effective, always adjusting to new opportunities and advances, and planning for the future. The national interest must be weighed against special or local interests; and it is the national interest that calls upon us to cut our losses and cut back those programs in which a very dim promise no longer justifies a very large cost.

Specifically:

1. Our decision to acquire a very substantial increase in second-generation solid-fuel missiles of increased invulnerability (Polaris and Minuteman) enables us to eliminate safely the last two squadrons of Titan originally contemplated. These would not have become operational until 1964, and at a cost of $270 million—a cost several times that of the Minuteman missiles we are purchasing for the same period and could increase with our standby facility. $100 million in the 1962 budget can be saved by this adjustment.

2. The phaseout of a number of B–47 medium bomber wings already planned will be accelerated to provide promptly the trained crews required for the expanded ground alert program. (Fiscal 1962 savings: $35 million.)

3. Additional personnel will also be made available by the immediate phaseout of the subsonic Snark airbreathing long-range missile, which is now considered obsolete and of marginal military value in view of ICBM developments, the Snark's low reliability and penetrability, the lack of positive control over its launchings, and the location of the entire wing at an unprotected site. (Fiscal 1962 savings: $7 million.)

4. The acquired missile capability programed by this message also makes unnecessary and economically unjustifiable the development of the B–70 Mach 3 manned bomber as a full weapons system at this time. The B–70 would not become available in operational numbers until well beyond 1965. By that time we expect to have a large number of intercontinental ballistic missiles, fully tested and in place, as well as a substantial manned bomber force mostly equipped with air-to-ground missiles. In view of the extremely high cost of the B–70 system, its lesser survivability as a ground-based system and its greater vulnerability in the air compared to missiles, its capabilities as a second strike system do not appear to have sufficient advantages over a much less expensive missile, or even a B–52 or successor bomber equipped with Skybolt, to justify a request in fiscal 1962 for $358 million.

We recognize, however, that there are still uncertainties with respect to the operational characteristics of our planned missile force. We also recognize that there are certain advantages inherent in a controlled force of manned bombers. To preserve the option of developing this manned bomber weapon system, if we should later determine such a system is required, I recommend that the B–70 program be carried forward essentially to explore the problems of flying at three times the speed of sound with an airframe potentially useful as a bomber, with the development of a small number of prototype aircraft and related bomb-navigation systems. We should also explore the possibility of developing a manned bomber system specifically designed to operate in an environment in which both sides have large ICBM forces.

Even on this more limited basis, the B–70 project will cost $1.3 billion before it is completed in 1967. Approximately $800 million has already been provided, $220 million is now requested for 1962—$138 million less than the amount included in the January budget—and the balance will be required in subsequent years. The total development program which I am recommending will cost $1.4 billion less than that previously planned.

5. Nearly 15 years and about $1 billion have been devoted to the attempted development of a nuclear-powered aircraft; but the possibility of achieving a militarily useful aircraft in the foreseeable future is still very remote. The January budget already recommended a severe curtailment of this project, cutting the level of effort in half by limiting the scope to only one of the two different engines under development, although not indicating which one. We believe the time has come to reach a clean-cut decision in this matter. Transferring the entire subject matter to the Atomic Energy Commission budget where it belongs, as a nondefense research item, we propose to terminate development effort on both approaches on the nuclear powerplant, comprising reactor and engine, and on the airframe; but to carry forward scientific research and development in the fields of high temperature materials and high performance reactors, which is related to AEC's broad objectives in atomic reactor development including some work at the present plants, making use of their scientific teams. This will save an additional $35 million in the Defense budget for fiscal 1962 below the figure previously reduced in January, and will avoid a future expenditure of at least $1 billion, which would have been necessary to achieve first experimental flight.

6. The January budget did not include funds for the continued development of the Navy's "Missileer" fleet defense aircraft, but funds were included for the continued development of the Eagle missile—designed for use by the Missileer—in the hope that it could be adapted for use by some other aircraft. I am now advised that no such alternative use is in prospect; and I have directed the cancellation of that project, with a saving estimated at almost $57 million in 1961 and 1962.

7. The plan to install Polaris missiles on the cruiser *Long Beach* has been canceled. For effectiveness in a nuclear war, the money would be better spent on the far less vulnerable Polaris submarines. In a limited war, the cruiser's utility would be reduced by the presence of the missiles. (Savings in fiscal 1962: $58 million).

8. Finally, technological progress causes obsolescence not only in military hardware but also in the facilities constructed for their deployment. We must continually review our nearly 7,000 military installations in the light of our needs now and in the event of emergency. Those bases and installations which are no longer required must be inactivated, and disposed of where feasible, and I have so directed the Secretary of Defense. He has already taken steps to have 73 domestic and foreign installations discontinued as excess to our needs now and at any time in the future; and studies are continuing now to identify additional facilities which are surplus to our requirements.

I am well aware that in many cases these actions will cause hardships to the communities and individuals involved. We cannot permit these actions to be deferred; but the Government will make every practicable effort to alleviate these hardships, and I have directed the Secretary of Defense to take every possible step to ease the difficulties for those displaced. But it is difficult, with so many defense and other budgetary demands, to justify support of military installations, with high operating and payroll costs and property values, which are no longer required for the defense of the Nation. The closing of excess installations overseas will in many cases help alleviate our balance-of-payments deficit.

No net savings are expected to be realized in 1962 from these inactivations because of the added costs involved in closing, and no reductions in the 1962 budget are proposed on that account. Substantial savings, approximately $220 million per year, will be realized, however, in subsequent years.

(I am also proposing that $320 million of the obligational authority required be provided by transfer from the current balances of working capital funds in the Defense Department.)

CONCLUSION

Our military position today is strong. But positive action must be taken now if we are to have the kind of forces we will need for our security in the future. Our preparation against danger is our hope of safety. The changes in the defense program which I have recommended will greatly enhance the security of this Nation in the perilous years which lie ahead. It is not pleasant to request additional funds at this time for national security. Our interest, as I have emphasized, lies in peaceful solutions, in reducing tension, in settling disputes at the conference table and not on the battlefield. I am hopeful that these policies will help secure these ends. I commend them to the Congress and to the Nation.

JOHN F. KENNEDY.

THE WHITE HOUSE, *March 28, 1961.*

SUBCOMMITTEE ON HEALTH AND SAFETY OF COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that the Subcommittee on Health and Safety of the Committee on Interstate and Foreign Commerce be authorized to sit during general debate this afternoon.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

TREASURY AND POST OFFICE DEPARTMENTS, AND THE TAX COURT OF THE UNITED STATES APPROPRIATION BILL, 1962

Mr. GARY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5954) making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1962, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to 2 hours, one-half of the time to be controlled by the gentleman from New York [Mr. PILLION], and one-half by myself.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present. This is a $5 billion bill.

The SPEAKER. Evidently a quorum is not present.

Mr. GARY. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 30]

Alford	Holifield	Shelley
Blitch	Kilgore	Sheppard
Brooks, La.	Lipscomb	Spence
Bruce	McDonough	Teague, Tex.
Buckley	McSween	Thompson, La.
Cahill	McVey	Walter
Celler	May	Williams
Durno	Moulder	Willis
Fino	Powell	Wilson, Calif.
Fogarty	Rabaut	Winstead
Goodell	Robison	Wright
Harrison, Va.	Roosevelt	

The SPEAKER pro tempore (Mr. BOGGS). On this rollcall, 394 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

TREASURY AND POST OFFICE DEPARTMENTS AND THE TAX COURT OF THE UNITED STATES APPROPRIATION BILL, 1962

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Virginia [Mr. GARY].

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5954) with Mr. THORNBERRY in the chair.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. GARY. Mr. Chairman, I yield myself 30 minutes.

Mr. Chairman, this is the first time during my 15 years' membership on this committee that I have appeared before the House with this bill without the assistance of my highly esteemed friend, the Honorable Gordon Canfield, former Congressman from New Jersey. We have handled this bill together for 15 years. I am, however, most grateful for Mr. Canfield's successor. The gentleman from New York [Mr. PILLION] has done a magnificent job working with the committee this year. No one could have been more cooperative, and altogether we had an excellent committee: the gentleman from Louisiana [Mr. OTTO E. PASSMAN], who is my chairman on the Subcommittee on Foreign Operations; the gentleman from Oklahoma [Mr. TOM STEED], the gentleman from North Carolina, [Mr. HUGH Q. ALEXANDER], the gentleman from Massachusetts [Mr. SILVIO O. CONTE], and the gentleman from Pennsylvania [Mr. WILLIAM H. MILLIKEN, JR.], who is the new member on our committee.

May I add that although the committee personnel has changed, there has been no change in its unity. We present to the House today a unanimous report.

Mr. Chairman, heretofore this has been the second largest appropriation bill to face the Congress, amounting to approximately $30 billion. We have, however, cut this bill this year over $16 billion; therefore we have cut ourselves out of second place. Now, I hasten to admit that that cut is not all savings to the American taxpayers. We have transferred from this bill to the HEW bill approximately $16 billion to be expended out of the social security trust funds. That money is merely paid out of the Treasury. Since the payments out of the trust funds are determined by the Department of Health, Education, and Welfare, in accordance with the law, we thought the appropriation of the funds should be transferred to that Department.

That leaves about $14 billion in the present bill. Of that amount, however, $8.6 billion is for permanent appropriations over which this committee has no control whatever; they cannot be changed because they are fixed by law. Of that amount the largest item is $8.5 billion for interest on the Federal debt. Although that is $400 million less than last year, it is still greater than the entire cost of operation of the Federal Government in 1936, which was just 25 years ago.

Let me call your attention to this startling fact: every time the second hand of your watch makes a complete circle, the Federal debt increases $17,000 for interest alone.

Interest on the Federal debt today amounts to $17,000 every minute of every day and night during the year.

Mr. GROSS. Mr. Chairman, will the gentleman yield now, or would he prefer to yield later?

Mr. GARY. Mr. Chairman, I would prefer to yield later unless the gentleman wants to ask about the interest item.

Mr. GROSS. Yes, I do.

Mr. GARY. I am glad to yield to the gentleman.

Mr. GROSS. The committee cut the appropriation for the interest payment on the Federal debt; did it not?

Mr. GARY. We did not cut it. The estimate this year is lower than it was last year. We have no control over it. Whatever the interest is we have to pay it. But the Treasury Department estimates that the interest will be $400 million less next year than it was this year because of more favorable interest rates.

Mr. GROSS. It is because of more favorable interest rates?

Mr. GARY. That is right.

Mr. GROSS. But you are looking down the muzzle now of more deficit spending; are you not? In other words, the Treasury is out now to float a borrowing of $3.6 billion or $3.8 billion. How in the world are you going to make these figures coincide? Are you coming in with a deficiency appropriation for this purpose?

Mr. GARY. No. The interest rates are so much lower that they estimate they can finance the Federal debt next year for $400 million less than it cost during the present fiscal year.

Mr. GROSS. Even in the face of the new borrowings that are just about to take place?

Mr. GARY. Yes; that is their estimate. That is an estimate we have not touched because we do not control those expenditures. They are permanent appropriations and whatever the interest amounts to the Treasury has to pay.

The appropriations that do come under the scrutiny of this committee are for the operating expenses of the departments. This committee recom-

mends for the next fiscal year $5,281,865,000 for the Treasury and Post Office Departments and the Tax Court of the United States. This is $438,731,000 over the 1961 appropriations, but it is a cut in the budget requests of $89,936,000—approximately $90 million. Of the $438,731,000 increase approximately $314,049,000 is for the pay increase and the health benefits enacted by the Congress last session. The actual increase over 1961 is $124,682,000 excluding those two items.

For the Treasury Department our committee recommends $911,615,000. That is $77,546,000 more than for the present year but $34,316,000 less than the 1962 budget request. Of this $77.5 million increase $34,700,000 is for the pay increase and health benefits. The increase for operations is $43,230,000.

Our report covers very clearly each separate division of the Treasury and Post Office Departments. I shall not touch them all because there are only several in which there are any unusual features but they are all outlined in the report which the committee has submitted to the House.

In the office of the Secretary there is an increase. The committee recommends $4 million for that office. That is an increase of $615,000 over 1961. It is a reduction of $233,000 from the estimate for 1962. Of the increase $191,000 is for the pay increase and health benefits.

The new administration, let me say, requested an increase of $478,000 for this item over the amount requested by the previous administration. The previous administration had asked for 17 additional personnel. The new administration said that they had found that the tax study staff is inadequate. Therefore, they requested 60 new personnel largely for tax studies. Our committee agreed that some increase for this purpose was justified but we felt that an increase of 60 at one time was rather large and therefore recommended about half of the increase requested, or approximately 30 additional personnel in the office of the Secretary.

In the Bureau of Accounts no additional funds other than those necessary for the pay increase were requested and none were granted.

In the Division of Disbursement we allowed an increase of $2,300,000, of which the pay increase is $638,000, but we cut the estimate $600,000. The reason for that increase is the tremendous increase in the number of checks that the Division has to disburse at the present time.

On the Bureau of the Public Debt, there has been very little change over the pay increase and health benefits, which amounted to $1,111,000. We allowed an increase over 1960 of only $1,150,000. We cut the request $200,000 and gave them just about their previous year's appropriation with the automatic pay increase.

Now we come to the Bureau of Customs. This is one of the more important bureaus of the Treasury Department. We recommend for that Bureau $62,650,000, an increase over 1961 of $6,430,000, but of that $3,766,300 is for the pay increase and health benefits. We cut the request $750,000. That allows the Bureau of Customs 200 additional personnel, which we consider very important because they are today building up a large backlog of appraisals. This is a detriment to the economy of the country because when importers bring in goods and they cannot have the custom duties immediately determined, they are handicapped in selling those goods because they do not know what to add for the customs duties.

Although we allowed 200 additional employees, and a substantial increase in the appropriation, let me say that in 1960 the customs collections amounted to $1,519,600,000, which was an increase of 16.6 percent over 1959. The estimated collections for 1961 are $1.7 billion, and the estimated collections for 1962 are $1.785 billion. We feel quite certain that these additional employees will bring in far more than their cost.

The next major item is the Internal Revenue Service. For that service our committee recommends $440 million, which is an increase of $52 million over 1961 and a cut of $16,800,000. Of the $52 million increase allowed over 1961, approximately $26.7 million is for pay increase and health benefits.

As a former State tax administrator I yield to no one in this House in my desire for a fair and impartial enforcement of our tax laws. With our high taxes today we must see that everyone pays his just share of the burden, otherwise the burden on honest taxpayers who have to carry his part and theirs too will become unbearable. Our committee believes in proper tax enforcement.

The Congress last year allowed this Service 2,000 additional employees for the current fiscal year. The previous administration asked for an increase in personnel of 3,810 for the next fiscal year. The new administration upped that to 4,575, or an increase of 765 over the original request.

We believe it is impossible for the Department to recruit and properly train that many good agents in 1 year. As you are aware our tax laws are very complicated. Consequently, auditors and field agents who check the returns of taxpayers, have to be skilled men and have to be specially trained for that task. Of course, the Service could employ 10,000 additional employees, but they would not be the caliber of men that we need in the tax enforcement service. We felt that 2,000 employees, the number that we allowed last year, was about all that they could properly recruit and train during the year. Therefore, we allowed 2,000 additional employees for the next year with this exception, the new administration proposes to coordinate the law-enforcement program so that the various law enforcement agencies will be working together in order to break up outlawry in this country. We approve of that. The Treasury Department divisions have been working together for years. Customs, the Coast Guard, and the Bureau of Narcotics are all law enforcement agencies working together very closely. But there has never been any coordination of their activities with the Department of Justice. The Department of Justice is seeking to establish cooperation with the Treasury Department enforcement divisions. We felt that was highly desirable. As a matter of fact, some of you may remember that the only way Al Capone was ever put behind the bars was on a prosecution for evading income taxes. Therefore, we did allow a request for $2,700,000 and provided for 183 additional personnel for that particular program on top of the 2,000 otherwise allowed. We believe that under this recommendation the Department can live and can do a good job.

The next item is the Bureau of Narcotics. I hope every Member of this House will read the testimony concerning the Bureau of Narcotics. I want to say to you, in my humble judgment, Dr. Anslinger, the head of that Bureau is one of the ablest administrators in the Federal Government. He is doing a magnificent job, and he is doing it with a comparatively small budget. From time to time the Congress itself has insisted that he build up his enforcement personnel. He says, "No; our duty is to supervise and to work with the local agencies and help them enforce the law." But his chief object is to keep narcotics from coming into the United States. Now let me tell you what happened. Just a few years ago, he asked us for several foreign agents. We allowed them and as a result of those additional employees, this year the Bureau made one of the largest seizures of heroin that has ever been made by the Bureau. And do you know who was bringing it in? It was the Guatemalan Ambassador to Belgium, and the Netherlands. He came into this country, arriving in New York on his way to or from his post. Our local agents were tipped off by their foreign agents abroad. They shadowed him and finally arrested him. They seized 100 kilograms of pure heroin. The value of this heroin in the wholesale market was approximately $1 million, but as it would be diluted and sold retail at $1 a shot, the heroin would be worth approximately $26 million. The Government to which this man was accredited did not attempt to defend him. He was given 15 years in the penitentiary, which he is now serving.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. GROSS. Is the traffic in narcotics increasing or decreasing?

Mr. GARY. The traffic is decreasing very substantially except in two States. Most of the States have adopted very severe laws, and if you will look at the statistics in the hearings you will find that in all the States except New York and California, where they have not adopted the more severe penalties, the traffic is decreasing very materially. The three spots in the United States today where the sale of narcotics is most alarming are New York City, California, and Chicago. In those areas they are not showing as much improvement as we would like, but I understand in both New York and California the authorities are studying their laws, and we hope they will enact laws with stiffer penalties.

But let me say to the gentleman that there has been a very marked decrease in the number of juvenile addicts. This has been most gratifying to our committee.

Mr. GROSS. I am glad to hear the gentleman say that, but it is disappointing that New York State is not doing what apparently it ought to do to control this traffic.

Mr. GARY. That is because New York State has not adopted a law with sufficiently severe penalties. New Jersey adopted very severe penalties and apparently the narcotics peddlers left New Jersey and went over into New York. New Jersey shows a very marked improvement. The situation in New York is not improving as it should.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. CONTE. In answer to the question of the gentleman from Iowa, Mr. Chairman, the addiction prior to World War I was 1 to about 400; presently the addiction is 1 to 4,000.

Mr. GARY. The results have been very gratifying and and the Bureau is doing a magnificent service.

For the U.S. Secret Service our committee recommends $4,700,000, which is an increase of $573,000 and a cut of $200,000. Of the increase $281,000 is for pay increases and health benefits.

Let me say this, the committee, in the 15 years I have been a member of it, has never cut 1 penny that was requested for the protection of the President and his family. We feel that the Secret Service should be able adequately to protect them, and when they make a request we grant it.

There was a request for new agents. They will be used in breaking up counterfeiting, which is increasing very rapidly in this country. We have granted exactly what they requested for the President's protection and also for the White House Police force. The committee made no change in those items.

In the Bureau of the Mint there is a slight increase over 1961, but a cut of $350,000. The increase was necessary because of the demand for more coins. With the increase in sales taxes throughout the country there is a greater demand for pennies, and this increase is to provide for additional coinage that is needed at the present time.

Next is the U.S. Coast Guard. There we recommend $208 million for the operating expenses of the Coast Guard, an increase of $3 million over 1961, but a cut in the estimates of $4.5 million. The committee has recommended about one-half of the increased personnel requested.

Mr. MONAGAN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Connecticut.

Mr. MONAGAN. Mr. Chairman, in Connecticut there has been some feeling that the maintenance of the Coast Guard facilities at the Academy have not been adequately served. Having talked to the gentleman from Virginia, I realize that he and the members of his committee have some thoughts on this subject. The American Legion and its commander, Edward Lynch, and other groups throughout the State, have been interested in a program of capital improvements. I would like to have the gentleman make a statement in reference to that.

Mr. GARY. I may say to the gentleman that the thoughts of the people of Connecticut are not without foundation. In my judgment, the Coast Guard is one of the most economically operated agencies of the Government. If the other branches of the service—and the Coast Guard is a branch of the national defense—were operated as economically as the Coast Guard we would save billions of dollars in this country. There has been a tendency to hold back some of the improvements for the Coast Guard Academy, but the gentleman will remember that 2 years ago we appropriated $2 million for a new dormitory which was greatly needed. That dormitory has been completed. Our committee visited the Academy on February 24 to see what had been done, and to appraise the needs. That dormitory has just been completed and is now in operation.

Last year, realizing there were some necessary changes that ought to be made, the committee appropriated $20,000 for a survey of these needs. A survey has been made and a long-range plan has been recommended. The committee this year has recommended $1.6 million as an initial expenditure on this long-range plan. This $1.6 million is for an enlisted men's barracks, but it will also provide additional classrooms and some enlargement of hospital facilities which are greatly needed. The Coast Guard thought these were the most desperately needed improvements. The committee is impressed with the survey and I think in the main we will approve the plan. We will follow it in future years as a guide to additional appropriations for the Coast Guard Academy.

Mr. MONAGAN. There is a long-range plan of capital improvements and this $1.6 million is a part of that plan?

Mr. GARY. That is correct.

Mr. MONAGAN. There has been mention made of the dock facilities, as the gentleman realizes. May I ask if that improvement has also been included in the long-range plan?

Mr. GARY. That is included in the long-range plan, but some additional property has to be acquired before that can be put into effect. So even if we appropriated the money today, work could not be started until after they have acquired this additional property which is owned by the city as part of a park. It will take a little time to acquire that property.

Mr. MONAGAN. This is a very intelligent approach, and I thank the gentleman and the committee for their consideration.

Mr. GEORGE P. MILLER. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from California.

Mr. GEORGE P. MILLER. As Chairman of the Board of Visitors for two terms now of the Coast Guard Academy, I want to congratulate the gentleman on the foresight of the committee in negotiating this long-range plan.

I am sure the gentleman recognizes that the $2 million was necessary to replace these barracks that were firetraps. He also remembers that the $2 million was put in on the floor some 6 years ago. The Coast Guard, unfortunately, has been sort of an orphan, and I am glad to know that besides the committee, the Committee on Merchant Marine and Fisheries will exercise control over it and that it now has the arms of the committee wrapped around it. And, I am sure that this 10-year program that will cost about $16 million is on its way, and I want to express my appreciation to the gentleman.

Mr. GARY. I will say to the gentleman that I think the Coast Guard has been treated as a redheaded stepchild rather than an orphan. We have not been as kind to them as we would have been to an orphan.

Mr. GEORGE P. MILLER. And you and I can make corrections from now on out.

Mr. GARY. I thank the gentleman.

Now, on the acquisition and construction program we have recommended $39 million, which is a $9 million increase over 1961, but a cut of $10,333,000 in the revised estimate. Let me say that the new administration did revise this item upward. We allowed $2.5 million increase over the request of the previous administration, but we feel that the appropriations for this purpose have been rather niggardly in the past, and we believe their facilities do need replacements and improvements.

On the retired pay and reserve training, we allowed substantially what was requested.

Now we come to the Post Office. In the Post Office we allowed under "Administration, regional operation, and research" $82 million, which is an increase of $8.7 million over 1961 but a cut of $6.8 million. The pay increase and health benefits amount to $5,333,000. The estimate for 1962 includes $8,767,000 for activities previously carried under "Modernization and improvements of buildings and equipment." That is just a budget structure change. But, we have cut this item $6.8 million, and I will discuss that just briefly in a few moments.

For operations we have recommended $3,434 million, which is an increase of $316.5 million over 1961 but a cut of $18 million. Of that $316.5 million increase, $273 million is for pay increase and health benefits.

It has been amazing to this committee the way the volume of the Post Office has continued to increase. During the war it went up by leaps and bounds. We thought surely after the war was over it would start to go down, but as a matter of fact, the volume has increased every year since the war. And, frankly, as the volume increases, they have to have more money for operations. We have participated in a guessing game with the Post Office Department as to volume of mail and money needs. Last year they estimated the volume increase at 5.2 percent over the previous year. Our committee estimated 3.2, and our

estimate was almost identical with the actual volume increase, so the appropriations we made were adequate. This year the Department estimated a volume increase of 3.8 percent. It is only running now 2.9 percent, and we see no reason for it to increase. We think that with the recession, if anything, it should go down below that, but we have allowed 2.9, and the cut in these operations are based upon the different volume over estimates.

The new administration requested a decrease of $12 million in the transportation appropriation. We cut it $3,600,000 more. We thought it could stand that cut.

In facilities our present appropriation is $168 million. The estimate for 1962 was $167,700,000. We recommend $152,500,000 which is a decrease of $15,500,000. The reason for that is that we feel the Post Office Department is going too fast in its rental program. They plan next year to occupy 1,762 newly constructed or remodeled leased facilities with a rent and lease program amounting to $79,106,000, an increase of $16,556,000 over 1961. We thought that was too much of an increase in these rentals and we also thought that some of the other facilities could be reduced to some extent.

Mr. AVERY. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman.

Mr. AVERY. With respect to the facilities program of the Post Office Department, for offices that have already been authorized, will this reduce the possibility of these offices being built in the next fiscal year or was this figure submitted for a projected program?

Mr. GARY. This figure was submitted for a projected program during the next year. How many of those buildings have been committed, the cost of the buildings that have already been committed, I am not prepared to say. But this was for the construction program for the next year. I daresay some of the 1,762 that they planned have been committed, but we felt that with cuts in some of the other items—this facilities appropriation covers more than the rental program, it also covers vehicles and various other items of the Post Office Department—we felt that our cut was a very reasonable one. While it will cut back some on the proposed rental program we do not believe anybody will be hurt by it.

Mr. AVERY. Mr. Chairman, will the gentleman yield further?

Mr. GARY. I yield.

Mr. AVERY. Does not the gentleman feel that would be somewhat inconsistent with the viewpoint expressed by the present administration of using the Post Office construction program as one means of alleviating the so-called recession?

Mr. GARY. We feel that in this rental program they have gone too far in a great many instances. They have built so rapidly, costs were not checked as closely as they might have been checked, and therefore it was costing the Government a great deal more than it should have cost. We are trying to bring the program within proper bounds, so that we can get an economical rental construction program.

Mr. AVERY. But the committee had no intention of this having a retroactive effect by terminating construction that has been authorized and anticipated?

Mr. GARY. No, sir.

Mr. AVERY. I thank the gentleman.

Mr. GARY. We now come to the plant and equipment account. This now includes a large part of the modernization program which started with this committee. I well remember about 12 or 15 years ago, shortly after I became a member of this committee, I was out in one of our large cities and they took me up on a platform and showed me how the people down below were standing around tables handling the mail by hand. They said that that is the way we have been doing this job for 45 years, and my reply was that if that is true then you are 25 years behind the times because anybody doing a mechanical job today the same way he did it 45 years ago is certainly behind the times. We felt that there had been so many improvements in mechanical devices that we suggested and in fact insisted at that time that they start a Department of Modernization and Research. We have been increasing the appropriation for that purpose every year very substantially. Finally, last year the Postmaster General came in and began to talk about bouncing mail off the moon. We were far more interested in having the mail transported and delivered quickly and economically here on earth than we were in bouncing it around in the stratosphere. In our judgment, that is not the function of the Post Office Department. We felt therefore that it was time to start an investigation of this modernization program and we did.

During the summer we had the staff of the Committee on Appropriations make an investigation. They reported to us at the beginning of this year on this program. The report contained criticisms of various phases of the program.

Just to give you one item, on the facsimile mail program we had spent $4,500,000 trying to transmit facsimile mail over the wires without opening the letters so that the mail could not be read by any person en route. Various commercial companies had been experimenting with this facsimile transmission for many years. The new administration feels that if we get into that program at all we are going to be in competition with private enterprise which is now in the field. Therefore, they have abandoned the program entirely, and they say we are not going into it any further. By so doing, therefore, the $4.5 million that has already been spent on that program is a total loss.

In the staff report there was very severe criticism of the so-called Turnkey project at Providence, R.I. Our committee, not willing to rely on secondhand information entirely, visited the Turnkey project at Providence on February 24. We were greatly shocked with what we found there.

To begin with, we had been told that this operation was going to be completely automatic. It is not completely automatic. We were told that it would serve the Providence area and 81 other post offices. It is serving only the one post office in Providence. We were told that it was going to be a laboratory for future experiments. There are serious limitations on it for that purpose.

We found that the machines that are being used there, the culling machines and various other machines, were made by foreign subsidiaries of the International Telephone & Telegraph Corp. These machines were manufactured in Belgium and Germany and brought into this country. Although we have spent $2,500,000 with the Burroughs Co. to produce a similar machine for use in other post offices, that machine is not used, but instead these machines were imported from Belgium and Germany.

Notwithstanding the grossly excessive cost, which I will give you in a few minutes, it requires 234 more people to operate the post office today than it did before.

Touching the costs, we have agreed to pay Intelex Systems Inc., the contracting company, a yearly rental for that post office—and mind you, this is a city of 275,000—of $1,500,000. They agree to maintain the plant and the machinery—not the operations—the operations are handled by the Post Office Department. But they agree to maintain the plant and the machinery, and we agree to reimburse them for the maintenance costs which are estimated at $900,000 a year. So that the Government is obligated to pay approximately $2,400,000 a year for that one Post Office for a total of 20 years, which will make the total cost $48 million over the period. If we are going to place a post office of that kind in every city in the United States with 275,000 inhabitants, pray tell me, Where are we going to wind up? We think the costs are wholly unreasonable. Our investigations of this project are not yet completed. We have had a second staff report submitted and we plan in time to hold hearings and to go into it very fully.

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. KOWALSKI. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. KOWALSKI. Mr. Chairman, I rise to commend the gentleman from Virginia [Mr. GARY] and members of his distinguished and hard-working subcommittee for their excellent report on Coast Guard appropriations. I am particularly pleased to note that the committee supports a program to upgrade the Coast Guard Academy facilities.

We of Connecticut have become increasingly concerned in years past over the deterioration of the physical plant at New London. Reports of the Congressional Boards of Visitors at this fine institution give weight to the seriousness of the situation.

Mr. Chairman, I cannot understand how we can continue to ignore this vital service, and make it a stepchild while we appropriate large sums for the

upkeep and construction at other service academies. I do not believe this situation actually reflects the will of Congress, or the general high esteem with which the Coast Guard is held by our citizenry.

To my knowledge, the Coast Guard has never been held up and chastized by Members of Congress for wasteful use of appropriated funds. Nor in my recollection have any charges been leveled against this service for the manner in which it went about its assigned duties.

I think that rather it has been proved that this service has done its work with dedication and perseverance. They have done their work with pride and in silence. They have spent more time in devising new ways of service to the American people than in trumpeting their accomplishments. Their public relations are excellent, for the simple reason they have proved by service what others may be prone to shout from the treetops.

It is high time, Mr. Chairman, that Congress recognize the excellent service rendered to America by the Coast Guard. A tangible method of such recognition would be a general uplifting of the status of the Coast Guard Academy. By appropriating funds to accomplish the objectives of the completed study on needed improvements, with all possible haste, we perform a valuable service to America.

I repeat, I feel we have made a step in the right direction in providing funds for new Academy construction. I hope that next year we can see even greater strides made toward completion of the construction program needed there.

Mr. PILLION. Mr. Chairman, it would be most difficult for anyone to add substance to the comprehensive summation given to you by the gentleman from Virginia [Mr. GARY].

No member of the subcommittee would claim this bill to be the most economical or the most adequate appropriation bill to be presented to this House. However, it is a reasonably good bill.

There are two items in the Treasury operations that deserve the particular attention of this House.

INTEREST ON PUBLIC DEBT

As of January 1, 1961, the gross public debt was $290 billion. The budget estimates carry an item of $8.5 billion for the payment of interest on this debt. The interest for the previous year was $8.9 billion. It is gratifying to note this prospective saving of $400 million on interest payments. A brief review of the management of our public debt is warranted at this time.

Congress will soon consider a bill to, again, increase our debt limit. Before the expiration of this Congress, it will probably, again, be called upon to increase the interest rate limitation of 4½ percent on bonds having a maturity in excess of 5 years.

Permit me to give the makeup of our $290 billion public debt: $190 billion is in marketable securities; $50 billion is in special trust funds, such as social security, retirement, and unemployment funds; $50 billion is in savings bonds that are redeemable in 60 days. Of the $190 billion in marketable securities, $67 billion is due and payable this year, 1961, and $33 billion is due and payable in 1962. The combined 2-year total of debt maturity is the staggering sum of $100 billion. To this huge liability we must add the potential liability of $50 billion in savings bonds that are redeemable in 60 days.

This is a most unhealthy and dangerous condition.

We must bear in mind that our currency is the reserve and the monetary medium for practically all trade in the free world. Our dollar, like Caesar's wife, must remain above suspicion.

Due to a unique combination of circumstances, there is a market today for 20- to 30-year U.S. bonds at a most favorable interest rate of about 3.8 percent.

The committee strongly recommends that the Treasury Department accelerate its program to lengthen and to average out our public debt over a period of 20 to 30 years. The present advance refunding program of the Treasury is a step in the right direction. But, a greater effort is not only desirable but necessary. The lengthening of our public debt would stabilize interest costs, improve Federal credit, and remove our Federal borrowings from the uncertainties of the money market.

INTERNAL REVENUE SERVICE

I would like to make one more reference to the Treasury operations. The budget contains recommendations for 4,575 additional employees in the Internal Revenue Service.

The new Commissioner, Mr. Kaplan, is a most capable gentleman. It is his contention that a substantial increase in the auditing of income tax returns would result in greater voluntary compliance.

I might suggest that our taxpayers are suffering not so much from a lack of voluntary compliance as they are from an involuntary inability to pay. This bill allows 2,183 new full-time employees in addition to a substantial increase in temporary employees. It is estimated that 5 percent of all returns can be audited by the increased staff. The subcommittee unanimously agreed that the increased force is fully adequate for present needs.

POST OFFICE

I would like to call to the attention of the House that the report on this bill is somewhat misleading in respect to the overall Post Office appropriation.

It shows a $361-million increase over 1961 appropriations. It leaves out of account a pending supplemental bill of $261 million.

Most of this increase is due to the wage increase and health insurance costs.

The actual increase is about $100 million for operations. This is about a 2½-percent increase over the 1961 expenditures. It is expected to cover additional employees and other costs involved in a projected 3-percent increase in the volume of mail.

The 1962 budget estimates are based on a 3.8-percent increase in the volume of mail. This bill reduces the budget estimates by $55 million to adjust for the committee's estimate of a 3-percent volume increase.

MODERNIZATION

The modernization program of the Post Office has been for the most part a dismal failure. Everyone recognizes the need in the Post Office Department for increased productivity and better service to the public. Mechanization, automation, and modernization can produce these benefits.

However, the modernization program was ill conceived. It is overambitious. It has been incompetently managed. The modernization can be divided into two categories: First, research and development; and second, mechanization and automation of new and old post offices.

RESEARCH

Research is a popular slogan. But it has been a great disappointment to the subcommittee.

This program lacks coordination and lacks practical attainable objectives.

For example: In the past 2 months, the Post Office has scrapped a microwave contract with the I.T. & T. Corp. The $4.5 million paid out so far is a complete loss.

MECHANIZATION AND AUTOMATION

We have spent more than $100 million in the past 3 years for the mechanization and automation of our post offices.

I have not been able to find one post office where mechanization has had a favorable benefit-cost ratio.

The Providence, R.I., project known as Turnkey is a glaring example of waste in this area.

This post office was constructed by the Intelex Systems, Inc., a subsidiary of the I.T. & T. Corp., at a cost of more than $15 million.

The post office lease provides for the payment to the Intelex Corp. of $2.4 million per year for a period of 20 years—a total of $48 million.

The area served is about the same as the original Providence post office.

The number of Federal employees prior to the mechanization was 1,214. Today, there are 1,448 Federal employees—an increase of 234 serving substantially the same area.

The cost of operation in the old post office was about $8 million per year. This has been increased to about $9 million per year.

In addition, the lease cost paid to the Intelex Corp. is $2.4 million per year.

The Turnkey project is a mechanical monstrosity. It is an economic bankruptcy.

The lease is permeated with illegalities, irregularities, misrepresentation, incompetence, and gross negligence.

I strongly urge the Post Office Department to rescind this unconscionable contract.

PUBLIC SERVICE

The budget for 1962 contains an item of $61 million as payment for public postal services. This item is completely eliminated from the pending bill.

The Postmaster General is being urged to submit a public service item of about $300 million based upon the Postal Policy Act of 1958.

There are numerous methods for computing and ascertaining the cost of public services. The broad language of the

Postal Policy Act of 1958 requires implementation and clarification.

The inclusion of large sums as mere estimates of the cost of public service would be a serious mistake. Such action would give subsidized mail users a vested interest in the Government's losses.

It would legitimatize present subsidized mail rates. It would restrict the power of Congress to adequately deal with our postal deficit of about $850 million per year. We do not have formula, approved by Congress, for the ascertainment of the costs of public service.

CONCLUSION

The members of the subcommittee believe that this bill provides sufficient funds for both the Treasury and the Post Office Departments to operate without the need of supplemental requests.

The funds in this bill should produce, first, greater and better service to the public; second, a more efficient operation in both the Treasury and Post Office Departments; third, greater revenues to the Federal Government.

Mr. BATES. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield to the gentleman from Massachusetts.

Mr. BATES. Will the gentleman advise whether the contract with I.T. & T. had any performance specifications in it that this particular machine would do a certain type of operation?

Mr. PILLION. Not exactly, but the record is replete with misrepresentations given to this committee as to what it would perform, and I am sure that the information given to us by the officers of the Post Office Department must have come by reason of negotiations with the Intelex Corp. We have no direct assurance from the Intelex Corp., but the Post Office officials, for instance, told us that it would serve an area as great as Baltimore, and representations such as that, of course, have proven not to be true.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield to the gentleman from Iowa.

Mr. GROSS. I admit that I did not get to read the hearings on this bill as closely as I would like, but it is my understanding that the Secretary of the Treasury, when he testified before your committee, held out no hope whatever for a reduction in the Federal debt at this time; is that approximately correct?

Mr. PILLION. That is absolutely correct.

Mr. GROSS. And the committee got no assurance that in the foreseeable future there would be a reduction in the enormous public debt; is that a fact?

Mr. PILLION. That is correct. The Secretary made a point that the concern should be about the ratio of our debt to the overall gross national product rather than looking upon it as an absolute debt. He related it to the income of the Nation as a whole.

Mr. GROSS. Now you did increase the appropriation to the Bureau of the Public Debt by what, a million dollars?

Mr. PILLION. For the management.

Mr. GROSS. For the management of the Bureau of the Public Debt?

Mr. PILLION. Yes.

Mr. GROSS. Which indicates that they anticipate a heavier workload. What other justification would there be for an increase in overhead of the administration of the debt?

Mr. PILLION. The gentleman makes a good point.

Mr. GROSS. Is that approximately correct?

Mr. PILLION. Well, I am hoping that they will use some of those funds for refinancing the Federal debt on a long-term basis.

Mr. GROSS. Getting it in long-term obligations?

Mr. PILLION. I hope that will be done. I cannot understand why a greater effort has not been made along this line. It certainly is an unhealthy situation fiscally. And, I thoroughly agree with the gentleman concerning our debt. I think it is something that we do not give enough attention to, and if we do reach a point in our economy where there is a restriction of credit, to attempt to pay $100 million in 2 years should be of very serious concern to everyone in this country.

Mr. GROSS. If we now go into a war, what is the situation going to be?

Mr. PILLION. Complete runaway inflation, I will say to the gentleman from Iowa.

Mr. DULSKI. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield to the gentleman from New York.

Mr. DULSKI. I should like to commend the gentleman for a very informative statement. What was the initial capital investment in the Turnkey operation?

Mr. PILLION. The total figures? Of course, they were never audited by the Post Office inspection service as all other items as these are audited. This was never audited. The total figure, land and leases, is based upon estimates, not upon actual expenditures. It is about $15 million.

Mr. DULSKI. And the figure after 20 years will be $48 million?

Mr. PILLION. We would be paying $48 million, roughly, but the costs are getting higher and higher each year. For instance, we were assured by Mr. Barnard, of the Department, that the local taxes would only be $125,000 a year. This year we find that has jumped to $148,000 a year, all to be borne by the Government.

Mr. DULSKI. I thank the gentleman.

Mr. GARY. Mr. Chairman, I yield 5 minutes to the gentleman from Louisiana [Mr. PASSMAN].

Mr. PASSMAN. Mr. Chairman, I rise in support of the bill before the Committee.

At the outset, I should like to pay my respects to the distinguished chairman of this subcommittee, the gentleman from Virginia [Mr. GARY]. It has been my privilege to have served with and under Mr. GARY for 13 years as a member of this subcommittee. When the gentleman from Virginia [Mr. GARY] has completed hearings and the committee has reported the bill, there is very little left that other members need to say.

I should like also to associate my views with those of the distinguished chairman in paying compliments to our former colleague, Mr. Canfield. We hold him in deep affection and were sorry to lose his services, although he had richly earned his retirement. But we do have in Mr. JOHN PILLION an able and worthy successor to Mr. Canfield. I assure you, Mr. Chairman, that it is a genuine pleasure to observe the work of these two gentlemen, the gentleman from New York as the ranking minority member and the gentleman from Virginia as the chairman. When you have sat with them for a year, you have certainly learned some valuable lessons.

Mr. PILLION. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. TABER].

Mr. TABER. Mr. Chairman, the former President in submitting his proposed budget estimated a total expenditure availability for the fiscal year 1962 of $80.9 billion. The present President, in the bills and messages that have at this time been submitted to the Congress, would increase those figures by at least $7.5 billion and the balance of the present fiscal year would be increased at least $1 billion.

We are up against a situation where subsequent increases in the budget for the Military Establishment may raise the amount of the present President's demands upon the Congress by a very considerable amount beyond the $7.5 billion. This means that we are going to increase the public debt anywhere from $7.5 to $10 billion.

I am inserting a table which I have been given leave to have printed in the RECORD as a part of this statement and which I would like to have the membership examine. I have personally been unable to vote for any substantial increases in the respective expenditures, because they would increase the public debt and the Government's operating deficit by at least $10 billion for the fiscal year 1962 and at least unbalance the budget for this fiscal year 1961, unless increased taxes are provided for some of these costs.

The table follows:

[Millions of dollars]

	Former administration approach	Increases in Kennedy administration approach	
		Prior bills and messages	Budget and fiscal policy message (H. Doc. 120)
Distressed area redevelopment	83	394	40
Unemployment compensation extension		[1] 1,000	440
Aid to dependent children of unemployed		[1] 305	215
Peace Corps		10	
School aid program (classroom construction and teachers' salaries)	67	[2] 666	500
College housing loans	100	[2] 250	45
Academic facilities loans	20	[2] 300	
Scholarship grants		26	
Nursing homes		20	

[1] Through fiscal year 1962.
[2] $2,300,000,000 for 3-year program.
[3] Annually for 5 years.

[Millions of dollars]

	Former administration approach	Increases in Kennedy administration approach	
		Prior bills and messages	Budget and fiscal policy message (H. Doc. 120)
Medical and dental school grants		[4] 75	
Hospital research and development		20	
Medical care for aged		1,500	(5)
Increased social security benefits		1,100	(5)
Water pollution control		80	12
Highway program	900	900	(6)
Low income public housing		[7] 1,500	65
Housing for elderly		50	10
Urban renewal		[8] 625	54
Metropolitan planning	10	10	
Land reserve		100	
Miscellaneous increases recommended by Mr. Kennedy in H. Doc. 120			941
Total	1,180	9,001	2,322

[4] Annually for 10 years.
[5] Not in budget; increase in social security taxes.
[6] Not in budget; increase in highway taxes.
[7] 100,000 new units.
[8] $2,500,000,000 over 4-year period.

This table will show the increases item by item and they run to a point of a little over $7.5 billion. There are other increases that are set up in a new kind of method in House Document 120 on budget and fiscal policy. That message would propose increases of $2,322 million.

Frankly, every one of these measures that comes in costs a big block of money, money that has not heretofore been provided. The programs for the schools are going to cost a lot. This scheme that is to follow this bill, the depressed-area proposition, is going to cost from $290 million up to $300 million. The payment of additional money for unemployment insurance is going to cost a billion dollars before we get through with it.

When we get all through with it, it is going to leave an awful job for the Committee on Appropriations and the Committee on Ways and Means. How we can possibly go ahead with all these schemes, and there seems to be no limit to the different ones that are coming in day after day, I do not know. For my own part, I do not propose to vote for any of them, because I think they are not in the interest of the United States and they are not going to help the people of the United States.

I just hope that the Members of the House will take unto themselves a sense of realization of their responsibilities and be more careful in the way they approach putting more public debt onto our people. I do not think I can afford to let any opportunity go by to impress upon the public generally the importance and the necessity of getting our financial house in order and getting to the point where we can balance the budget of the U.S. Government.

Mr. PILLION. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. JOHANSEN].

Mr. JOHANSEN. Mr. Chairman, first of all I should like to thank the gentleman from New York for his courtesy in granting me this time, all the more so because I am going to differ respectfully with the gentleman on some points.

I rise to undertake a delicate and difficult task.

I respectfully ask the committee to hear me out. When I am finished I will, of course, gladly yield to any Member whose name I have mentioned.

The task I am undertaking—and I do so solely on my own initiative and responsibility as a Member of Congress and as a member of the Committee on Post Office and Civil Service—is to discuss what seems to me to be the cavalier, prejudicial, ex parte treatment of the issue of postal modernization in general and of the controversial Project Turnkey at Providence, R.I., in particular.

In offering this respectful protest, I am mindful of, and trust duly deferential toward, the jurisdiction, prerogatives, and membership of the Subcommittee on Appropriations.

I speak without rancor and I hope with complete fairness. But I speak also out of deep conviction and I will not mince words.

I question the fairness and objectivity of some of the procedures to date—and I question the fairness and objectivity of the product of those procedures.

My questioning extends to some of the statements made during the subcommittee hearings. It extends to the inaccessibility to date of the subcommittee to a major party of interest in the controversy; I refer to the contractor on Project Turnkey—the Intelex subsidiary of International Telegraph & Telephone Corp. It extends to the statements appearing on pages 12 and 13 of the committee report. And, I reluctantly add, it extends to some of the accusatory and prejudicially premature statements which have been offered on the floor of the House this afternoon.

I have not used the words "prejudicially premature" carelessly or flippantly. They go to the heart of the matter with which I wish to acquaint my colleagues in these remarks.

That is the fact that in large measure, if indeed not totally, conclusions have been reached and publicly proclaimed with respect to postal modernization in general, and Project Turnkey in particular, on an ex parte basis.

And I use the term "ex parte" in the precise sense of the dictionary definition, "made or done in the interest of, or with respect to, one side only."

It is solely to establish this deplorable fact and to plead for a reservation of judgment by the House until this situation has been fully corrected that I have taken the floor this afternoon.

I believe the subcommittee wants to be fair. I believe the House wants to be fair. I believe the American people want us to be fair and themselves wish to be fair.

I believe that up to this point there has been something very substantially less than fairness or justice.

Moreover I am certain that one member of the subcommittee shares this feeling and is deeply troubled by it. I think the voice of conscience spoke when the distinguished, able and eminently fair gentleman from Oklahoma [Mr. STEED] said in the subcommittee hearings:

> As one member of the committee who is very interested in research, development, and modernization, and in the hope we will come up with some good answers at a reasonable cost, I think all of us are objective in wanting to know if mistakes were made, where they were made, and how we can profit by this example in the future. Also I am interested due to the fact we are here confronted with what in the absence of any information to the contrary could really be rather disconcerting information.
>
> Sometimes when you get into these things detailed information may indicate some of these things are not as odd as they seem at first glance, and for the sake of the entire objective picture I think most members would like to know the true facts.

I applaud—and I think this House should applaud—the very distinguished gentleman from Oklahoma for these wise and just observations.

I regret to say that this same concern for securing the entire objective picture does not seem to be reflected in some of the prejudicially premature judgments and conclusions which have been given publicity by the Postmaster General, by some of my colleagues and, above all, by the language of the committee report on pages 12 and 13.

In passing let me offer the observation—which I feel is fully warranted—that the Postmaster General's repeated and caustic comments regarding the allegedly overpowering "desire to create publicity" on the part of the previous administration of the Post Office Department would come with better grace if the present Postmaster General exercised greater restraint on his "Operation Downgrade" publicity proclivities. I shall not begrudge legitimate public relations and publicity on the part of Mr. Day if, and when, they assume a justifiably affirmative note.

I have said that to date there have been prejudicially premature judgments and conclusions—ex parte in character. Let me illustrate:

First. On page 295 of the hearings, the able and distinguished chairman of the subcommittee, the gentleman from Virginia [Mr. GARY] catalogs his indictments against Project Turnkey. I am not going to debate those conclusions—and I feel that they very definitely are conclusions.

I do, however, with the utmost respect for my friend and colleague, assert that the conclusions are subject to honest differences of opinion.

But even that is not the point I am making.

My point is that the conclusions—and the publicity and sweeping implications which have been attached to the conclusions—represent something substantially less than a complete or fair investigative and appraising process until all parties of interest have been given an opportunity to be heard.

And that opportunity has not been afforded to date as I shall have occasion to point out further.

Second. With respect to the testimony of Postmaster General Day, it is obvious

that this gentleman was incorporating some very definite conclusions in the record—as he has done in statements to the press. This despite a profession of objectivity and reluctant criticism.

On page 296 of the hearings, the Postmaster General says:

I do not want to seem to be looking for ways to question the past administration of the Department.

Again, on page 327, Mr. Day says:

I do have the problem continually that I do not want anything that I do to try and take a new look at things to be misinterpreted as any partisan activity on my part.

Perish the thought, of course.

But this admirable reluctance and restraint vanishes a few sentences later with the very definite conclusion on his part:

I think a great deal of the top direction (in the past administration of the Post Office Department) was motivated by a desire to create publicity. I do not think that should be part of a proper running of the Post Office Department or research projects.

I do not think that the individuals who may have carried out the instructions—and I am sure you gentlemen agree—as a group, in the absence of some particular facts that may later come to our attention—should necessarily be held responsible for the fact that the thing was rushed ahead with a promotional motivation rather than a motivation of providing good service.

This is a conclusion, I should point out, which alleges not only a failure to provide good service but which also alleges very dubious motives.

If this is objective nonpartisanship, I hope we will be spared any display of biased partisanship by the present Postmaster General.

Third. I will be nonpartisan in my comments to the extent, at least at this point, of expressing my regrets over the statement made by the gentleman from Massachusetts [Mr. CONTE] found on page 332 of the hearings:

In respect to the Providence Turnkey post office, as has been brought out here, and based upon what we saw up there Friday, this definitely warrants a good looking into. In fact, I would dare say that it borders on a public scandal—the whole situation—and should be investigated. It is certainly unfortunate that so much money has already been expended, and it is going to be very difficult to recoup anything out of this, except experience.

I think there is indeed something that borders on a public scandal—the fact that these accusatory conclusions are reached and given the widest public circulation on an ex parte basis.

Let me interject, at this point, that I do not oppose a full and fair investigation and ventilation of the matters in issue.

On the contrary, that is exactly what I plead for.

What I do oppose—and oppose most earnestly—is the prejudicially premature conclusions in advance of any opportunity of hearing for those who are the subject and the object of the gravely adverse premature conclusions.

That applies alike to the contractor—a firm of international standing whose integrity, technical competence, reputation and even contract relations with the Government are beclouded—and likewise to the top leadership of the past administration whose motives, even, are the subject of ex parte conclusions.

As to the contractor, International Telegraph and Telephone Corp., I am informed that an urgent appeal for the privilege of a hearing was addressed to the chairman and members of the subcommittee on March 2, and that this request to date has not been granted.

There may well be completely valid reasons for this delay. I assume there are, of course. I am positive that it is the intention to afford such hearings. My questioning and my protest go not to the possibly unavoidable delay in affording such a hearing, but to the extent to which conclusions have been so extensively reached and publicly promulgated in advance of such hearings.

The hearing has been deferred but, unfortunately, not the premature conclusions. This unfortunate fact detracts from the promise of future public hearings.

And in connection with the statement of the gentleman from Massachusetts I offer these further observations.

I am firmly convinced, on the basis of some very extensive inquiries which I have made, on my own responsibility, that there is very substantial, relevant and persuasive evidence to be presented to the committee and to the House, and for that matter to the American people, in rebuttal of many of these premature conclusions.

Furthermore, I would think that the subcommittee itself, in view of its acknowledged parentage of the modernization program and its continuing deep interest in that program, would hesitate to proclaim too vigorously its thunderstruck amazement over what has allegedly transpired, and over the alleged shortcomings of that program. I confess to some bafflement at the shocking insights which have been gained so promptly after the 20th of January. Has there been some serious lack in the subcommittee oversight of this program in prior years?

I offer another observation. With the normal aversion of human nature to change. I am sure that it is in no sense surprising that there are those at various levels within the postal organization who do not enthusiastically seek the success of the modernization program in general, or of project Turnkey in particular.

The Postmaster General himself—and I commend his fairness in this particular—cites what appears to be an obvious example of such resistance. I quote from page 293 of the hearings:

General DAY. Mr. Chairman, when we were at Providence an employee in the post office whom I cannot even identify as to who he was made the statement to a number of us that that parcel sorter was damaging 25 percent of the parcels being handled. I do not know why he made such a statement. No one who happened to be around at the time said what the correct statistics were, but I am told the actual figure was seventeen-one hundredths of 1 percent, which is about average. This gentleman is not involved in that work, so I do not know why he undertook to make such a statement.

It strikes me that prejudicially premature conclusions either by the top levels of the Department or by this House with respect to project Turnkey, for example, may however, unintentionally, lend aid and comfort to the type of resistance which could very well doom this or any other pioneering program to serious difficulty, if not failure.

One further observation, the seemingly precipitate conclusions regarding Operation Turnkey and publicity thereof, within less than 4 months after the project's inauguration, is all the more inexplicable to me in view of the statement made by my good friend, the gentleman from New York [Mr. PILLION] in the course of the January 1960 hearings of the subcommittee.

Mr. PILLION said:

I want to compliment the Department on their attempt to bring about this modernization, this saving. I truly mean that. I think it is a step in the right direction. On the other hand, unless we do make some saving, then it becomes a different situation, and we have to look at it differently.

But I certainly want to compliment your Department upon your attempt, even if it is a failure—if it is a failure, however, I want to know it now and not 5 years from now.

I think it is obvious, and I would think the gentleman from New York would have to agree, that the determination of success or failure, or of the degree of success or failure, in an experimental program of this complex nature, would at least require a trial period of operation, an opportunity for phasing in the 81 other post offices located in the area surrounding Providence, about which the subcommittee chairman complains, and certainly something more than a 4-month shakedown period.

Fourth. I come now to what seems to me the most seriously premature and prejudicial conclusions of all.

I quote from pages 12 and 13 of the subcommittee report:

The committee is seriously concerned over the failure of the postal modernization program to produce much of anything modern except buildings. It appears that the basic objective of the program has been almost completely forgotten—namely, the development of mechanization which will provide more efficient, more effective, and more economical postal service to the users of the mails. Therein lies the real challenge to the postal service. On the other hand, the committee is not interested in gadgetry or the development of machines which do not make a real contribution to the service.

The outstanding example of the lack of real progress in postal modernization is the much-touted "Turnkey" automated post office located in Providence, R.I. The committee recently visited that project and was shocked at the extent to which it failed to measure up to its advance billing. The mechanization was merely a collection of machines of European design—nothing really new. The project has contributed nothing to the efficiency or economy of postal operations. The committee is investigating this matter further and will take such action as may be warranted.

These are sweeping and damning conclusions indeed, particularly for an investigation which—so far as the contractor is concerned—has extended only

to the point of a promise that this contractor firm someday will be given ample opportunity to present its case.

Never, in my 6 years in this House, have I questioned or opposed the oversight and investigative role and responsibility of congressional committees. Certainly, I do not oppose these activities in this instance. I have never hesitated to criticize waste or inefficiency in the Federal Government on the basis of protecting any individual or any party.

I will not hesitate to do so in this instance if in my judgment such criticism is justified once, in the admirable words of the gentleman from Oklahoma [Mr. STEED], we have been given "the entire objective picture," and provided there is fair and reasonable allowance for the problems peculiar to the acknowledged trial and error aspects of an experimental project.

This House faces no legislative action or decision today on the sweeping indictments of the postal modernization program or Project Turnkey.

But it does, in my judgment, face a moral responsibility to redress, as speedily and as fully as possible, the wrongs and damage of prejudicially premature conclusions, arrived at in ex parte proceedings.

I hope in the interests of simple justice, as well as of constructive progress, that it will, through the appropriate committee or committees, act forthwith to meet that responsibility.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. GARY. Mr. Chairman, I yield the gentleman 2 minutes, and ask if he will yield to me?

The CHAIRMAN. The gentleman from Michigan is recognized for 2 additional minutes.

Mr. JOHANSEN. I am most happy to yield to the gentleman from Virginia.

Mr. GARY. I would just like to say to the gentleman that if he has any facts on this project, our subcommittee will be delighted to have them. We have been looking for facts. They have been very hard to find. We have not concluded our investigations. If he has any facts to present to our committee we will be delighted to have them.

Mr. JOHANSEN. I appreciate the gentleman's statement, and I will be most happy to avail myself of it. I would say to the gentleman that it is characteristic of his fairness.

I do regret the fact that as far as I have been able to determine, a request of the contractor to be heard has not yet been granted.

Mr. GARY. The committee as yet has not felt that it had sufficient evidence from its staff to go into a hearing of that kind. When we do conduct a hearing we want the full facts, and we want to give our staff ample opportunity to collect such facts as they can before the hearing so that we may cover every phase of the case during the hearing. What we have done is to present to the House the facts we have been able to accumulate thus far.

Mr. JOHANSEN. May I say in friendly response to the gentleman from Virginia that I share his desire to develop all the facts. I do respectfully suggest that it might be helpful in the interest of fairness if the Postmaster General would restrain some of his public outgivings in terms of conclusions until the eminently fair process which the gentleman proposes has had time to be developed.

Mr. GARY. The Postmaster General, of course, speaks for himself. We have no control over the Postmaster General.

Mr. JOHANSEN. I was only suggesting moral suasion to the gentleman.

Mr. GARY. The Postmaster General visited the project with us, and I will say that neither the Postmaster General nor our committee were pleased with what we saw.

Mr. BARRY. Mr. Chairman, will the gentleman yield for a question?

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

Mr. PILLION. Mr. Chairman, I yield the gentleman 2 additional minutes.

The CHAIRMAN. The gentleman from Michigan is recognized for 2 additional minutes.

Mr. JOHANSEN. Mr. Chairman, I yield to the gentleman from New York.

Mr. BARRY. I would like to call the gentleman's attention to the bottom of page 12 and ask if he does not consider this double talk where it says that the basic objective of the program has been almost completely forgotten; namely, the development of mechanization.

A little further in the same paragraph it says that the committee is not interested in gadgetry being developed. I wonder if this is not only inconsistent but an injustice when viewed in the light of the development of many new machines and new processes. I would like to call attention particularly to the long and persistent efforts made by the American Machine & Foundry Co. to invent a pin-setting machine for bowling alleys. The gentleman will recall that a few years ago stock in that company was selling at $7 or $8, but today it is up to $125 a share mainly because such a machine was invented—Was that gadgetry? Some of those who now are opposed to automating the Post Office by accusing the Post Office of gadgetry appear to have abandoned the "New Frontier" if that term ever meant the experimentation of new ideas and machines to save the taxpayers money.

There are many other companies whose engineers and technical skills have consumed years in research and development to ease the heavy work load of the Post Office Department.

Here we are talking about these companies that are putting in their capital and their scientific know-how to make a better America for every one of us, and judging their work without adequate hearings. I deplore it.

Mr. JOHANSEN. I share the gentleman's view, and I thank the gentleman who yielded me time, because he may have wanted to ask a question.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. JOHANSEN. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I do not think that what the committee has said or done thus far is any reflection on a past administration. I do not think they had any other intention but to conduct a closed hearing and make an investigation. We went to the place where the new post office was constructed and we did have some witnesses from the Post Office who were carryovers from the last administration. Based upon this evidence and the evidence gathered for us by our investigators, statements were made. I am certain that hearings will be held. They will be private hearings as provided by the rules of the Appropriations Committee. But let me cite the gentleman to this: This is supposed to be a modern post office with all these modern facilities. The first place we visited was the loading platform. We ascertained there it requires during a period of time 5,131 more man-hours to operate the loading platform.

Mr. JOHANSEN. Let me comment at this point because of the limited time. It has not been my purpose, and I did not intend to go to the specifics of the allegations. My only point is there have been most unfortunate generalizations and I may say to the gentleman that in the hearings the gentleman said:

> I would dare say that it—
>
> Referring to the situation—
>
> borders on a public scandal.

I regard that as a very serious conclusion. It may be the facts will bear out that conclusion some day. I think that statement at this juncture is unfortunately premature.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. JOHANSEN. I yield to the gentleman from New York.

Mr. PILLION. There was a motion picture costing $17,600 that was allowed as a part of the construction cost for this post office. There was a little booklet put out. This was all added to the cost that the Government is paying for. There was a small check for $2,500 sent to help in the entertainment of the Postmasters here in Washington. These items are all wrongfully added to the costs paid for by the Federal Government as a part of that building. Does the gentleman know that? Does the gentleman know after this supposed mechanization the productivity of these employees instead of increasing was reduced from 292 pieces per man-hour in 1960 to 261 in the same period of 1961, a further reduction in productivity per employee man-hour from 365 to 336? Did the gentleman know those things before he made his very eloquent and I think very fine sentimental talk here?

Mr. JOHANSEN. Let me say to the gentleman that there is not a particle of sentiment in the speech I made. I am simply saying that the conclusions which have been made public have been made public so far as I know in every instance without, No. 1, a detailed indictment of the type which the gentleman has mentioned and, No. 2, without the opportunity for anyone who is accused with relation to this to respond to the generalized conclusions.

Mr. PILLION. I know the gentleman has a great sense of fairness. But, let us not be confused about the principles that are applicable. We certainly can-

not, as a House here, as a group making appropriations, adopt a jury system. We cannot have a grand jury or conduct a jury trial every time we make appropriations or make a report. This House is not accountable to individuals who may incidentally be hurt or suffer some degree of criticism. This House is above that. We are looking out for the interests of the taxpayers of the Nation as a whole.

Mr. JOHANSEN. Of course, I am completely aware of the basic points that the gentleman makes. I am also aware of the fact, as I am sure the gentleman is, because I happen to be on a standing investigating committee of this House, and I certainly am making no invidious comparisons, as the gentleman, I am sure, understands. But, I know that under the rules of our committee, if gravely adverse information is developed in executive hearings, that information and the persons involved therein cannot be disclosed until that person has been given an opportunity to respond to it. Now, I am again not going to get into an argument over these detailed allegations. I simply say that I think the record of the hearings, the statements in the committee print, and some of the things that have been said on this floor—and I do not question the gentleman's complete good faith—all these generalizations have been made on a basis which nothing of record before the House and nothing of record before the American people substantiates. I have never opposed the oversight or investigative functions of the committee. All I plead for is that we get to the matter of getting the facts completely before us as rapidly as the committee can.

Mr. PILLION. I commend the gentleman, and I know his intentions are of the best.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. PILLION. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. CORBETT].

Mr. CORBETT. Mr. Chairman, as I review the hearings on the 1962 Post Office Department appropriation and read the committee report thereon, I am amazed at the refusal of the Appropriation Subcommittee to place a value on public services. I am quite disturbed when I read the justification for this action, and note the words, "and serves no useful purpose."

The 1958 Postal Policy Act from its inception regarded the Post Office Department as a public service and yet, after 3 years are still unable to follow the clear intent of the 1958 law. From the hearings on this bill one gleans the definite impression that the 1958 Postal Policy Act was something done in haste and now we must repent in leisure.

I want to set the record straight on this: The Postal Policy Act of 1958 was the result of several years' work on the part of both the House and Senate Post Office and Civil Service Committees. The first postal rate policy designed for the purpose of guiding the committees of Congress in establishing postal rates was contained in H.R. 11380, which passed the House of Representative on July 6, 1956. Gentlemen, I need not remind you that 1956 was 5 years ago. I think furthermore, that this is positive proof that the Postal Policy Act was not a last minute effort on the part of some Senate group, but rather it was the result of long years of study and deliberate effort on the part of both the House and Senate committees to establish criteria for the guidance of the Congress in establishing postal rates.

I shall not burden this body with a review of the provisions of the 1956 bill, but I will tell this body quite candidly that many of the provisions contained in the final act of 1958 were contained in the original 1956 bill passed by the House.

Let me direct your attention to the fact that on August 13, 1957, the House of Representatives again enacted a bill, H.R. 5836, adjusting postal rates and once more establishing a postal rate policy for the guidance of the Congress. This bill, of course, with modifications by the Senate, became the Postal Policy Act of 1958.

One fundamental principle carried in all of these enactments was simply that the sum of such public service items should be assumed directly by the Federal Government and paid directly out of the general fund of the Treasury and should not constitute direct charges in the form of rates and fees upon any user or class of users of such public services, or of the mails generally.

Now, gentlemen, this provision of law did not speak of the "loss of revenue" concept, rather it spoke of the sum of such public services. It is a logical consequence of these early provisions that the Congress finally adopted a provision of law, section 104(a)(1), requiring that the "total loss" resulting from the transmission of certain specific items should be set aside as public services.

Oh, the Post Office Department and the Bureau of the Budget appeared before the substantive committees many times and urged upon the Congress the "loss of revenue" concept. But the Congress, in its deliberation, declined this concept and substituted therefore "total loss." As a matter of fact, to emphasize its insistence on "total loss," the Congress repealed in the 1958 act the only statute on the books which since 1930 had permitted the Department to take credit for "loss of revenue" on certain free and preferred items—section 214(a)(1), Public Law 85–426.

The big question in our minds concerning "loss of revenue" was simply—"Who pays the bill?" Let me give you a concrete example: In 1959 the "total loss" on nonprofit second-class mail amounted to $60 million. This is the difference between revenue and allocated costs. Under the "loss of revenue" concept the figure is a little better than $3 million. I can't believe it was the intent of Congress to follow the "loss of revenue" concept and force commercial mailers to pick up a $57 million additional charge on nonprofit newspapers and magazines, many of which carry advertising in competition with these commercial publications.

The one well known national magazine enjoying a nonprofit rate pays 1½ cents a pound on its advertising irrespective of distance. Commercial publishers pay 14 cents a pound on advertising up to the eighth zone. I assume the Congress intended that the Post Office Department balance its budget—at least the law so states. Gentlemen, you cannot balance the budget by asking commercial mail users to pick up tremendous losses on free and nonprofit categories.

There are many other examples I could cite relating to free-in-county, nonprofit third-class mail and so forth, but in the interest of time, I shall not do so. I note the hearings indicate that perhaps third-class mail might be fully charged off as a public service under this law. This is not the case. The only provision made for third-class mail is in the interest of religious, fraternal, and charitable mail. The law provides that total losses on this category shall be fully set aside. The last administration attempted to raise nonprofit third-class mail rates, but quickly withdrew its request in the face of the onslaught by many Catholic, Protestant, and Hebrew religion representatives. It will be very difficult to hike the rates on charitable third-class mail.

The law provides that losses on third- and fourth-class post offices should be charged off as a public service. I supported this provision and I still do. The Department has told us that such estimates are impossible, but it never fails to tell us that when closing an uneconomic fourth-class postoffice, it saves the taxpayers $1,400 per year. If you don't think a third- or fourth-class post office is a public service, just recall all of the objections that are raised by the citizens of a community when a small post office is being closed. It doesn't take much scanning of the Post Office cost ascertainment report to reveal that some 25,000 third- and fourth-class post offices do not take in enough revenues to meet the salaries of postmasters and their clerical staff. As many of them are in the public interest, I think we should set aside at least a large percentage of their "total loss" as required by law.

In recent years certain amounts, computed on a "loss of revenue" basis have been set aside as a public service. While this was not adequate, it nevertheless, observed the principle of the law. The 1962 budget carried $62 million as a public service item which was not adequate, but now even that has been eliminated. Recently there was a published report that the new Administration sought the approval of the White House to request $269 million for public services. This report states that the Bureau of the Budget refused the request—Advertising Age, March 20, 1961. I make no criticism of our new President in this matter, as I know his time is consumed with world-shaking problems. I can only observe that he must have received some very poor advice on this subject inconsistent with the aims of the New Frontier.

There has been much talk lately concerning the realism of certain of the budget estimates. In January we were told that April 1 was an unrealistic date for the commencement of postal rate

hikes. Now, as we approach April 1, we are told that July 1 is a realistic date. I only cite these facts and let you draw your own conclusions.

Furthermore, we are told that a postal rate request in the amount of $843 million will be laid before the Congress in the near future. In my opinion, this is the most unrealistic item contained in the budget. I, for one, do not believe the Congress of the United States will permit a balancing of a postal budget which requires commercial mail users to pick up the losses on many of these free and low-cost services enumerated by law, contrary to the provisions of the law. I will insist that the House Post Office and Civil Service Committee abide by the clear intent and provisions of the 1958 Postal Policy Act at such time as a rate bill is under consideration.

I am delighted that the new Postmaster General has abandoned the word, "deficit," and refers to the loss as a "gap." At least a proper evaluation of public services will go part way in closing this gap, and I shall insist on this realistic approach.

I regret very much that my colleagues have found it necessary to nullify the 1958 law again. We had hoped for more cooperation for the purpose of realizing a sound basis upon which to establish postal rate increases. I see no recourse except to follow the provisions in an act, which is properly the law of the land.

Mr. Chairman and Members of the Committee, the remarks of the chairman of the subcommittee come as no surprise, and I hope he will be able to give his undivided attention to it.

Mr. Chairman, addressing myself to the chairman of the subcommittee, I find in the hearings which that subcommittee held that you are quoted as saying that I believe that all the cost of second, third, and fourth class post offices should be regarded as public service and that this is ridiculous. Now, that is pretty strong language from my friend. But, I think these corrections ought to be made in order: first, I never said that second-class post offices should be included; and in the second place, it is not I who said that third- and fourth-class offices should be included. This is the word of the House of Representatives and the Senate—and it was approved by the President—in the Postal Policy Act of 1958, which says that the cost of third- and fourth-class offices should be regarded as public service.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. CORBETT. Yes. I just wanted the gentleman to know that he was reported as calling the Congress, of which he is a Member, ridiculous.

Mr. GARY. I want to say to the gentleman that no remark I made was personal. I think someone else mentioned your name. If I did not say it, I intended to say that those who were advocating this large appropriation for public services held to that view, and if I said second- and third-class post offices, I was in error. I intended to say third- and fourth-class offices; it was a slip of the tongue if I said otherwise. I am not questioning the gentleman, but I certainly want to make it plain that I had no criticism whatever of my friend of long standing.

I know he is very much interested in this problem; I know he has studied it. I disagree with him, but whenever I disagree with anybody, I try to do so agreeably and I certainly intended nothing personal in any remark that I made.

Mr. CORBETT. Mr. Chairman, I deeply appreciate the gentleman's statement. I do not think I would have referred to it—I am not that thin-skinned—had it not been a good point from which to take off on a further inquiry into this subject. I do want to point out, as the membership well knows, that this has gotten to be a sort of annual bout between the Chairman and myself as to just what are proper charges to be made to the users of the mails and what are not proper charges. The gentleman said that he has disagreed with me often. That is absolutely correct. I do not need to point out to him that in this country you do have a right to be wrong.

Mr. GARY. I do not say the gentleman is wrong. I think the entire service of the Department is public service. Therefore I say that when you pick out just the third- and fourth-class post offices it is ridiculous, because it is all public service. If it is not then the Government has no business rendering the service at all.

Mr. CORBETT. I might remind the gentleman again, and his subcommittee, that after years of effort, in 1956 and 1957 and again in 1958, the Committee on Post Office and Civil Service of this House and the corresponding legislative committee of the other body agreed to definite policy statements. We did outline, specify, and write down in black and white that certain aspects of postal activities were services which the Congress had decided are public services, extended to all of the people, and therefore said that these items should not be charged to the users of the mails. Year after year your subcommittee comes back without any provision made for public service at all. You say that this is—well, it is just unimportant, it is just a bookkeeping item.

Here is our situation basically. We do not feel, we members of the legislative committee, that the Subcommittee on Appropriations has the right to tear up the work we have done, completely ignore it, and say there is no such thing as public service in the post office. We labored with this matter, had extensive hearings, revised it, and went over it and over it, but you gentlemen say that it does not exist. We think that is not right.

We have disagreements, of course, if we ever get into the matter of public service, as to what it is, whether it should be a loss of revenue only or a total loss. We have all those arguments, but they must follow the argument whether or not the legislative committees of this Congress are writing the policy or whether the Subcommittee on Appropriations is writing it.

The Post Office Department, we have on reliable information, went to the administration and asked for $269 million this year for public service items. That was turned down. They came to your committee and asked for $62,500,000, a very much reduced amount and as I understand you allowed them nothing; you just said there is not any. I would say that from here on through—and this might interest the gentleman very much, because I have talked to the users of mail and I have come to a conclusion myself—if we can ever establish and itemize just what is public service, just what is properly chargeable to the Treasury, then we ought to raise rates sufficiently to very nearly eliminate all of the true deficit.

This can be done this year if we can get a reasonable understanding from the gentleman's committee and from the Senate and the White House as to what are proper charges to make to the users of the mail and what are proper charges to make to the Treasury of the United States—that is, we can then raise the postal rate sufficiently to make up the deficit or the "gap," as the new Postmaster General chooses to refer to it.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. CORBETT. I yield to the gentleman from New York.

Mr. PILLION. The gentleman realizes that the subcommittee had only one figure before it on public service, the $62 million. It had no other figure, although there was talk of $300 million. But as the gentleman knows, it is a matter of identifying what is public service.

Mr. CORBETT. Correct.

Mr. PILLION. The gentleman knows the various formulas that have been used.

Mr. CORBETT. The gentleman also knows the figure is more than zero.

Mr. PILLION. Yes; I quite realize that; and that the job of determining which formula should be used is substantially and basically within the jurisdiction of the gentleman's committee, the legislative committee.

Mr. CORBETT. And we have done that.

Mr. PILLION. Only in broad language.

Mr. CORBETT. Let us say in specific language, but let us agree that dollar marks have not been put on the specific items. In this I agree with the gentleman. In any postal rate increase this year or next year—and I understand it may be put off until next year—we ought to itemize, we ought to put a dollar value on, these things when we talk about the loss incurred in performing special services such as special delivery and the like. We ought to put the dollar mark on it. This, I think, should be done.

I am simply saying to the subcommittee that I hope when they meet with the conferees from the Senate that they do give a more openminded consideration to the thing, because if we can get along and once and for all settle this issue of public service then no user of mail is going to hide behind it again and say, "Well, we would pay except we have all these public services, and we are not going to pay for them." If we could put the dollar value in, I think at long last we could resolve a really complex

and difficult question for the interest and the welfare of the country.

Mr. WALLHAUSER. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. WALLHAUSER. Mr. Chairman, I wish to congratulate the gentleman from Pennsylvania [Mr. CORBETT] on a very able presentation of an issue that must be faced up to and, it seems to me, without delay. A previous Congress has declared it to be the intent to allow a charge for public service by the Post Office Department. This is, in my opinion, a correct allowance and it should be recognized in making appropriations. There is no doubt that the users of the mails should pay for services rendered, but should not be required to pay more than their just share. Let us recognize the realties and settle this matter once and for all, so that proposed rate increases can be correctly studied and proper conclusions reached.

Mr. GARY. Mr. Chairman, I yield 5 minutes to the gentleman from Oklahoma [Mr. STEED].

Mr. STEED. Mr. Chairman, I have asked for this time to discuss two or three points I think the House will find of interest.

In the first place, I think it is important for us to realize that the bill before us today traditionally is the first appropriation bill to come before the House each session. All of you know that we got a very late start this year, and we are here on schedule with the appropriation bill in spite of that solely due to the fact that the chairman of this subcommittee has been willing to go far beyond the call of duty in putting in an immense amount of overtime and extra work to make this possible. This subcommittee has worked hard and long in order to get this bill here back on schedule despite the very late start we got.

The importance of this I stress for this reason: In discussing today the Turnkey project I want you to know the subcommittee does intend to have hearings. It does want all the facts. But in order to get this bill here today, you can do only so much. There just has not been time to do this work and get to the other work that has yet to be done. It has not been because anyone wanted to delay it; it is just that we have not had time to go into it thoroughly yet. I think also we should remember that the bill here today, although it is usually taken more or less for granted, probably affects the lives of more people in more ways than any other bill that will come before this House. It involves about one-third of the total budget. It involves at least one-third of all the people who are employed by the Government, and it involves the receipt and handling of almost all of the total revenues received by this Government. In that connection, I think it is interesting to note some of the reasons why these two bills have to come here in larger and larger amounts of cost each year. Most of the functions of these two departments of Government are in fields beyond their control. The work load is something over which they have no control.

As the country grows, these problems also grow. These departments have no choice except to seek funds with which to carry on this work. Sometimes when the House passes a bill, it probably does not realize some of the chain reactions of cost to these two departments of Government that these actions can have. For instance, whenever we put the Government in the business of issuing 440 million checks to the American people, as we are doing this coming year, we open up a field for the theft of checks in unprecedented number. It takes more people in the Secret Service and it takes more people in the Post Office Department to get these forgers and check thieves than ever before, and we find an increasing cost year after year brought about just by this sort of chain reaction. There are many interesting things about this modernization and mechanization program in the Post Office Department. I want you to know when this program started, it did so with the full cooperation and backing of this subcommittee. This subcommittee has been one of the strongest supporters of the idea that we have to find some way, some modern mechanized way to meet this increasing problem of handling the mail, which this year is at an all-time high in total cost of the Post Office Department. The mail load is going up by leaps and bounds every year. We must find, if we can, some way to do a better and more economical job of handling this tremendous mail load. Two-thirds of the mail in the entire world is handled by the American Post Office Department. While we have gone along year after year providing millions and millions of dollars for research and development to help to find these answers, we also at the same time feel a very keen responsibility to see to it that this money is spent as wisely as possible. That is why whenever we go into a very substantial program like Turnkey and we find it coming out short of the hopes we had for it, we feel such keen disappointment. We do not want this to give the research and development program a black eye. But, we think if there is any way to bring back year after year a program that we can continue to fight this battle, we have to keep this program on as sound, solid, and sane ground as it is humanly possible to do. Therefore, sometimes we may have to go into some things that do have unpleasant implications, but I feel we have no choice.

Mr. PILLION. Mr. Chairman, I yield 7 minutes to the gentleman from Massachusetts [Mr. CONTE].

Mr. CONTE. Mr. Chairman, at the outset I want to take this opportunity to congratulate our chairman of the subcommittee, the gentleman from Virginia [Mr. GARY] and the ranking minority member on the Republican side, the gentleman from New York [Mr. PILLION]. Both of these gentlemen have worked together in exemplary harmony and coordination. They have worked long and exacting hours and have ferreted out the information and sifted the evidence by the meticulous questioning of witnesses, and they have been understanding with all those who appeared before us. I believe if anyone here would take the time to read the testimony, they would clearly see the thorough manner in which both of these men have examined the witnesses on many important matters facing the Post Office and the Treasury Departments.

Mr. Chairman, I want it completely understood that I, too, like the gentleman from Oklahoma, stand for modernization, but I do not feel that we should mechanize merely for its own sake. Last year, Mr. Chairman, I brought out in the committee hearing that I was opposed to the microwave system whereby radio waves beamed to the moon from the east coast were bounced from its surface to the west coast. At that time, Mr. Chairman, we had already spent about $3 million in experimentation. Had we stopped the program at that point we would have saved the taxpayers of the United States a million dollars, for to date we have spent $4,500,000 besides having discarded the microwave system. So, we are right back where we started, using trucks, mailsters, and bags on the backs of mailmen.

In regard to the Turnkey post office, we do not intend to cast any bad reflection whatsoever upon the past Post Office administration, but we felt that the present one is continuing the mechanization program and is embarking on a very expensive project called Gateway in Oakland, Calif. The cost of this project will make the cost of the Providence, R.I., Turnkey look anemic by comparison. Therefore before embarking on a project so costly to the taxpayers of the United States we thought we would go into this Turnkey project with a fine toothed comb. It is so-called because it was designed with the intention that the entire post office could be operated mechanically by turning a key. This was not an ex parte hearing. We had several members of the Post Office Department who were in charge of this program last year and the year before. They were asked questions and given the opportunity to answer. What disturbed us, I believe, and disturbed me more than anything else, was not the failings in the mechanized equipment—malfunctions are to be expected because, after all, this is a laboratory, a guinea pig project which is going to take some time before the kinks are ironed out. We went to Providence and saw the mail-sorting machines. They are supposed to take the large envelopes out and allow only the small envelopes to pass through. Twenty-five percent of the smaller envelopes were being ejected along with the large envelopes. Therefore manpower was required to separate the small envelopes from the larger ones by hand; hence, an added cost.

We saw the package-mail sorter, the sorter for parcel post mail. It was dropping packages about 25 feet down a chute. We discovered that a heavy breakage resulted to packages.

Then we saw the canceling machine, but here again we found a 25-percent imperfection. It was not canceling the stamps if they were positioned a little off the precise right-hand corner of the

envelope, and not at all if there was any writing in the left-hand corner. This, too, required a great deal of manpower to correct the deficiencies of the machine. I will admit, however, that a certain amount of malfunctioning is to be expected, especially in the development of new processes and new machines. Again, I point out that this is a laboratory, a guinea pig. What did disturb me most were the maintenance figures given the committee. Let me read some of them. There is a figure of $923,679 for maintenance of the Turnkey project post office for 1 year. Mr. Chairman, do you realize how many employees they have in this post office to maintain it? It is 63 men. Yet they have a maintenance cost of over $900,000. They have an item in maintenance costs of $5,000 for labor relations, mind you, labor relations with only 63 employees, despite the fact that they have no labor problems with this small group of employees. They have recurring items of payroll expenses. These are not salaries and wages, but the cost of keeping track of salaries and wages, which amounts to $20,745 per year.

They have a figure for traveling and living expenses for 63 employees in the amount of $155,986. They have fees for outside services to help these 63 men in the amount of $143,636. These are costs that will be recurring in the budget year after year. These were the disturbing things that bothered me and bothered some other members of the committee. Before we embark on another gigantic modernization program, with a lot of colored lights and gadgets, conveyor belts, and so forth, I think we should investigate this thing very closely and be certain we are on solid ground before we allow another project to go forth like Providence's "Turnkey."

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Virginia.

Mr. GARY. A statement was made here a few moments ago on the floor concerning the patriotism of the company that erected this building and put at the Government's disposal the results of its studies and achievements in this field. It was well paid for its patriotism, was it not?

Mr. CONTE. It certainly was, Mr. Chairman, and as I brought out in the hearings, with the unfavorable balance of payments that everyone is talking about, that we read so much about in the newspapers, and which we have to do something about, Intelex purchased every piece of its equipment in West Germany or Belgium—when we had the same machinery right here in the United States. If anyone should be setting an example to buy American commodities it should be our Government agencies.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Michigan.

Mr. JOHANSEN. If I may say to the gentleman from Virginia, having in mind the old saying that patriotism is the last resort of the scoundrel, I trust his reference to my patriotism does not make me a scoundrel. The truth of the matter is the gentleman from Michigan made no reference whatever to patriotism. He spoke of integrity, technical competence, reputation, and contractual relations.

Mr. GARY. I assure the gentleman from Michigan that I had no reference to him or remarks made by him when I made that statement. I was speaking of the remarks made by the gentleman from New York who spoke of the patriotism of the company which erected the building.

Mr. CONTE. At this time I would also like to say a word in regard to the Bureau of Narcotics.

The Bureau of Narcotics, established in 1930 to enforce the Federal narcotic and marihuana laws, regulate and control legitimate trade in narcotic drugs within the United States, supervise imports of raw opium and coca leaves as well as the manufacture and distribution of narcotic substances from these drugs, has been under the very able direction of Commissioner H. J. Anslinger.

The Bureau cooperates with the Bureau of Customs and with the law enforcement authorities of many foreign governments to suppress the illicit production and international trafficking in narcotic drugs.

To curtail the illicit international traffic as it affects the United States, agents of the Bureau are stationed in several foreign countries where they assist the police authorities of such countries in investigating the illegal activities of major international traffickers attempting to arrange for the smuggling of large quantities of narcotic drugs into this country. By intercepting these shipments of narcotic drugs at their foreign sources of supply and by the seizure of clandestine laboratories where large quantities of opium are converted into heroin, the amount of narcotic drugs available to the illicit narcotic traffic in the United States is effectively reduced.

The Bureau maintains close liaison with State and local narcotic enforcement authorities, and since 1956 has conducted a narcotic training school in Washington to train State and local police officers and law enforcement agents in specialized techniques and procedures of narcotic law enforcement so that these officers can more effectively discharge their responsibilities at State and local levels thus enabling the force of some 290 Federal narcotic agents to concentrate on the apprehension of interstate and international narcotic traffickers.

The Narcotics Control Act of 1956 which provides a minimum mandatory sentence of 5 to 20 years for a first offense of unlawful sale of narcotics or marihuana and a 10- to 40-year sentence for subsequent offenses, with no probation, parole, or suspension of sentence, except for a first offense of possession, has been of inestimable value in curbing the activities of notorious gangsters, many of whom have discontinued their narcotic activities in favor of less hazardous criminal enterprises where the severe sentences now attached to narcotic law violations do not apply.

The effectiveness of the Narcotic Control Act of 1956 has been evidenced in States which have enacted similarly severe State narcotic control legislation to deter illicit trafficking and reduce addiction. Ohio and Illinois have proved the efficacy of this type of legislation, supported by strong enforcement measures. In my own State of Massachusetts where I sponsored heavy mandatory penalty legislation we have another example of the effectiveness of such legislation.

In recent months agents of the Bureau of Narcotics have successfully concluded an investigation of extensive cocaine trafficking in Bolivia in which they seized a large quantity of cocaine destined for the United States. At the request of the Governments of Mexico, Ecuador, Colombia, Peru, and other Latin American countries, agents of the Bureau of Narcotics have assisted the police of those countries in numerous investigations of narcotic trafficking. Some of these investigations were undertaken under extremely dangerous conditions and involved serious injury to police officers.

Because heroin, the drug most desired by addicts in the United States, is smuggled into this country from abroad, international cooperation is of vital importance in suppressing this traffic. More than 600 important international criminals have been arrested and several tons of illicit narcotics have been seized as a result of the work of the Bureau of Narcotics agents abroad working under cover with their counterparts in other countries.

In late 1960 Bureau agents were largely responsible for the seizure of more than 100 kilograms of heroin and the arrest of the former Guatemalan Ambassador to Belgium and the Netherlands, who acted as a courier between Corsican gangsters in France and Italian gangsters in New York City.

For many years Commissioner Anslinger has steadfastly appealed for the adoption of a program of civil commitment of narcotic addicts in drug-free institutions as the only means of successful treatment and rehabilitation of addicts. Several States and the District of Columbia have enacted legislation providing for this type of commitment. Much work is needed to persuade all States to adopt similar legislation if the excessively high incidence of addiction is ever to be reduced to a minimum in such States as New York and California, which harbor more than 60 percent of all the addicts in the Nation.

Since the enactment and vigorous enforcement of the several Federal statutes controlling production and use of narcotic drugs in this country, the incidence of addiction has been reduced from 1 in 400 of the total population before World War I to the present rate of about 1 in 4,000. But rather than becoming complacent about these gains we must realize the need for constant vigilance in all areas where narcotic trafficking and addiction constitute serious problems.

The United States traditionally has assumed world leadership, through the League of Nations and more recently through the United Nations narcotic control organs, in initiating and encouraging other countries to cooperate

in a system of effective control of production and use of narcotic drugs to prevent their diversion to illicit channels and to exert every effort to suppress drug addiction throughout the world.

This country is deeply indebted to Commissioner Anslinger and his small force of dedicated narcotic agents. These dedicated men, operating under a limited budget, have done a tremendous job in enforcing the Federal narcotic and marihuana laws.

Mr. PILLION. Mr. Chairman, I yield the balance of the time on this side to the gentleman from New York [Mr. BARRY].

Mr. BARRY. Mr. Chairman, as a member of the Committee on Post Office and Civil Service, I think of that committee as a board of directors of the largest communications system in the world, which it is. This Congress is a means of communication to all the stockholders or citizens of the United States of this largest communications system in the world. The Appropriations Subcommittee, having to do with postal affairs, is the finance committee of the largest communications system in the world.

Looking at it in that light it is difficult for me to conceive how the finance committee would force upon the board of directors, which is the final policy-determining group of the largest communications system in the world, the fact that one of its services, one of its main services, should not receive an allocation. I refer specifically to the allocation for public service and the problems you are forcing upon the Committee on Post Office and Civil Service by not allowing a proper figure for public services.

Mr. GARY. Mr. Chairman, I yield 5 minutes to the gentleman from North Carolina [Mr. ALEXANDER].

Mr. ALEXANDER. Mr. Chairman, on this very important bill I congratulate the distinguished gentleman from Virginia [Mr. GARY], our chairman, for the very fine work he has done; also, I commend the ranking minority member, the gentleman from New York [Mr. PILLION], who has also done an excellent job.

I may say to the membership of the House that on this bill in which there is more than $5 billion involved the members of this committee come to you with a unanimous report.

I realize that in the consideration of requests in the magnitude that is involved here we cannot always be right, but I will say that this committee has studied the requests, has given them all due consideration, and has done a workmanlike job.

Now, in the consideration of this matter my distinguished chairman and the other members have discussed this bill at length and in such detail that I doubt that I could add anything particularly that would be of interest, but I do want to give one or two observations in regard to the matter which we are now considering.

One of the things that this committee has been most concerned about has been the mechanization and the modernization of the Post Office and the other departments to the point where they can do a good job for less money and more economically for the American taxpayer. One of the things that has concerned us has been the fact that year after year we have been spending more and more money on mechanization and modernization, and yet at the same time the requests from the Department have continued to go up.

For example, in the modernization program in 1951 the request was for $710,000; in 1959, $47,290,000; in 1960, $120,615,000. This year the request was for $110 million and we cut it back to $97.5 million.

Now, at the same time mechanization has also continued to go up. In 1960 the mechanization program amounted to $33 million. In 1961 it was $39 million. This year the request is for $36 million, but in the bill it was cut back to $30 million.

Now, the reason I mention that is that this committee certainly is interested in mechanization and modernization, but that we want the Department to so mechanize that we can get the benefit of the mechanization and cut down on the expense in future operations.

Now, I might just bring to the attention of the committee one other thing, and that has to do with the facilities and the building occupancy. The rent and the utilities in the leased space for the last 2 years has gone up 45 percent. And, I might direct the attention of the committee to the fact that in 1953 the cost of the rent and the utilities used for the rented space was $37 million. In 1960 it was $75 million. In 1961 it was $91 million, and this year the request is for $113.5 million. The request this year was for 1,762 proposed new rental buildings. I do not want it to appear to the committee that I am opposed in any way to the renovation or to the building of new post office buildings or anything of that kind, but I think that we should stop and take a good look at what we are doing and move with caution. Now, the increase this year of 31,777,000 square feet of rental space is quite a bit of building. Each new building has increased its capacity by 50 percent.

In the 1962 budget there is a request for 20 major leased facilities, which will cost more than $5 million.

I think, Mr. Chairman, that this committee agrees with the new Postmaster General that we ought to have good management, that we ought to have motivation of all the Federal employees involved in the Post Office Department, in the Internal Revenue Service, all the Federal employees we have; that we ought to use mechanical assistance to the maximum where it can be done economically and for the welfare and the good of our country. But where it cannot, I think we ought to go slowly, take a good look and move only after due deliberation.

Mr. Chairman, I think this is a good bill and one that the membership of this House should support, even though it is almost half a billion dollars more than the cost last year.

The CHAIRMAN. The time of the gentleman from North Carolina [Mr. ALEXANDER] has expired.

All time has expired.

The Clerk will read.

The Clerk read as follows:

SALARIES AND EXPENSES, DIVISION OF DISBURSEMENT

For necessary expenses of the Division of Disbursement, $25,600,000.

Mr. GROSS. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I join with my colleagues on the Committee on Post Office and Civil Service in expressing regret that the committee took out the $62,500,000 appropriation for public service in the Post Office Department.

Mr. Chairman, a good deal has been said this afternoon about automation. I note in the hearings on page 147 that there has apparently been a good deal of automation in the Bureau of Accounts. They say, for instance, that they have the ability to turn out 750 checks per minute—that is, the punching capacity is 750 checks per minute and that, "We have hit as high as" the witness says, "of 40,000 checks an hour." Yet I read the report and find that there is an increase of $182,000 in the appropriation to the Bureau of Accounts. I wonder why, if this automation is successful, there is an increase; why should there not be a decrease in the cost of operation of the Bureau of Accounts? Can somebody from the committee enlighten me?

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. CONTE. I believe I brought that out some other place in the hearings in connection with several other departments. I think that in the Bureau of Accounts the gentleman will find that that increase was due to the salary increases voted last year.

Mr. GROSS. The total $182,000 is due to salary increases?

Mr. GARY. Mr. Chairman, if the gentleman will yield to me, the total is due to the pay increases and the health benefits voted by the Congress last year.

Mr. GROSS. Then automation in the Bureau of Accounts is not showing any saving at that rate, is it?

Mr. GARY. It is taking care of the increase in volume that they are handling in that office. There have been substantial savings in many of the departments as a result of using these automatic machines.

Mr. GROSS. Then there has been an increase in the volume?

Mr. GARY. Yes; there has been a definite increase in volume.

Mr. GROSS. While the gentleman is on his feet, I should like to ask this question. This bill is $438,731,000 above the spending of the previous year. Perhaps this is repetitious, but how much of this is due to the pay increase bill of last year?

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman.

Mr. PILLION. I think the remark was made earlier that $100 million represents the increase due to volume and the balance is due to increase in pay and health benefits.

Mr. GARY. Mr. Chairman, if the gentleman will yield further, for the total bill the pay increase and health benefits amount to $314,049,000. The increase over and above the pay increase and health benefits is $124,682,000, practically all of which is taken up by the increase in volume in the Post Office and the increase in the Internal Revenue Service for better enforcement of the tax laws.

Mr. GROSS. On the subject of the Internal Revenue Service, did I not read somewhere in your hearings that some years ago it was indicated that $1 spent for increased personnel in the Internal Revenue Service would return $20, and that $1 spent for that purpose now will return $10?

Mr. GARY. Between $10 and $15 at the present time.

Mr. GROSS. Why that decrease in the ability to capture additional revenue?

Mr. GARY. The simple fact that our enforcement is becoming better and better all the time, and not so many people are escaping their taxes.

Mr. GROSS. You are going the other way. If I recall the testimony correctly, a dollar spent earlier would get you $20.

Mr. GARY. That is true, because there was more money lying around to be picked up by these agents. There were more unreported taxes then than now. People are now reporting the taxes, either because they are becoming more honest or else because they are afraid of getting caught.

Mr. GROSS. So that now the chickens have come home to roost?

Mr. GARY. The time will come when we will reach a point of diminishing returns on these increases. That is the point we are raising with reference to putting on all of these additional people.

The Clerk read as follows:

COAST GUARD

Operating expenses

For necessary expenses for the operation and maintenance of the Coast Guard, not otherwise provided for, including hire of passenger motor vehicles; services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); purchase of not to exceed thirty-two passenger motor vehicles for replacement only; maintenance, operation, and repair of aircraft; recreation and welfare; and uniforms or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131); $208,000,000: *Provided*, That the number of aircraft on hand at any one time shall not exceed one hundred and thirty-five exclusive of planes and parts stored to meet future attrition: *Provided further*, That amounts equal to the obligated balances against the appropriations for "Operating expenses" for the two preceding years, shall be transferred to and merged with this appropriation, and such merged appropriation shall be available as one fund, except for accounting purposes of the Coast Guard, for the payment of obligations properly incurred against such prior year appropriations and against this appropriation: *Provided further*, That except as otherwise authorized by the Act of September 30, 1950 (20 U.S.C. 236–244), this appropriation shall be available for expenses of primary and secondary schooling for dependents of Coast Guard personnel stationed outside the continental United States in amounts not exceeding an average of $250 per student, when it is determined by the Secretary that the schools, if any, available in the locality are unable to provide adequately for the education of such dependents, and the Coast Guard may provide for the transportation of said dependents between such schools and their places of residence when the schools are not accessible to such dependents by regular means of transportation.

Mrs. CHURCH. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this time to ask my annual question of the chairman of the subcommittee, regarding the appropriation for the U.S. Coast Guard. I note in the report that the committee recommends an appropriation of $280 million, a decrease in the estimate of $4,500,000, although it permits an increase of $3 million above the amount appropriated for 1961. May I ask the chairman whether the decision not to appropriate the requested amount interferes, in anyway, with plans to increase safety on the Great Lakes?

Mr. GARY. None whatever.

Mrs. CHURCH. Will the Coast Guard protection on the Great Lakes, and if I may say so specifically, Lake Michigan, be greater than in 1961 or be carried on at the same level?

Mr. GARY. It will probably be carried on at the same level, unless they have planned an increase. We have not changed the plans with reference to any operation. That is left entirely to the Coast Guard. We do not feel that we can say to the Coast Guard, you must do this or you must do that, unless a specific problem arises. They determine the needs of the service and they meet those needs as they deem best. We feel we have given them ample money to meet the needs of the service. If additional service is needed on the Great Lakes, they should be able to render it under the amount they have been allowed.

Mrs. CHURCH. I thank the gentleman.

Mr. JOHNSON of Maryland. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Maryland?

There was no objection.

Mr. JOHNSON of Maryland. Mr. Chairman, I wish to take this opportunity to thank the House Committee on Appropriations for making available in this budget the sum of $420,000 for an appropriate basin and mooring for a Coast Guard lifeboat station at Ocean City, Md.

The Coast Guard has recognized for many years the need to replace the present facilities of a station at Ocean City with new structures.

I have been advised that the estimated cost for a completed project is approximately $742,000. It is gratifying to me, and I know to the constituents of my district, that the House Treasury and Post Office Subcommittee has given this project favorable consideration.

The Clerk read as follows:

OPERATIONS

For expenses necessary for postal operations, not otherwise provided for, including uniforms or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131); for repair of vehicles owned by, or under control of units of the National Guard and departments and agencies of the Federal Government where repairs are made necessary because of utilization of such vehicles in the postal service, and for other activities conducted by the Post Office Department pursuant to law; $3,434,000,000, including expenses of delivery to postal patrons of mail matter under congressional frank, as now authorized by law: *Provided*, That not to exceed 5 per centum of any appropriation available to the Post Office Department for the current fiscal year may be transferred, with the approval of the Bureau of the Budget, to any other such appropriation or appropriations; but the appropriation "Administration, regional operation, and research", shall not be increased by more than $1,000,000 as a result of such transfers: *Provided further*, That functions financed by the appropriations available to the Post Office Department for the current fiscal year and the amounts appropriated therefor, may be transferred, in addition to the appropriation transfers otherwise authorized in this Act and with the approval of the Bureau of the Budget, between such appropriations to the extent necessary to improve administration and operations: *Provided further*, That Federal Reserve banks and branches may be reimbursed for expenditures as fiscal agents of the United States on account of Post Office Department operations.

Mr. BARRY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I was attempting some while ago to make a point that when a finance committee attempts to superimpose its views on a board of directors, it is difficult, indeed, to get good direction of the total forces of a corporation or of any department of government. Especially it is a problem this year when President Kennedy has asked for a postal increase and when we will have before the Committee on Post Office and Civil Service the various large users of the mail who will plead their individual cases saying it is not they who are costing Uncle Sam the deficits which we have been annually placing before our people to pay for in higher taxes or by increasing the debt, but it is rather the public service that is rendered by the Post Office Department in particular.

I ask if a reconsideration, especially in the conference to which this appropriation will undoubtedly go—if consideration could not be given to the fact that if President Kennedy wanted to balance his postal operations, which is the largest communications system in the world, he be given a better chance than was given President Eisenhower. I say this because I do not believe the American people realize that of the total $17 billion debt piled up during the Eisenhower administration, approximately 40 percent of that debt was in postal deficits. I think we can put the Post Office Department on a business-like basis, by making each class of service pay its own way, and the place to begin is to give a credit to the board of directors of this company, the board of directors of the largest communications system in the world, for what service

they render the public apart from postal services.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. BARRY. I yield to the gentleman from Virginia.

Mr. GARY. I thoroughly agree with the gentleman that every class of mail should pay its own way. I have been advocating that for many years. But, you do not balance the Post Office budget simply by a bookkeeping entry, charging off a part of the debt to public service. As a matter of fact, as I said a few moments ago, in my judgment the entire postal service is a public service, otherwise the Federal Government would have no right to be engaged in it at all. The Federal Government has no right to engage in private business. Just picking out one or two items and saying, we are going to charge this off as a public service will not get us anywhere at all. I think the question of rates ought to be determined, not on the basis of the deficit, but on the basis of what it costs to handle the mail, and whatever that cost is the people for whom that mail is handled ought to pay it.

Mr. BARRY. I believe the gentleman from Virginia and I are not too far apart. But it proves again that you cannot manage the board of directors of a large operation on the floor of Congress, and I believe also that the intentions of the gentleman from Virginia are the same as mine and the other members of the committee, but until your committee shows that you will credit the Post Office Department for a type of public service which is not individually bought and paid for at the counter window of the Post Office Department, that the users of the mail who do go to the counter are going to complain that part of the total cost which the Post Office claims is their proper charge should be charged instead to public services.

If we really want to put the Post Office on a paying basis we should start by giving a credit to the Post Office Department for those services which are not bought at the counter. I think if the gentleman had sat with our committee and heard the testimony of the users of the mail, he would arrive at an accurate figure for public services so that the Post Office Committee of the Congress can look to the Post Office Department to allocate the remaining cost of postal operations to the various classes of mail.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. CORBETT. Mr. Chairman, I rise in opposition to the amendment and I will be very brief.

I simply wanted to compliment the gentleman from New York on his statement and to point out to the committee and subcommittee that while in a general sense the whole Postal Establishment is a public service, that is not the point we are trying to make. We are trying to make the point that when the Congress in its judgment requires the Post Office Department to perform some services that have nothing to do with service rendered to users of the mail, those services should be paid for out of the Treasury and not charged against the users of the mail. For example, we asked the Post Office Department last year to distribute to every home a census blank. This cost the Department money, obviously, but we say that this amount should be paid out of the Treasury and not charged against the users of first-, second-, third-, and fourth-class mail.

What we are trying to do, Mr. Chairman, is to segregate those services the Post Office does which have no relation to what the users of the mail should be charged with—services which we as a Congress impose upon the Post Office Department. We are trying to point out certain services and say that they are not proper charges against the users of the mail and that the users should not be asked to pay for the services. I am hopeful we can arrive at some decision on it this year and arrive at a rate basis that will eliminate the postal deficit. I am sure that is what the gentleman wants to accomplish.

Mr. GARY. We think we ought to bring the deficit down from what it is now. The gentleman knows that the greater part of the deficit is caused from those users of the mails who are getting subsidies. Some say it is a public service; I say it is a special service that is rendered, and when people get special services from the Government they should be willing to pay for them and be made to pay for them. Ordinary users of the mail should not be called upon to pay more than the cost of the service rendered to them. But I do not think the deficit has anything to do with that. Let us get an adequate cost accounting system and determine what it is costing to handle this mail.

Mr. CORBETT. The gentleman's committee, I am afraid, is using the term "public service" a little differently than my committee is in order to determine what things are proper charges to the Treasury and what things are proper charges to the users of the mail—figures you are going to give out at the end of this year.

Mr. GARY. I hope the gentleman will not base it on the difference between first- and second-class post offices and third- and fourth-class post offices. I see no justification for that distinction, in that they all render service to the people in handling the mail.

Mr. CORBETT. We are going to try to show the gentleman that the cost figures are unclear.

When the Post Office Department closes a fourth-class office they say they do not put any figure on it because they do not know how much it should be; therefore, they made an estimate of zero instead of an estimate of $70 million, or whatever it was. They do say that everytime they close a fourth-class office there has been a saving of $1,400,000. So they have put an estimate on it.

Your third- and fourth-class offices are community centers, and they operate far beyond the scope of simply being a depository for letters. However, beyond that, here is the determination which it is the duty of the Congress and the Post Office Department to work out. This is our job. If we fail to do it then we should be held accountable, but having done it then we should join with you folks and with others in saying there should not be any special services granted to users of the mail for which they do not pay. Then we can agree on that and destroy the argument of any users of the mail hiding behind the public service factor if we implement it dollarwise.

Mr. BASS of Tennessee. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I should like to call attention to page 14 of the committee report which states:

> The committee considers that the post office construction program is being accelerated entirely too rapidly.

I think that the statement is misleading because we have not had any construction actually performed by the Federal Government that is noticeable throughout the country in post office and Federal buildings in the past 20 years.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. BASS of Tennessee. I yield to the gentleman from Virginia.

Mr. GARY. I will say to the gentleman that with reference to construction under lease, they are planning new construction next year for 1,762 new post offices. It is true they will be constructed under lease and not by the Federal Government. The way that is handled, the Federal Government acquires a piece of land, it then gets somebody to agree to erect a building on it. The Government sells the land to them, then they enter into a lease agreement for the land and the building. We feel they have been entering into these lease agreements too fast, and they have not been giving sufficient consideration to the cost of the transaction. We think it ought to be slowed down until we can get some figures.

Mr. BASS of Tennessee. I might be in position to agree with the chairman in some instances as to cost of the leased buildings, but what I would like to point out is that the program of building is not overly accelerated because there is a tremendous need for post office quarters throughout the country. As a matter of fact, in the 16 counties of the district of Tennessee that I represent there has been only one post office building constructed as a Federal building since World War II. Certainly if we are in the period now where we see a necessity for increased construction as a stimulus to the economy—and I am fully aware of the necessity for it—then I think greater consideration should be placed on building Federal buildings. If there is an acceleration that is above what it should be, it is an acceleration of buildings that are leased where Government-owned quarters would serve better, but certainly the program of construction itself in the instance of procuring adequate quarters for post office operations has not been overly accelerated. They should be changed from ordinary leased quarters to those of federally owned quarters throughout the Nation.

Mr. GARY. Our committee has no jurisdiction over that subject matter at all because all Government construction is handled by the General Services Administration. We do not handle the appropriations for the General Services Administration, so we cannot put one dollar of construction costs in our program.

Mr. BASS of Tennessee. You can slow down providing funds for leased quarters in the larger cities and towns which will necessarily make them build Federal buildings.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. BASS of Tennessee. I yield to the gentleman from New York.

Mr. PILLION. Our subcommittee was in trouble on account of the tremendous jump in the costs of leased buildings and a few of the utilities. There was a feeling that perhaps we were going too far and too fast. The gentleman from North Carolina [Mr. ALEXANDER], referred to this figure in his presentation. That item of rents and utilities jumped from $75 million a year to $113 million in the space of 2 years; a 50 percent increase. So, the committee felt that there ought to be a review and a stop, look, and listen attitude so that we do not get into a situation to where we are committed to lease cost way beyond what may be absolutely necessary.

Mr. BASS of Tennessee. I agree with the gentleman.

Mr. HARRIS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I am interested in this discussion, too, and I would like to pursue this just a little bit further with the distinguished chairman of this great Subcommittee on Appropriations as well as with the gentleman on the minority side who has apparently expressed agreement with what the chairman of the subcommittee has just said.

I would like to ask the chairman this: Is it not a fact that most of these lease contract agreements referred to by the Post Office Department for use of facilities have been for third-class offices?

Mr. GARY. No, they are not.

Mr. HARRIS. Well, I have several in my district, and every one of them that has been authorized and a lease permitted has been for third-class offices without exception. And I think the Post Office Department has done a pretty good job working cooperatively with the local people for this particular class of office. I think the gentleman from Virginia and the members of this committee realize from a practical standpoint we are not going to get the General Services Administration, and everyone else who would be involved with it, to approve a Federal building, a Post Office facility, for a third-class office in any community. And, I would like to impress upon the members of this committee, if you have any question about these leased facilities, that you do not cut out these third-class offices in the small communities where they cannot get facilities otherwise except by lease or rental.

Mr. BASS of Tennessee. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Tennessee.

Mr. BASS of Tennessee. I am in perfect agreement with the gentleman on this matter, and I am not suggesting in any degree that we start building Federal buildings for post offices in all of these small communities. The business of providing adequate quarters by lease is adequate. But, in the building of buildings and leasing quarters for first-class offices in large metropolitan areas where Federal buildings should be provided is what I am talking about. Now, in the smaller communities that is a different problem, and I am in agreement with the gentleman.

Mr. HARRIS. But this is a broad statement in the report. It refers to all leased quarters.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Massachusetts.

Mr. CONTE. There is another benefit to lease-building construction. It puts that building on the tax roll in the smaller communities, where you have these third-class offices in the small towns, where they already have a heavy real estate tax burden. Instead of having a Government building which is tax exempt, you will have a leased building on which to get some revenues.

Mr. HARRIS. Yes; the gentleman makes a good point. But, the point I want to emphasize here—and I hope the committee does not go that far—is that while I agree with the committee that we should review these programs, they should give close scrutiny to them, at the same time I do not believe that the committee by its report here should be telling the Post Office Department where an acceptable contract for leased quarters can be provided for facilities in a small community that cannot get them otherwise, that it should not be permitted, and I hope that the gentleman's committee will insist that that program be followed.

Mr. GARY. Certainly there has been no attempt on the part of our committee to tell the Post Office Department that, but we have said where this cost is going up by leaps and bounds, we think it should be scrutinized very carefully.

Mr. HARRIS. I agree with the gentleman, but I think in these small communities you should not take action that would defer them or result in stopping the program to provide adequate facilities for these small communities which are entitled to them as much as the larger communities.

Mr. HOFFMAN of Michigan. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, my purpose is to learn, if possible, from whoever is in charge of this bill, just who is running the Post Office Department. Some weeks ago we were told by the press that Mr. Day, our Postmaster General, intended to run the Department as he wished notwithstanding anything Congress might do. That is all right with me, but I doubt that he ever was discourteous or intended to disregard Congress for he like other Cabinet members depends to some extent upon the Congress for appropriations. This morning a letter came in from the Sturgis Journal, a newspaper that prints a fine conservative publication. Three years ago the Journal, which gives much daily news and sound, constructive editorials, put more boxes around on a rural route, running out of Burr Oak, St. Joseph County, Mich. For 3 years there has not been any trouble, everyone was satisfied, all the people on the route, the newspaper, which owned and placed the boxes with the Department's approval. But along comes this mail carrier, Martin Maystead, the rural carrier on that route, and he now says—and that is since the change in administration—he does not like the location of those boxes and he wants them all moved. Whether he wants them all in one place and nearer the post office, I do not know. Maybe he wants to establish a New Frontier all his own.

I notice the gentle lady from New York [Mrs. ST. GEORGE], who is a member of the Committee on Post Office, is present. May I ask her, Does the carrier have that authority, or is that authority downtown or with a regional office?

Mrs. ST. GEORGE. I do not think the carrier has the authority, but he might have; there is no way of telling. Things are very fluid right now.

Mr. HOFFMAN of Michigan. Apparently he is a supporter of the New Frontier.

Mrs. ST. GEORGE. Then he probably has the right.

Mr. HOFFMAN of Michigan. Perhaps this is not a fair question, but should the boxes be moved nearer the road or back a little further?

Mrs. ST. GEORGE. Oh, definitely nearer the road.

Mr. HOFFMAN of Michigan. Nearer the road?

Mrs. ST. GEORGE. Yes.

Mr. HOFFMAN of Michigan. And closer together?

Mrs. ST. GEORGE. Possibly, yes.

Mr. HOFFMAN of Michigan. So the route will be shorter.

Mrs. ST. GEORGE. That is right; that is very important.

Mr. HOFFMAN of Michigan. I certainly thank the gentle lady from New York.

Mr. Chairman, I shall certainly pass that information along to the paper and I hope they will take it on to the carrier, because he has the idea that he is running the Post Office Department, at least in his territory.

The Clerk read as follows:

This title may be cited as the "Post Office Department Appropriation Act, 1962".

Mr. GROSS. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I want to take a minute to ask the chairman of the subcommittee about the trust funds as shown on page 17 of the report. Who authorizes payment of this money from the trust funds?

Mr. GARY. They are permanent appropriations authorized by the Congress.

Mr. GROSS. Not by the Committee on Foreign Affairs or any other legislative committee?

Mr. GARY. No. They are authorized by the Congress and are payable in accordance with direct legislation enacted by the Congress.

Mr. GROSS. I thank the gentleman.

The Clerk concluded the reading of the bill.

Mr. GARY. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with the recommendation that the bill do pass.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. THORNBERRY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5954) making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1962, and for other purposes, had directed him to report the bill back to the House with the recommendation that the bill do pass.

Mr. GARY. Mr. Speaker, I move the previous question on the bill to final passage.

The previous question was ordered.

The SPEAKER. The question is on engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

AREA REDEVELOPMENT ACT

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 237 and ask for its immediate consideration.

The Clerk read the resolution as follows:

Resolved, That upon the adoption of this resolution, it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 1) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically distressed areas. After general debate, which shall be confined to the bill and continue not to exceed three hours, to be equally divided and controlled by the chairman and the ranking minority member of the Committee on Banking and Currency, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider, without the intervention of any point of order, the substitute amendment recommended by the Committee on Banking and Currency now in the bill, and such substitute for the purpose of amendment shall be considered under the five-minute rule as an original bill. At the conclusion of such consideration the Committee shall rise and report the bill to the House with such amendments as may have been adopted and any member may demand a separate vote in the House on any of the amendments adopted in the Committee of the Whole to the bill or committee substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit, with or without instructions.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN], and pending that I yield myself such time as I may consume.

Mr. Speaker, House Resolution 237 provides for the consideration of S. 1 as amended, a bill to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically distressed areas. The resolution provides for an open rule, waiving points of order, with 3 hours of general debate.

S. 1 as amended would provide a coordinated attack on the basic economic problems confronting those areas with persistent and substantial unemployment. While it would rely on local initiative and the efforts of private enterprise, it would enable the Federal Government to play its proper role and meet its responsibilities in this field. Technical assistance and guidance would be made available along with financial aid, primarily in the form of loans to implement local economic programs.

The principle of Federal action to relieve unemployment in areas of persistent and substantial labor surplus has been endorsed in the platforms of both parties. It has also received wide support from labor, industry, municipal, and private citizen groups.

S. 1, as amended and reported out by the House Committee on Banking and Currency, contains a number of safeguards to insure both that the assistance will produce a real measure of relief to the areas in need and that it will do this without detriment to any other community. Naturally, wise administration is essential and it is believed this is best cared for by placing responsibility for the program in a Cabinet rank officer and at the same time establishing a high-level Government official in the Department of Commerce to perform such functions as the Secretary may assign to him in carrying out the program.

To conserve the funds for their most urgent uses the bill provides that no loan may be made unless funds are not otherwise available from other sources on reasonable terms. To make certain that the assistance given under this program will not result in dislocations in other areas, the Banking and Currency Committee amendment carries a flat prohibition against the use of any funds for the transfer of business establishments from one area to another.

The purpose of the legislation is to make a net expansion of job opportunities and not to "pirate" industries from other locations.

Mr. Speaker, I urge the adoption of House Resolution 237.

BACKGROUND AND SUMMARY OF S. 1, THE AREA REDEVELOPMENT BILL

S. 1 is designed to establish a new program to meet the problem of chronic localized unemployment. It will do this through Federal technical assistance, financial aid, and occupational retraining assistance.

Background of the bill: Proposals for area redevelopment along the lines of the present bill have been before the Congress for over a decade. On two occasions bills have passed both Houses. In 1958 an area redevelopment bill was passed but was pocket vetoed. In 1960 another bill (S. 722) was passed but also was vetoed. The Senate failed to override. In spite of this, the principle of Federal aid to chronically depressed areas has been endorsed in the platform of both parties.

The committee amendment to S. 1 represents generally the administration views. It was introduced by Chairman SPENCE of the Committee on Banking and Currency, at the request of the President and reported out of the Committee with amendments by a vote of 20 to 6.

Need for this program: Many communities suffer heavy unemployment even when the overall economy is prosperous. The general reasons are technological advances by which machines replace manpower; changes in demand which make existing plants and skills obsolete, and depletion of resources such as timber, coal, and ore. In addition, the rapid advances in farm technology, combined with historical conditions which have created many small uneconomical farms, have resulted in serious unemployment, underemployment, and poverty in many rural areas.

As a result of these conditions, 20 major labor market areas and 83 smaller areas would be eligible for the assistance provided in S. 1 under the mandatory designation provision. In addition, many other areas, particularly rural places, would be eligible under the guidelines established by the bill.

Experience has shown that local efforts by themselves, however vigorous and imaginative, cannot do the whole job of redeveloping these communities. Local resources, both public and private, become depleted under the pressure of heavy persistent unemployment, and outside credit aid is not available in adequate volume to finance redevelopment. The bill would provide this assistance along with technical aids, loans, and grants for public facilities, and occupational retraining benefits.

MAJOR PROVISIONS OF THE BILL

Responsibility for the program would be placed in the Secretary of Commerce, though he would be directed to use existing Government agencies and facilities, such as the Small Business Administration and the housing agencies, wherever possible. An Area Redevelopment Administrator would be established in the Department of Commerce to give his whole time and attention to the program, carrying out whatever duties are assigned to him by the Secretary.

A prerequisite for aid under the bill is an overall economic redevelopment program which meets the approval of the Secretary. This program will analyze the community's economic problem, determine whether or not redevelopment is feasible, and, if it is, indicate the steps that should be taken to achieve it. To enable the Secretary to provide technical assistance for these programs and for other studies aimed at preventing or

alleviating any unemployment, the bill authorizes annual appropriations of $4.5 million.

In order to carry out the recommendation of the economic plan, Federal loan funds are provided in case adequate private financing is not available. This would take the form of liberal loans for industrial expansion. These loans could be used for the acquisition and development of land, the construction of industrial or commercial buildings, and in exceptional cases for the purchase of machinery. Such loans could not exceed 65 percent of the total cost of the project with the balance to be met by the community or local redevelopment organization and by private lenders. The maximum term would be 25 years with a possible extension for another 10 years. The interest rate is based on a formula which currently produces a rate of 4⅜ percent. The bill authorizes for appropriation $100 million for each of two revolving funds—one to be used for loans in industrial areas and the other for rural areas.

These loans can be used to rehabilitate existing plants or provide for the expansion of plants either in the locality or from outside the area. However, the bill explicitly states that none of this financial aid is to be used to help any firm to relocate, totally or partially, from one area to another.

A prime need in many communities is the improvement or expansion of community facilities. Adequate sewer and waterworks and other public investment is essential to modern industry. Many communities faced with the burden of chronic heavy unemployment have found their revenue reduced while at the same time their outlays for relief have increased. As a result, they are unable to finance the necessary public works by themselves. To meet this need the bill authorizes $100 million for appropriation to be used for Federal loans to these communities. Such loans would have terms up to 40 years with a possible 10-year extension, and the interest rate would be computed on a formula based on the average cost of money to the Federal Government plus one-fourth of 1 percent for additional administrative costs. Currently this interest rate would be 3½ percent.

In some communities the need is so great that it is not feasible to finance needed local public works entirely on the basis of loans. A subsidy is necessary to finance the project and keep rates on the utility low. For this purpose the bill authorizes the appropriation of $75 million for partial grants for local public works. These grants could not exceed 65 percent of the net difference between the total cost of the project and the amount borrowed from any source. The community itself must raise the funds required for the other 35 percent of the difference.

The bill also makes it possible for designated communities to take advantage of the urban renewal program. While this program is aimed primarily at clearing residential slums, there has been growing recognition of the need to eliminate blighted business areas as well. On past occasions the Congress has made available a certain portion of the urban renewal capital grant authority for these nonresidential projects. To assure that this assistance will be available to depressed communities, S. 1 provides that up to 10 percent of any future capital grant authority made available for the urban renewal program can be used for nonresidential slum clearance projects in designated depressed areas. This will make it possible for these communities to provide industrial sites and at the same time bolster their tax bases. In addition, the bill makes the urban planning grant program available to communities designated as eligible under this bill.

While many workers in these areas are skilled, their abilities are no longer in demand. Such workers as well as untrained workers require occupational training if they are to find adequate employment. Therefore the bill authorizes annual appropriations of $4.5 million to assist the State vocational training programs. Because in many States workers undergoing training are not eligible for unemployment compensation, the bill authorizes annual appropriations of $10 million to make subsistence payments for periods up to 16 weeks.

Finally, the bill makes permanent the authority of the Small Business Administration to make loans to State and local development companies for plant construction, conversion, and expansion. Under present law this authority will expire on June 30 of this year.

Altogether this bill authorizes appropriations totaling $394 million. Of this, $300 million is for loans repayable with interest. Considered in perspective, this is a relatively small amount to do a large and vitally important job. For example, it is less than half of 1 percent of our total Federal budget. However, this bill will make a vital contribution by providing concentrated and comprehensive attention to the problems of areas which suffer chronic unemployment and, in the long run, will benefit the entire Nation.

Mr. BROWN. Mr. Speaker, I yield myself such time as I may require.

Mr. Speaker, as the gentleman from Missouri has explained, this rule, which is an open rule and provides for 3 hours of general debate, makes in order the consideration of the bill S. 1, the so-called depressed areas bill.

It provides that the committee amendments shall be considered as an original bill, which, of course, will permit the offering of a substitute at the proper time and place. The rule also provides for one motion to recommit, reserved to the minority, either with or without instructions. I would like to take just a minute or two, if I may, to discuss this legislation because we had rather extensive hearings on it before the Committee on Rules.

First of all, I want to congratulate, if I may, the House Committee on Banking and Currency for bringing out what all of us on the Committee on Rules seemingly agreed is the best bill of this type that has been presented in the Congress. This bill is a much better measure than that which has been approved in another body, that is, the original bill, the amendments to S. 1, because S. 1, you will find, while it has the title of the Senate bill contains none of the provisions of the Senate original bill, which has all been rewritten and the amendment is being considered as the original bill.

One of the things I am very happy about in connection with this legislation is the fact that it does not provide for backdoor spending nor the backdoor approach to the Federal Treasury, but requires all funds to be spent under this legislation, should it be enacted into law, shall be appropriated by the Congress after due hearings before the Committee on Appropriations. It also eliminates a number of other bad provisions in that measure, and yet even as much improved as the bill is, I believe it goes too far in many instances and is certainly so distorted, if I can use that word, that the meaning of it is unclear in certain sections and certain provisions, and it confers entirely too much power on some unknown individual who is designated as the Administrator. Who he may be, no one knows. What his thinking may be on some of the matters that may come under his jurisdiction seemingly no one knew or could understand. So there will be a substitute bill offered. This committee amendment, the same as the Senate bill, provides for an expenditure of $394,500,000 over a period of time, I think, to run up to 1963, if I remember correctly, supposedly a terminal date and yet with no exact terminal date for the working up of this program, as I could understand this measure. Instead, it provides for certain new approaches to what we might call chronic unemployment that have never been thought of before. I want to call your attention, if I may, to section 5(b). No one could explain just what it meant or what could happen or what might be decided under it. We were advised by the proponents of the bill that the Secretary of Agriculture, because it deals with rural districts, did not know what section 5(b) meant or how it might be administered. The Secretary of Labor knew nothing about it.

The Secretary of Commerce said he could not explain it, did not understand it, yet under that provision we embark upon some sort of program just as thin as the air. It is some sort of program to take care of unemployment and depressed areas out in the rural sections of the country; and it was admitted that every rural area in the United States can be declared a depressed area and come in and get funds.

Another provision opens the door to all sorts of Federal contributions under this particular program for the construction of community facilities such as antipollution programs, water treatment plants, sewage disposal plants, and such things, although we have special acts and laws set up for that purpose. They could even go so far under this bill as to construct public schools under the depressed areas section of the bill, as community facilities.

Then there is no clear definition and no clear alinement. They say very frankly to us that what may be a depressed area or area of unemployment changes from day to day; and I can un-

derstand there may be some changes, of course. But I have looked this over rather carefully and I suggest that you look at page 18 of the report on this act. I understand this list has been changed very materially, so we were advised by some of the proponents of the bill.

Seemingly some of these rather abstract and peculiar provisions of this bill have been left to the Administrator to decide, whether a community can qualify for aid as a distressed area, one of unemployment, or underemployment as the case may be, whether or not this district or that district, or this State or that State, will qualify or will not qualify.

And I just want to mention this, to you, if I may, because I have been here quite a long time and have seen politics in their practical application, and from my experience I have observed that no law is better than the person who administers it. I am fearful that in this bill if it is adopted and approved, we are delegating to one man, some unknown Administrator, all the powers and authority of Congress, almost, to decide as to what are actual distressed areas or depressed areas, and the need for these plants, these industries, the retraining of workers, just whatever he may decide in his discretion whether all of the rural counties in your State shall be declared distressed and depressed areas, or none of them. Also, I think you and I can understand from the practical point of view that it may be necessary to send quite a number of experts out of Washington to check these particular areas at different times and perhaps to check them for a long time to see just what areas may qualify and what should be done. It leaves the door open, of course, for building a very, very efficient and a very, very effective political machine should the Administrator be of the type or the mind that might like to engage in just a little bit of politicking along with his other public duties.

Somehow or other, in my opinion, if this legislation is to be enacted—and, of course, there is a realization in the minds of all of us, there is a certain realization, that there are some problems in depressed areas where there has been unemployment and no employment, that have existed for a long, long time.

Somehow or other this measure has to be tightened up. It should be made a proper kind of a bill with every possible safeguard thrown about it or else it should be defeated. That will be the issue you will have confronting you when it comes time to consider a substitute that will be offered by the minority on the Committee on Banking and Currency, or when the bill comes to final passage.

This measure is an embarkation, if we can call it that, upon an entirely new theory as to the Federal Government's responsibility, an embarkation, if you please, upon an entirely new program. While they talk about terminal dates and the possible ending of the program, it will probably be like many other of these spending programs that have come to us through the years, it will be with us for many, many years to come. If we are going to do this with the Federal Government now owing more than $290 billion, with the report coming to us from downtown that the White House will soon send us a message asking the Congress to increase the national debt limit again so that at least $10 billion more may be borrowed for our children and grandchildren to pay off in the future, we should look at this measure closely. We should scrutinize it carefully. If we are going to do a thing like this we should do it in the safest, most practical, sound way that we possibly can. I hope that careful attention will be given to the debate, as the sponsors, the proponents, and opponents to this legislation, those who believe this bill should be changed so that it can be enacted into law, perhaps those who may oppose it entirely, will present their views. We should listen to those views because this is a very, very important piece of legislation upon which we are starting consideration at this time.

Mr. Speaker, I yield 5 minutes to the gentlewoman from New York [Mrs. ST. GEORGE].

Mrs. ST. GEORGE. Mr. Speaker, it has been well said that this bill, S. 1, comes before us in far better shape than the bill that was passed last year. First of all, the bill makes the clause on piracy much stronger. This is in many ways a good thing, although at the same time it gives very great and possibly dangerous powers to the Administrator. There is also no back-door spending in the House bill. It does appear in the Senate bill.

Another thing is that this matter has been put in the hands of, and under, the Department of Commerce, which was requested by President Eisenhower, I believe, in his veto message. So that it is on the whole a better bill; nevertheless, it is open to some quite serious criticism, it seems to me. It needs to be tightened up in many respects.

The amount of spending, $394 million, is to all intents and purposes quite modest. If you will turn to page 18 of the report you will find that under "major areas" there is a total of 28 such areas, under "smaller areas" there is a total of 83 areas, which makes a grand total of 103. At the questioning it came out that the witness was constantly speaking about 101 areas. In answer to my question I pointed out I could obtain only 103, not 101. I was told there had been a change since the report had been written and that at the present time there are 101 major areas. I am telling this merely to show how necessary it is to look into this bill and to tighten it up wherever possible.

There is an awfully big difference, I submit to you, between 20 major areas and 101. That is just one of the things that is typical of this legislation.

Now, it is also true that if we are to give $394 million and divide it and spread it all over these areas and all over this country, especially over the rural areas that are very ill defined in this bill—in fact, they are not defined at all—we are going to have a great many very disillusioned citizens because no one is going to get enough to satisfy them in any way.

In walking through the Speaker's lobby you can see a great many maps of just one of our States, West Virginia. And, I submit to you that $394 million will not go very far even in that one State if things are as bad as we are told. Therefore, a number of rural areas should be looked over also with great care; otherwise, as has been well said here on the floor, it might be that entire States would be turned over as depressed areas.

Now, in the minority views of the gentlewoman from New Jersey [Mrs. DWYER], she has this to say, and I think it is well said and very much to the point:

> To that end we favor discharge by Government of responsibility for those activities which the private sector cannot do or cannot so well do, such as constructive Federal-local action to aid areas of chronic high unemployment.

She then says:

> The committee bill fails to meet the test of "constructive Federal-local action" because it tries to do too much for too many areas—thus the assistance it provides would tend to be dissipated.

And, I submit, Mr. Speaker, that that is true and that that is a very serious disadvantage in this legislation.

I was also very much interested to see another thing that has been said by a gentleman who happens to be one of my constituents, Mr. Hans Christian Sonne, head of the National Planning Association. Mr. Sonne was born in Denmark and brought up in England. Both of these countries, I submit, are further along in welfare programs than the United States is today. Mr. Sonne points to the fact that we may be in very, very real danger. He says:

> An effective depressed areas program must contribute to an increase in total production and total employment, not merely to a shift of production and employment from one area to another. We are seeking a program to help depressed areas participate in national economic growth and well-being, not to distribute the distress more evenly throughout the economy.

The possibility of "distributing the distress more evenly throughout the economy" is precisely what disturbs him about the standards in S. 1 as reported.

I think it is a very valid criticism and I think it is one that we must take cognizance of. If we will do this and if we will tighten the bill up—and we have an opportunity of doing it in the substitute that is to be offered—I think we may have a sound piece of legislation. I still think the overall amount is too small, unless it is brought into a much smaller radius, to be very effective.

Mr. BROWN. Mr. Speaker, I yield 5 minutes to the gentleman from Michigan [Mr. MEADER].

Mr. MEADER. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. MEADER. Mr. Speaker, the way to get a bill passed is to give it an attractive label.

That is why we have bills like unemployment compensation, aid to children

of the unemployed, minimum wage, medical care for the aged, and now the depressed areas bill.

There should be a rule prohibiting misbranding of bills.

No one wants to oppose a bill to assist chronically depressed areas. We all are sympathetic to their plight and their problems. But, should they be exploited to promote socialism—which actually will harm instead of helping them and at the same time introduce turmoil, uncertainty, and politics into our whole business community?

This bill should be relabeled. Under rule XIX of the House Rules you cannot amend the title of a bill until the bill is passed, but this bill should be called a bill to socialize the American economy by Federal intrusion into the equity end of business enterprises; to assist in pirating the same through politics; by nationalizing the municipal bond market; and for other socialistic purposes.

This bill is an unkind fraud on the downtrodden and the charity-minded.

It will bring untold added misery to areas already miserable and impede the march of a dynamic free economy—the genius and guiding principle of the American dream.

It is a half-baked excursion into unsophiscated socialism.

The only beneficiary of this proposal will be the fly-by-night operator—the medicine man—the scalawag who has all but vanished—harried by State blue-sky laws and the Federal Securities and Exchange Commission.

The Federal Government—that is, all the people of the United States through their tax contributions—and civic-minded local citizens impressed by the backing of the Federal Government will be the victims of this marginal entrepreneur who risks little of his own—5 percent of total cost. If the business should succeed, the entrepreneur will reap the benefit. If it fails—as is most likely since available private capital shied away—the entrepreneur will milk the business as long as he can get away with it and then depart with his loot, leaving the area worse off than when he arrived.

Where will the Federal Government recruit the wizards of industry to make a marginal or submarginal enterprise flourish? Have past bureaucratic performances demonstrated that the Government can attract talent with the imagination and enterprise even to make an essentially sound business succeed? How can it expect to enlist the genius to manage a business which is basically unsound, or at the best marginal, or submarginal?

Mr. Speaker, on August 1, 1958, a similar proposal was brought before this House of Representatives, the so-called community facilities bill, another experiment in socialism. And I might say to you that I believe many of these socialistic experiments originate in the think machine of the UAW–CIO.

Mr. Speaker, the House on that day, using good judgment, defeated the rule for the consideration of the community facilities bill by a vote of 173 for the rule to 187 opposed to it. You will find the rollcall in the CONGRESSIONAL RECORD, volume 104, part 12, page 15874.

Mr. Speaker, there are two areas in Michigan listed as depressed areas located in my congressional district. This morning I received from the city of Monroe, Mich., one of the areas, a letter signed by the president of the chamber of commerce and four other gentlemen from the city of Monroe asking me to oppose this legislation. The letter is as follows:

GREATER MONROE
CHAMBER OF COMMERCE,
Monroe, Mich., March 27, 1961.

HON. GEORGE MEADER,
Representative from Michigan,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN MEADER: The board of directors of the Greater Monroe Chamber of Commerce, meeting in special session on March 24, 1961, went on record as opposing S. 1 (Douglas area redevelopment bill) for the following reasons:

1. The bill would only relocate unemployment;

2. It would provide some industries with unfair, Government-created advantages over their competitors at the expense of the already overburdened American taxpayer;

3. It does not recognize the basic causes of depressed area problems, which are not a lack of plant sites, buildings, and community facilities. The real reasons we have unemployment cover a much broader area than that which can be solved by the use of Federal funds; and

4. The bill would do a grave injustice to communities which have, through their own efforts, maintained a good employment record.

We believe that the solution to the unemployment problem lies in independent local action spearheaded by local leadership.

We respectfully request, therefore, that you vote in opposition to the passage of this bill.

Very truly yours,
GREATER MONROE CHAMBER OF COMMERCE,
WALTER G. HAESSLER,
President.
WARREN W. GRUBER,
Immediate Past President.
WARREN M. PELLOT,
Treasurer.
JAMES E. RAU,
Secretary to Board of Directors.
RICHARD D. MCHENRY,
Manager.

I do not believe we ought to undertake to consider this measure. I say to those who want to get away for an Easter vacation, rather than being put under the gun for the consideration of this bill, if they want to get their vacation started a little earlier, just vote down the rule.

Mr. Speaker, under leave to extend my remarks, I also include an editorial from the Jackson Citizen Patriot, Jackson, Mich., of Sunday, March 19, 1961:

WHO'S DEPRESSED?

It's always been fun to play Robin Hood, and the new peach-fuzz and gray-flannel set in Washington seems out to do it with a vengeance.

Their version, of course, is taking from the prosperous sections of the Nation and giving to the poorer areas. They call this aid to depressed areas and duck the fact that the logic involved is at loggerheads with everything that built America.

But apparently some of the folk the young men in Washington want to help still nurse something called pride, obviously a stumbling block for the let-George-do-it-for-you lads.

Senator PAUL DOUGLAS, that intrepid economist-turned-Congressman from Illinois, is author of the bill.

In it, he described as a "depressed area" Marion County, Ill. It's not hard to wring out a few tears for the poor hapless of Marion County, waiting patiently in long drab lines for handouts of cold, thin soup.

Only trouble is that the folks in Marion apparently haven't heard about this hard luck.

The daily newspaper in Marion posts this list of indications of a nondepressed situation:

Bank deposits of personal accounts are more than a half million dollars higher than they were on January 1. Local utilities are bustling into a $6 million expansion program. A new Federal prison, costing $10 million, is going up.

Residents of the area in January purchased $215,000 in saving bonds. One of the most important industries is expanding its plant. The local hospital just got a new roof.

Another industry is building a $400,000 warehouse. The bank just doubled the size of its building, two new office buildings are being constructed, two finance companies have moved to larger quarters and the Presbyterian Church has announced plans for a new building.

Postal service has been expanded into growing suburban areas.

The amount the people spent on purchase of Federal savings bonds in a month was larger than the amount they could expect to receive in Federal aid from the Douglas bill in 3 years.

What do you do for people like this? What sort of American is it who asks not for whom the dole tolls, but instead asks for help in keeping bureaucracy off his neck?

He obviously poses big problems for the legislators with the social worker hearts.

But then, shucks, those guys in Washington are always reminding us that we're out of step with the rest of the country, we fuddyduddy midwesterners. Why can't we just shut up and let Sam do it?

If there is anyone left in America who doesn't want to plop his freedom on his head like an apple and let the Ivy League-trained archers take potshots at it with their fuzzy arrows, let him keep his peace. After all, time must march on.

Mr. BROWN. Mr. Speaker, I yield the remaining time on this side to the gentleman from New Jersey [Mr. WIDNALL], a member of the committee.

Mr. WIDNALL. Mr. Speaker, some Members of the House may think that I speciously offered a substitute bill in connection with area redevelopment. This is certainly false. May I say this about my own district? I do not think it makes any difference in votes to me whether I am for or against area redevelopment. I do believe there is a specific problem in the United States toward which we can address our attention, toward which we should make some positive progress and toward which there should be a contribution by the American people as a whole. Because of that feeling, in the last Congress I supported a bill that was sponsored by the administration; now I have introduced a bill which will be offered as a substitute bill when we are in the Committee of the Whole, that will attempt to use the best that has come out of the subcommittee and the committee, taking out those sections we feel are not right, that

did not have a healthy approach toward solving the problem.

There are 15 differences between the bill that I have offered and the bill that came out of the House committee. Incidentally, the subcommittee did a fine job in considering the bill. There was intelligent work by Members on both sides of the aisle, and an attempt to reach an agreement, but there is fundamental disagreement with respect to a number of the sections.

In the designation of industrial redevelopment areas in the bill that I have offered, the authority to designate redevelopment areas contained in the first sentence of section 5(a) of the committee bill is eliminated. Under it, in the bill as reported, the Administrator can designate a whole State as a redevelopment area. Certainly if we believe that the chronically depressed areas, the ones we have talked about both in political campaigns and outside political campaigns, are to have effective support through this legislation, they should be pinned down, and pinned down to the areas that really need the help. The truly depressed areas should not have to share the benefits intended for them on any such basis as a statewide area.

In the proposed substitute bill the term "labor market area" is used in place of "areas." The Department of Labor Statistics has unemployment benefits on the basis of labor market areas. Therefore, we are using what seems to be an intelligent connotation of the area so it can be pinned down. Areas within a State can only be designated as redevelopment areas after the chief executive of the State has requested the designation be made. This preserves the States' rights in the making of such designation.

The criteria that must exist before areas can be designated as redevelopment areas are set forth. This will tend to assure that the assistance provided in the bill will be available for the hardcore depressed areas, which are the ones in greatest need.

The loans for rural areas are eliminated in the substitute bill. Why was this done? The members of the subcommittee itself and many members of the full committee, and I am sure many members of the House Committee on Rules, were not satisfied with the loose development of this section of the committee bill, with the failure to pin down programs to definite areas and to establish what can be done in rural areas. So in the substitute bill instead of $100 million for rural development work there is $500,000 that will be used to research and develop a feasible program that can be pinned down and directed in a direction that will give substantial assistance to the underemployed areas.

Other differences between the bill I have introduced and the bill reported by the House Banking and Currency Committee:

First. Plant loan funds by the industrial redevelopment areas—section 6(b).

In my bill, a 50-percent increase is provided in the loan funds available for the hardcore industrial depressed areas since that program can proceed on a sensible basis.

Since it is the apparent intention of the committee bill that there be at least a 15-percent State and local equity participation in plant loans, section 6(b)(9)(C) is amended to close a loophole under which, in certain cases, only a 10-percent participation would be required.

Second. Loans for public facilities—section 7.

In place of establishing a new, duplicating public facility loan program on a subsidized basis, provision in my bill is made for expanding by $100 million the existing public facility loan program in the housing agency with provisions for a priority for counties, cities, and other municipalities and political subdivisions in redevelopment areas. Such a program is on a nonsubsidized lending basis.

Protection is afforded against such loan funds being utilized in a manner to induce pirating of industry from other areas to redevelopment areas.

Third. Grants for public facilities.

This WPA-type program—section 8 of the reported bill—is completely eliminated from my bill on basic policy considerations as follows:

It is a foot-in-the-door start of omnibus Federal grant-in-aid legislation.

The eligibility criteria are virtually unlimited.

It could be used to foster unsound projects in that it would apply to a project for which there would be "little probability that such project can be undertaken without the assistance of a grant under this section."

Fourth. Termination of eligibility for further assistance—section 12.

Although no change is made in this section, nevertheless for the first time it would acquire real meaning because of the deletion of the broad area designation authority contained in the first sentence of section 5(a) of the bill as reported. Eligibility of an area is terminated when it no longer meets requirements for designation as a redevelopment area.

Fifth. Urban renewal—section 13.

A provision is added in my bill protecting against plant pirating in the use of this program in redevelopment areas. Somewhat similar protection was included in the bill S. 722 which was sent to the President by the last Congress.

Sixth. Occupational training—section 15.

Since this is the only help some of the unemployed in depressed areas will get out of this bill, the amount provided for occupational training in my bill has been more than doubled—increased from $4.5 million to $10 million.

The authorized appropriation is placed on a 1-year basis to force the coordination within that time of this new program with the existing vocational training programs of the Department of Health, Education, and Welfare.

Seventh. Retraining subsistence payments—section 16.

The amount is the same as the reported bill.

The authorized appropriation is placed on a 1-year basis to afford the Ways and Means Committee an opportunity to coordinate and possibly consolidate this program with the basic unemployment compensation program.

Recapitulation follows:

	Committee bill (S. 1 with amendments)	Widnall substitute (H.R. 5943)
Industrial areas plant loans	$100,000,000	$150,000,000
Rural areas	[1] 100,000,000	[2] 500,000
Public facility loans	[3] 100,000,000	[4] 100,000,000
Public facility grants	[5] 75,000,000	
Technical assistance	4,500,000	4,500,000
Subsistence payments	10,000,000	10,000,000
Occupational training	4,500,000	10,000,000
Total cost	394,000,000	275,000,000

[1] Plant loans with no guidelines as to where or how program would apply.
[2] Study to develop a workable program for rural areas.
[3] New, duplicating program on subsidized basis (3½-percent interest rate).
[4] Added authority to existing HHFA program with a priority for redevelopment areas. Loans not on subsidized basis (4½-percent interest rate).
[5] WPA-type program—wide-open eligibility including schools.

The substitute bill should be seriously considered and adopted when offered in the Committee of the Whole.

Mr. BOLLING. Mr. Speaker, I yield such time as he may desire to the gentleman from Minnesota [Mr. MARSHALL].

Mr. MARSHALL. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. MARSHALL. Mr. Speaker, the people who live in the towns and village of the Cuyuna Range in my district are greatly interested in the legislation before us today.

This area has suffered substantial and persistent unemployment and these communities are suffering real hardship. Unemployment has reached almost 13 percent of the available working force. According to the report of the Committee on Banking and Currency, this is one of the areas that meets the criteria for mandatory designation as a redevelopment area under the bill.

In this area, iron ore mining constitutes a major source of direct employment and income and provides an important basis for secondary employment in transportation, construction, and various services. Because of the geographic concentration of the industry in counties like Aitkin and Crow Wing, any change in manpower requirements is intensified within the counties rather than absorbed in the rest of the State's economy.

The committee has implied that the success of this bill will depend in large measure upon local initiative and local cooperation. I can assure the House, Mr. Chairman, that the people of the Cuyuna Range are prepared to assume their share of the responsibility for a constructive and coordinated attack on their own economic problems. With the assistance contemplated in this bill, they should have an opportunity to undertake programs to develop diversified industries which can stabilize the local economy.

The communities concerned have themselves given a great deal of study

and thought to their own problems. A Cuyuna Range Distressed Areas Committee was formed to develop all of the pertinent facts. This committee prepared for us a comprehensive report of economic conditions on the range and the potentials for improvement. Each conclusion was carefully documented by local sources.

Mr. Speaker, under unanimous consent I insert the summary of this report in the RECORD since it states in a clear and concise manner the case for Federal cooperation in this vital area. The documentary material which supports this summary has been included in the hearings on the bill:

REPORT OF CUYUNA RANGE DISTRESSED AREA COMMITTEE

PURPOSE OF COMMITTEE

To bring the facts concerning the present and probably future economic conditions of the Cuyuna Range before the Congress of the United States so a determination may be made as to whether the area will be eligible for aid under the provisions of Federal legislation.

PERSONNEL OF COMMITTEE

Robert R. Alderman, chairman, Brainerd attorney.

Howard Smith, vice chairman, Crosby merchant.

Harold Nyberg, Crosby miner.

Harvey Manning, Crosby merchant.

Fred Ferguson, district coordinator, State unemployment.

Frank Murphy, Crosby attorney.

Verner Anderson, Brainerd Chamber of Commerce, executive secretary.

Walter Hasskamp, Crosby miner.

Einer Anderson, county auditor.

Dick Lee, Crosby banker.

John Burgstaler, Crosby bulk oil dealer.

William Graham, First Federal Savings and Loan of Brainerd.

H. V. Johnson, Crosby merchant.

Gene Foote, Crosby realtor.

ECONOMIC HISTORY OF CUYUNA RANGE

The villages and towns within the area known as the Cuyuna Range were conceived when the mining companies began removing iron ore from the ground. Their continuing existence to date is solely because ore has been mined. There are no other industries in the area. For all practical purposes, there is no farming and cannot be because the soil is inadequate. While there are some lakes in the area, they are largely unsuitable for resort purposes.

With the advent of taconite and the use of high grade foreign ores in the middle fifties, mining operations on the Cuyuna Range have steadily decreased.

FINDINGS OF THE COMMITTEE

The committee has attempted to objectively determine the present economic condition of the area and what may be expected to develop in the future. These findings are based on actual surveys, interviews with people who can best advise on specific fields of endeavor, and undisputed facts.

(a) *Present and future employment at the mines*

To set a base for what constitutes "normal" as far as mining operations are concerned, the years 1952 through 1957 were used. The postwar boom had ended and the Nation's economy was generally stable.

For the past 3 years the output of ore tonnage has been approximately 50 percent of normal and the estimate of what 1961 will be is less than 33⅓ percent. Overburden removal will be 29 percent of normal.

The result will be that less than 50 percent of the families directly dependent on employment at the mines will not be called back to work. Those called back will work 3- and 4-day weeks. The total man-hours to be worked will be less than 36 percent of normal. There are strong indications that the estimated tonnage removal will be even less than what we estimate because even as this report is being completed, Pickands Mather, one of the large Cuyuna operators, announced the closing of Michigan underground mines.

All of the companies have drastically reduced or transferred their office, engineering, and management personnel. The usual preparatory winter work such as drilling and removal of overburden is nonexistent.

Unemployment is widespread, with approximately 13 percent of the available labor force working. Because of high average age of this labor force and because unemployment in Brainerd and other nearby towns is high, other employment in other areas is extremely difficult to attain.

Records of the Minnesota Department of Employment Security reflect that unemployment claims of workers in the Ironton and Aitkin offices (which service most Cuyuna Range workers) are increasing rapidly and will go even higher. Also, there will be a large increase in exhaustion of the amount available to the workers.

Funds available to supplement unemployment compensation, which the union administers, comes from the mining companies at the rate of 3 cents per man-hour.

This fund is rapidly dwindling so that within another month little or nothing will be available. Obviously, the fund cannot be replenished until work is available. This, coupled with the fact that unemployment compensation paid by reason of the large layoffs of July and August of 1960 will be exhausted early in 1961, means that many miners will be without funds of any kind.

As a result of this, the county welfare board is girding itself for a tremendous number of new claims for direct relief particularly for maintenance. Mr. Buth, who is the executive secretary of welfare, has indicated that almost all of the increases given for direct relief in the last 3 years has gone to the Cuyuna Range and that there is a direct correlation between direct relief granted and number of man-hours worked on the Cuyuna Range; although he couldn't support this conclusion without a great deal of work.

(b) *Derivative effect on "Main Street"*

Retail sales (except for staples) are down as much as 60 percent from 1957 and it appears the bottom has not been reached.

Accounts receivable continue to mount and average length of time before payment and delinquencies soar. Young married men who can't get work at the mines because of lack of seniority have to be satisfied with part-time odd jobs which cannot pay enough to sustain their families. Everyone is affected.

Real estate is not selling. Because office, engineering, and administrative workers are leaving, many houses are available without takers. Lower values result.

Area lending agencies are extremely wary of making home loans (exhibit H) and short-term personal and business loans.

For the past several years, a very hard working committee backed by an eager Cuyuna Range populace has been raising funds for a badly needed community hospital. An effort was made to qualify for funds under the Hill-Burton Act and all of the requirements were met, including local raising of funds. The application, however, has been rejected because the mining future of the area is uncertain and the mining companies have not contributed, but have taken a "wait and see" attitude.

(c) *Taxation*

Records of the Crow Wing County auditor show that in the last 8 years the percentage of taxes levied on minerals and mining property has decreased 10.9 percent. Expenses of operating the school districts, villages, and towns has increased and so the loss of mining tax revenue has increased the levy on nonmining property. This further depresses value of nonmining property and will make nonmining tax delinquencies larger.

(d) *Miscellaneous forecast*

There is no evidence that the mining companies plan to build plants which will process Cuyuna Range ore so that it can compete with taconite and high grade foreign ore. Economically, it is presently unsound to market the existing ore in normal quantities.

Unemployment will be widespread. Benefits under the unemployment compensation plan and under the union management contract will all but disappear. Businesses dependent on sales to the mining companies will not be able to operate. Retail stores will be in desperate condition. All segments of the area, which consists of over 10,000 people, will suffer.

CONCLUSIONS OF THE COMMITTEE

(a) The Cuyuna Range, consisting of roughly the easterly one-half of Crow Wing County, Minn., is presently in a perilous economic condition.

(b) That the area is a "one industry area" and the industry does not contemplate anything close to a normal year for 1961 or beyond.

(c) That the area has a large, able labor force presently unemployed.

(d) That the area is suitable for new industry.

(e) That Federal aid is of vital necessity at this time and for the foreseeable future.

Respectfully submitted.

CUYUNA RANGE DISTRESSED AREA COMMITTEE,
ROBERT R. ALDERMAN, *Chairman.*
HOWARD SMITH, *Vice Chairman.*

Mr. BOLLING. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to.

RESIGNATION FROM COMMITTEE

The SPEAKER laid before the House the following resignation from a committee:

MARCH 28, 1961.

Hon. SAM RAYBURN,
Speaker of the House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I hereby submit my resignation as a member of the Committee on Interstate and Foreign Commerce.

I consider it a special privilege to have served on this committee and will always follow with interest the contribution its members make to the legislative history of this and succeeding Congresses.

Sincerely yours,

WILLIAM H. AVERY.

The SPEAKER. Without objection, the resignation will be accepted.

There was no objection.

ELECTION TO COMMITTEES

Mr. HALLECK. Mr. Speaker, I offer a privileged resolution (H. Res. 239) and ask for its immediate consideration.

The Clerk read the resolution as follows:

Resolved, That the following-named Members be, and they are hereby, elected members of the following standing committees of the House of Representatives:

Committee on Interstate and Foreign Commerce: PETER H. DOMINICK, Colorado.

Committee on Rules: WILLIAM H. AVERY, Kansas.

The resolution was agreed to.

A motion to reconsider was laid on the table.

HOUR OF MEETING ON MARCH 29

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet tomorrow at 11 o'clock.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

AREA REDEVELOPMENT ACT

Mr. PATMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 1) to establish an effective program to alleviate conditions of substantial and persistent unemployment in certain economically distressed areas.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 1), with Mr. Boggs in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Texas [Mr. PATMAN] will be recognized for 1½ hours and the gentleman from New York [Mr. KILBURN] will be recognized for 1½ hours.

The Chair recognizes the gentleman from Texas [Mr. PATMAN].

Mr. PATMAN. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, we have before us S. 1 with a committee amendment. This bill is designed to meet the problems facing communities which have suffered heavy and chronic unemployment. It provides for technical assistance and financial aids mainly in the form of loans from the Federal Government. This bill is truly a bipartisan bill in this, that the members of Subcommittee No. 2 of the Committee on Banking and Currency, held hearings for more than 2 weeks on this bill. Every member of that committee participated actively in questioning each and every witness. All the members participated in the writing and rewriting of this bill. The members of the minority party were very helpful in suggesting constructive amendments to this particular bill, and we accepted a number of amendments that were recommended by the minority members. They were good amendments and helped the bill. I feel this bill is really a bipartisan bill because the members of the committee from both sides of the aisle helped in writing it and caused it to be labeled the best bill of its kind that has come before Congress. You heard the speeches made here under the rule, and Members who are violently opposed to this bill admit it is the best bill of its kind that has been before the Congress. They all admit that the antipiracy provisions are as near perfect as it is possible to write them, and particularly in writing these provisions of the bill, we had the constructive help, assistance and guidance of the minority members for which we are grateful.

Let me say at the outset, this bill by itself is not intended to solve all of our problems. The primary reliance is still on private enterprise and local initiative. The purpose is to create conditions in which private industry will prosper. This bill will simply enable the Federal Government to meet its responsibilities toward these places and the people there who suffer from unemployment and underemployment.

Also, this bill is not primarily an antirecession measure. It is aimed at the depression conditions which exist in certain communities in good times and in bad.

This bill, if passed and administered properly, and it is as effective as we expect it to be, will probably render unnecessary the passage later of a public works bill. If we do not do something now to stop these pockets of unemployment and underemployment we are going to have such a clamor for a general public works bill that Congress will be compelled to pass it. The step we are taking here will probably render unnecessary—we hope it will—the passage of a general public works bill.

And may I invite your attention to the fact that in this bill the localities, cities, and States having industry now are protected in that we have adequate antipiracy provisions in this bill. But if you were to have a general public works bill there would be no antipiracy provisions; it would be a question of catch as catch can.

Mr. HIESTAND. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from California.

Mr. HIESTAND. I would like to ask the distinguished chairman of the subcommittee if in the deliberations of the committee on this bill there was any discussion or study or report on the causes of the depression in these areas?

Mr. PATMAN. Yes; most of our hearings were directed to the question the gentleman raises.

Mr. HIESTAND. Can the gentleman refer me to them?

Mr. PATMAN. Yes. I think you will find them in the hearings which are printed and available now.

Mr. HIESTAND. But not in the report?

Mr. PATMAN. Not in the report, but you will find the testimony in the hearings of all the witnesses. This subject was gone into rather fully.

Mr. REUSS. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield.

Mr. REUSS. I would call the attention of the gentleman from California [Mr. HIESTAND] to the sections of the report on pages 9 and 10 which are entitled "Causes of Localized Chronic Unemployment," and summarize some of the specifics. I think the gentleman will find it will constitute an answer to his question.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. I would like to say to the gentleman that under the last five Presidents there have been special commissions appointed by the President; there have been committees of Congress; there have been special committees of each of the two Houses of Congress over a period of many years. There is in Washington today a vast library of the most complete, the most analytical, the most statistical and diagrammatic information imaginable on the basic, fundamental causes of these unfortunate economic tendencies.

Mr. PATMAN. I thank the gentleman.

Assistance provided by this bill is aimed at creating a net increase in employment and production. The bill explicitly states that none of the plant loans which would be provided are to be used to transfer jobs from one place to another. The idea is to enable communities which now have basic economic problems to share in our rising standard of living and our general uptrend in production and employment. Every year between $30 and $40 billion is invested in new plant and equipment by American business firms. On the average, about $7 billion of this is for new plants in new locations and create new jobs. With the technical assistance and the modest amount of financial aid in this bill, these hard-hit areas of substantial and persistent unemployment will be able to share fully in that tremendous flow of investment.

The program embodied in S. 1 is not a novel idea. Bills of similar intent and with generally similar provisions have been before the Congress for more than a decade. In fact, area redevelopment bills have passed both Houses of Congress on two occasions. In 1958, an area redevelopment bill was sent to the President but met with a pocket veto. Just last year, another bill passed the Congress but it too was vetoed. In spite of this, it should be kept in mind that the principle of area redevelopment legislation has been endorsed by the platforms of both parties. While there have been differences on the dollar amounts involved, there is no question on either side of the aisle that this is a serious problem and one which needs and deserves Federal attention.

The bill now before us embodies the administration's views on this subject. It is substantially identical with the bill, H.R. 4659, introduced by the distinguished chairman of the Committee on Banking and Currency, the Honorable BRENT SPENCE. The bill, with some amendments adopted in the committee, was reported by an overwhelming vote of 20 to 6.

It is indeed pleasing that now at last we can expect that an area redevelopment bill will become law and the program will get underway. The delays of the past have cost us dearly both in a cold dollars and cents calculation of the cost of unemployment compensation and relief payments and in terms of the much greater cost of human suffering and the waste of our resources. Over the years, the need for this legislation has increased. Many of the areas which would benefit have suffered unemployment and underemployment for more

than a decade. We have in the past witnessed dramatic changes in our economy and those changes are still occurring today. In fact, they are a permanent feature of our economy.

I do not believe that there is any need to go into an analysis of the economic changes which give rise to this problem. They have been spelled out in thousands of pages of testimony before congressional committees and they are summarized in our own committee report. Moreover, they have been directly experienced in the home districts of many of our colleagues here in the House today. These changes include dramatic technological improvements which have greatly increased efficiency and reduced the manpower needed in many lines of employment. We have witnessed a revolution in agriculture which has enabled us to produce recordbreaking crops with only a fraction of the number of workers once used for a lower level of production. We have witnessed similar revolutions in other lines, such as coal mining. Another important cause is the shift in demand, as for example, from coal to oil and natural gas for many purposes. Just in the past decade we have seen changes in military requirements from manned aircraft to missiles which has already hit hard at a number of communities where the manufacture of aircraft had built up to high levels under the pressure of World War II and the cold war. There is also a constant migration of industry. The classic example of this is the trend that began in the 1920's in the textile industry from North to the South. A recent newspaper story quoted that between 1949 and 1957 overall employment in textiles grew by 8 percent but employment in that industry in the 14 southern States grew by 40 percent. Now we are witnessing further changes in demand, technology and location that are resulting in the closing of plants in the South.

I hope it is well understood by now that this bill will not only benefit those communities which have chronic unemployment but will help the entire Nation. Every community in our country is dependent on other communities as markets for the goods and services which they produce. Obviously, no steel-producing center or auto-manufacturing center or household-appliance center exists just to serve a local market. They exist to serve the entire Nation and they need the entire Nation to buy their products. Anything that we can do to bring these many areas of low income up to the national norm will increase overall demand and make the entire Nation more prosperous. Moreover, the goods produced by areas which now have idle manpower will help to meet the needs of other communities. If we fail to help the growing number of areas which are suffering basic economic problems it might well lead to a serious slack in demand and a rise in layoffs throughout the economy. I am sure that most of my colleagues will recall how the depression conditions in agriculture served to undercut the markets of industry and was one of the factors that lead us into the great depression of the 1930's.

The need for Federal legislation to meet these problems is perfectly clear. This is not just a local problem but truly a national problem. Federal responsibility to combat unemployment was explicitly assumed in the Full Employment Act of 1946. Moreover, as I have said, both parties endorse the principle of Federal assistance to these areas. In our Nation the Federal Government cannot stand by and ignore the problems of any important segment of the economy. While it is private enterprise which must supply the jobs and the local communities which must supply the initiative, the Federal Government's role is still an important one. It can and it should supply expert advice and technical assistance to help these areas plan their own rehabilitation. It also must provide some credit and other financial assistance. It is obviously illogical to expect a community which has suffered high unemployment, and along with it the erosion of its own tax base, to finance its own redevelopment. If these redevelopment programs are to be realized, they will often need a little push through Federal financial assistance. The funds provided in this bill are in the nature of seed money. They will help to get redevelopment programs underway.

Mr. Chairman, I would like to summarize briefly the contents of this bill. S. 1 would create a new program under the Secretary of Commerce to help designated areas which suffer substantial and persistent unemployment or which have heavy concentrations of low income families and chronic underemployment.

Under S. 1, the Secretary of Commerce will designate as redevelopment areas those places which he determines have had substantial and persistent unemployment for an extended period of time. This will include those areas in which the rate of unemployment, excluding temporary or seasonal unemployment, is 6 percent or more; has exceeded the national average by 50 percent for 3 of the 4 preceding calendar years, or 75 percent for 2 of the 3 preceding years, or 100 percent for 1 of the 2 preceding years; and has averaged 6 percent or more during each of the qualifying years. The Secretary of Commerce will also designate as redevelopment areas those areas which do not meet the above requirements but which he finds are among the highest in numbers and percentages of low-income farm families and have substantial and persistent unemployment or underemployment.

According to the latest figures, 20 major labor markets and 83 smaller ones would be included in the requirement for mandatory designation. In addition, other areas, particularly rural places, would be designated according to criteria set forth in the bill.

These latter areas, the rural places, represent a major national problem. In some of them poverty and waste of manpower has persisted for many decades. The Secretary of Agriculture, in testimony given before my subcommittee, stated that the underemployment in rural areas is equivalent to the full unemployment of 1,400,000 men. That is, if our statistics could take into account the idle time of rural workers our unemployment today instead of being 5.7 million would be 7.1 million.

Mr. Chairman, the legislation we are discussing today can have a far-reaching effect in the rural communities and small towns of this Nation.

As we all know, technological change and mechanization have had a severe impact on our farm population. In recent years, many thousands of farm families have been forced to close up their farms and move to town in search of work. Other thousands of families have come to depend almost entirely on the income earned through work off the farm in nearby factories and other enterprises. The Census Bureau informs us that there are now 3.7 million farms in the Nation, a drop of more than a million in just 5 years. Yet in 1959 nearly half of all our farmers worked part time off their farms. And 3 out of 10 worked off their farms 100 days or more. About one-third of the income of farm people is now derived from nonfarm sources, principally jobs in local industry.

The point of all these statistics is that the growth of rural industries is of crucial importance to the Nation's farming families. Without local jobs and other nonfarm opportunities, to supplement their incomes, many thousands of farm families would be forced to sell out and join the migration to our already crowded cities.

The bill requires that an overall program for the economic development of a redevelopment area must be submitted to and approved by the Secretary of Commerce before financial assistance is made available under the bill. Any project for which financial assistance is sought must be consistent with the approved program. Appropriations of $4.5 million a year are authorized by the bill to provide technical assistance to redevelopment areas to enable them to explore methods of expanding their industrial resources. The Secretary may also furnish such assistance to other areas which need it to alleviate or prevent excessive unemployment or underemployment.

This economic program is a vital feature of the bill. By itself it will enable many communities to attract industry by presenting a reasoned case for the potential value of the area. Also, if it is found that Federal assistanc is needed, it will be a guarantee that the Federal funds will be put to a good use and not dissipated.

To help these communities get their redevelopment programs underway, the bill provides for Federal loans. These loans can be used for the acquisition of land, the construction of plant facilities and, in exceptional cases, for the purchase of machinery. They can have terms up to 25 years with a possible 10-year extension. The Federal grant cannot exceed 65 percent of the total cost with the balance to come from the local government or community organization and from private lenders. The interest rate is established by a formula contained in the bill which currently works out to 4¾ percent for a 20-year loan. The bill authorizes appropriation of $200 million for these loans, $100 mil-

lion for urban areas and $100 million for rural areas.

In addition, the bill recognizes that adequate local public facilities are essential to industrial expansion. Modern industry is highly dependent on adequate sewer and water facilities and other community works. However, many depressed areas cannot afford to expand under present conditions. In fact, they are often hard pressed even to maintain existing facilities. Here they are caught in a vicious circle—adequate public facilities are needed for industrial expansion but the community cannot afford these facilities until the expansion takes place. To overcome this problem, the committee amendment provides for Federal loans and grants. The loans could be for the full cost of the work and would be repayable over a term of 40 years with a possible 10-year extension. The interest rate would be based on a formula which fully reflects the actual cost of money to the Federal Government, plus one-fourth of 1 percent to cover expenses of administration. This is the well-known "college housing" interest rate under which the Federal Government has already loaned $1.6 billion. Currently it works out to 3½ percent. The bill authorizes $100 million for appropriation for these loans. In addition, the bill authorizes Federal grants to those communities which cannot provide the local public works entirely upon a loan basis. These grants are on an approximately 2 to 1 matching basis. They can cover up to 65 percent of the net difference between the total cost of a project and the loans raised from any source to finance the project. The bill authorizes the appropriation of $75 million to make these grants.

The bill also assures that the benefits of the urban renewal program will be available to depressed industrial communities. While that program is aimed primarily at clearing residential slums, there has been a growing recognition of the need to eliminate blighted business districts as well. Therefore, on past occasions, the Congress has authorized the use of a certain proportion of the capital grant authority for this program for nonresidential slum clearance projects. The committee amendment provides that not more than 10 percent of any future capital grant authority made available to the urban renewal program may be used for nonresidential projects in designated depressed areas. By this means these communities will be able to make available industrial sites and at the same time restore local tax bases and local revenues. Also, the bill extends the program of planning grants authorized by the Housing Act of 1954 to redevelopment areas.

A highly important provision of the bill is the aid extended for occupational training of workers in redevelopment areas. This would be highly fruitful in the long run. Many workers in these places are already skilled but the skills which they have acquired are no longer in demand. They need to learn new trades in order to find employment. To meet this need the bill authorizes annual appropriations of $4.5 million to assist State vocational training programs. Also, because in 45 States workers undergoing training are not eligible for unemployment compensation, the bill authorizes annual appropriations of $10 million for subsistence payments equal to the rate of State unemployment compensation payments.

The bill also makes permanent the authority for the Small Business Administration to make loans to local development corporations to finance construction or expansion of plants. Without this provision that authority would expire on June 30 this year.

All in all, this bill authorizes appropriations of $394 million, of which $300 million is for loans to be repaid with interest. Viewed in perspective this is a relatively small amount. It would be less than one-half of 1 percent of our total Federal budget. It is less than one-tenth of 1 percent of our total gross national product even in our present recession circumstances. It is far less than Congress has voted on many occasions for comparable aid to foreign countries. It is small, but it is extremely important. With this bill we will have a comprehensive and concentrated effort to end the suffering in areas of chronic heavy unemployment and add many times that amount to our total national output. Mr. Chairman, I know that many Members on both sides of the aisle will vote for this measure. I am hopeful that it will be approved by a substantial majority.

SUMMARY OF S. 1 (AREA REDEVELOPMENT ACT), AS REPORTED TO THE HOUSE

S. 1 establishes a new program to provide new employment opportunities in areas suffering substantial and persistent unemployment for an extended period of time, and in other areas which have heavy concentrations of low-income families and substantial and persistent unemployment or underemployment.

The bill provides for an Area Redevelopment Administrator in the Department of Commerce. The Administrator will be appointed by the President, subject to Senate confirmation and will perform such duties in the execution of the act as the Secretary may assign.

The bill requires that an overall program for the economic development of a redevelopment area must be submitted to and approved by the Secretary of Commerce before financial assistance is made available under the bill. Any project for which financial assistance is sought must be consistent with the approved program. Appropriations of $4.5 million a year are authorized by the bill for providing technical assistance to designated redevelopment areas to enable them to explore methods of expanding their industrial resources. The Secretary may also furnish such assistance to other areas which need it to alleviate or prevent excessive unemployment or underemployment.

Under S. 1, the Secretary of Commerce will designate as redevelopment areas those areas which he determines have had substantial and persistent unemployment for an extended period of time. This will include those areas in which the Secretary of Labor has found that the rate of unemployment, excluding temporary or seasonal unemployment, is currently 6 percent or more; has exceeded the national average by 50 percent for 3 of the 4 preceding calendar years, or 75 percent for 2 of the 3 preceding years, or 100 percent for 1 of the 2 preceding years; and has averaged 6 percent or more during each of the qualifying years. The Secretary of Commerce will also designate as redevelopment areas those areas which do not meet the above requirements but which he finds are among the highest in numbers and percentages of low-income farm families and have substantial and persistent unemployment or underemployment.

The Secretary of Commerce may make loans to purchase or develop land and facilities for industrial or commercial usage within redevelopment areas out of two $100 million revolving funds. The loan cannot exceed 65 percent of the project cost, and there must be reasonable assurance of repayment. The maximum term of the loan will be 25 years—with a possible 10-year extension. The interest rate will be determined under a formula which would work out at 4⅜ percent currently for 20-year loans.

The bill also authorizes loans to provide needed public facilities in redevelopment areas, out of another $100 million revolving fund. These loans may have a maximum term of 40 years—with a possible 10-year extension—and an interest rate of 3½ percent currently. To help provide public facilities in redevelopment areas that are unable to undertake them without grant aid, grants are authorized, to be made out of appropriations of not more than $75 million. The grant is limited to that portion of the cost which cannot be financed through loans. Before such a Federal grant may be made, a non-Federal source must provide a matching grant, in the proportion of 35 percent non-Federal to 65 percent Federal. Such loans and grants may be made only for projects that would improve the opportunities for establishing industries in the area.

The bill waives certain of the normal requirements of the urban renewal program, so that financial assistance may be extended under this program to clear sites in these areas for industrial and commercial development.

The bill also makes planning grants under section 701 of the Housing Act of 1954 available to counties and municipalities located in redevelopment areas. These grants are for surveys, land-use studies, and other planning work—excluding plans for specific public works.

Stepped-up programs for retraining unemployed workers in these redevelopment areas will also be provided. The need for such training will be determined by surveys conducted under the supervision of the Department of Labor. The actual training will be provided in the normal case by the State vocational education agencies, with assistance from the Department of Health, Education, and Welfare. Annual appropriations of $4.5 million are authorized for this purpose.

For unemployed or underemployed workers who are receiving vocational training under the bill and who are not receiving or seeking unemployment compensation, the bill would authorize payments equal to the State unemployment compensation payments, for up to 16 weeks. Appropriations of $10 million annually would be authorized for this purpose.

The bill also makes permanent the authority—now due to expire on June 30 of this year—for the Small Business Administration to make loans to local development corporations to finance construction or expansion of plants.

The following table summarizes limits on new money authorizations in the bill:

	Million
Plant loans (sec. 5(a) areas)	$100.0
Plant loans (sec. 5(b) areas)	100.0
Public facility loans	100.0
Public facility grants	75.0
Technical assistance (annually)	4.5
Occupational training (annually)	4.5
Retraining subsistence payments annually)	10.0

QUESTIONS AND ANSWERS ON THE AREA REDEVELOPMENT BILL

Question. What is the purpose of this bill?

Answer. The bill provides Federal financial assistance and technical aids to supplement the efforts of State and local government and private enterprise to cure the economic problems which have resulted in high and chronic unemployment in good times and in bad in certain communities.

Question. About how many areas are involved?

Answer. Under the terms of the bill, 20 major labor market areas and 83 smaller ones would automatically be eligible for assistance. In addition, an undetermined number of rural areas and some additional urban areas would be designated according to the guidelines set forth in the legislation.

Question. Why is it that these places suffer from unemployment even when the national economy is prosperous?

Answer. There are a number of reasons. Broadly speaking, these reasons include technological change such as the shift of railroads from coal to oil; migration of industry such as the movement of the textile industry from the Northeast to the South; depletion of resources as in the case of some timberlands, coal and iron and other ores; widely fluctuating seasonal employment requirements as in the case of tobacco manufacturing centers; and overdependence on a single crop or on farming in general as in many rural areas, particularly in the Southeastern States.

Question. What Federal aids are provided by this bill?

Answer. The bill would provide financial assistance, primarily loans, technical assistance for local economic programs, and vocational training help. In more detail, the bill would authorize for appropriation $100 million for loans for industrial and commercial facilities in urban depressed areas; $100 million for such loans in rural areas; $100 million for loans for local public facilities; and $75 million for partial grants, if necessary, for local public facilities. In addition it would authorize annual appropriations of $4.5 million for technical assistance, $4.5 million for occupational retraining, and $10 million for subsistence payments to those receiving technical retraining.

Question. Why is Federal aid needed?

Answer. The very fact of depressed economic conditions makes it difficult or impossible for local efforts to provide the money or raise the credit needed for the rehabilitation of existing plant facilities or the construction of new ones, and outside private capital is often reluctant to go into these areas. Moreover, there is a need for coordinated efforts in developing local economic programs and to provide workers in these areas with new skills.

Question. Can we afford this program?

Answer. There is every reason to expect that this program will return a profit to the Treasury in the long run. Even apart from our moral responsibility to those suffering from unemployment—a responsibility expressly assumed by the Full Employment Act of 1946—a cold dollars and cents analysis will probably show a profit. For one thing, the bulk of the funds provided are for loans to be repaid with interest. The successful operation of this program is bound to increase the revenues of every level of government—local, State, and Federal. Offset against this is the fact that there is a heavy cost for failure to take action. There are direct outlays for unemployment compensation and relief payments to the unemployed and the hidden costs of lost production.

Question. How do we know that the money will actually accomplish something and not be wasted?

Answer. Experience under local programs, such as those in Pennsylvania where local development groups and the State have worked together, shows that if credit is available much can be done to bolster the economic bases of these depressed communities. Moreover, before any financial assistance is extended under this program, the community must work out a general economic development program for the approval of the Secretary of Commerce. This program will have to show that there is good reason to believe that the aid sought will make a meaningful contribution toward long-term economic improvement for the area. If the economic program does not convince the Secretary, he will not authorize Federal loans and grants under the bill.

Question. Will this program take the place of local efforts?

Answer. This program is designed to assist and supplement local efforts, not take the place of them. The initiative for loan and grant assistance under this program must come from the community level.

Question. Why can't, or why doesn't, private enterprise restore these areas without Government aid?

Answer. Actually the program ultimately relies on private enterprise to provide the long-run solution to chronic unemployment in these places. The benefits provided in this bill are all aimed at creating conditions in which private enterprise can flourish. This includes not only the industrial loan funds but the assistance for community facilities and the aid for retraining workers.

Question. Will this aid be used to transfer plants from one place to another?

Answer. Absolutely not. There is a flat prohibition in the bill against using these loans to assist establishments relocating from one area to another. The program rests on the fact that billions of dollars are spent for new plant facilities every year in new locations. Given a modest amount of assistance to efforts of local community and business leaders, there are many opportunities to develop new employment opportunities in these areas for the benefit of the entire country.

Question. Why should the Federal Government finance plants in these areas; can't they get credit from private sources if they are sound?

Answer. The bill requires that there must be some private investment in every project financed with Federal help under the plant loans section. The Federal loan cannot exceed 65 percent of the project cost. Experience in Pennsylvania with this sort of program indicates that in many cases private investors or the State, or both, will provide 50 percent or more of the funds needed. Federal loans are limited to the amount which cannot be obtained from other sources.

So if private credit is available, on reasonable terms, it will be used. But in these areas credit tends to be tight, especially in areas which have already strained every resource to help themselves, so they must turn to the Federal Government for the additional credit they need.

Question. Is there enough money in the bill to do the job?

Answer. The financial assistance provided in this bill should be regarded as "seed" money. It is not expected to do the whole job itself. Primary reliance will continue to be on private enterprise. The assistance in the bill is aimed at getting local economic development programs underway.

Question. Will all of the designated areas share in these aids?

Answer. Probably all of them will benefit one way or another from the technical assistance and other aids in developing local economic programs. However, not all of them will need the financial assistance. Financial assistance will be extended only if the local economic program shows its need and if application is made for a project which the State and the Secretary approve.

Question. How will this help areas not designated as eligible?

Answer. Anything that can be done to improve employment and incomes in these places will increase total demand. In our closely interrelated economy every area is dependent on other areas for markets for the goods and services produced. Helping these depressed areas will mean the sale of more cars, more appliances, and other products. By the same token, if nothing is done, the lack of buying power in these areas may undercut general business activity and result in unemployment and stagnation in other communities.

Question. Wouldn't it be better if the people moved out of these depressed communities?

Answer. Actually a substantial amount of migration is taking place from these communities, but this is not an adequate answer to the problem. For one thing, many families, particularly older workers, are unwilling or unable to cut their ties from home and friends and move to strange communities. Moreover, business firms are often unable to move their investment out of the community except at a substantial loss.

A particular problem which shows the weakness of migration as a solution is the fact that many workers who have moved to another city to find employment, often leaving their family behind, discover that they have no seniority for job security in the new place. They are among the first laid off and often have no recourse but to return home.

In a broader view, our country can ill afford the abandonment of the tremendous investment in schools, roads, homes, industry and commercial buildings, and the like, which would be entailed by wholesale abandonment of these communities.

Question. Is area redevelopment legislation a new idea?

Answer. It is not. Bills for this purpose have been before the Congress for several years and in fact two of them have passed but met with Presidential vetoes. However, the basic principles of area redevelopment legislation have bipartisan support and have been endorsed in the platforms of both parties.

Question. Why is aid for public facilities necessary?

Answer. Adequate public facilities, particularly water and sewer works, are highly important to industry expansion. However, many of these communities are unable to finance them on their own. High unemployment poses a heavy burden of relief

assistance while at the same time tax sources are eroded. Therefore, the bill provides for Federal loans and, where necessary, partial grants to finance local facilities which will improve the opportunities for business growth.

Question. Is the interest rate for these public facility loans a subsidized rate?

Answer. There is no subsidy involved. The rate is based on the average interest paid by the Treasury on the outstanding public debt plus one-quarter of 1 percent. Currently this means an interest rate of 3½ percent. It is the same rate as applies now to college housing loans.

Question. Can't these communities borrow more cheaply on their own?

Answer. Because of the Federal tax exemption on the interest on local bonds, it will be possible for some communities to borrow more cheaply on their own and where this is true, the bill directs them to do so. Federal loans may be used only where the community cannot borrow more advantageously through their own securities.

Question. What do you mean by "underemployment"?

Answer. In our industrial areas, people normally have a full-time job or none at all. But in rural areas, many farmers must have part-time jobs off the farm to earn an adequate living. In 1959, nearly a third of our farmers worked off their farms 100 days or more. There are hundreds of rural counties where these part-time jobs are not available, and farmers cannot earn adequate incomes. These are the "underemployed" who must be helped.

Question. What is the extent of underemployment in rural areas?

Answer. Secretary of Agriculture Freeman testified that "There is enough underemployment each year among workers 20 to 64 years of age who live on farms to equal a full year of unemployment for 1,400,000 workers. That is to say—if we did not have so many people underemployed in agriculture, the Nation would have roughly 1,400,000 more unemployed workers than are currently reported."

Question. How does underemployment affect farmers' incomes?

Answer. More and more farm families are found in the lowest income group—the lowest one-fifth in the Nation. In 1959, 36 percent of farm families had incomes below $2,000.

Question. How will the bill help these rural areas?

Answer. The same aids are available for these areas as for industrial areas, except, of course, for the urban renewal assistance which would not be applicable. There is a special revolving fund of $100 million for industrial and commerical projects in rural areas, and the $75 million public facility grant fund will probably be of particular benefit to our smaller towns.

Question. What would be the impact of the vocational training program in a rural area?

Answer. Many workers, particularly younger ones, want to enter trades and occupations other than farming. The vocational training provision of the bill would be an important added resource providing such individuals with opportunities to learn new skills.

Question. Why isn't the existing rural development program enough?

Answer. The rural development program through regular agricultural agencies is providing help to local business, farm, and other individuals to permit economic development. The area redevelopment bill would provide intensified assistance with additional resources and broader scope for designating rural areas. Under this bill some local development programs would have additional capital for industrial development; vocational training programs would be speeded up; and the technical assistance provisions would provide additional resources for basic economic studies and technical advice in special agricultural, industrial, and marketing development projects.

Question. What urban renewal aids are provided for?

Answer. Under the urban renewal program, the Federal government can make grants to communities to pay up to two-thirds of the net cost of clearing slum areas. While the program is aimed primarily at residential blight, a certain amount has been authorized for redeveloping blighted business areas. The bill waives certain requirements of the regular program to make sure that depressed industrial areas can take advantage of this assistance.

Question. Why is this urban renewal aid important?

Answer. First, it will make it possible for communities to provide sites for industrial development. Secondly, by clearing away rundown business districts and replacing them with new plants and offices, the community's tax base will be strengthened.

Question. How will the Department of Labor decide what type of training is needed in redevelopment areas?

Answer. The basic information will be gathered through the State employment security offices. There are now 1,800 of these offices throughout the country, operating at the grassroots level. They have had 25 years' experience, working with the Department of Labor and community groups, in gathering information about the labor force, including the information needed to determine what types of training can result in useful jobs for idle workers.

Question. Can you accomplish much with retraining?

Answer. Yes. This may prove to be one of the most constructive features of the bill, because it should provide permanent solutions to the occupational problems of many people. There are vacancies even in depressed areas which men or women with special skills can fill. This is evident from success in placing graduates from some of the technical vocational schools. Moreover, if the unemployed do get specific training, they may find it easier later on to get jobs in some other nearby communities.

Question. Who will conduct the training?

Answer. Here again, existing State and local agencies will be used, for the most part. There is a well-established Federal-State vocational education training program. This will be expanded under the bill, with increased Federal assistance to the State vocational education boards for stepped-up training in redevelopment areas. There will also be some on-the-job training. Occupational training under the bill will require cooperation among the various representative groups in the community—the school system, the employment service, management, and labor—both in appraising the skills that are needed and in helping to plan realistic training courses for those skills.

Mr. Chairman, the gentleman from New Jersey [Mr. WIDNALL], has announced that he will offer his bill (H.R. 5943) as a substitute amendment for the committee bill.

The Widnall amendment increases plant loans for industrial areas by 50 percent. At the same time, it narrows the criteria for designating these areas, and completely eliminates aid to rural areas. It also eliminates, or makes unworkable, or puts a 1-year expiration date on most of the other assistance offered by the bill, including assistance for public facilities, urban renewal, and occupational training.

The farm areas would be cut out completely, and told to settle for a $500,000 study of their problems. Their problems have been studied for years. They need action, not more study.

Also, grants for public facilities would be eliminated completely.

The rest of the damage would be done in the name of "coordinating" the new program with existing programs. In the case of public facility loans, this "coordination" results in forcing the chronically depressed areas to seek assistance under a 6-year-old program which has accomplished very little. Chronically depressed areas, as well as the less-hard-hit "areas of substantial labor surplus" have a priority today for assistance under this program. But the interest rate has been so high it has been of little value. But, for what it is worth, it is available today, for depressed areas as well as more prosperous communities. The Widnall amendment would impose a completely unworkable "antipirating" restriction on this program; a restriction that even the Eisenhower administration opposed. The result would be that there would be no more public facility loans for any community, depressed or not, if the Widnall amendment were adopted.

An even stranger result would follow for urban renewal. Under the Widnall amendment, the same "antipirating" restriction would be placed on urban renewal assistance for chronically depressed areas, but not for prosperous cities who can get assistance under the regular program today for clearing industrial slums.

Again in the name of "coordination," the Widnall amendment would terminate assistance for occupational training after June 30, 1962. The same death sentence would be imposed on subsistence payments for workers being trained.

Under unanimous consent I include in the RECORD at this point a more detailed discussion of these points.

ARGUMENTS AGAINST WIDNALL SUBSTITUTE (H.R. 5943)

First. It eliminates help for rural areas.

The Widnall amendment increases plant loans for urban areas by 50 percent—$50 million—and eliminates or makes unworkable most of the provisions which would help farm areas. It eliminates completely the committee bill's authorization of $100 million for plant loans in rural areas, and the $75 million authorization for grants of public facilities, which would be particularly helpful to smaller communities in outlying areas.

Instead, the farmer is told to be content with a study. The problems of underemployment in rural areas have been studied for years; it's time to act.

The committee bill is criticized because the criteria for designating rural areas are "loose and meaningless." And yet last year, when specific criteria were specified, they were attacked because they showed the South had the highest concentrations of low-income farm families and low-income farms. This bill has seven criteria for designating rural areas, and the Secretary of Agriculture has testified that they will work well. See appendix B, page 19 of the committee report. The data for underemployment in rural areas are not as

advanced as the data for unemployment in industrial areas, and so the criteria for designating rural areas must be more flexible. But we shouldn't penalize the farmer for defects in our statistics. The Department of Agriculture has enough data now to identify some of the worst areas. They are now studying the results of the 1960 census and will shortly have available more information to round out the picture. There is no need to wait for some indefinite time in the future to do something about this problem. The problem is here now, and we have enough information now to go ahead with a solution.

The Secretary of Commerce yesterday wrote a letter to Hon. BRENT SPENCE, chairman of the Banking and Currency Committee and author of the committee bill, urging again that the rural areas be allowed to participate in this new redevelopment program. I quote from the Secretary's letter:

> The bill which is now pending before the House contains provisions for loans in both urban and rural areas. It is my firm opinion that we should certainly deal with both the rural and urban economic problems which now confront many areas of the Nation. I see absolutely no justification to attempt to deal with one to the exclusion of the other—I see no justification, for example, for the deletion of the provision for rural assistance in order to concentrate soley on urban areas, as has recently been suggested. I recommend and urge that the basic proposals contained in S. 1 for both rural and urban assistance—as reported by your committee—be approved by the House.

The National Grange testified that from the long-range standpoint, this bill could be one of the most important pieces of agricultural legislation of the 87th Congress. The National Farmers Union and the National Rural Electric Cooperative Association also enthusiastically support it.

Second. Its antipirating provisions are unworkable and actually penalize depressed areas.

The committee bill has a general statement of policy to the effect that the bill is to be used to create new job opportunities—as opposed to transferring jobs from one place to another—and it has a specific prohibition against pirating in the plant loan section. This prohibition will work for plant loans, because when a plant loan is made, you can normally identify the business that will occupy the plant, and you can make sure that no one will be thrown out of work as a result. The Widnall amendment is identical with the committee bill in this respect.

But the Widnall amendment requires an impossible finding before urban renewal aid is given to clear a site in an industrial depressed area. No one can tell before a site is cleared who will move in to use the cleared land. And yet the Widnall amendment requires the Housing and Home Finance Administrator, before authorizing urban renewal help to clear the site, to determine whether it will assist business establishments in relocating, totally or partially, from one area to another. The Eisenhower administration opposed any such requirement, on the ground that it could not work—hearings on area redevelopment before Subcommittee No. 3 of the Banking and Currency Committee, 1959, page 443. The Widnall amendment would impose this unworkable requirement on aid to depressed areas, when no such requirement is imposed today under the regular urban renewal program on aid to prosperous cities.

The Widnall amendment also imposes the same unworkable restriction on public facility loans. But at least in this case, the amendment is consistent. It not only imposes the requirement on depressed areas, but it also imposes it on other more prosperous communities. Depressed areas as well as other communities can get assistance under the program today without being faced with this particular roadblock. The amendment makes sure that no community, depressed or not, will be able to get a loan under the public facility loan program.

Third. It would mean high interest rates on public facility loans. The Widnall amendment coordinates the public facility loan provisions of the bill with the existing public facility loan program. While the amendment does not specify the interest rate for these loans, the interest rate on this loan program has traditionally been so high that the program has been of very little value. Currently, the rate is 4⅛ percent for general obligation bonds, and 4⅜ percent for revenue bonds, with 30-year maturities. The Dow-Jones index on yields on tax-exempt municipal bonds, by comparison, has been averaging about 3½ percent in the last week, according to the Wall Street Journal of Monday, March 27, 1961. You cannot expect a loan program to give any real help to depressed areas if it is priced that far above the market. The committee bill produces a rate close to the market: 3½ percent.

It is claimed that the committee bill provides for a subsidized interest rate. And yet it is based on the average rate the Government pays on all its borrowing, plus a quarter of 1 percent to cover administrative expenses. An identical interest rate now prevails in the college housing loan program, and a lower interest rate is in effect for REA loans.

Fourth. Occupational training would be terminated June 30, 1962.

Despite the fact that even the opponents of the committee bill are conceding that occupational training would be one of the most valuable tools for helping depressed areas, and despite the fact that the Widnall amendment actually increases the authorization for appropriations for this purpose during the first fiscal year, it terminates this program on June 30, 1962, by limiting the authorized appropriations to fiscal year 1962.

The reason given for this death-sentence is that this will "force coordination within that time of this new program with the existing vocational training programs of the Department of Health, Education, and Welfare." The committee bill, of course, provides for just such coordination. It provides that these training programs will normally be set up by the Department of Health, Education, and Welfare, through the State vocational education boards. It is hard to see how improved coordination will be achieved by killing the program after 1 year.

Similarly, the Widnall amendment kills off the retraining subsistence payments after 1 year. The reason given is that this will allow the Ways and Means Committee to "coordinate and possibly consolidate this program with the basic unemployment compensation program." The fact is that these training payments are needed because under State law in 45 States unemployed workers are denied unemployment compensation while they are in training because they are not "available for work." This is a matter of State law which the Ways and Means Committee has no control over. But even if the Ways and Means Committee does have some plans to provide a better program next year, there is no reason to impose a death sentence on this program. It will be entirely feasible to enact improvements, if they are developed, without such a death sentence.

Fifth. It eliminates grants for public facilities.

The public facility grants authorized in section 8 represent but a small portion of the committee bill in terms of dollars, but they could prove the most important part of the measure to those areas which qualify for them. Grants are to be made only in situations of extreme need. There will be a few places in the United States where all the energy and resources of local people will not suffice to attract a project vitally needed to strengthen the community's economic base.

The margin between failure and success might be very small, and Federal grants could be the only lever to lift community resources to a level where new enterprises can make a beginning. If all sources of financing, together with Government loans, are fully explored and found insufficient to meet a fully demonstrated need, then we should have in reserve at least the limited authority for Federal grants provided in the committee bill.

The proposal for grants in the committee bill is modest and well protected against possible abuse or waste. Section 3(e) authorizes a total appropriation not exceeding $75 million for public facility grants, and subsection (b) establishes four safeguards. These specify that grants shall be made only after the maximum local contribution has been made and found insufficient, only where the need is urgent and could not be otherwise undertaken, only for projects that assure permanent benefits, and finally, only for projects that are consistent with the approved development program. In any case, a matching State or local grant, equal to roughly half the Federal grant, will be required as a minimum.

Mr. Chairman, I desire to answer some of the statements that will be made and I therefore reserve the remainder of my time.

Mr. KILBURN. Mr. Chairman, I think this bill will do more harm than good. I do not think it will take care of the depressed areas of our country, which, of course, is what we all want to do.

Mr. Chairman, I yield such time as he may desire to the gentleman from Connecticut [Mr. SEELY-BROWN].

Mr. SEELY-BROWN. Mr. Chairman, this bill is certainly the best bill as such that has been reported by the committee covering this particular subject. Personally I feel that the Widnall suggestion, the Widnall amendment, or the Widnall substitute is even a better approach, therefore I expect to support the Widnall amendment.

Mr. Chairman, I am for Federal assistance to help those areas of our country which want and need help to recover from chronic unemployment and underemployment. This assistance should, to be effective, provide some long-range improvements in our economy. It is not intended to be a part of a program to help relieve a recession.

The list of those communities which apparently would qualify for Federal assistance includes three areas in Connecticut, one of which is in my district, which have lost jobs and which have been striving, with some success, through local and State efforts, to bring in industries that will provide new ones.

A helping hand for these communities and others like them, from the Federal Government is in order, to put more beef behind those who already have their shoulders to the wheel, and by which there is reasonable expectation that the job-producing complex can be put back on the track.

It was to help these communities that, during my previous service in Congress, I advocated and supported legislation for the assistance of depressed areas. I am eager to help them now.

The best way to do that, I am convinced after a thorough study, is to pass the Widnall substitute for S. 1.

The Widnall bill, H.R. 5943, which my friend from New Jersey [Mr. WIDNALL] introduced on last Friday, will provide more loan assistance—50 percent more—for the construction of plants in truly depressed areas, it will provide more than double the amount of funds allocated for occupational training and retraining, and it will do all of this at a cost which will be a third less than the cost under S. 1.

Under the Widnall substitute, it is estimated that the cost will be $275 million; but the committee bill will cost the taxpayers at least $394 million.

Since the substitute which is now before us was introduced as an original bill last week by its sponsor, the gentleman from New Jersey [Mr. WIDNALL], and printed copies of the bill have been available for several days, it is unnecessary for me to go into a detailed comparison of the provisions of this bill with the committee bill.

There are some highlights about it, however, which should appeal to all Members of the House.

For loans, on a nonsubsidy basis, too, it should be pointed out, for the construction of plants in redevelopment areas, $150 million is provided in the Widnall substitute, as against $100 million in the committee bill.

For occupational training, which is the only help some of the unemployed in depressed areas will get out of area redevelopment legislation, $10 million is provided, which is more than double the $4.5 million in the committee bill. The Widnall bill provides the same amounts as the committee bill, for technical assistance to redevelopment areas and, for subsistence payments during retraining.

Not only is the overall total of loans authorized increased in the Widnall bill, as compared with the committee bill, but the truly depressed areas will not have to share benefits intended for them with areas which might include an entire State under the broad authority to designate redevelopment areas contained in the committee bill.

The Widnall substitute uses the term "labor market area" instead of "area," which appears in the committee bill, because Department of Labor statistics on unemployment are tabulated on this basis, and by using this term in the legislation before us, there will be correlation between the areas designated and the areas for which unemployment information is available.

In the Widnall substitute, a redevelopment area can be designated as such only after the chief executive of the State has requested such designation, so that the rights of the States are protected.

The loose and meaningless criteria for designation of rural development are eliminated. Under the committee bill, although it was evident from the testimony at the hearings that nobody had the faintest idea how it would work, half the counties in the country could be designated as redevelopment areas, and even Indian tribes are included.

The Widnall substitute gets down to earth on rural redevelopment, by removing the $100 million loaning capacity, and allotting $500,000 for a study by the Secretary of Agriculture so that he could come up with some kind of a workable program for rural areas for redevelopment.

The substitute bill also eliminates the duplication in authority to make loans for communtiy facilities. The Community Facilities Administration of the Housing and Home Finance Agency already has full authority to make loans for all kinds of communities. The Widnall substitute takes out of the bill before us the $175 million for public facility loans and grants, and adds the $100 million for public facility loans to the Community Facilities Administration authority, with a priority for redevelopment areas.

The Widnall substitute makes 15 changes in the committee bill.

They are changes which are constructive, and which strengthen the bill. They would provide more dollars for redevelopment than the committee bill. They would provide the framework for adding jobs in areas where they are most needed.

I hope the substitute bill will be passed by the House, in place of the committee bill.

Mr. KILBURN. Mr. Chairman, I yield 10 minutes to the gentleman from Michigan [Mr. HARVEY].

Mr. HARVEY of Michigan. Mr. Chairman, I am opposed to S. 1 as it was reported out of committee and as Mr. PATMAN has presented it today. I would like to make clear at the outset that the purpose of this legislation is commendable, and as a Member of Congress from Michigan, one of the States to be affected by this legislation, I, too, desire to lessen human suffering and to get people back to work in these economically distressed areas. Contrary to what some people might say, there should be no question of whether our Federal Government should act to alleviate this type of unemployment, but rather only a question of how the Government should act. I certainly agree that not enough praise can be said for the many fine people in these areas who have tried diligently to help themselves out of their predicament, where natural resources have been depleted or industries have left. I do not mind saying that I have come to admire my colleague from Scranton, Pa., who sits on the same side of the aisle as I, and who in my mind probably best personifies the tremendous efforts of planning on the part of these communities to help themselves.

I do not believe, however, that this bill, the Spence bill, or now referred to as S. 1, is the proper legislation to put these communities back on their feet. It is important to remember that what we are trying to do is to give industry an incentive to build new plants and thereby create new jobs in these areas. This legislation starts with the erroneous assumption that there are numerous companies ready and willing to move into one of these depressed areas just as soon as arrangements can be made to find them a site and build them a plant. In other words, it is based upon the premise that the extension of credit is the key factor in the expansion of industry. I call to your attention that we have ample plant space in Michigan already built and unoccupied at the present time, and ours is only one instance where that is true. My point is that the extension of credit to build a plant is only one of many factors that persuade an industry to expand an existing plant, or to build a new plant. There are other factors just as important. These include the type of labor, markets, materials and services, transportation, as well as the local government and an intangible factor often referred to as business climate. During the subcommittee hearings on this subject, one of our witnesses testified that not more than 350 new plants a year are created. The representative of the U.S. Chamber of Commerce stated, and this should be obvious to us all, that there are already thousands of these industrial development agencies competing for these few new plants that are constructed each year. I call to your attention that almost all of these are presently advertising 100 percent financing for new plants. Quite properly then, we should conclude that credit is only one factor in locating a new industry.

I believe that it is imporant for Congress to recognize that there are other incentives to bring about the expansion of industry and the creation of new plants that are more important than simply extending credit. I know that I am digressing from the bill before us, but let us look for a minute at our policy

with regard to depreciation of plant machinery and equipment. We only have to look to the north, to Canada, to see the tremendous growth of that economy in the next decade. Again, we need only look abroad to Europe to see the growth of these countries. It is time that we in Congress should change our thinking with regard to depreciation for tax purposes. We must begin thinking in terms of "useful life" of machinery rather than in terms of "physical life." We must think in terms of "replacement cost" and not "original cost." Inasmuch as I have introduced a bill which would make these changes in our tax laws, I was very happy to see an article recently appearing in one of the newspapers in my district quoting President Kennedy as "renewing his pledge to quickly receive tax reforms to help business update its plants." These simple changes in our tax laws I submit to you will do more toward bringing about new plants and new jobs than any depressed areas bill such as you have here.

Getting back to the Spence bill that we have before us, however, I would like to talk to you briefly about those features of the bill which I believe have merit and those features to which I object.

First. The industrial loan provision, section 6(a): There was testimony in our hearings that some of the areas who have been conducting these industrial development programs, for more than a decade, have been having difficulty raising local funds. Now I do not deny that extending credit for construction of a plant is some incentive to industry to expand. I do say, however, that the capital you are providing under this system is minor by comparison to the overall need. In other words, you are doing this the hard way. Much more capital for expansion would be provided by a realistic depreciation policy for tax purposes. The effects would be felt by industry immediately, as well.

Second. The retraining provision in section 16(a): The testimony at our hearings indicated that some States have conducted very worthwhile retraining programs. I read only last week of a very successful retraining program conducted by the Armour Co. and its union in Chicago without any help from the Federal Government whatsoever. I believe that retraining makes sense. I say so because rather than for a person to just sit idly by and receive unemployment benefits, I would much prefer to have him learn something at the same time. However, I call to your attention that no reasons have been shown why all of the States have not been conducting such retraining programs, nor if the Federal Government is to get into the act, why the retraining program should not be tied in with the legislation we just passed to extend unemployment compensation benefits for an additional period of time. We in the minority of the committee feel that although these features of the bill have some merit, they can better be accomplished by the methods which I have described to you.

The objectionable features of this bill in my judgment far outweigh any benefits rendered. One of the most objectionable features is certainly section 5(b), "rural development areas." No one knows what areas these are. Everyone agrees that complete discretion in designating these areas is invested in the Secretary. Listen to what Mr. Hodges and Mr. Freeman have to say:

> Secretary HODGES. I agree with you that it is not as clear cut as would be desirable, and when you are dealing with a rural area it is not as specific, of course, as you have in your urban area. We would have to lean very heavily on the Secretary of Agriculture and his agency for their recommendations. We would have our own people doublechecking it to be sure of it.
>
> Mr. SCRANTON. In other words, there is no limitation, as you see it, in the criteria as to number; is that correct?
>
> Secretary FREEMAN. No, sir; I think this allows discretion as to that on the administrator.

Certainly, having these statements of Secretary Freeman in mind, we cannot justify handing over to him $100 million and let him determine wherever he wants to spend it.

Another equally objectionable feature of this bill is the provision for loans and grants for the construction of public facilities. Granting that public facilities are another factor considered by industry in locating a new plant, I point out to you that there are numerous communities throughout our Nation with such public facilities already constructed and with credit readily available, but which have, so far, been unsuccessful in attracting new industry.

As far as loans for public facilities are concerned, I call to your attention that the need has not been shown and, second, that we would be duplicating existing machinery. I say no need has been shown because, as we have set forth in our minority views, most of the areas have excellent credit. They are borrowing money as well, or better, than our Federal Government. I say that there is a duplication of machinery because we are already loaning money through the HHFA, the Community Facilities Administration, to communities all over the Nation for all types of public works projects. Just listen to this letter written to one of our communities from the HHFA, practically begging this community to borrow money to build any kind of a public works project:

> Other policies which in the past restricted public facility loans to water, sewer, and gas projects have also been changed to provide financing for all types of public works, except schools, which the community is interested in placing under immediate construction.

Even a more objectionable aspect of these public facility loans, however, is the fact that this bill includes a subsidized interest formula. This is preposterous as far as I am concerned. Having just finished serving as mayor in Saginaw, Mich., a town of 100,000 persons, I say to you that I do not believe that any of our citizens, nor any in the United States, expect our Government to lend money at a lesser rate than they can borrow it. This just does not make sense. Only this last week our Federal Government converted some obligations for 3 to 5 years and paid from 3.98 percent to 4.09 percent interest. How can we then justify lending at 3½ percent? Not even Secretary Hodges asks this. Here is what he says:

> I don't think it will make too much difference, sir, what communities could borrow money for because, keep in mind, you are dealing with communities that are in tough situations where money or credit is often not available at any interest rate.

Section 8 of the proposed bill, which provides for $75 million in grants for public facilities is just as objectionable. I heard it said that this bill would forestall the need for a huge public works program. On the contrary, that is just what this section of the bill is. A public works program cannot be justified on the basis of need. What are the communities in our district going to say who have already paid for these public facilities when they see our Government building them for free next door? Keep in mind that complete discretion is vested in the Secretary to decide what sort of facility, whether it be school, highway, public building, or any other project, where it will be built, or how much will be spent within the limits of the $75 million that we give him for a starter. This is poor legislation to end a recession, for the recession will be over by the time the project gets underway. I submit to you that for the Government to engage in a vast public works program is also highly inflationary, as well. I do not believe it can be justified under any circumstances today.

In summary, let me say this; I believe there are dangerous aspects to this bill other than those individual features I have pointed out. I would rather see us give industry incentive by a realistic depreciation policy, and conduct a retraining program where it belongs, than in a bill such as this, for I feel that this bill, itself, is a vast step toward socialized industry. I know that the cry of socialism has been raised for the last 30 years, but I call to your attention that where the Government begins to finance the plants, and where the Government determines where a plant shall be located, or denies such permission, is no less than the socialized industry that has been such a failure in England during the past years.

Much has been said about the antipirating provision in the bill. Neither Secretaries Hodges, Freeman, nor Goldberg felt that pirating could be eliminated entirely. No one as yet knows how to handle the situation where the company has a plant and built a new plant in a depressed area, then for reasons of its own decides to close the plant in the older established area. I was interested to read a clipping in the Wall Street Journal just the other day where Mr. Walter Reuther, the head of one of our largest unions, advocated that industry should be required to secure a permit or get clearance from the Federal Government before it should be permitted to move a plant. I call to your attention that this is just what we are doing in this legislation, and that it is, therefore, a big step toward socialized industry, which I am not prepared to accept. It is for these reasons that I oppose the Spence bill.

Mr. PATMAN. Mr. Chairman, I yield 8 minutes to the gentleman from Wisconsin [Mr. REUSS].

Mr. REUSS. Mr. Chairman, the chairman of the subcommittee, the gentleman from Texas [Mr. PATMAN], has made his usual comprehensive and thoughtful statement in support of the bill S. 1 with the committee amendment. There is little to add to it.

But I want to address myself briefly to the bill's antipiracy clause. As the gentleman from Texas well said, this is the strongest antipiracy provision ever put into an area development bill. It was the particular task of many of us on the subcommittee and the full committee to see that the most apt language possible for this task was used. The main antipiracy provision is contained in section 6, and provides that no loan shall be made "to assist establishments relocating, totally or partially, from one area to another."

That, I submit, Mr. Chairman, effectively locks up the bill against any possibility of pirating industry from one area to another.

That the committee's intent might be even more abundantly clear, it is set forth on pages 4 to 6 of the committee report just what those words mean. Specifically, the bill itself and the committee report lay it down that if a plant is to be erected in a new locality, the locality of distress, no loan can be granted if it even appears that some time in the future this might cause a plant to be withdrawn or relocated from some other area. The Secretary of Commerce is expressly vested with the power to see to that.

Secondly, the words "totally or partially" in the amendment just read are defined so that the Secretary of Commerce is required reasonably to assure himself that the establishment of the branch is not going to cause any unemployment in the area where the original plant is located. The prohibition is absolute; it is clear. We do not believe it will inhibit the good that this bill will do, but we do want to make it clear, and we certainly have made it clear, that if action under this bill is going to cause unemployment, then the action is prohibited.

Mr. VANIK. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Ohio.

Mr. VANIK. I want to agree with what the gentleman has said. I shared with him great concern when we began consideration of this legislation that the industrial communities where industry was now established would not suffer in any way as the result of this legislation; and I am satisfied, as he is, that the language we have adopted in committee is the strongest possible language and that it is the furthest, I think, that every community can feel assured that there will be no piracy under the provisions of this act. I might add, we hope the administrator of the act will, when loans are made, provide as part of the loan contract that there will be some penalties for bad faith or subterfuge if any should be practiced by anyone who is seeking to take advantage of the loan benefits under the terms of this legislation.

Mr. REUSS. I thank the gentleman.

Mr. WIDNALL. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I am glad to yield to my colleague, the gentleman from New Jersey, a member of the committee.

Mr. WIDNALL. I know the subcommittee and the full committee were greatly concerned with antipirating. I would like to ask the gentleman this question. With that evident concern, why was it not extended to the urban renewal section and to public facilities? In the substitute I have offered, it would cover both of those sections also, and I feel the committee bill has a few holes in it. It does not have that at the present time.

Mr. REUSS. The reason we thought it impractical to put anything into those sections is as follows. The urban redevelopment section, of course, is merely a section to be taken into consideration with the existing urban renewal and redevelopment provisions of the housing bill; and, as the gentleman well knows, there is no antipiracy section there because piracy is not really an issue. For example, we are redeveloping most of the major cities of this country. At the time of redevelopment, one cannot tell what plants may relocate in that area in the days to come. If we are going to try to engraft antipiracy provisions upon that section of the bill, I think it would tend to do away with the entire urban redevelopment program..

Mr. WIDNALL. I believe in the bill which was sent to the President last year, which was vetoed, there was such a clause covering urban renewal. Why was that removed this time?

Mr. REUSS. I do not know whether it was removed or not, because I do not recall whether it existed in the bill last year, but I repeat my answer to the gentleman. I yield to no one in my desire to find the strongest possible workable antipirating clause. The urban redevelopment program is a program independent of the area redevelopment act. Nowhere in the urban redevelopment program in general is there any antipiracy clause, and to add an antipiracy clause would not only produce an unbalancing effect applying as it would to only a small part of the urban redevelopment program, but I suggest that it is really not workable. How do you know when you tear down some old slum buildings in a city that five years later a plant may move into that area? The time to stop that plant from moving into the area, if it causes unemployment in the area of origin, is when it starts to talk turkey and wants to move to the new area.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Texas.

Mr. PATMAN. The Eisenhower administration proposed this provision. In the hearings before our subcommittee in 1959 at page 443, it was stated that the Widnall amendment would impose this unworkable requirement on aid to depressed areas, when no such requirement is imposed today under the regular urban renewal program on aid to prosperous cities. So, it will not work, as the gentleman properly said. You cannot except these things. And to make a requirement that you must show that there will be no piracy is making it impossible, because you do not even know who you will deal with if you deal at all. It is just making a climate in the local community such that the industry will come there when you do not know whether industry will come or not.

Mr. REUSS. I would ask the gentleman from Texas from what the gentleman is reading.

Mr. PATMAN. The 1959 hearings, page 443. This was the Eisenhower administration talking.

Mr. REUSS. I thank the gentleman from Texas. So, if one wants to serve the Eisenhower policy, he would not insist on an antipiracy clause in the urban redevelopment or community facilities section.

Mr. SEELY-BROWN. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Connecticut.

Mr. SEELY-BROWN. As one who appeared before the subcommittee in support of a strong antipiracy clause I am very pleased to see that you have included one in the bill as reported by the committee.

I wonder if before the gentleman's time expires he would make a few observations as to whether or not funds under this bill could be made available for such things as trade schools or schools in which trades can be taught? I would like to know whether or not there is anything in this bill which would prohibit that.

Mr. REUSS. I yield to the gentleman from Texas to answer the gentleman.

Mr. PATMAN. I do not believe it is in the bill. If it is, it is in the Widnall amendment also; but I may say that would not be permitted in either event, because that is not contemplated.

Mr. SEELY-BROWN. It is a question of a technical or training school.

Mr. PATMAN. Yes, it is possible for any retraining.

Mr. SEELY-BROWN. That is what I am getting at.

Mr. PATMAN. It would be possible there.

Mr. REUSS. Occupational retraining aid is in the bill in the amount of only $4.5 million. I would infer, therefore, that no brick-and-mortar program for school building is contemplated.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. WIDNALL. Mr. Chairman, I yield 5 minutes to the gentlewoman from New Jersey [Mrs. DWYER].

Mrs. DWYER. Mr. Chairman, I want to vote for an area redevelopment bill. In good conscience, however, I can do so only if the bill in question meets two tests: First, that the legislation is so written as to create honest prospects that it will effectively put people back to work in chronic labor-surplus areas; and second, that it will help depressed areas without hurting nondepressed areas.

The existence—indeed, the growth—over the past 7 or 8 years of well-defined

areas of the country which have not responded to the general growth and prosperity of the economy is a matter of the utmost concern. The problem of chronically depressed areas and long-term unemployment is no longer simply a local one, as both political parties have formally recognized. Its proportions are such that the Federal Government has a clear obligation to help.

In devising the means by which we propose to help put people back to work, we have a solemn responsibility to be frank. We must not lead the people of depressed areas to expect miracles. On the other hand, we must be as certain as possible that the assistance we provide will really help. The criteria in the bill by which redevelopment areas would be designated should be precise and realistic. And the channels through which aid would go to these areas should be designed for maximum effectiveness.

In both these respects, Mr. Chairman, it seems to me that the substitute proposed by my distinguished colleague from New Jersey [Mr. WIDNALL] is superior to the committee bill. It would tighten up the definition of redevelopment area and help reduce the possibility of waste through the dissipation of Federal aid in too many areas. And it would emphasize the most practicable forms of assistance by increasing plant loan funds, by expanding the existing public facility loan program, and by more than doubling funds for occupational training.

In discussing this legislation with many of our colleagues, Mr. Chairman, I have found much agreement that Federal assistance should be sent where it is needed most and where it will do the most good. I hope, therefore, that the House during this debate will make it clear that Congress intends this purpose. I suggest that three general standards would be suitable as an expression of congressional intent in this respect. The Area Redevelopment Act should be so administered as to give priority to and to concentrate the available assistance in redevelopment areas, first, where the rate of unemployment has been among the highest; second, where substantial unemployment has existed for the longest periods of time; and, third, where economic circumstances are such that the assistance can most effectively be utilized in developing employment opportunities.

These are general standards, Mr. Chairman, but I believe they would indicate to those charged with administering the legislation that Congress intends to establish priorities and to emphasize those areas where prospects are greatest that Federal assistance will result in substantial economic improvement.

Secondly, Mr. Chairman, I believe the so-called antipirating provisions in the legislation should be strengthened. I hope the House will agree to amend the bill by adding language to the declaration of purpose in section 2, specifying that assistance under the bill shall not be approved in any case where a loss of employment would result in any other area.

I would also hope that antipirating provisions would be strengthened in other relevant sections of the bill by adding language specifically prohibiting the use of assistance not only for relocating establishments but also for transferring production from plants in one area to establishments in a redevelopment area.

Most of us, Mr. Chairman, represent areas which are not yet classified as labor-surplus areas. We have an obligation to help keep these areas economically healthy. It would be futile, wasteful, and tragic if we should write legislation which encouraged, or even permitted, Federal funds to be used which would have the effect of transferring jobs rather than creating new ones.

Mr. DENTON. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. DENTON. Mr. Chairman, I am in favor of S. 1, to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas. For a number of sessions, I have introduced similar legislation.

There is a condition in the district I represent, which illustrates the need for the enactment of depressed areas legislation. My hometown is the city of Evansville, Ind. It is a community of approximately 140,000. One of the largest industries in the city was Servel, Inc., which at its peak employed about 15,000 people. Three years ago it discontinued operations.

Then, year before last, Chrysler, another large industry employing approximately 6,000 men, moved to St. Louis. A number of other small businesses in Evansville discontinued operations. All told, 20,000 wage earners lost their positions.

If you lived in a community where this happened, I am sure you would know that this was a real calamity. It might happen to any community, where, like Evansville, it was no fault of the community. If some disaster such as a flood, fire, tornado or earthquake, occurred, everyone would spring into action to help the victims. I assure you that a situation such as befell Evansville is a very serious disaster.

The people of the city have made an heroic effort to alleviate the situation. A survey has been made by an expert of the conditions in the community and recommendation made as to what can be done to alleviate the situation. A million dollars has been raised by popular subscription to build plant sites and attract industry to the community, and an additional $300,000 has been raised for loans to small businesses.

Evansville's Future, Inc., has been set up to deal with every phase of this unemployment problem. Surely, the Government should give some assistance to a community which has made such diligent efforts to rescue itself from such a disaster.

The bill before us provides for loans of $300 million, and grants of $95 million. If past experience is any criterion, the money loaned will all be recovered by the Government with interest and profit, so that the only money the Government will be out is the $95 million, to relieve the entire Nation from this critical situation. I am not opposed to foreign aid if the money is properly spent, but certainly any nation which has spent billions of dollars to relieve distressed areas all over the world can afford to spend $95 million to aid the depressed areas in its own boundaries.

There is some talk to the effect that distressed areas assistance would pirate and take business from other communities. The act prohibits that, but as one who has lived in a so-called distressed area, I can assure you we have no desire to take business from any other community. We simply know the conditions in an area which has been so disastrously affected. We know it is contagious, and we want to prevent it from spreading to other communities.

Mr. Chairman, I want to go on record as approving the passage of S. 1.

Mr. PATMAN. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. FLOOD].

Mr. FLOOD. Mr. Chairman, this is the third time that this committee and the House have considered this type of legislation. The imprimatur of the Congress has twice been placed upon the principle of this bill, the Congress has decreed twice that there is Federal responsibility to meet this demand, and I am sure this Congress will do the same.

I have heard certain papers read here today, not too well in some cases. The reason why would be obvious. The recent acquaintance with documents causes difficulty in semantics, syntax, and syllables, but when you have been here a hundred years as I have been this is not unusual. Strange little birdies drop stranger specks in certain hands—but this fools no one—unless it is the reader.

This bill does not bear the signet of the Bourbons. "Apres moi le deluge" for the first time in these debates has appeared, but only once or twice comes an important phrase in this debate that would lend assistance to trying to help people like mine. But the Bourbons are not dead. Maybe that is good. The contrast is startling on both sides.

Now, Mr. Chairman—and I tell you this because I have lived with it—for 6 years there has not been politics in this bill. I have served as chairman of an unofficial committee to help the leadership with this bill for 6 years, and with the distinguished gentleman from Pennsylvania [Mr. FENTON] and the distinguished gentleman from Pennsylvania [Mr. VAN ZANDT] and a dozen other Representatives of distinction, joined this year by my neighbor and a new Member, the distinguished gentleman from Pennsylvania [Mr. SCRANTON], for years together across this aisle have we joined hands to help the people in the distressed areas. Politics. From the bottom of the barrel came that one and only from a politician.

Now, this bill is not conceived by some long-haired, flat-heeled bureaucrat, somebody left over from the vestigial remainders of the New Deal, not at all. This is no brain child of some campus wonder that often we have all seen trotted in and out of here, and I joined you

and you me to deny that paternity. This bill has been written by Republicans and Democrats of distinction and seniority after hearings by the other body, with committees in 20 States for 6 years and by this House with its committee and in 20 States for 6 years. This is the synthesis not of some 90-day wonder but of the best brains in business, in finance, in labor, in every phase of the American economy. So was this bill born. Mark that.

Let me tell you this, and I have a right to say this, because I supported those bills, and I point to the distinguished gentleman from Alabama [Mr. ANDREWS], who sits on the foreign aid Committee on Appropriations, and I sat for years upon the defense Appropriations Committee; there was $500 million for a special fund for South America last year. To do what? To do exactly what this bill prays you do for the United States. Three hundred and ninety-four million dollars of that five hundred million was earmarked in one check to a special bank to build factories, to give jobs to South Americans.

This is a point 4 program for America. This is a foreign aid bill for my people and yours. This is bad? Can there be a Member, Republican or Democrat, who ever voted for any foreign aid bill who will vote "no" on this? I challenge you—I dare you. This is money that your people will borrow from your Government, and your people will pay back in American dollars, with interest—every dime. You are giving them nothing. This is no giveaway. Socialism? Drivel. I heard that ghost trotted across this well against every piece of constructive legislation that is now part of the body of American law. We have laid that ghost. Where have you been?

But the $500 million probably will not be paid back and if it is paid back it will be paid back—in dollars? No; in soft currency. To the Treasury of the United States? No; to the revolving fund of the bank. And my friend the gentleman from Alabama [Mr. ANDREWS] on the record asked the question last year, "Will this be the end, the $500 million loan to South America?" And the answer was, "No; it will go on for more than 10 years. It will come to $3 billion." And this bill is one shot for Americans alone, with interest, $340 million, the exact amount you put on a blank check into the bank for South America. And this is bad. This will destroy America. This will eat the heart of our poor unemployed who are being prostituted by these Socialists. ANDREWS, of Alabama? There is a Socialist for you, is there not? Look at him.

Dr. FENTON, of Pennsylvania? That bad old Socialist—Doc FENTON? JIMMIE VAN ZANDT, of Pennsylvania, three times national commander of the Veterans of Foreign Wars? JIMMIE's a "Red"? A Socialist? We should laugh off the floor any Member who tries that tack in this debate.

Mr. Chairman, I do not presume to be so impertinent or presumptuous with this committee on both sides to analyze this bill for you section by section. But I can.

DEPRESSED AREAS BILL VITALLY NEEDED

Mr. Chairman, as a further extension of my remarks made during the course of today's floor debate on the depressed areas bill, I submit the following supporting documentation which I feel should be made a part of today's House proceedings so that all who are interested in this vital and necessary program to aid the depressed economic areas throughout the Nation will have these figures on unemployment in various sections of the country on hand for easy reference.

I submit first my home State's unemployment figures—Pennsylvania's areas of substantial labor surplus—second, the surplus labor markets in the Southern States; and, finally, the surplus labor markets in Western, Mountain, and Pacific States; and North Central States:

PENNSYLVANIA'S AREAS OF SUBSTANTIAL LABOR SURPLUS

(Extension of remarks of Hon. DANIEL J. FLOOD, of Pennsylvania, in the House of Representatives, Thursday, March 23, 1961)

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release of March 17, 1961, issued by the Bureau of Employment Security, Department of Labor and Industry, Commonwealth of Pennsylvania, which was sent to me by the secretary of the department, Mr. William L. Batt, Jr. The figures incorporated in this release are broken down by labor-market areas, and it is to be noted that 26 of Pennsylvania's 29 classified labor-market areas are areas of substantial labor surplus.

This report, Mr. Speaker, certainly underscores the need for the passage by the House of the area redevelopment bill, approved last week by a wide margin, 63–27, in the U.S. Senate. These depressed economic areas in Pennsylvania and elsewhere in the country are looking toward this aid for real and solid help to assist them in meeting their long-term, chronic unemployment problems.

The indicated press release follows:

"According to January ratings, and following the national trend, 4 additional labor-market areas in Pennsylvania were classified as areas of substantial labor surplus, bringing the total to 26, according to a report released today by Secretary of Labor and Industry William L. Batt, Jr.

"The classifications of the areas are made jointly by the U.S. and Pennsylvania Bureaus of Employment Security on the basis of the adequacy of labor supply as of January 15, 1961, and showed 9 major and 17 smaller areas in the substantial labor surplus category. This represented the addition of three major and one smaller area since the November ratings.

"Layoffs in durable goods industries which were expected to continue over the next few months were primarily responsible for the reclassification of the three major areas, Philadelphia, York, and Allentown-Bethlehem-Easton. In Lock Haven, the smaller area, cutbacks in aircraft manufacturing and the anticipated closing of an electrical machinery plant prompted the labor surplus rating.

"Of these 26 areas, 19 are designated as 'areas of substantial and persistent labor surplus.' This constitutes an increase of three over November, one major, Pittsburgh, and two smaller labor market areas, Indiana and Sayre-Athens-Towanda.

"Since November, classification changes in the Nation as a whole resulted in an increase in the number of major areas of substantial labor surplus from 51 to 76. The number of smaller areas meanwhile rose from 123 to 152. Of the total number of substantial labor surplus areas in the United States, 103 are classified as 'areas of substantial and persistent labor surplus.'

"In January, the U.S. rate of unemployment again remained well below the Pennsylvania rate. The national percent of labor force unemployed in January was 7.7 and the Pennsylvania percentage was 11.4. Seasonally adjusted, the national rate was 6.6.

"The areas in Pennsylvania which are presently classified appear on the list below. Data presented include the estimated total number of unemployed workers as of mid-January and their percentage of labor force unemployed. These data reflect a revised method of computing unemployment. The computations were made in accordance with a new, standardized methodology developed by the U.S. Bureau of Employment Security in cooperation with State agencies. The new method which incorporates newly available data and the results of special studies is designed to establish a uniform system in all the States for estimating the number of jobless workers.

"Labor market area	Percent of total civilian labor force unemployed Jan. 15, 1961	Percent of total civilian labor force unemployed Nov. 15, 1960	Estimated total number of workers unemployed Jan. 15, 1961	November 1960-January 1961 net change in number unemployed

[1] Percent of civilian labor force. [2] Estimated. Source: State employment security agencies.

Mr. FLOOD. Mr. Chairman, this is the fourth Congress in which I have introduced an area redevelopment bill. The Senate has approved such a bill on four occasions, the latest on March 15 of this year by a vote of 63 to 27. Twice previously the Congress has adopted such a vital program and on each occasion it was vetoed by the former President.

I sincerely hope this Congress will consider the bill favorably and with a sense of urgency.

Rising unemployment and inadequate economic growth have accentuated the problems of unemployment throughout the Nation. Today there are nearly 6 million in this country out of work and in my congressional district of Luzerne County, Pa., the total unemployed is currently 17.1 percent of the work force, some 23,000 looking for gainful employment. Mr. Chairman, this is a tragic and an appalling thing to realize and contemplate. Twenty-three thousand in just one congressional district. Think of it.

Moreover, Mr. Chairman, the number of distressed economic areas has increased sharply in recent months, with some 101 out of a total of 150 major industrial areas now classified as distressed areas, according to an announcement just last week by the Department of Labor.

Unemployment throughout the Nation now exceeds 6 percent, but unemployment in the distressed areas is nearly twice as high, and in many communities it exceeds depression proportions of 15 percent or more, such as the conditions found in my congressional district.

There are also hundreds of counties in predominantly rural areas where incomes are extremely low and unemployment is extremely high. These counties have an additional population of from 4 to 7 million.

The express purpose of my bill, Mr. Chairman, is to establish an effective program for reducing substantial and persistent unemployment and underemployment in the distressed areas of the Nation and to help maintain a continuing high level of economy throughout the United States.

This economically unhealthy situation as we find at the present time creates hardship to many millions of individuals and their families and impairs the national welfare by wasting human resources. My bill will assist communities, industries, enterprises, and individuals in distressed economic areas to achieve lasting local improvements by the development of new employment opportunities.

Mr. Chairman, it is now generally accepted that the Federal Government has a responsibility to help assure maximum employment. This principle is now a part of the law of the land, through the enactment of the Employment Act of 1946. The persistence of high unemployment and underemployment in many areas should be fought by the Federal Government, not only because it causes great human suffering in these areas, but also because these conditions are a threat to the general welfare of the Nation.

The bill which I offer, Mr. Chairman, recognizes this responsibility to the areas of chronic unemployment and underemployment and provides for a program which will help the people of these areas expand their economic activities. The bill also proposes a program which will stimulate these areas to help themselves.

I sincerely hope that the House will adopt the bill which I have submitted, the same as that passed on March 15 of this year by an overwhelming vote in the U.S. Senate with Senator PAUL DOUGLAS, of Illinois, spearheading the attack and guiding it through that body to successful passage. This program, Mr. Chairman, is indeed very badly needed and needed right now.

Mr. Chairman, before this session of Congress ends it is my hope and the hope of many of my colleagues that the House and the Senate will have agreed upon an adequate and effective bill to aid the many U.S. communities suffering from chronic and persistent unemployment.

The Area Redevelopment Act, sponsored as S. 1 by the Honorable PAUL DOUGLAS in the Senate, was passed on March 15, 1961, by the Senate by a 63 to 27 rollcall vote.

Mr. Chairman, I share with my colleagues and with thousands of unemployed Americans throughout our Nation the fervent hope that the House will soon have an opportunity to act upon this proposal.

One of the groups which has led the fight for area redevelopment legislation is the Area Employment Expansion Committee, of 99 University Place, New York, 3, N.Y.

Recently this organization prepared an excellent summary and legislative history of the fight for area redevelopment legislation. I should like to list the table of contents of this fine and comprehensive piece of research work:

	Page
I. Introduction	1
II. History of Federal Action Respecting Distressed Areas	1
III. Legislative History Relating to Area Redevelopment Bills	2
IV. Legislation: Principles and Comparison of Bills	3
V. Need for Area Redevelopment Legislation	4
VI. Response to Opponents of Area Redevelopment	7
VII. Positive Features of Bill	8
VIII. Organizations Which Support the Legislation	8

Mr. Chairman, I take pleasure in the opportunity to bring this fine research to the attention of Members of Congress by joining with several of my colleagues to insert the entire text in the CONGRESSIONAL RECORD:

I. INTRODUCTION

Proposals for area redevelopment legislation have been before the U.S. Congress for more than a decade. The basic principles have been endorsed by both parties in convention and by their leaders. Differences have involved the amounts of the assistance, the need for integrating rural and urban area redevelopment, the proposals for loans and grants for public facilities, the provision for subsistence grants for the unemployed who are being retrained, and the administrative machinery for carrying out the program.

The needs of the chronic labor surplus areas are most urgent. Their problems become more intense and their solution more complicated the longer they persist. The human, social, and capital waste is high. The cost is a tremendous burden upon our communities and State and Federal Governments.

It should be emphasized that in virtually every case these local communities have exerted the maximum effort of which they are capable toward their own economic rehabilitation. Residents of the stricken communities have literally given till it hurts to raise money for industrial site preparation, plant construction, and other services necessary to attract industry. The simple truth is that, in most cases, local financial resources have been exhausted.

So long as these communities remain unassisted in their efforts at redevelopment the Nation is neglecting its commitment under the Employment Act of 1946 to achieve maximum employment, production and purchasing power.

The American people have undertaken to finance economic redevelopment of the distressed and underdeveloped areas in foreign countries. It appears appropriate that we establish a similar program for our own people confronted with comparable problems. If a point 4 program is a good program for us to carry on overseas, it is doubly worthy for us to carry on at home.

II. HISTORY OF FEDERAL ACTION RESPECTING DISTRESSED AREAS

A. Urban areas.

The initial interest in the problem of distressed areas can be traced back to the recession of 1949. There have been persistent subsequent efforts to provide some assistance to these communities, but these steps have been largely temporary and inadequate.

1. The E area program (1949–50).

The executive branch of the Government ordered that aid be given to the E labor market (very substantial labor surplus) by channeling regularly budgeted Federal activities, primarily procurement and construction, to these areas. In all, 62 areas became eligible at one time or another but only 36 shared in the modest consideration. Some observers doubt that any substantial priorities were given these areas.

2. Defense manpower policy No. 4 (February 1952).

This policy was designed for labor surplus communities adversely affected by the cessation of military contracts. In the 85 months through March 1959, contracts amounting to only $213 million were allocated to these areas by virtue of DMP No. 4.

3. Extra accelerated tax amortization (November 1953).

The program for rapid tax amortization for investments in facilities needed for the Nation's industrial mobilization base was further liberalized first for chronic and later for all substantial labor surplus areas. Through April 1959, only 71 facilities were located in 38 areas, for an investment of $318 million, providing jobs for approximately 16,625 workers. This program ceased functioning at the close of 1959.

4. Buy American Act.

American producers supplying goods substantially all of which are produced in areas of substantial unemployment may enjoy a price differential of either 12 or 20 percent depending upon the formula. No data are available on the benefits.

5. U.S. Employment Service.

Since 1949 this Service has helped a number of communities in their developmental activities by providing information on the local labor markets and labor supply but it has been limited by inadequate staff resources.

6. Office of Area Development (U.S. Department of Commerce).

This Office has provided technical pamphlets and statistical studies to all communities seeking help and information to attract new industries without regard to their employment experience.

7. Urban planning grants (HHFA).

Section 701 is designed to aid long-term planning by communities of less than 50,000 population and counties of less than 25,000 population suffering from major natural disasters or rapid urbanization following Federal installations. No special provision is made for distressed areas.

8. Urban renewal (HHFA).

This program aids communities to eliminate slums and blight in predominantly residential areas. No special provision is made for distressed areas.

9. Community facilities (HHFA).

(a) The program for public facility loans may be used by a community of less than 10,000 population for water and sewer systems if it has been denied credit by at least two lending institutions and submits evidence of an ability to repay. No special provisions are made for distressed communities.

(b) The program for interest-free advances for public works planning, which have gone primarily for sewage and water systems, is limited in amount. There is no special provision for distressed areas.

10. President Eisenhower in 1960 set up an interdepartmental committee to "coordinate Federal urban area assistance" which is staffed by the Office of Area Development of the U.S. Department of Commerce.

B. Rural areas.

A rural redevelopment program was instituted in June 1955 to increase productivity of low-income farm people; increase prospects for employment in part-time and nonfarm jobs by encouraging nonagricultural outlets in rural areas; increase opportunities for young people to secure training; and raise the social and economic standards in low-income rural areas. The primary responsibility is lodged with the U.S. Department of Agriculture.

Appropriations consisted of $2,061,645 in fiscal 1957 distributed among the Agricultural Extension Service, Soil Conservation, Agricultural Research Service, Agricultural Marketing Service, Farmers Home Administration, and some information and administrative offices.

In the fourth annual report covering the years 1958–59 the Secretary of Agriculture reported that some 200 counties in 30 States and Puerto Rico had been included in the rural development program areas.

In October 1959, the President formally constituted a committee for rural development programs, supplanting the earlier committee which had been operating informally.

Thus the need for rural redevelopment has long been recognized. The program established by S. 722, described later in this document, insures that this recognized need will be adequately met.

III. LEGISLATIVE HISTORY RELATING TO AREA REDEVELOPMENT BILLS

A. S. 281 introduced in 1949 sought to implement the Employment Act of 1946 and in title V provided specific aids to areas of serious unemployment. After certification such areas would be examined and measures for economic adjustment would be recommended for them. It provided for placement of Government contracts in these areas; RFC loans to private industry; an unemployment emergency reserve fund; retraining facilities; relocation funds; maintenance allowances for trainees.

B. In 1950 a similar measure was introduced, entitled H.R. 7444.

C. Republican candidate Eisenhower in his 1952 speech at Lawrence, Mass., promised to help hard-hit communities.

D. The March 1955 report of the Joint Committee on the Economic Report urged that loans and technical assistance be extended to distressed areas. The committee declared that "we are very concerned with distressed conditions which persist in certain industries and regions, even in an expanding economy. We believe that action is required now and that much can be done through public works to assist these communities. The Federal Government should recognize its responsibility to those areas and industries by promoting research to discover new products and new processes. Consideration should be given to the possibility of modifying the unemployment compensation programs to meet the special problems of retraining and readjusting facing these areas. Loans, technical assistance and, as the President recommends, an expanded area development program should be provided for these areas to help them to adapt to changed economic conditions." The Democratic members of the committee criticized the Economic Report of the President for identifying the problem as a local rather than as a national one. The committee itself declared that "we must recognize and deal with unemployment as a local as well as a National and State problem. The failure of the executive branch

to show sufficient vigor in its approach to this problem disturbs us. It should have occupied a high place in the Economic Report." (Statement of supplemental views of Senators Douglas, Sparkman and O'Mahoney, Representatives Patman, Bolling, Mills and Kelly.)

E. Senator PAUL DOUGLAS introduced the Depressed Areas Act (S. 2663) in July 1955 to provide assistance for distressed areas.

F. The Subcommittee on Low-Income Families of the Joint Committee on the Economic Report recommended in January 1956 that "there be established in the executive branch of the Federal Government a central group with the responsibility of preparing a coordinated comprehensive program aiding currently depressed industrial and rural areas."

G. The President's Economic Report for 1956 reversed its position of the prior year and concluded that the "fate of distressed communities is a matter of national as well as local concern," and recommended special legislation. The report further added that "although these (administrative) programs have proved helpful, experience demonstrates that bolder measures are needed. To this end, a new area assistance program is recommended for aiding a community that experienced persistent and substantial unemployment."

H. Senator Smith, of New Jersey, introduced the administration's bill (S. 2892) entitled "Area Assistance Act of 1956."

I. The Senate in the 84th Congress, 2d session, passed a revised Douglas bill. It was reported out by the House Banking and Currency Committee but it died in the House Rules Committee.

J. Both major parties in their 1956 platforms called for Federal legislation to aid economically distressed areas.

K. In the 85th Congress, Senator DOUGLAS and cosponsors introduced a slightly revised version of the bill considered in the preceding Congress (S. 1433) which was followed by another administration bill (S. 9641). Hearings were held in the first session. A clean bill (S. 3684) was reported out in the second session by the Senate Committee on Banking and Currency. This bill passed the House with some slight amendments and was finally sent to the President at the end of the session. The President pocket-vetoed the bill on September 6, 1958.

L. In the 86th Congress, Senator DOUGLAS introduced a similar bill (S. 722) which was followed by the administration bill called Area Assistance Act of 1959 (S. 1064). After some modifications, S. 722 was passed by the Senate. The House Banking and Currency Committee revised the Senate bill and asked for a rule from the House Rules Committee. The report of the House Banking and Currency Committee was filed May 14, 1959, and is House Report No. 360.

M. The Special Senate Committee on Unemployment Problems conducted a series of hearings on unemployment in many major centers at the end of 1959 and the beginning of 1960. These hearings brought to light the plight of the distressed areas. The recommendations of this special committee can be obtained by contacting the committee in Room 357 of the Senate Office Building, Washington 25, D.C.

N. The Joint Economic Committee conducted an extended series of hearings on "Employment Growth and Price Levels" during 1959. Both the staff and committee reports urged action on distressed areas.

1. The staff report declared that "Federal leadership is needed to assist the recovery of a number of chronically distressed areas. Both technical and long-term financial aid will probably be required. Assistance programs should be of sufficient scope to justify the expectation that the areas will become self-sustaining within a reasonable period. While some nonrecoverable costs may be incurred by the Federal Government in this effort, a well-planned program for reviving the chronically depressed areas should result in a net economic and social gain to the country" (staff report, p. xxix).

2. The Joint Economic Committee in its report concluded that "a program of assistance to chronically depressed areas should be started. Both technical and long-term financial aid will be required to help these areas to become self-sustaining and to help themselves. Where necessary, retraining of workers should be undertaken, particularly where the long-term outlook for an area is poor" (Senate Rept. No. 1043, p. 54).

O. The 1960 Economic Report of the President declared:

"Legislation is needed, however, to supplement and strengthen these efforts to help areas of persistent unemployment create new job opportunities. Such legislation should stimulate and complement efforts of communities to help themselves, should promote maximum participation by private financial institutions and by State and local agencies, should encourage the creation of new job opportunities rather than the mere transference of jobs from one area of the country to another, and should encompass technical aid for the economic diversification of rural low-income areas and single-industry communities."

Mr. FLOOD. Mr. Chairman, under unanimous consent, I include in the RECORD the following portion of the text of an article prepared by the Area Employment Expansion Committee on the subject of area redevelopment legislation:

IV. NEED FOR AREA REDEVELOPMENT LEGISLATION

A. Urban areas.

1. Unemployment persistently concentrated in chronically distressed areas in good and bad times.

(a) Unemployment persists in chronically distressed areas.

(1) The number of labor markets with substantial labor surpluses (6 percent or more unemployment) fluctuates with the rise and fall in business activity but distressed areas continue with substantial labor surpluses.

Areas of substantial labor surplus (unemployment of 6 percent or more of the labor force)

[1] Recession months between start of decline and return to prerecession levels of industrial production.

Source: U.S. Department of Labor.

(2) The chronically distressed communities (with 6 percent or more unemployment for at least 18 months out of the last 24 months) persist. Even in periods of general prosperity they have substantial labor surpluses. Chronic unemployment is only slightly relieved even when unemployment is low in the Nation as a whole.

The number of chronically distressed labor markets has continued to rise. The recent recession created a new group of chronically distressed labor markets, because of dislocations in the automobile and aircraft industries.

Labor markets	1957, August	1958		1959		
		January	July	January	May	November
Areas with substantial labor surplus (total)	89	117	250	259	246	177
Major areas	24	45	89	76	57	31
Small and very small	65	72	161	183	189	146

Major areas	12	18	21	22	32	29
Small and very small	53	52	54	97	147	143
Chronically distressed labor markets as a percentage of all of labor markets with substantial labor surplus	73	60	30	43	73	97

[1] Exclusive of Alaska labor markets.

Source: Area Employment Expansion Committee. These data include more smaller communities than are listed by U.S. Department of Labor.

(b) Unemployment unduly concentrated in chronically distressed labor markets.

The rate of unemployment continues to be unduly high in the distressed labor markets. In November 1959 the total unemployed in the 172 distressed labor markets (exclusive of the 5 in Alaska) numbered 923,000. Though these areas had 13.7 percent of the civilian labor force, they included 25.1 percent of the unemployed. The rate of unemployment in these areas was 9.8 percent as compared with a national rate of 5.3 percent.

Unemployment in the United States and in distressed areas, 1959

	January	May	November
United States:			
Civilian labor force (thousands)	67,430	69,405	69,310
Unemployment (thousands)	4,724	3,389	3,670
Percent unemployed	7.0	4.9	5.3
Distressed areas:			
Number	119	179	172
Civilian labor force (thousands)	7,552	10,079	9,465
Unemployment (thousands)	812	1,091	923
Percent unemployed	9.3	10.8	9.8
Civilian labor force as percent of United States	12.9	14.5	13.7
Unemployment as percent of United States	17.2	32.2	25.1

(c) Chronically distressed labor markets suffer from substantial labor surpluses for long periods.

The principal characteristic of unemployment in the chronically distressed communities is that the substantial labor surplus continues to fester for long periods of time. Recovery is not quick. Even the labor market which is later graduated out of the distressed condition takes many years for significant improvements to occur. In some areas the relief has come from the outmigration of people and the reinvigoration of existing rather than new enterprises. But where these alternatives are not easily available the recovery is particularly slow in coming. It has taken some communities a decade or two of the most aggressive local action to effect a measurable reduction in unemployment. The reason basically is that the community may have failed to redevelop itself properly to provide the base for a new industry.

Evidence of the length of the time of the persisting substantial labor surplus is provided by the following table, which enumerates the time of the start of the most recent period of continuous substantial labor surplus.

Date of start of last period of substantial surplus	Total	Distressed labor markets		Number with prior period of substantial labor surplus
		Major	Smaller	
1951	1	1	0	0
1952	18	6	12	0
1953	8	1	17	0
1954	10	1	9	1
1955	11	0	11	1
1956	17	1	16	5
1957	75	15	60	30
1958 (October or before)	26	7	19	8
Total	166	32	144	45

Some labor markets with more recent starting dates for their chronic distress had suffered prior periods of substantial labor surpluses. The revival was short lived and these communities fell back again into the category of chronically distressed.

(d) Few chronically distressed communities graduate out of classification.

The vague hope that many communities will be able to graduate out of the chronically distressful conditions is not justified by experience. On the contrary, the best available data appears to confirm the conclusion that ony a small group of distressed labor markets have lifted themselves to a better status.

Of the total of 116 labor markets which between July 1953 and March 1958 became chronically distressed, only 41 were not so classified in March 1958. Of the remaining 75 labor markets, 64 were continuously distressed from the time their economic difficulties began and they continued unrelieved in this condition of substantial labor surplus. The remaining 11 experienced a temporary period of economic revival.

The 41 labor markets which were not classified as chronically distressed in March 1958 included 19 which had as substantial labor surplus in January or March 1958.

Labor markets chronically distressed, July 1953–March 1958:

1. Total chronically distressed labor markets, 112.

2. Number of labor markets suffering continuous distress from time of origin, 64.

3. Markets which experienced partial revival but chronically distressed as of March 1958, 11.

(a) Chronically distressed in prior period of labor surplus, 4.

(b) Substantial labor surplus but not chronically distressed in prior period of labor surplus, 7.

4. Labor markets formerly distressed markets but not so classified in March 1958, 41.

(a) Areas with a substantial labor surplus in January or March 1958, 19.

(b) Areas not classified as having substantial labor surplus as of March 1958, 22.

(c) Structural unemployment core of unemployment problem in good times.

Deputy Assistant Secretary of Labor Charles D. Stewart declared recently that "one-third of the unemployed in periods we usually regard as one of full employment fall in this (structural unemployment) category."

2. Chronic unemployment in distressed areas is caused by longrun economic changes.

A. Types of economic changes causing chronic unemployment.

1. Industries have declined because new products or services have captured the markets.

(a) Oil has challenged both anthracite and bituminous coal and has preempted many significant markets.

(b) Diesel power has supplanted steampower on the railroads with far-reaching effects, seen in the reduction of the number of repair stations and in the amount of railroad equipment built by the railroads and other service industries.

(c) The railroads have lost out to trucks, passenger cars, and airplanes so that number of spur lines has been reduced and the volume of passenger traffic dropped. Employment has decreased.

(d) Synthetic fibers have made tremendous inroads on silk and wool. The former has been practically eliminated except for specialized restricted areas.

(e) The change in the types of refrigerators has resulted in the closing of a number of older plants.

2. Regional migration has denuded older areas of plants.

(a) The migration has been particularly marked in the soft goods industries. Where there has not been any significant migration, the relative rates of growth in various areas have differed strikingly.

In the textile industry, many mills moved South during the twenties. While the number of such shifts has since been small, the rate of attrition has been high in the North, whereas mill closings in the South have been the exception until recently.

(b) The apparel industry has been subject to violent shifts in location since the beginning of the century. The movement out of the large cities to new markets has been frequently recorded. Recently the so-called newer markets and areas have been losing plants to southern locations.

(c) The electronics parts industry, originally located in the large cities, has been standardized so that production units could be moved to outside lower wage areas. Such migration has taken place at an impressive rate during the last decade.

(d) The automobile industry has been highly decentralized as assembly and parts plants have been placed nearer the consumer markets. As growth of the industry has been halted, the older areas have witnessed many plant closings.

3. Some industrial changes result in plant closings.

(a) The amount of subcontracting by the automobile industry resulted in the shutdown of many parts plants.

4. Changing military requirements have left many communities stranded.

(a) Military installations have been closed as the size of the Armed Forces has been reduced.

(b) The substitution of missiles for armed aircraft has had many significant effects. It has resulted in a severe reduction in the aircraft industry. Some plants have been converted to electronics and become part of the missile industry. The full impact has not yet been felt as increased civilian demands for jet planes has helped fill part of the gap.

The new military defenses require less warehousing and storage facilities, resulting in the closing of depots.

5. Automation and increased mechanization and efficiency have resulted in lower labor demands.

(a) Man-hour productivity is constantly rising. This is effected through mechanization, automation, better management, better materials and standardization of processes. Almost every industry is affected.

(b) Industries in which output is not rising or is declining and yet are experiencing considerable advances in gross productivity are necessarily reducing manpower needs; as witness the textile industry.

(c) New processes may render older plants obsolete and demand a change in the location of the operation as exemplified by the meatpacking industry.

(d) Automation will reduce the needs for warehouses, branch offices and shipping facilities.

6. Import competition is accelerating the decline or forcing the shrinkage of some industries.

(a) Imports have captured the markets for some industries such as leather and knit gloves, watches and clocks, flatware, tubular brass plumbing, rope, chinaware. As a result they have caused plant closings in these industries.

(b) Raw material industries have found that lower foreign prices make them noncompetitive and some mines have been affected by this competition. These include fluorspar, lead, zinc, antimony, copper and iron ore industries.

7. Depletion of natural resources.

(a) Lumber and other raw material product industries have in some areas been affected by sheer exhaustion.

B. Scientific, technical, product, and economic changes will continue.

1. America's investment in scientific research and development is rising. In 1957 it had increased to $10 billion of which about three-quarters was done by private firms. This research is constantly stimulating new products, new industries, and new consumer demands, rendering older ones obsolete.

2. The rate of man-hour productivity is rising. The National Bureau of Economic Research has declared that "the long-term pace of advance in output per man-hour has been speeded up." The average annual output per man-hour increased, according to the U.S. Bureau of Labor Statistics, 4 percent in 1909–19 and 2.9 percent in 1939–58. The rate for 1947–58 was 3.1 percent.

3. The rate of increase in productivity in many industries is even higher than the national average: candy, 19.8 percent; cigars, 18.1 percent; copper, 10.7 percent; iron ore, 9.4 percent; flour, 7.5 percent; synthetic fabrics, 15.2 percent; bituminous coal, 6.8 percent; railroads, 6.2 percent.

4. Dr. Arthur Burns has concluded that "the life histories of industries are becoming shorter * * * [the] increased birth rate of new products means an increase in death rate of old products and a decline in the average life span of individual industries."

5. The continuance of these changes spells the obsolescence of different parts of our economy and the displacement of workers. Where one or another industry provides a substantial part of the employment, the industry when declining will cause a labor surplus. If the community is itself not immediately ready to fit into the newer industrial and economic trends, it will suffer from long-term chronic unemployment.

C. Industries primarily responsible for heavy unemployment in chronically distressed labor markets.

Area Employment Expansion Committee Fact Sheet 42–A lists the industries primarily responsible for heavy unemployment in chronically distressed labor markets and the specific areas affected.

Mr. FLOOD. Mr. Chairman, I include the following portion of the text of an article prepared by the Area Employment Expansion Committee on the subject of area redevelopment legislation:

The industries listed in this fact sheet are—mining: Anthracite, bituminous, fluorspar, iron ore, lead and zinc, copper, and antimony; quarrying: limestone; fishing and seafood processing; oil refining; tobacco; textiles; apparel; logging and lumber; shoes; leather; metal and products: fabricated, brass, clocks and watches, air conditioners, refrigerators, textile machinery, electrical equipment, other machinery and railroad equipment; automobiles; aircraft; ordnance; railroads and repair shops; stone, clay, glass, pottery; chemicals; Federal and military installations; shipbuilding; agriculture; construction; natural resources industries.

D. Cycles of major industries in difficulty.

The distressed area problem has gained particular attention because of the tendency for adversity to hit a group of communities dependent upon the same major industry at relatively similar periods. The concentrated effect tends to highlight the problem.

In recent years, the contracting cycles have been associated with important American industries.

(1) The reverses in the anthracite and coal industry beginning in the thirties.

(2) The liquidation of northern textile mills in the twenties and fifties.

(3) The closing of railroad repair shops and contraction of railroad employment beginning in the thirties.

(4) The decentralization of the automobile industry during the fifties.

(5) The substitution of the missiles for manned aircraft in the fifties.

3. Communities in distressed and chronic condition of substantial labor surplus.

(a) The communities adversely affected by these economic trends are with few exceptions centers of advanced industrial development. Otherwise they would not have attracted high concentration of population and enterprises. Being urbanized communities they have not only the core industries upon which their development was founded but all of the service and auxiliary developments with which to supply the needs of the people. They are communities in which there are vast investments of private, commercial, and industrial capital.

(b) Most of the distressed communities are dependent upon one or two industries which have suffered reverses. In some there has been a concurrent drop in a number of interrelated industries as has occurred in the communities dependent upon the automobile industry.

(c) There are among the distressed communities a large number of single industry communities.

There are many other similar communities in the United States. A study of the U.S. Census of Manufactures for 1954 indicates that of the 3,103 counties, there were 1,986 or 64 percent in which the largest two companies accounted for 50 percent or more of the manufacturing activity in these counties. The proportion in the counties with less than 1,000 manufacturing employees was 70 percent indicating the high dependence upon two employers.

(d) No community is safe from the above reverses. It is clear that the high dependence on a limited number of industries increases the chances of reverses, but complete diversification is not feasible or economically sound. It is better to deal with the problem in realistic terms of establishing provisions for handling the reverses when they come. There can be no insurance policy against adversities.

4. Migration from distressed areas is no general solution.

(a) It is often quite casually suggested that the solution for the distressed areas is the outmigration of the people to other communities. This well-meant suggestion ignores the difficulties standing in the way of this solution.

(b) Some people do move out of the distressed areas. As a matter of fact there are considerable disadvantages in such outmigration. First, it deprives the community of many younger aggressive and ambitious persons. Second, these people tend to return as they face reverses in the newer communities aggravating the lot of the distressed community at a time when it is least able to face the problem.

(c) There is a large volume of migration taking place in the United States which already taxes our national facilities and skill. There is a movement from rural to urban and from urban to suburban areas and other purely personal shifts. People move for various reasons including the desire for advancement, preferred jobs in terms of wages, benefits and prospects.

Surveys on migration already indicate that each year, 7 percent of the population changes its place of residence across county lines and 3 percent across State lines.

A study of unemployment shows that 10 percent of unemployment is accounted for by voluntary shifts, 20 percent by seasonal factors, 20 percent by new job seekers, 30 percent by structural changes and 20 percent by the mobility of people for personal reasons.

A study of population changes from 1940 to 1950 indicates that 1,051 counties lost population, 1,535 had a stable population and 430 showed a fast rate of growth in population.

(d) The people who are not readily moving are reluctant to move because of the difficulties it would entail either to them personally, their investments or both.

People don't want to move because of their strong attachments, social ties, home ownership, possible losses from the sale of houses, advanced age, fear of distant parts, dependents, fear of adjustment, and differences in ethnic backgrounds. Housing problems may be encountered. Moreover jobs in the new community are tentative and uncertain.

Businessmen and people with investments cannot move easily since their livelihood is often completely tied up with a specific locality.

(e) There are no real shortage areas in the United States. In January 1960 there were no major labor markets classified in group A. The occupational shortages relate to skilled professional and clerical jobs.

(f) The cost of migration is sufficiently high as to discourage workers.

Migration can be of help to individuals, and may assist individual communities where redevelopment will not be adequate to absorb the total displaced, but it is not the answer to the problem of chronic unemployment.

5. Local efforts for redevelopment are insufficient.

(a) Most of the recovery experienced in distressed areas has been due to expansion and revitalization of existing industry or outmigration or commutation, often at very high cost to the individual and community.

(b) The three presently available approaches to redevelopment are inadequate.

(1) "Realtor approach." This is a common one which seeks to find an employing tenant for existing vacant space.

(a) This approach is inadequate because it relies on existing space which is obsolete and attracts tenants who want low-price floor space. These may not be energetic and expanding companies.

(b) If the tenant is successful, he will want to expand and find modern space. Otherwise, he is likely to close up.

(2) "Diversification approach." This has been endorsed by the U.S. Department of Commerce and many developers. The purpose is to bring in new industries. This approach may not be economic since there may not be a justifiable base for diversification. Economic advantage may not support it. Diversification is no guarantee against chronic unemployment.

(3) "New commercial and industrial structures. This approach seeks to build a new plant and secure a tenant for it.

(a) This approach may net a tenant but there is no assurance that it will be sufficient to stop the decline in employment or that the new plant will become the nucleus for new economic growth. Many communities with new plants find that they have no multiplier effect.

(b) Local communities and State groups may exhaust their financial resources to build plants.

(c) Local programs often falter and fail. The reasons for these failings are:

(1) They may lack sufficient funds for the project as resources are drained by their local recession and as tax capacity dwindles. The longer the distress, the more limited are the resources.

(2) They become discouraged at the meagerness of the results.

(3) Local vested groups often resist expansion and the appropriation of funds to pay for it.

(4) The people may become resigned to the patterns of unemployment and underemployment.

(5) Local leadership is often lacking after the major industry leaves.

(6) Neglect of distressed urban communities conflicts with Employment Act of 1946.

(a) The act prescribes "maximum employment, production, and purchasing power." The tolerance of chronic unemployment defeats this end. Economic growth depends upon the optimum use of our resources.

(1) The neglect of distressed communities means the deterioration of manpower, entrepreneurial skills and experience; public and social capital; private commercial, personal, and industrial capital.

(2) The development of new communities demands costly investments in new facilities which duplicate existing ones. We already have a tremendous backlog resulting from the unfinished development of our suburbs. The completion of these communities should

have a high priority on our capital investment.

(3) Many new or rapidly growing communities already have difficulty in absorbing new population. The cost of facilities is very high.

(4) The conservation and renewal of existing communities through redevelopment is cheaper and wiser, since much of it involves renewal rather than clearance for redevelopment.

(b) Neglect of unemployment areas is costly.

(1) Large scale unemployment means high costs of poverty in the form of costs of relief, unemployment, high rate of dependence, slums, social evils, and other problems.

(2) Chronic distress means business bankruptcies.

(3) Disuse brings deterioration of public and private capital.

(4) Low income means deterioration of public services for raising young (low standards of education, hospitals, welfare facilities). This places a burden on the Nation as a whole.

(5) Unemployment spreads pessimism and disaffection.

(6) Unemployment depresses wage scales generally.

B. Rural areas.

1. Rural unemployment, underemployment, and low income widely known.

There is little dispute about the prevalence of rural poverty and underemployment. Studies by the Joint Committee on the Economic Report and the Department of Agriculture highlight these facts.

One of every three commercial farms in this country had in 1954 gross sales below $2,500. One quarter of the farm families had an annual income of $1,000 or less.

The greater preponderance of the counties in which unemployment is chronic and in which low standards of living prevail is in the Southern States, particularly Alabama, Arkansas, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. Additional low-income counties are to be found in Florida, Illinois, Michigan, Minnesota, Missouri, and New Mexico.

2. Characteristics of rural distressed areas.

a. These are communities in which population increases have outrun local resources.

b. Population has increased faster than outmigration.

c. Nonfarm jobs tend to be limited.

d. Farms are small and underdeveloped with low capital investment.

3. Rural redevelopment program is inadequate.

The present program sponsored by the Department of Agriculture is inadequate. It rests primarily upon voluntary cooperation and little or no funds are provided the areas. In the period from 1958–59, the budget provided $15 million for the Farmers Home Administration for additional local authorizations in the pilot counties or about $150,000 per county and $2.6 million for the special services and research activities by public agricultural agencies assisting the program. No funds have been provided for industrial development.

4. Local resources are not sufficient to remove rural poverty.

The National Planning Association declared that "to place exclusive emphasis on private initiative and local initiative is unrealistic and self-defeating. If a century and a half of dependence on local initiative has failed to eliminate America's low-income rural regions, it seems futile to depend only upon such initiative to solve the same rural poverty problems still before us."

5. Rural redevelopment requires outside capital and experience.

V. ORGANIZATIONS WHICH SUPPORT THE LEGISLATION

American Federation of Labor-Congress of Industrial Organizations, Area Employment Expansion Committee, National Farmers Union, the National Grange, American Municipal Association, Southern State Municipal Leagues and Cities, Conference of Mayors, Local Development Councils, Local Councils and Legislatures, National Planning Association.

Mr. Chairman, I would like to add a list of the areas by States, congressional districts, and names of Representatives of such districts declared to be areas of substandard and persistent labor surplus, as follows:

Areas of substantial and persistent labor surplus

	Congressional district	Congressman
NEW ENGLAND		
Maine:		
Small: Biddeford-Sanford	1	Peter A. Garland, Republican.
Massachusetts:		
Medium:		
Fall River	14	Joseph W. Martin, Jr., Republican.
Lowell	5	F. Bradford Morse, Republican.
New Bedford	9	Hastings Keith, Republican.
Do	14	Joseph W. Martin, Jr., Republican.
Small: North Adams	1	Silvio O. Conte, Republican.
Rhode Island:		
Medium:		
Providence-Pawtucket	1	Fernand J. St. Germain, Democrat.
Do	2	John E. Fogarty, Democrat.
Connecticut:		
Small:		
Ansonia	3	Robert N. Giaimo, Democrat.
Bristol	1	Emilio Q. Daddario, Democrat.
Do	5	John S. Monagan, Democrat.
Danielson	2	Horace Seely-Brown, Jr., Republican.
MIDDLE ATLANTIC		
New York:		
Small:		
Amsterdam	32	Samuel S. Stratton, Democrat.
Auburn	36	John Taber, Republican.
Gloversville	32	Samuel S. Stratton, Democrat.
Jamestown-Dunkirk	43	Charles E. Goodell, Republican.
Ogdensburg-Massena-Malone.	33	Clarence E. Kilburn, Republican.
Plattsburgh	31	Carleton J. King, Republican.
New Jersey:		
Medium: Atlantic City	2	Milton W. Glenn, Republican.
Small:		
Bridgeton	2	Do.
Long Branch	3	James C. Auchincloss, Republican.
Ocean City-Wildwood-Cape May.	2	Milton W. Glenn, Republican.
Pennsylvania:		
Medium:		
Altoona	20	James E. Van Zandt, Republican.
Erie	24	Carroll D. Kearns, Republican.

The CHAIRMAN. The time of the gentleman from Pennsylvania [Mr. FLOOD] has expired.

Mr. KILBURN. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. FENTON].

Mr. FENTON. Mr. Chairman, first of all let me assure my colleague, the gentleman from Pennsylvania [Mr. FLOOD], that I am for this bill.

Mr. Chairman and Members of the House, my district in the anthracite region of Pennsylvania is one that has been beset with problems of unemployment for a long time. In addition to the Scranton-Wilkes-Barre area—my area—Pottsville, Shamokin, Mount Carmel, Shenandoah, Mahanoy City, Tamaqua, Minersville, Girardville, and other towns are in great need.

Ever since the turn of the century, the number of jobs in the anthracite mines has been lessening, and the communities in my district have fought a valiant battle in trying to establish new industries to provide jobs for displaced miners and their families. This battle has been a monument to the principle of community self-help.

Even now people in my district do not seek charity or handouts. We are happy to continue to shoulder the main responsibility for providing new footings, a new base for our economy.

At this point Mr. Chairman, I would like to point out that I was the one who pioneered area assistance legislation when I introduced in the House on January 9, 1956, the proposals of the former Eisenhower administration 4 days after the President in his state of the Union message recommended such assistance after I had personally arranged various group conferences at the White House.

We have before us S. 1 as amended by our Banking and Currency Committee.

Another bill—H.R. 5943, the Widnall bill—will be offered as a substitute for the committee bill.

I wish to say that no one in the Congress is more keenly interested in helping our domestic distressed areas than am I.

Mr. Chairman, former President Eisenhower in his state of the Union messages, and in economic reports, announced the principle that there is a responsibility in the Federal Government to help areas of substantial and persistent labor surplus in their efforts to solve their problems. This is clear, despite the fact that the Nation as a whole has enjoyed a period of general prosperity since 1952.

Many people have spoken at length in behalf of legislation of this kind at this and previous sessions of Congress.

Secretaries of Commerce and Labor, both in the last and present administrations have spoken in favor of legislation to help areas of persistent unemployment, especially the so-called chronic areas.

Representatives of labor, and the chief executive of the State of Pennsylvania, and others have appealed for adequate legislation.

I will try to give you some idea of our economic conditions in the Schuylkill-Northumberland anthracite-producing area of Pennsylvania, and the time and efforts given by the people of my area in trying to help themselves.

We have witnessed the population of my district shrink over 80,000 from 1940 to 1960.

We have seen our major and basic anthracite industry have its annual tonnage reduced from almost 100 million tons in 1919, in World War I, to around 20 million tons at the present time.

We have also seen the number of mineworkers diminish from a peak of 179,679 in 1917 to less than 20,000 today.

Now the causes of all these decreases are well known to those of us from the hard coal fields. In fact, the Federal Government itself knows full well the condition in which our area finds itself, because, over the years, since I have been a Member of Congress, I have brought to the attention of our various administrations the economic plight of the anthracite industry and the people dependent upon it for a livelihood.

As a matter of fact, and the record will disclose this, I have been successful

in having a number of my proposals enacted into law to assist the anthracite industry and our people. For example, first, Public Law 812, 77th Congress, which established the Anthracite Research Laboratory; second, Public Law 738, 83d Congress, which authorizes the appropriation of Federal funds to the Bureau of Mines to fight mine fires and which eliminates the necessity of asking for special funds each year; the appropriations for this type of work over the past several years has saved over 350 million tons of coal from destruction at a cost of less than 1 cent a ton.

I also sponsored Public Law 162, 84th Congress, which authorizes the Federal Government to appropriate $8,500,000 to match a similar amount from the State of Pennsylvania to dewater mines for health and safety purposes, and to conserve one of the Nation's greatest natural resources—Pennsylvania's anthracite mines.

While we have been trying to stay the continued onslaught of unemployment by helping to stabilize our anthracite mining industry, our people and our communities have been doing a splendid job in organizing in various ways, and indeed, have succeeded in securing new plants in some communities and also expanding plants already there.

Our people want to work, as is evidenced by the fact that thousands of them travel over 100 miles each day in commuting back and forth to work. Others are compelled to leave their families for the week and return home on the weekends.

Our people cannot understand why a helping hand has not been extended them long ago as has been done by our Government to other segments of our economy. Neither can they understand why the Government itself permits the terrific influx of residual oil on the eastern seaboard, which displaces millions and millions of tons of coal each year.

We have recommended that this excessive importation of residual or waste oil be curtailed or be placed on a proper quota basis, and I introduced legislation to accomplish this. If this was done it would help in keeping down our unemployment.

In addition to the influx of foreign waste oil, we have been hurt by the "big and little inch" pipelines built by the Government. We had no complaint to make when these pipelines were built because of their necessity to aid in winning the war. We did not intend to have them later used by private enterprise in competition and injury to the coal industry.

We objected strenuously to their being sold to the oil and gas industries after the war because we knew it would hurt our anthracite markets. It did hurt us very severely, and the Government did assist the oil and gas industry in selling the pipelines.

I cite these several instances about the plight or our basic industry, because our pleas fell on deaf ears for many, many years.

We have in various communities in my district, attempted to help ourselves and have succeeded in securing new plants, but we have reached the limit and we now look forward to the State and Federal Governments for assistance in the form of loans.

The President is concerned about areas of chronic unemployment and is attempting to do something about it.

According to January ratings of the Pennsylvania Department of Labor and Industry, four additional labor market areas in Pennsylvania were classified as areas of substantial labor surplus, bringing the total to 26.

The classification of the areas, made jointly by the United States and Pennsylvania Bureaus of Employment Security, showed 9 major and 17 smaller areas in the substantial labor market surplus category. This represented the addition of three major and one smaller area since the November ratings.

Of the 26 areas, 19 are designated as "areas of substantial and persistent labor surplus." This constitutes an increase of three in January over the preceding November.

Since November, classification changes in the Nation as a whole resulted in an increase in the number of major areas of substantial labor surplus from 51 to 76. The number of smaller areas meanwhile rose from 123 to 152. Of the total number of substantial labor surplus areas in the United States, 103 are classified as "areas of substantial and persistent labor surplus."

In January, the U.S. rate of unemployment again remained well below the Pennsylvania rate. The national percent of labor force unemployed in January was 7.7, and the Pennsylvania percentage was 11.4. Seasonally adjusted, the national rate was 6.6.

At the present time the unemployment figures for my district in Pennsylvania is about 26,000. In Schuylkill County we have 16,900 unemployed, and in Northumberland County 9,100. In Schuylkill County alone this means that the percentage of unemployed is 22.1 percent, and in Northumberland 13.9 percent.

Many bills have been introduced for distressed areas by Members of both political parties in the 84th, 85th, 86th, and the current 87th Congress.

I urge and trust that we will pass and bring forth a bill that can be accepted by the House and Senate, and signed into law by the President.

The anthracite coal producing area of Pennsylvania is a chronically distressed area and the people of my district will be especially grateful for favorable action.

Mr. PATMAN. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. MOORHEAD].

Mr. MOORHEAD of Pennsylvania. Mr. Chairman, I am honored to follow in the well of this House my distinguished colleagues from Pennsylvania [Mr. FLOOD and Mr. FENTON] and to join with them in urging the passage of this area redevelopment bill.

Mr. Chairman, the area redevelopment bill is legislation designed to take care of human needs in a businesslike way.

The name of this bill, the area redevelopment bill, should not confuse us. We are not concerned so much with distressed areas as with distressed people who live in these areas.

The distress that comes to people from long-continued unemployment is serious whether the unemployed people live in a large city, a small town, or in a rural community. The committee bill recognizes this fact and is designed to help people wherever they may live in the United States of America. Even without considering the rural areas, people in more than one-half of the 50 States will be benefited by the legislation.

The purpose of the committee bill is to help people but the means it uses are businesslike. This is no dole, handout, or giveaway program. It is a program to help business create new job opportunities for our unemployed.

Those who oppose this legislation say that local States and communities should do the job for themselves. One of the witnesses at the hearing described what a wonderful job the city of Erie in my State of Pennsylvania was doing to attract industry. He neglected to point out that in November of 1960, unemployment of Erie was 9.4 percent and that Erie is classified as an area of substantial and persistent unemployment. The opponents of this legislation fail to recognize that, although Pennsylvania has been doing a wonderful job of trying to solve its problems, some 49 of the 67 counties in Pennsylvania are classified as distressed areas. Mr. Chairman, we in Pennsylvania have gone as far as we can go. We need a partnership with the Federal Government if we are to solve our problems.

But this is not Pennsylvania's problem alone; it is a national problem. Persistent unemployment, for any of a number of reasons, has arisen or can arise in every one of 50 States and in every one of the 437 congressional districts. It may not have arisen in your congressional district but who knows what tomorrow may bring. One technological change or invention may eliminate the economical basis of your community.

The committee bill will help people who live in cities. It will help primarily through the provisions for industrial, urban renewal, economic planning assistance, and training and retraining of workers. Sixty-three percent of the unemployed in Pennsylvania are classified as either unskilled or semiskilled. Others have skills no longer in need. Training and retraining will be their salvation.

The committee bill will help people who live in small towns. It will help by bringing new industry to towns and by assisting them in providing the public facilities which industry may need. The tax basis in some of these smaller communities may have become so eroded that they cannot even borrow money for public facilities. The committee bill recognizes this situation and provides a limited program of grants in aid.

The committee bill will help people who live in farming communities and suffer from chronic unemployment. It will help farming communities to develop agricultural production in combination with processing—what the Secretary of Agriculture referred to as "Agribusiness." "Agribusiness" may

mean a combination of farming, forestry and woodwork. In another area "agribusiness" may mean the promotion of tourists and recreation.

In short, Mr. Chairman, the area redevelopment bill is national legislation to help all the people of our Nation whether they live in city, town, or village. I urge the adoption of the committee bill.

Mr. KILBURN. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. VAN ZANDT].

Mr. VAN ZANDT. Mr. Chairman, in beginning my statement, I want to commend the House Banking and Currency Committee for the job they have done in perfecting and bringing to the House floor for consideration at this time the bill, S. 1.

My interest in area redevelopment began on June 21, 1954, when I introduced bills designed to provide programs of public facilities construction to stimulate employment in areas having substantial surplus labor and to amend the Small Business Act of 1953 to authorize loans to be made by the Small Business Administration to municipalities having a substantial labor surplus.

Since the introduction of these bills, I have joined many of my colleagues annually in sponsoring similar legislation and at the same time have stood in the well of this Chamber frequently appealing for positive action in alleviating the distress of unemployment in labor surplus areas.

In addition, I have voted for every area redevelopment bill brought to this floor since the 85th Congress and joined advocates of the legislation in an effort to override the Presidential veto of S. 722. Therefore, it is my desire to emphasize that I am prepared to support S. 1 when perfected and ready for a vote by this House.

The basis of my longtime interest in area redevelopment legislation stems from the fact that since World War II—with the exception of the Korean conflict—my congressional district in Pennsylvania comprising the counties of Blair, Centre, and Clearfield has been plagued with chronic unemployment due to depressed conditions in the coal, railroad, clay and related industries, such as brickyards, machine shops, and so forth. Believe it or not, at times as much as 18 percent of our total labor force has been unemployed.

These depressed conditions I have mentioned stem from technological changes, migration of industry, shifts in demand from one product to another, as well as foreign imports such as residual oil, which have captured our eastern seaboard coal markets.

As a classic example, I should like to point to my hometown of Altoona, Pa., which until some years ago was the largest locomotive repair center in the United States. With the advent of diesel locomotives, the pattern of skills required by locomotive repairmen shrank considerably, thus throwing many railroad mechanics and men with related skills into the ranks of the unemployed.

When you add this group to others who lost their jobs due to the decline in coal, freight, and passenger business, you will understand why employment in the Altoona, Pa., railroad shops dropped from nearly 15,000 in 1951 to 4,900 as of March 1, this year, or a loss of more than 10,000 jobs.

With respect to the coal industry, it should be pointed out that since 1948 in the central Pennsylvania area the production of bituminous coal has been on the decline with the result that production has dropped from 60 million tons to 31 million tons in 1960, or a loss in production of 48 percent. In manpower, in 1948 these mines employed 51,500 miners while in 1960 the number employed was approximately 17,500, a decrease of 66 percent. In other words, 34,000 coal miners lost their jobs.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield.

Mr. FLOOD. If the gentleman will, I would like him to tell us how many men and women in his district are receiving surplus foods?

Mr. VAN ZANDT. At the present time out of the overall population in my congressional district we have 14 percent receiving surplus commodities. As I say, it is difficult to watch these people because they are mechanics, they are boilermakers, they are upholsterers, they are carpenters, they are bricklayers, and they are all unemployed.

With the unemployment in the railroad and coal industries making up the majority of the unemployed in the two labor market areas in my congressional district, here is the picture as compiled by the U.S. Department of Labor:

	Altoona			Clearfield-DuBois		
	Labor force	Unemployment	Ratio, unemployment to labor force	Labor force	Unemployment	Ratio, unemployment to labor force
			Percent			*Percent*
July 1956	52,700	8,100	15.4	(1)	(1)	(1)
July 1957	53,800	6,300	11.7	(1)	(1)	(1)
July 1958	54,000	9,800	18.1	36,700	5,000	13.6
July 1959	53,800	4,500	8.4	35,700	4,200	11.8
July 1960	53,300	6,100	11.4	35,600	4,000	11.2
February 1961	53,000	7,100	13.4	35,200	5,100	14.5

[1] Data not available.

As these figures show, the unemployment problem in my congressional district is simply this: Out of a labor force of nearly 90,000, some 13,000 are unemployed or about 14 percent. This unemployment is not seasonal but chronic, as it has plagued us since the close of World War II with the exception of the period of the Korean conflict.

As you can imagine, both of these labor market areas have been for years classified as areas of substantial and persistent unemployment by the U.S. Department of Labor.

Having lived with all of this chronic unemployment for years, the residents of the central Pennsylvania area know the meaning of ghost towns and the misery that follows in the wake of unemployment, as we watch good American families being forced to exist on public assistance and surplus commodities.

In this connection, as of January 1, in my three-county area there are 29,386 persons eligible for surplus food or nearly 10 percent of the overall population. In fact, in Clearfield County nearly 14 percent of the population are recipients of surplus commodities and dependent upon them for necesssities of life.

Faced with the unemployment problem, my colleagues many times have asked the question: "Why is it that these areas of chronic unemployment cannot help themselves?"

The answer is that while some 1,800 communities throughout the country have active area redevelopment groups, I can only speak for my own congressional district where such groups have been active for years and have enjoyed a measure of success. As a matter of fact, every area of unemployment in my congressional district has an industrial development committee of some kind and number 25 in all.

While not all of the committees have been successful, we can point with pride to the fact that hundreds of new jobs have been created in the central Pennsylvania area through community effort.

Outstanding in the effort is the city of Altoona, Pa., where through the Altoona Enterprises, Inc., a subsidiary of the Altoona Chamber of Commerce, 14 new industries have been secured, representing employment for 4,500 persons with an increased annual payroll for the area exceeding $18 million.

The $1,595,000 contributed by Altoona residents to finance this effort represents contributions on the part of a cross section of Altoona's population. In addition, it was necessary to borrow funds from the local banks and, at this moment, the Altoona group has exhausted its borrowing capacity.

Besides praising Altoona, I should like also to commend other communities of my congressional district such as Curwensville, Coalport, Clearfield, Du Bois, Tyrone, Philipsburg, Martinsburg, and Houtzdale, all of which are also pulling themselves up by their own bootstraps.

Therefore, in my congressional district these 25 area redevelopment groups—which have been instrumental not only in attracting new industries to the area but by their activities and faith in the future have created an atmosphere of hope and confidence—are in need of the

type of Federal assistance provided for in the bill before us.

What I am saying is this: Our experience in the central Pennsylvania area has convinced us that we cannot do this job alone. If we are going to lick these areas of depression stemming from pockets of unemployment, we desperately need Federal assistance in coordinating our efforts.

Frankly, I do not find it difficult to support S. 1 because as my statement reveals, I have firsthand knowledge of the great need for this legislation. In addition the program as contained in S. 1, if written into law, will provide a coordinated attack on the basic economic problems confronting areas of substantial and persistent unemployment, such as I have in the two labor market areas in my Congressional District.

I have studied the seven major provisions of S. 1 and agree with the Committee Report when it says that such provisions will enable the Federal Government to play its proper role and meet its responsibilities in the field of area redevelopment.

The provisions follow:

First. The bill would place the responsibility for area redevelopment in the Secretary of Commerce to insure that the program will be dealt with at the Cabinet level. At the same time, an Area Redevelopment Administrator would be established in the Department to perform such functions as the Secretary may assign to him under the bill.

Second. The bill would authorize the designation of areas of chronic unemployment and underemployment. Such designation would be mandatory for some communities under criteria set forth in the amendment but the Secretary would designate other areas including rural places according to guidelines set forth.

Third. The Secretary would be authorized to make loans for industrial projects in the designated areas. Two funds of $100 million each would be established by appropriation.

Fourth. Loans would be available on liberal terms for local public facilities to encourage economic expansion. The amount of $100 million would be authorized for appropriation for these loans.

Fifth. Partial grants could be made to communities for local public facilities if these are necessary for the financing of the project. The amount of $75 million is authorized for appropriation for these grants.

Sixth. The bill contains two sections which would vest additional authority in the HHFA Administrator in order to assist redevelopment areas. Grants and loans for urban renewal could be made without regard to the predominantly residential requirement which must be met in most cases. Urban planning grants authorized by the Housing Act of 1954 would be made available to redevelopment areas without regard to the population limit otherwise applicable.

Seventh. Upon a finding by the Secretary of Labor that training is needed, the Secretary of Health, Education, and Welfare could provide information and financial assistance in connection with occupational retraining programs. The Secretary of Labor would be authorized to enter into agreements with the States to pay subsistence payments up to 16 weeks for persons receiving such occupational training.

Mr. Chairman, according to the committee report, the cost of this legislation will be $394 million. May I say I hold no brief for those who quibble and employ delaying tactics over the price tag of an area redevelopment program. Like a few here today, some provisions of the bill may not meet my approval and the cost may be a little high, but since we have billions of dollars to pour into foreign aid, we certainly have a moral obligation to care for the needs of America's unemployed.

By the facts that I have given you, my constituents without Federal aid have given their own money as well as their time and effort to combat this economic problem. Yes, some progress has been made down the long, hard road, but they need a helping hand to attain their objective.

Before concluding my statement I wish to point out that if this bill is enacted into law in its present form, the two labor market areas located in my congressional district—both of which have been classified by the U.S. Department of Labor as areas of substantial and persistent unemployment—will meet the criteria for mandatory designation as redevelopment areas.

In plain words this means that the area redevelopment groups in my three-county area will enjoy Federal assistance in a coordinated attack on the basic economic problems representing the causes of the chronic unemployment.

I think it should be understood that enactment of this bill will not cause the Government to provide jobs immediately for the unemployed through the construction of plants and assignment of Government contracts.

To the contrary, it may be months before many of these areas will solve their unemployment problem since this bill if written into law simply authorizes the Federal Government to rely on local initiative and the efforts of private enterprise by furnishing them technical assistance and guidance together with financial aid, primarily in the form of loans to implement local community redevelopment programs.

Mr. Chairman, as one who represents two chronically depressed areas in Pennsylvania with unemployment at 14 percent of the total labor force, it is my sincere desire that S. 1 be approved promptly and that a conference report on the Senate and House bills be agreed to so that the legislation may be sent to the White House at the earliest possible date.

Mr. PATMAN. Mr. Chairman, I yield 3 minutes to the gentleman from New York [Mr. GILBERT].

Mr. GILBERT. Mr. Chairman, I wish to express my strong support of the bill before us which would provide Federal aid to distressed areas. In fact, I introduced a bill covering such aid in January of this year, for I have long recognized the dire need for such assistance.

As a member of subcommittee 2 of the Committee on Banking and Currency, which held extensive hearings on the bill, I heard the many witnesses who testified before us. Members of the Cabinet, representatives of unions, municipal associations, Governors, mayors, and other city officials were among those we heard. All pleaded for passage of this legislation and proved its urgency and necessity. I wish to stress that every elected official, whether city or State, who came before us, urged passage of this legislation.

President Kennedy has stressed that our economy is in trouble. We have had 7 years of diminished economic growth, 3½ years of slack, and 7 months of recession. In these days of crises, we cannot permit further deterioration in our economy; we must take positive and effective steps to stimulate the economy and pave the way for its full capacity performance; we must aim for the highest possible rate of economic growth. Five and a half million unemployed workers live in the 103 designated distressed areas. The bill before us which provides for area redevelopment would be a big step forward in combating the unemployment problem on an intelligent basis and in helping the country generally by stimulating our economy. In New York State there are numerous areas which are in trouble and which are in desperate need of the assistance this legislation would give them.

Due to natural exhaustion of coal and other natural reserves, mechanization of facilities, automation, competition, and technological changes, industrial rehabilitation of numerous areas is necessary if those communities are to survive. Many have tried to solve their own problems; the community has worked, civic leaders have tried to attract new industries, money has been borrowed, the people have made great personal sacrifices, but the forces responsible for the condition are so strong and varied, they require comprehensive measures, and assistance by the Federal Government is imperative. No community can win the battle without Federal help. Let us also recognize the fact that the long-range view is necessary, for a community which is booming today may, because of automation or a new scientific development, find itself in the depressed areas class tomorrow. Sensible, workable plans must be laid now to eliminate and prevent economic distress to the fullest degree possible.

I like to think of the help provided by this bill as a transfusion into the life stream of the economy of those communities now suffering from the blight of economic depression and as a ray of hope into the lives of the unemployed who are now suffering hardships.

Many of my colleagues have been concerned with the question of the pirating of industry from one community to another. The committee, mindful of the

dangers which might lie in this type of program, included the strongest, possible antipirating provisions in the bill. If there is any language providing stronger protection, I am certain that we would be happy to adopt that type of amendment.

Many of my constituents are of Puerto Rican background; I am happy that the bill before us would help Puerto Rico, as it meets the bill's requirements as to depressed industrial areas. Much progress is being made in Puerto Rico, and I should like the people there to be encouraged in their efforts to improve their Commonwealth as well as their standards of living.

The chairman of our committee worked conscientiously and judiciously to bring out a good, workable bill, and every effort was made by him to do his best for all concerned. He treated all who appeared before him with fairness and interest. He is to be complimented upon the fine results he has accomplished.

I strongly urge passage of this important bill.

FEDERAL AID TO DISTRESSED AREAS—FACT SHEET 1

VII. PROMPT ACTION ON AREA DEVELOPMENT SOUGHT BY KENNEDY ADMINISTRATION

After reviewing the postelection task force study on area redevelopment, President Kennedy concluded that depressed area problems deserve the most important domestic priority.

"As President, I will direct all agencies of Government to give priority, in all regular programs, to the needs of depressed areas. This includes * * * the agencies concerned with transportation, with flood control, with urban renewal, with conservation." (Senator Kennedy, October 28, 1960.)

In his state of the Union address President Kennedy stressed that our economy is in trouble. He based this on the 7 years of diminished economic growth, 3½ years of slack, and 7 months of recession which we have been experiencing. Among the measures to be proposed to remedy the situation was to redevelop distressed areas, pointing out that large numbers of the 5½ million unemployed workers live in the 103 designated distressed areas.

A. Administration recommendations

1. Provide a workable program to alleviate distress and meet the immediate subsistence needs of the people and to stimulate sustained economic growth, so that the people who live in these distressed areas may share in our Nation's expansion, including:

(a) technical assistance to enable local communities to plan their economic growth and development intelligently;

(b) participating loans to assist when conventional lending facilities are unavailable to the area;

(c) modernized public facilities to encourage industry;

(d) facilities and opportunities for training and retraining the labor force.

2. Place the depressed areas program in the Department of Commerce, which would be responsible for coordinating aspects of the program involving other Government agencies and departments.

3. Provide flexibility in the program so as to benefit urban and rural areas alike and to function in regions of economic distress which includes parts of two or more States.

B. The need for immediate action

Problems of distressed areas are accentuated with rising unemployment and present inadequate economic growth.

Unemployment over a long period has a destructive effect on the lives of people affected and on the entire community.

The potential of our economy is constantly expanding but the failure to use our full capacity is the urgent economic problem of our day.

The performance of our economy is far below its full capacity: Labor force is rising 1.5 percent yearly; output per man-hour is rising 2 percent yearly due to better plants, equipment, modern technology, improved human skills.

This manpower and productivity alone is basis for a potential annual growth rate of 3.5 percent, but this would still fall short of the rate necessary if we are to meet our challenges at home and abroad.

The deterioration in our economy over the past 7 years makes it imperative that we take immediate steps to stimulate the economy to reverse the trend and to achieve a high rate of economic growth. Area redevelopment legislation is one of several such actions.

As of January 1961, the national unemployment rate was 7.7 percent of the labor force. Seventeen major distressed areas in the Nation have an unemployment rate three-fifths higher than the national average.

The number of distressed areas has risen since President Eisenhower vetoed the 1960 Area Redevelopment bill. In March 1961 101 of the Nation's 150 major industrial areas had 6 percent or more unemployed; 184 smaller areas also had unemployment of 6 percent or more.

C. Senate action

By a 63–27 vote on March 15, 1961, the Senate approved an amended version of S. 1, which conforms in most respects to the administration's bill, H.R. 4569. It authorizes a $394 million program of loans and grants to help rehabilitate the 103 industrial and numerous rural areas designated as chronically depressed areas.

Senate debate centered on control of the program, method of financing, and the amount of expenditures. Senator DOUGLAS, Democrat, of Illinois, sponsor of the Senate bill, originally wanted a new independent agency to administer the program, but yielded to administration wishes that it be placed in the Commerce Department.

DOUGLAS' plan to finance the program through Treasury borrowing instead of requiring annual congressional appropriations survived on a 49–45 roll call vote.

Attempts to scale down the size of the program were defeated as was DIRKSEN'S substitute bill providing only a $180 million program. Under the Senate version, the program would expire June 30, 1965, unless renewed by Congress.

D. House Banking and Currency Committee action

During 2 weeks of hearings on the administration's bill (H.R. 4569), testimony supporting the measure was presented by the Secretaries of Commerce, Labor, and Agriculture. The bill was also supported by witnesses representing the AFL–CIO, United Mine Workers, National Farmers Union, American Municipal Association, U.S. Conference of Mayors, and the National Rural Electric Cooperative Association.

Representatives of the U.S. Chamber of Commerce and the NAM appeared in opposition to the administration bill.

The committee substituted the language of the House bill for the provisions of S. 1 and reported the amended bill on March 22, 1961. (For detailed provisions see H. Rept. 186.)

E. Major provisions of S. 1 (H. Rept. 186)

1. Authorizes $394 million in Federal loans and grants for redevelopment of economically depressed industrial and rural areas.

2. Establishes 3 separate $100 million revolving loan funds, financed by regular congressional appropriations:

(a) Urban redevelopment loans, and (b) rural redevelopment loans may be used for industrial and commercial projects, including construction of new plants, rehabilitation and improvement of existing buildings, and in certain cases, for the purchase of machinery and equipment; may be made for a period of up to 25 years and cover up to 65 percent of the cost of the project; a minimum of 10 percent must be met by State funds and 5 percent must be provided by private lending facilities. The interest rate is based on the average current yield of outstanding Treasury bonds of comparable maturity, plus one-half of 1 percent to cover overhead cost.

(c) Public facility loans may be used for construction and improvement of public facilities within redevelopment area; may be made for a period up to 40 years and cover 100 percent of the total cost of the project.

3. Authorizes $75 million in Federal grants for public facility expansion in areas where it is not practical to use the loan program described in 2–c above. All loans and grants listed are contingent on approval of a local economic development program.

4. Authorizes annual appropriation of $4.5 million for subsistence payments for unemployed workers who are taking part in an authorized training program and $10 million annually for retraining subsistence payments.

5. Makes permanent the authority of the Small Business Administration to make loans to local development corporations.

6. Permits redevelopment areas to participate more fully in the urban renewal program by amending the Housing Act to permit urban planning grants to be made directly to cities and counties in redevelopment areas without time-consuming delays.

7. Authorizes annual appropriation of up to $4.5 million for technical assistance for studies as to how redevelopment programs may be best utilized.

8. Contains an "antipirating" section to forbid the use of funds to assist businesses in relocating "totally or partially" from one area to another.

Mr. PATMAN. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. BOGGS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (S. 1) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically distressed areas, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that all Members speaking today in Committee may have permission to revise and extend their remarks and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

TEXTILE PROBLEMS IN THE SOUTH

The SPEAKER. Under previous order of the House, the gentleman from South

Carolina [Mr. HEMPHILL] is recognized for 60 minutes.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. HEMPHILL. Mr. Speaker, I rise again this week as I have so many times in the past to talk about the textile problems in my area. I call attention to the fact that the import of textiles continues to rise. That being the case, Mr. Speaker, the unemployment which has threatened this country's very economy is being increased day by day and week by week.

Now, some of this unemployment is in the category of those people who lose their jobs absolutely or who lose their jobs to such an extent that their own ability to take care of the budgetary items necessary in their lives is destroyed for at least a period of 6 months to 1 year.

In addition to those who are laid off for considerable periods of time or those who lose their jobs entirely we have a category of people who now have the misfortune of being on what is known as short time. "Short time" means that the usual 46-, 44-, or 40-hour week has now been reduced because of the textile import situation and the economic situation in the textile industry which is a direct result of it, and those people are now unable to make the weekly payments for such vital things to Americans as homes they want to own, the automobile, which has become a symbol of American civilization and American prosperity, the washing machine and the other things in the household appliance field which we in America have come to expect as a part of the comfort, part of the high standard of living, and which we have been bringing in to the good ladies of America; those employed in the textile plants and whose living is dependent upon that employment.

Cotton cloth imports, which totaled 454,890,000 square yards, increased 89 percent in 1960 over the 1959 total of 240,371,000 square yeards. Cotton yarn imports now totaling 15,141,000 pounds were 997 times greater than they were in 1959 and a fantastic 1,713 times greater than in 1958. If there are imports of cotton yarns of such percentages as 1,700, when we import the yarns we export the jobs. When we export the jobs we export the prosperity of America. When we export the jobs we export a part of an industry which has been frequently declared and correctly identified as a major part of our national defense effort.

No industry in this country can survive with imports of such volume and such increasing volume.

Mr. Speaker, I am glad to say that I have here a clipping from a newspaper quoting Secretary Hodges. Here is what this article says:

> Secretary of Commerce Luther Hodges, himself a former textile executive, goes so far as to say: "Our Government is actually destroying a basic industry essential to our economy and our national defense."

We have before us at this time the problem of what to do not only about the foreign markets which we have apparently lost or given away or legislated away, but other related problems.

Mr. WHITENER. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield to the gentleman from North Carolina.

Mr. WHITENER. Mr. Speaker, I appreciate the fact that the gentleman is again bringing this very important subject to the attention of the Congress. The reference the gentleman has just made to our textile industry in its relation to the defense situation brings to my mind a recent statement that was made by former Secretary of the Army Stevens who is head of one of the larger textile concerns of the Nation, when he pointed out that it was his firm conviction after years of experience in the Government as well as in the textile industry, that today the American textile industry would not be adequate to meet the defense needs in the event we should be called upon to supply a fighting Military Establishment.

I am sure that this fact is something that we should all be concerned about. It would seem to warrant the invocation of the provisions of section 8 of the Trade Agreements Act, since our national security is unquestionably in jeopardy by reason of the deterioration of our textile situation, primarily because of excessive imports.

Mr. HEMPHILL. I want to thank the gentleman for his continuing and magnificent interest. We have been discussing among ourselves, particularly the gentleman from North Carolina [Mr. WHITENER] and I, the dual problem which we have in getting rid of our surplus cotton on the one hand and being able to export the product of our mills on the other. I have been amazed to find that in the early part of 1960, while we have been exporting thousands of bales of cotton, the imports from those bales of cotton which we have been exporting have now returned to us in increasing volume in the form of either fabric or yarn. When they do return to us, this cotton on which we paid a subsidy when it was shipped overseas returns to us in the form of yarn or finished goods based on production not only at an overhead cost far less than American industry with its concern for the American worker has experienced, but from areas where the wage scale is so low that the competition of American industry may be aptly characterized this way: They are able to put the cloth on the market here cheaper than the domestic manufacturer can sell it to the broker in New York or than it can leave the mill, leaving no room for profit for either the broker or the person who puts the fabric into the finished garment, or anyone else who ordinarily would expect from this great industry the sustenance he or she has previously received.

Mr. WHITENER. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield to the gentleman from North Carolina.

Mr. WHITENER. The gentleman has mentioned that some of our abundant cotton supply is being exported and returned to us in the form of textile products manufactured in foreign lands. That brings to my mind another phase of this problem which many of our friends from cotton-producing areas apparently are overlooking. I refer to the fact that much of this product, the yarn, the fabric, the finished apparel, which we are finding coming in from foreign countries, is not manufactured out of American cotton. Recently I was told by a reliable informant that the equivalent of 600,000 bales of cotton came back into our country during 1960 in the form of finished fabric and wearing apparel, and, as I remember it, that only one out of seven of that bale equivalent was processed from raw cotton raised in America. Some of the cotton was raised in Red China and some raised in other cotton-producing areas. So we are doing the farmer of our country a great disservice as long as we permit the almost unlimited inflow of these yarns, threads, fabrics and unfinished wearing apparel as we are doing today.

I wonder if the gentleman would agree with me that this is something which might well be considered in the form of an amendment to Public Law 480 or section 22 of the Agricultural Adjustment Act, as this Congress is concerned with this problem.

Mr. HEMPHILL. I certainly agree with the gentleman. I might say, to emphasize the correctness of what the gentleman has said, that in 1952 we exported about 700,000 bales of cotton. In 1960 we exported only in the neighborhood of 500,000 bales. While our exports of raw cotton have decreased, at the same time the imports of cotton goods in terms of bales have increased. Therefore it only stands to reason that the cotton that is coming back is cotton which comes from many other countries.

I daresay if the gentleman were to visit the Sudan and some other areas of the world he would find that cotton is being grown there using our technology and many of the methods which we have furnished, which eventually comes back to haunt us upon the import scene.

I certainly agree with the gentleman. Of course, the gentleman well knows that we have a policy in which we require a certificate of origin from certain countries stating the origin of the merchandise to make sure that we are not getting merchandise from behind the Iron or the Bamboo Curtain; yet despite the fact that we now require those certificates of origin we have a problem because the textile experts inform me that on many occasions you cannot tell the origin once the processing has either proceeded to the bleaching stage or in many instances to a stage even less technical than the bleaching stage.

Mr. WHITENER. If the gentleman will yield further, in that connection it was recently called to my attention that some of the markings on some of the less expensive fabrics which are coming in in competition with some of our textile goods, that is, the fabric and finished products such as wiping cloths and such

as that, have been marked in these foreign countries—particularly the Hong Kong production—but they have been marked with fugitive dyes so that the minute a product hits the water that dye with the marking showing that the product came from Hong Kong vanishes into the water. I believe that something should be done on the Federal level to identify these products. Unless we do so, I am afraid that what happened in the gentleman's State and what has been threatened in the general assembly and in other States might bring about more confusion in this country. I speak, of course, of an act that was enacted by the General Assembly of South Carolina requiring that a plate or a plaque or something be shown in the presence of any imported textile products in South Carolina. You remember that the State Department and other agencies of the Federal Government complained about that. Unless we do something on the Federal level, it seems to me we are going to get a great deal of chaos out of the divergent views which might be expressed through State action—and in many cases abortive State action.

Mr. HEMPHILL. One of the things that has been so significant in the trend in the textile industry is the ability of our foreign competition to zero in on a target of some segment of the industry and completely destroy that particular segment of the textile industry. My friends from New England who have talked to me about it have told me that the gingham industry has been destroyed. I am well aware of that personally because a mill in my own district, which was in business for many years, has been closed up and it will not reopen and there is no possibility of the mill reopening. These are fine American jobs that have gone out the window. The velveteen industry has suffered likewise. We found that the bicycle industry suffered so much—I believe the President raised the tariff rate from 7½ percent to 15 percent and from 15 percent to 22½ percent not too long ago. But that does not answer our problem.

Mr. WHITENER. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield to the gentleman from North Carolina.

Mr. WHITENER. I have heard it said and I know it is erroneous, that certain people in the textile industry are crying "wolf" when no wolf is at the door. Coming from, perhaps, the greatest textile manufacturing district in America, I think I know something about the industry and what it is faced with today.

In the first place, today the production per man-hour in the textile industry is 60 percent greater than it was 10 years ago. That is a tribute to the efficiency not only of management but of labor in those plants. I know from my own observation that these excessive workloads which have been heaped upon the people in our domestic textile industry have been in most cases willingly accepted by the people who earn their living at the textile machines because they are aware of the competitive situation which is breaking the back of the textile industry, and they are willing to try to do their bit. But there is a limit to the ability of a human being to continue to accept additional physical labor.

We have reached the point at which our people over the age of 50 are not able to keep up with the accelerated production. That gives great concern to many of us.

I think it cannot be controverted that perhaps the most efficient industry in America today on the basis of cold facts and statistics is the textile industry. So we have been pushed about as far as our great industry can go.

There is another phase of this which I think people not from a textile area should understand, and that is that prices of textile products today are still at the level of 10 years ago, and in some cases lower. I know of no other commodity in this country which can say that. We used to say that a certain soft drink and a nickel were the only things still worth a nickel. We can say today that a nickel's worth of textile fabrics 10 years ago is worth perhaps 4 cents today. This is a problem which I am hoping that others from areas perhaps not as directly concerned as those of the gentleman from South Carolina [Mr. HEMPHILL] and myself, will join hands with us in the interest not only of our national security but also in the interest of preserving the jobs of people. This very day we are here debating on the floor of the House of Representatives a bill to provide an artificial stimulation for additional jobs through Federal loans and Federal assistance. It seems to me we should be equally concerned about the preservation of an industry which today employs 900,000 people. One-quarter of those 900,000 people are located in the state of North Carolina, from whence I come.

I commend again my distinguished and longtime friend for his presenting this important matter to us today, and assure him that I am very much pleased that he is doing it and will be right by his side constantly as we fight for the jobs of hundreds of thousands of people in this country, jobs with a fair workload, jobs with a compensatory salary, because we know that the textile industry wage scale is lower than that of the average of other manufacturing industries.

So this is a cause which should appeal to all good Americans. I hope that as a result of the many things that are going on now here in the Congress and in our relationship with the Executive Department, things in which the gentleman from South Carolina is playing such an important role will come to fruition in the near future and our great industry known as textiles will not be wiped from the face of this continent.

Mr. HEMPHILL. I want to thank the gentleman for his constant and consistent support. In commenting on the fact that there are 900,000 people in the textile industry involved, I would also point out that there are I think 1,100,000 jobs, approximately, in the apparel industry which is the best customer of the textile industry, and that the total payroll amounts to about $7 million annually; and that is a payroll that we are reducing by these imports, and I think that is a very serious thing.

Mr. BAILEY. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield to the gentleman from West Virginia.

Mr. BAILEY. I want to commend the distinguished gentleman from South Carolina for coming to the rescue of not only one of the South's great industries but one of the Nation's great industries. The gentleman will recall that when the Japanese attacked Pearl Harbor they were kicked out of the general agreement on trades and tariffs and were kept out of that agreement until 1955 when through the unwisdom, if I may be permitted to say so, of our American policymakers they were readmitted to the tariff and trades agreements.

When they took hold of all the benefits of the favored nations clause they were able to increase their imports of white cotton cloth from 15 million square yards within 6 months' time to 270 million square yards. How the Congress and the people of America could hope for an industry like the textile industry to thrive in the face of that kind of competition is unbelievable to me. I am glad the gentleman from the time he came to the Congress to the present time has been on the side I have been fighting on for the past 14 years. I am hopeful that he and I will not leave this body until we have had an opportunity to see some drastic changes in our present trade policies. I may say his speech today is opportune because it comes at a time when we were talking about helping distressed areas.

Let me say to the gentleman that 75 percent of the trouble in the distressed areas can be laid at the door of our abominable trade policies.

I thank the gentleman for yielding to me.

Mr. HEMPHILL. I thank the gentleman from West Virginia and I say that I unqualifiedly share his ambition that before he and I leave this body—regardless of how soon or how late—we will at least have the opportunity of having seen the people of America who have been paying the taxes given some consideration. I say that because on Friday last in press release No. 157—while we of the textile industry are pleading for relief—I saw this release in which it is said that the Japanese Government has asked for an increase in quota, and the State Department of the United States with a total lack of consideration for the health and welfare and the jobs of the people in the textile industry who have been paying their salaries is favorable to the request.

Mr. HALEY. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield to the gentleman from Florida.

Mr. HALEY. I want to say to the gentleman from South Carolina and also the gentleman from North Carolina that we have just been considering a bill, the so-called Area Redevelopment Act, and we will consider it again tomorrow. I call the gentleman's attention to page 18 of this report from that committee. You will find in that report in the great State of Massachusetts that one of the major areas is Fall River, another Lowell and New Bedford. In the great State

of Rhode Island you will find Providence and Pawtucket. At one time those were great textile centers of this Nation.

The reason that these areas are now calling for assistance from this Government of ours is a very subtle matter. It has happened because under the foreign aid program the textile industry throughout the world has been equipped with the finest machinery at no cost to the people of that particular country. They have been using the tax dollars that South Carolina, North Carolina, Georgia, and other textile States have been pouring into the Treasury of the United States to put in competition people with the best know-how this Nation has been able to produce, to put these great areas, in a situation where they have unemployment, and I say to the gentleman from North Carolina and the gentleman from South Carolina until you stop giving away American dollars and placing them in the hands of the people who are cutting the throats of the textile industry of this country, you are going to suffer. You know that. We have set up plants in various parts of the world with the finest machinery possible at no cost. How can you compete, I ask you, on the world market with that kind of situation, where the manufacturers can buy cotton at less per pound delivered to their door than your textile manufacturer can buy it in South or North Carolina, or in any other textile area of the Nation? That is the thing that is destroying not only the textile industry but many other industries of this great Nation. And until the Congress wakes up and stops this huge giveaway program you are going to have this same situation develop throughout the length and breadth of this great Nation.

Mr. HEMPHILL. I thank the gentleman from Florida. He is well aware of the fact that I have voted against this giveaway consistently. I want to refer to a plant outside of Hong Kong, China. It is as modern as many of the plants I have seen in this country. The gentleman who was kind enough to take me through the plant said that in technology they had been able to purchase from various people in the United States they were able to provide the technological assistance with which to compete with us. I saw awaiting to be uncrated American-made looms of such late production as to be classified as the most modern in the world—better, in some instances, than in some of our own plants. The plant I refer to has many customers in the United States.

Then I might also say to the gentleman in connection with his pointing out the Massachusetts situation that I am old enough to remember the great unfortunate depression that we called the Hoover depression down in my part of the country, and that is what we still call it, and the only breadline I have seen since the Hoover depression was a dreadful thing to see again, because I remember so vividly the hard times we had when I was a young man coming of age; I had occasion to see a television program of a textile plant in Massachusetts, and I was so concerned that I do not think I rested. I remember I did not rest very well that night because I told the members of my family that heaven forbid that that could again happen in this country. But, it is coming to the textile industry unless we get some relief, and it is coming sooner than we think, because once we go down we cannot come up very fast.

Mr. WHITENER. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield.

Mr. WHITENER. I was quite impressed with what our friend from Florida said about the foreign aid program and its effect on this textile situation. As he talked I was reminded of a record that I heard played on some radio station a few days ago down home, as I was driving along in my car, and I remember that at one point in the record this hillbilly singer was saying something like this: "I know some folks who got it made; they just lie back living on foreign aid." Now, Mr. President, I must insist that you put South Carolina on the list. I assume the gentleman from Florida is wanting to get Florida on the list with South Carolina, and I speak for North Carolina also.

Mr. HALEY. I just want to say to my friend from North Carolina that I do not think we have a textile plant in the great State of Florida.

Mr. HEMPHILL. I thank the gentleman.

Mr. LINDSAY. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield to the gentleman from New York.

Mr. LINDSAY. I should like to ask my good friend from South Carolina this question: Traditionally the gentleman's party has supported what we commonly know as liberal reciprocal trade programs. Now, bearing in mind that the reciprocal trade program comes up for reexamination in 2 years, do I understand the gentleman to argue and to support the view that his party should retreat from this past accepted philosophy of his party?

Mr. HEMPHILL. Well, I might say to the gentleman, since we are apparently going to have a partisan discussion, that my conception of the Democratic Party is that it is not a party of retreat. I might also say insofar as the party which the gentleman represents is concerned, that we knocked at the White House door for 8 years, and the Tariff Commission made many recommendations unanimously, and the gentleman's party, the chief of the gentleman's party, turned a deaf ear to the textile industry and never did anything for them; never evidenced any interest.

Mr. LINDSAY. Mr. Speaker, will the gentleman yield further?

Mr. HEMPHILL. I will be happy to yield.

Mr. LINDSAY. I am wondering whether we are getting to a position where in the future the traditional roles of the parties seem to be in a little different context than they used to be. Maybe we can expect the gentleman's party to adopt narrow trade policies, whereas when the gentleman was referring to the policies of the last administration, that President was advocating liberal reciprocal trade programs. As I understand, the burden of the gentleman's remarks and what he is suggesting is that the United States retreat from its, in modern times, traditional polices of advocating and supporting liberal reciprocal trade programs on an international basis.

Mr. HEMPHILL. I must say the gentleman's understanding is entirely and understandably a partisan one. So far as the past administration was concerned and its liberal policies, I always had the feeling that it either did not have the courage or perhaps the intelligence to get up a program of its own, so it had to copy the program of the Democratic Party. So far as retreat is concerned I think I have answered the gentleman on that. But I would tell the gentleman that the Democratic Party as I conceive it has not only the compassion which the party of the gentleman lacks, in my opinion, but the Democratic Party has the elasticity I think to reconsider any policy it has which will affect the jobs of people, because the Democratic Party is concerned with jobs and I am happy to be a member of that party.

Mr. WHITENER. Mr. Speaker, will the gentleman yield to me?

Mr. HEMPHILL. I yield to the gentleman from North Carolina.

Mr. WHITENER. Mr. Speaker, at this point I would like to make this suggestion to my friend from New York [Mr. LINDSAY]. Apparently he is not aware of the fact that on 28 occasions during the recent and lamented Eisenhower administration there were opportunities for relief not only to textiles but to all American industry and on only two of those occasions did that administration do anything to preserve American jobs.

I know of no instance since I have been serving in this body during the former President's administration, that those of us from the textile areas who were pleading for survival were even given an indication that we could be heard at the White House.

I am happy to report that the present administration has appointed a Cabinet-level committee to study the textile problem and that just yesterday the distinguished gentleman who now occupies that position with vigor and with zeal and who is willing to work at the job entertained 14 Representatives of the textile area from this House of Representatives who discussed with him and presented to him our problem.

I might say to our distinguished friend from New York that the present President understands the problem, is interested in the problem, and is interested in preserving American jobs and not in shucking off responsibility and ignoring the plain and hard facts of life which have many thousands of people gravely concerned.

I am confident that under the leadership of this dynamic young man from Massachusetts as contrasted with the inactivity of the 8 years which preceded him that this textile industry of ours will at least know that it has received fair and proper consideration.

Mr. LINDSAY. Mr. Speaker, will my friend from South Carolina yield further to me?

Mr. HEMPHILL. First, Mr. Speaker, I want to thank the gentleman from North Carolina [Mr. WHITENER] for foreclosing the issue. I am now happy to yield to the gentleman from New York.

Mr. LINDSAY. I thank the gentleman. I do not think I was interjecting a partisan issue and had certainly no intention of doing that. I was just trying to get myself educated a little bit, and trying to understand the gentleman as to what he is advocating.

My only question was, What will be the gentleman's argument, what will be the gentleman's point of view when we are faced with the difficult job of trying to write new reciprocal trade legislation? I wonder in this connection whether the gentleman is familiar with the dilemma that the English find themselves in now because of the pressures in their own community to protect themselves internally. The Government in power now avoided participation in the European Common Market. I suppose that possibly the one foothold that the Labor Party in England has, the one case they are able to make out against the Government in England now is that they were shortsighted in adopting really restrictive policies on trade and that perhaps the long-range point of view, the part of wisdom in this area was to have joined the European Common Market.

I can assure the gentleman from South Carolina, and my friend from North Carolina, too, that there was no intention to interject a partisan question here.

My question is one based on concern and worry, and it is, Where do we go 2 years from now when we have to reconsider this whole question of reciprocal trade? Do we take the course of liberal reciprocal trade programs along the lines of the European Common Market, or do we pull in our horns and adopt a protectionist philosophy in order to make the adjustments which obviously have to be made by one means or another to protect our own workingmen? Where does the balance lie? Which direction does the gentleman suggest the country take on an overall basis?

Mr. HEMPHILL. I might suggest to the gentleman that he go back and read the record of the reciprocal trade legislation which we had I believe 3 years ago, when those of us who sought some relief or protection took the position that some changes in the peril point provisions should be made from what then existed. The majority of our own Democratic Party, together with a majority, if not a greater majority even, of the gentleman's party, voted against such a reconsideration at that time. Now we have another 2 years and we will have a total of 4 years' experience. I think in the light of that experience we can certainly have a reevaluation. If the textile industry and other industries continue to be affected, and I believe they will if we do not get relief, I think certainly the Democratic Party has the elasticity to make the reevaluation. What the outcome of that would be of course I do not know, and I assume the gentleman does not yet prophesy.

Mr. WHITENER. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield to the gentleman from North Carolina.

Mr. WHITENER. The gentleman from New York has spoken about quotas and restrictions on bringing in commodities. There is nothing new about that philosophy in the Democratic Party because for several years now we have operated under a global quota with regard to extra long staple cotton. That presents another problem to the yarn industry, of which we have such a preponderance in the district I serve, because by reason of this rigid quota the price of this extra long staple cotton is so much higher to the domestic manufacturer than it may be to one in another country who can buy this extra long staple cotton from Egypt and other producing areas without paying a premium; they can bring their commodities into our country under the present program and compete in a very unfair way with our domestic industry. There is nothing shocking about quotas. It is unfortunate that the administration preceding this one apparently had the same view that my dear friend from New York has, that nothing should be done to protect the jobs of our people. I do not think the Democratic Party has ever taken the position that American workers' jobs are not of importance and concern to our great party. I think that whatever the philosophy of the individual Democrats may be, we are all at one in agreeing that the plain everyday American is the one for whom we feel the Government should be most careful in protecting his rights and his interests and promoting his welfare.

So while I do not ever engage in partisanship in the discussion of this problem, because I recognize that my dear friend from New York who serves on the Committee on the Judiciary with me is a man of great learning and of great intellectual capacity, frankly, I would not say anything of a partisan nature which might offend his sensibilities, because I know that the great mind that he has when he learns the facts will bring him to the same conclusion which we have about the threat to this great industry and the thousands of jobs of our people.

Knowing the gentleman from New York as I do, and knowing him to be a great American, I know when the roll is called on reciprocal trade, if we are here when it comes up next year, that we can count upon reason to hold sway with him and we can count on his assistance to help us in helping those humble Americans who today are crying for assistance from this great Government of ours.

Mr. HEMPHILL. I thank the gentleman. I might say I share the gentleman's sentiments and his admiration for the distinguished gentleman from New York. I am sure if there was anything said in a partisan manner by anyone who has participated in this discussion, it was unintentional.

I might call the gentleman's attention to one thing which has concerned me, and that is the fact that while we have a voluntary quota, as is the case with Japan, and I do not intend to discuss that at this time, from other countries goods are being exported into this country, from countries where there are no quotas. It seems to me, one particular path of relief or, perhaps, potential source of relief, would be to insist that some quota be placed on any country which does not now have a quota. I think we could measure and evaluate the desirability and not only the desirability but the actual statistical figures which we would expect in such a program with reference to these other countries.

I say that because we are not only concerned with the cotton textiles, but let me just show you exactly what happens. Consider wool imports. I have no wool in my district, but when the wool imports reached a record high of about 28 million pounds in 1960, after a sharp rise from 1959, at the same time we find that there is a general, a gradual, and a decided employment or production decline. So we cannot disassociate the fact that when we have a flood of imports, we have a decline in employment. Now in a time when we in America have 5½ million people unemployed, and in a time when we are considering unemployment as the basis and foundation, apparently, for certain legislation which is being proposed, and this unemployment is a problem and it is a problem of great concern to every one of us, then I think we should study carefully the impact of imports and the impact on this problem.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield to the distinguished majority leader [Mr. McCORMACK].

Mr. McCORMACK. And we should consider also the fact that the textile industry is one of the most important industries of our country and directly and indirectly provides employment, as I remember the figures, for approximately 2 million persons.

Mr. HEMPHILL. The distinguished gentleman from Massachusetts is eminently correct. As I pointed out a while ago, the payroll amounts to $7 billion, which is quite a payroll in our economy. The Office of Civilian Defense Mobilization regards the textile industry as an essential industry and we all recognize, of course, that it is an essential industry.

Mr. McCORMACK. The gentleman referred to the voluntary quota with our Japanese friends. As I remember, they were over here for months and could not even get into the last Republican State Department to sit down and have a chat about voluntary quota. Is my memory correct on that? They were here for a long while before they got in, and they had to break their way in.

Mr. HEMPHILL. I think the gentleman is correct. I think the Japanese themselves, at least, I would hope so because their trade is tied in with ours, and there is no disputing the fact that they would want to work with us—I would hope that they would.

Mr. McCORMACK. As a matter of fact, a reasonable quota is the orderly way and the proper way to try to meet this problem. In 1956, as chairman of the Democratic committee one of the criticisms of the Republican administration was for their failure to have a quota

system to protect American workers and American industry.

Mr. HEMPHILL. I thank the gentleman. I might say to the gentleman from Massachusetts, and I repeat again, one of our problems today is the fact that these people who do not have any quotas are flooding our markets, and they are not people whose trade is tied in with the United States to the degree that the Japanese people are nor are their defense characteristics similar or identical.

Mr. LINDSAY. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I shall be happy to yield to the gentleman from New York.

Mr. LINDSAY. I would be interested to know when the reciprocal trade bill comes up for renewal 2 years hence how the gentleman from Massachusetts, our distinguished majority leader, and the gentleman from South Carolina, vote, whether they will vote together on that subject.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. HEMPHILL. I yield.

Mr. McCORMACK. I am glad the gentleman from New York is going to watch closely how I vote. I can tell him now how I am going to vote so he will not have to worry about it for the next 2 years, but I tell the gentleman that from the inconsistent position he puts himself into by his nonpartisan-partisan injection I am going to be interested in watching how he votes.

Mr. HEMPHILL. Because my area is affected I am going to be watching how both the gentlemen vote and I hope they vote with me.

Mr. Speaker, I want to thank those who participated in the colloquy with me.

THE ONE-WAY STREET

The SPEAKER pro tempore. Under the previous order of the House the gentleman from Pennsylvania [Mr. DENT], is recognized for 1 hour.

Mr. DENT. Mr. Speaker, during these past months I have tried to awaken the people of this country to the present and growing danger to our long range welfare because of the importation of low-priced foreign-made goods.

In my recent speech I covered some of the figures on the glass industry giving the viewpoint in the main of the workers and their union representatives.

Today I want to give the equally serious and equally astonishing views and facts as presented by management.

In part, I will quote from the remarks of Robinson F. Barker, vice president, glass division, Pittsburgh Plate Glass Co.:

My name is Robinson F. Barker. I am vice president and general manager of the glass division of Pittsburgh Plate Glass Co. and have been in the glass business for over 25 years.

My company, Pittsburgh Plate Glass, manufactures glass, paints, chemicals, fiber glass, plastics, brushes, and other products. The principal glass products we manufacture include sheet glass, plate glass, laminated glass, tempered glass, structural glass, and optical glass. We believe that Pittsburgh Plate Glass produces about one-third of the sheet glass manufactured in this country. It is my understanding that sheet glass is the only product involved in this hearing.

I appreciate the opportunity to present facts concerning the serious injury our sheet glass business has suffered as a result of the foreign invasion of the U.S. sheet glass market. The injury, already severe, threatens to assume even greater proportions in the years immediately ahead.

The extent of the injury already suffered and whether the domestic industry can continue to survive the ever-increasing onslaught of foreign imports, it seems to me, are the very serious questions which are now before this Commission in the pending investigation.

Before addressing myself to these and other questions, I invite your attention to the fact that prior to the August 1960 hearings my company filed wih you a detailed memorandum in opposition to further reductions in the existing tariff rates applicable to sheet glass. That memorandum was supplemented by my appearance before you on August 17, 1960. Other representatives of the domestic industry, labor, and Members of Congress also appeared on that occasion.

Subsequently, on November 17, 1960, the Commission issued notice of this investigation under the escape clause provisions of the Tariff Act. Thereafter we were visited by members of the Commission staff and have received various requests from them for additional information, all of which we have supplied to the best of our ability. Of course, we have also answered and filed the detailed questionnaire we received from the Commission in connection with this investigation.

With your permission, I plan today to give you facts concerning the competitive problems confronting us in our sheet glass operations and also to speak candidly to certain questions which you may have in mind.

The fact that the U.S. sheet glass industry is losing the domestic market is readily apparent from the statistics your staff has developed during this investigation. As you know, the ratio of imports to total domestic shipments in 1955 was 15.4 percent. Three years later, 1958, this figure had increased to 27.2 percent and last year reached an alltime high of 32.5 percent.

During the same period U.S. exports of sheet glass declined substantially and now amount to less than 1 percent of total domestic shipments.

In my appearance before you on August 17, 1960, I discussed in some detail the reasons which have contributed to the loss of a substantial part of our domestic market to the foreigners. It is not my purpose today to repeat what I said on that occasion. However, I do believe it would serve a worthwhile purpose if I were to summarize those reasons and as to those where there have been additional developments I shall endeavor to bring you up to date.

The principal reasons which have contributed to the successful penetration of our market by the foreign producers are as follows:

1. There is equality of technology, labor skills, and productivity among foreign and domestic producers of sheet glass.

2. Ocean freight rates constitute no barrier to imports into the United States.

3. The foreigners have an overwhelming cost advantage over the domestic producers. This is true not only with respect to labor costs but also with respect to raw materials cost. In addition, replacement and repair costs and research and development expenses are appreciably lower abroad, primarily because of the lower labor costs they enjoy.

4. Our tariffs have been completely ineffectual in equalizing or offsetting the overwhelming cost advantage held by the foreign producers. The tariff on sheet glass in recent years has declined sharply—from an equivalent ad valorem of 60 percent in 1939 to an equivalent ad valorem of 14.8 percent in 1959. The cumulative effect of the series of tariff reductions made over the years necessarily has assisted the foreign producers in capturing a substantial share of our market. The latest in that series of reductions took place in 1958, the year in which the ratio of imports to total domestic shipments jumped dramatically to 27.2 percent from 17.1 percent in 1957.

5. With their tremendous cost advantage, the foreign producers can and do undersell us consistently in this market.

The summer and fall of 1960 witnessed a number of price gyrations. Although the amounts of the differentials between the prices of the foreign producers and Pittsburgh Plate Glass varied from time to time during that period, the cold, hard fact of the matter is that foreign sheet glass continues to be sold at considerable price differentials below our domestic prices. Thus, today the amounts of those differentials range from 8.1 percent to 12.2 percent in the case of the prices of Western European producers and from 13.3 percent to 18.9 percent in the case of Japanese producers. We have prepared an exhibit, which I respectfully request be made a part of the record, that sets forth in more detail the differentials within those ranges which are applicable to the various thickness of sheet glass presently sold in the United States.

We invite your attention to the fact that in comparing the prices in the United States of foreign producers with those of Pittsburgh Plate Glass we have used, in the cases of prices for single strength and double strength thicknesses, the foreign producers' prices on 18-ounce and 24-ounce sheet glass, respectively. We have done this for the reason that the foreign glass of those thicknesses is imported in the largest volume and is in direct competition in the marketplace with our 19-ounce and 26-ounce sheet glass.

The price schedules of the Western European producers and Pilkington contain prices on 19-ounce and 26-ounce sheet glass, and in each case state that an additional 3-percent discount from such prices is applicable to glass of 18-ounce and 24-ounce thicknesses.

An additional reason supporting the validity of our price comparison is the fact that the thickness tolerances for 18-ounce glass, which are contained in the specifications of the foreign producers, permit the foreigners to sell as 18-ounce glass a product which is slightly thicker than the minimum tolerances for 19-ounce glass as set forth in the specifications of the domestic producers. (Note: Pilkington 18-ounce thickness tolerances are from 2.0 to 2.2 millimeters. The 2.2 millimeters equal 0.087 inch. Pittsburgh Plate Glass' thickness tolerances for single-strength run from 0.085 to 0.095 inch.) The same situation applies in the case of the foreign producers' thickness tolerances for 24-ounce sheet glass as compared with our 26-ounce double-strength glass. (Note: Pilkington 24-ounce thickness tolerances are from 2.75 to 3.1 millimeters. The 3.1 millimeters equal 0.122 inch. Pittsburgh Plate Glass' thickness tolerances on double strength are from 0.118 to 0.130 inch.)

Although we know of no governmental statistics which disclose the relative proportions of 18- and 19-ounce for single-strength glass or 24 and 26 ounces per double-strength sheet glass imported in these categories into the United States from Europe, we believe that on the basis of all the trade information received by us that a very high percentage of the so-called single- and double-strength sheet glass imported into this country is in 18- and 24-ounce glass, respectively. For your information, single- and double-strength sheet glass

represent the largest volume items in our sheet glass line.

Pittsburgh Plate Glass has not produced those purportedly slightly thinner thicknesses because we have always produced 19-ounce glass for single strength and 26-ounce glass for double strength which for many years have been the standard thicknesses in this country.

Were further proof needed to establish this conclusion I would point to the fact that the Japanese do not even publish quotations on either 19- or 26-ounce thicknesses. For single and double strength they quote only an 18- and 24-ounce thickness, respectively. (See published quotations of Nippon Sheet Glass Co., Ltd., dated Nov. 20, 1960.)

Furthermore, although the Western European producers do publish quotations in the United States on both 19- and 26-ounce glass, during the course of the past 10 days our Brooklyn, Philadelphia, and Pittsburgh warehouses were unable to obtain a single lite of 26-ounce thickness from large importers in their respective areas. In each case, I am informed, they were told that the European producers rarely, if ever, ship 26-ounce glass to the United States.

We invite your attention to the fact that in comparing the prices in the United States of foreign producers with those of Pittsburgh Plate Glass we have shown, in the cases of prices for single-strength and double-strength thicknesses, the foreign producers' prices for both 18- and 19-ounce and for both 24- and 26-ounce sheet glass, respectively. We have done this for the reason that the foreign glass of those thicknesses is imported into the United States in the largest volume and is in direct competition in the marketplace with our 19- and 26-ounce sheet glass.

There was considerable testimony before the Commission yesterday regarding the impact of the 18- and 24-ounce products in the American market. There was also considerable discussion whether the indicated discounts at which such glass was sold below the prices for the standard 19-ounce single-strength and standard 26-ounce double-strength products were justified. From time to time Pittsburgh Plate Glass has given study to the possibility of producing glass in these thicknesses in the United States.

Our decision up to this time has been that it would not be economical for us to do so. Simply stated, our reasons are that the standard thicknesses which have prevailed in this country for many years have been the 19-ounce glass, or so-called single strength product, and 26-ounce, or the so-called double strength product. As indicated this is traceable, at least in part, to Government specifications. You have already been informed that the total market represented by sales under Government-prescribed specifications is quite small. The expression was even used, I believe, on yesterday, Why did we American manufacturers allow a so-called tail, representing this small percentage of the market based on 19-ounce and 26-ounce specifications, to wag the dog of a very much larger market which could apparently be adequately and satisfactorily filled by 18-ounce and 24-ounce products?

So far as PPG is concerned, we have felt a real obligation to continue to supply glass responding to the precise specification DD–G–451a established by our Government. Our studies have also established to our satisfaction that, consistent with this sense of obligation, if we were to attempt to undertake manufacture at the same time of 18-ounce and 24-ounce products, the possible savings in cost which have been suggested would be largely illusionary, if they exist at all. Specifically, we feel that to attempt to produce the small quantities of 19-ounce and 26-ounce single and double strength specification glass and at the same time and in our same plants and with the same equipment also attempt to produce 18-ounce and 24-ounce glass to supply the very much greater nonspecification market would involve so many additional production scheduling and inventory problems as to wholly defeat the possibility of effecting cost savings on the mix of thicknesses involved in such a program.

On the contrary, based upon our studies, it is our belief that our costs on such an undertaking would be increased for all four thicknesses. It is entirely possible that we may be driven to the abandonment of the 19-ounce and 26-ounce standard products conforming to Government specifications and to confine our production to the 18-ounce and 24-ounce products exclusively.

However, the prospect of the voluntary abandonment of any segment of our domestic market, which has already been riddled by low-cost, foreign competition is repugnant to us. Even if we should take this drastic action, the heavy losses which we have suffered as a consequence of low-cost, low-price foreign glass in our markets in recent years have afforded convincing proof that any lower level of prices we might thereby hope to establish would be wholly insufficient to meet the demonstrated ability of foreign competitors to reduce their prices to whatever extent necessary to take the business.

The essential thing which I desire to impress upon the Commission in connection with this whole situation is that foreign manufacturers—at least in the case of those competitors located in Western Europe—supply to the American market these four types of glass; namely: 18 ounce and 19 ounce in single strength category, and 24 ounce and 26 ounce in double strength category, and that the prices they quote on 18- and 24-ounce glass are even lower than the already low prices they quote on 19- and 26-ounce glass. The Japanese, on the other hand, do not even publish quotations in the United States on 19- and 26-ounce glass; they quote only 18-ounce and 26-ounce for single and double strength.

We say to you simply this: That, with the exception of the very small portion of the American market which is controlled by the Government specifications requiring 19-ounce and 26-ounce products, the Western European producers are offering and supplying throughout the United States single-strength glass in both 18-ounce and 19-ounce thicknesses, and double-strength glass in both 24-ounce and 26-ounce thicknesses. Concerning the single-strength product in 18- and 19-ounce thicknesses, the products are commercially interchangeable; the physical differences are hardly discernible, and can be determined only by precise testing; the products are bought and sold, and applied for the same uses and purposes, and are in every sense directly competitive. The same conclusions are equally applicable to the 24-ounce and 26-ounce products.

We would also invite the Commission's attention to the fact that thickness tolerances for 18-ounce glass, which are contained in the specifications of the foreign producers, permit the foreigners to sell as 18-ounce glass a product which is slightly thicker than our minimum tolerances for 19-ounce glass and the minimum tolerances set forth in the Federal specifications for single-strength thickness. The same situation applies in the case of the foreign producers' thickness tolerances for 24-ounce sheet glass as compared with our 26-ounce double-strength glass and the Federal specifications applicable to that thickness.

Turning now to questions which might be raised by those who would attempt to minimize the injury which has been sustained by us as a result of the successful foreign penetration of this market, the first question might involve the assertion that the impetus for the high volume of foreign imports was provided by the fact that in some past periods of time the domestic producers had inadequate capacity to serve the U.S. demand. It is true that during 1955 and 1956 sheet glass was often in short supply. This phenomenon, of course, was not confined to the sheet glass industry. Rather, it also occurred in many of the major industries in this country; e.g., steel, aluminum, cement, heavy chemicals, to name a few. The reason why this occurred in many American industries is explained by the fact that the economy was literally bursting at the seams in those years and also operating at its alltime highest levels.

I have purposely given a rather full and detailed report on this subject because too many of us as Members of Congress have been prone to listen to slogans and close our ears to facts.

In this regard, allow me to put another very illuminating statement by James L. Williams, vice president of American St. Gobain Corp. In one of my recent speeches, I talked about this company and its very sad plight in my home district. The article follows:

[From the News-Dispatch, Mar. 15, 1961]

GLASS EXECUTIVE TESTIFIES ON IMPORTS

An official of American St. Gobain Corp. testified in Washington that competition of low-priced foreign glass has forced the firm to close its Jeannette plant and reduce operations at the Arnold plant.

James L. Williams, Pittsburgh, vice president of the firm, is one of a group of representatives of domestic manufacturers of window glass who are asking the Tariff Commission to increase the tariff or perhaps even impose quota restrictions on imports which they say are ruining their business.

Williams testified that at the Jeannette plant, closed since February 1960, 781 men have lost their jobs; at Arnold, 644 men are working where 825 worked in 1959.

Since 1950, Williams testified today, the rates of import duty on sheet glass have been cut four times. In that same time, imports of sheet glass have increased from less than 3 percent of domestic consumption to 30 percent.

Commerce department figures admitted in evidence showed imports of window glass in 1950 were 32 million pounds; in 1960 were 410 million pounds. In the same period, exports of United States-made window glass fell from 8.5 million to 3.6 million square feet.

Williams explained his firm was formed in 1958 by merger of the American Window Glass Co., of Pittsburgh, and the Blue Ridge Glass Corp., of Kingsport, Tenn. He said the merger, and subsequent expansions of line, were made necessary by the need to compete.

PROSPECTS SEEM DIM

"But even with a full line of products in sight our prospects are considerably dimmer by reason of the current flood of imported glass."

He said majority ownership of stock in his firm is held by Compagnie De Saint-Gobian of Paris, France. "However, no limitation has been placed on my appearing before you or the statements I make."

He said his firm's sheet glass operations lost money in 1959 and 1960.

"The action of this commission may well determine whether the domestic sheet glass industry is to survive."

He said the foreign producers have the advantage of low labor costs, lower fuel costs, and lower materials costs.

Along the same line, Representative JOHN H. DENT, Democrat, of Pennsylvania, in the sixth of his series of speeches in Con-

gress in his crusade against the present reciprocal trade and aid program, told his colleagues he is presenting a brief to the Tariff Commission pleading and even begging for the return of thousands of jobs for the glassworkers of America.

Representative DENT said that through no fault of their own, these workers find themselves disposed of their opportunities to earn a living.

He warned America is "heading down the one-way street of economic disaster yet we are not strong enough to turn back or even to take a detour * * *."

Referring specifically to his hometown, DENT cited Jeannette employment figures as being typical of the entire glass industry. "The plant in Jeannette, at one time the world's largest under one roof, is now a ghost plant * * *. I predict the complete collapse of the industry unless some changes are made * * * in the thinking of the Tariff Commission * * *. The Commission should tell GATT (General Agreement on Tariffs and Trade) where to go and when to go and close its doors to the international traders who have had more to do with our gold crisis than any other group in this Nation."

MINIMUM WAGE VOTE

Mr. LINDSAY. Mr. Speaker, I ask unanimous consent that the gentleman from Pennsylvania [Mr. WHALLEY] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. WHALLEY. Mr. Speaker, on Friday, March 24, 1961, this body voted on the minimum wage legislation. My name was not recorded among those who voted on this measure.

Mr. Speaker, I was present when the session began that day at 12 noon, and it was my intention to support an increase in the minimum wage.

However, at 2:50 p.m., I received a call from the Temple University Hospital in Philadelphia, advising that my brother, who had been dangerously ill for several days, must undergo an emergency operation in an effort to save his life, and asking that I come to Philadelphia immediately.

Mr. Speaker, I regret that circumstances prevented me from casting my vote on this vital measure, but I would say again, that if I had had the opportunity to do so, I would have supported an increase in the Federal minimum wage.

LET'S NEVER LET ANY "PARTY LINE" PHILOSOPHY CREEP INTO OUR VITAL MILITARY INTELLIGENCE SERVICES

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. STRATTON] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. STRATTON. Mr. Speaker, both as a member of the Committee on Armed Services and as a combat intelligence officer with service in World War II and the Korean war, I have been greatly disturbed by newspaper accounts that in the Pentagon there is a plan which is currently being given very serious consideration that would merge the three separate intelligence services of our three separate services into a single intelligence service.

I am profoundly disturbed by these reports, Mr. Speaker, because I know from my own experience how disastrous it would be to resort to administrative action to eliminate differences of opinion in our intelligence services and in the estimates and conclusions which they are required to furnish to our military commanders and to impose instead some official "party line" philosophy. At its best, intelligence is a most delicate operation. Nothing is ever 100 percent certain in this field. To impose some kind of administratively neat uniformity upon our intelligence operations and estimates in the mistaken view that this might thereby help to eliminate wasteful interservice rivalries could well spell military disaster. Suppressing the minority view in intelligence would be just as much a backward step as would be supressing the minority view in our National Legislature.

Mr. Speaker, to underline the difficulties and hazards involved in these projected plans, I would, therefore, urge my colleagues to read and study the following two articles from the New York Times by their distinguished military editor, Hanson W. Baldwin:

[From the New York Times, Mar. 27, 1961]

INTELLIGENCE—I: MERGER OF SEPARATE SERVICE AGENCIES IS BEING PROPOSED TO CURB RIVALRIES

(By Hanson W. Baldwin)

The merger or centralization of the separate intelligence services of the Armed Forces, now under study in the Pentagon, offers seeming advantages but at the risk of major dangers.

Today, each of the services maintains its own intelligence division or branch—the Office of Naval Intelligence; the G–2, or intelligence branch of the Army; and the air Force A–2 section. The Joint Staff of the Joint Chiefs of Staff also maintains a Joint Intelligence Group.

Maj. Gen. Graves B. Erskine (Marine Corps, retired), head of the Office of Special Operations, has long been an assistant to the Secretary of Defense in the intelligence, security, unconventional warfare, and psychological warfare field. He also monitors the National Security Agency.

The National Security Agency, an agency of the Department of Defense, staffed by military personnel and civilians, deals with communications, intelligence, codes, and ciphers.

Outside of the Department of Defense there are other important intelligence collection and evaluation agencies. The most important are the Central Intelligence Agency, headed by Allen W. Dulles, the top echelon national intelligence agency, charged with the coordination and evaluation of intelligence on the national or strategic level; the Federal Bureau of Investigation, charged particularly with counterespionage; the State Department's intelligence activities; and those of the Atomic Energy Commission.

A PYRAMIDAL SYSTEM

There are two key groups responsible for coordinating and meshing all these intelligence activities. Within the Pentagon, a Joint Intelligence Committee, composed of Army, Navy, Air Force, and Joint Intelligence Group heads, formulates joint military intelligence. At a higher level, the Intelligence Advisory Committee, chaired by Mr. Dulles and composed of heads or representatives of all the principal intelligence agencies, meets once a week to review and approve various national intelligence estimates.

It is the Pentagon part of this system that appears to be threatened with reorganization by the new regime in the Department of Defense. What form such a reorganization would take is not clear as yet; studies are still underway. But given the organizational philosophy of some of the civilians in the new Pentagon team, and suggestions that have been made in the past, it seems clear that more centralization of intelligence at Department of Defense level is being investigated.

Merger, or centralization of all of the services' intelligence activities, has some superficial attractions. There is no doubt that the services have sometimes utilized inflated estimates of enemy strengths to strengthen their budget requests to Congress. There have been marked differences of opinion between the services—based on differing intelligence estimates—about Soviet missile strength, and, some years ago, about Soivet bomber strength. Each service has a natural tendency to stress those elements of Soviet strength with which it is most concerned.

Merging of G–2, ONI, and A–2 at Department of Defense level would, presumably, force the elimination of varying service estimates in favor of one military estimate. It would downgrade the individual service viewpoint and upgrade the collective military viewpoint, thus dampening one facet of interservice differences. At the same time such a change would carry the trend of past years toward centralization of power in the Department of Defense and reduction of the service departments and the individual services much further, since intelligence is the handmaiden of policy and provides the facts upon which it must be based.

It would also, of course, strengthen the control of the Secretary of Defense, since he would preside directly over one common department intelligence agency rather than over many separate agencies, each now indirectly responsible to the Secretary through other departments or agencies. Theoretically, too, the simplification of organization appears attractive.

But these potential gains are far outweighted by the probable risks.

[From the New York Times, Mar. 28, 1961]

INTELLIGENCE—II: MAJOR DANGERS SCENTED IN MERGER OF SERVICES' INFORMATION AGENCIES

(By Hanson W. Baldwin)

The merging of service intelligence units at the Department of Defense level poses several major dangers.

In the past, intelligence has always been a function of command. It is true that the functions of command, both in Washington and in the field, have been gradually limited since World War II by the "civilianization" of the services and the usurpation of command functions in the service departments by the increasing centralization in the Department of Defense. Legally, the Chief of Naval Operations and the other chiefs now command nothing; command is exercised through the Joint Chiefs of Staff as a corporate body and the unified commanders overseas.

Nevertheless, intelligence in the field—at regimental, ship, or air group level, which the services call tactical intelligence—is and must remain a function of command. Yet the tactical intelligence officers depend for a great flow of background and strategic information such as order of battle of the enemy, technical descriptions of enemy equipment and weapons, and so on, upon their

parent service organizations in the Pentagon. In fact, without these organizations—G–2 of the Army, A–2 of the Air Force, the Office of Naval Intelligence—to collate and digest field reports and the reports of military, air, and naval attachés, and to evaluate, study, and disseminate to the field, masses of other information, the intelligence officers in the field would be military orphans, a body without a head.

OTHER DANGERS SCENTED

The proposed merger of service intelligence agencies also poses another danger: that the specialized and detailed "nuts and bolts" intelligence data of major interest to each of the three services might well be neglected or downgraded by a higher level agency. A merged, non-service-oriented intelligence agency might well concentrate on high-level or strategic intelligence and neglect some of the basic land, sea, and air data.

The most dangerous aspect of a merged intelligence service is the emphasis it would inevitably place on "agreed" or "collective" estimates. Intelligence data, by their very nature, cannot be precise, except in a few instances. There are bound to be varying estimates of the details of enemy strengths, and when these are projected into the future, as intelligence attempts to do, the uncertainties and hence the differences are even greater. The danger of a merged intelligence is the danger that differences would be suppressed, or so far downgraded that minority views would never reach the eyes of the Secretary of Defense or of the President.

Under the present system dissents from factual estimates or interpretations are indicated by the dissenting group in footnotes or in other explanatory material; the nature of the dissent and the reason for it is given.

Present dissents although sometimes sharp and definite (as, for instance about Soviet missile strength), do not impair the basic value of the estimates. What they do do is to make the task of the policymaker harder.

But, for the security of the country it is highly important that this disagreeable extra work be undertaken and that these safety factors provided by the privilege of dissent be insured. Sir Winston Churchill took a leaf from his own experience in commenting adversely upon the dangers of agreed intelligence, which he called "this form of collective wisdom." The British Joint Intelligence Committee in 1941 rejected indications that the Germans were about to attack Russia, though Sir Winston as early as March, saw raw or unevaluated intelligence reports that convinced him that invasion of Russia was impending.

THE YALTA CONFERENCE

The importance of such dissenting opinions or estimates is emphasized for the United States by the Yalta conference. The military value of Russia's participation in the Pacific war hinged in considerable part at that time on the status of Japan's famed Kwantung Army in Manchuria. If this army, Japan's finest prior to World War II, was intact and strong, Soviet aid would probably be needed, our military commanders believed, to pin it down, to defeat it, and to prevent the prolongation of the war on the mainland.

A minority group in both the Office of Naval Intelligence and in Army G–2 felt that the Kwantung Army was a hollow shell; its crack divisions, they maintained, had been shifted out of Manchuria to defend the Pacific islands and the homeland. But the "collective" and "agreed-upon" intelligence estimate furnished to the Joint Chiefs of Staff prior to Yalta said that the Kwantung Army was exceedingly strong and that without Russian assistance the war might continue until 1948. But there were no indicated dissents in the collective estimate; the minority opinions never reached the top levels of policymaking, and this erroneous estimate undoubtedly influenced the military and the political judgments at Yalta.

If so serious a mistake could have occurred with the separate service intelligence agencies of those days functioning, how much more likely is a recurrence if they should be merged into one monolithic structure.

POLICYMAKING

There is a final danger. Intelligence collection and evaluation must never be confushed with policymaking. The merging of service intelligence organizations at the Secretary of Defense level might well produce a more closely integrated and agreed upon collective military estimate than the present system does. But any such monolithic agency so close to the throne of policymaking power in the Pentagon might well be susceptible to policy influence; the facts might subconsciously be distorted to suit the policy, rather than vice versa. This is not an idle fear: Sir Winston spoke of it in the House of Commons in 1939:

"It seems to me that Ministers run the most tremendous risks if they allow the information collected by the Intelligence Department * * * to be shifted and colored and reduced in consequence and importance, and if they ever get themselves into a mood of attaching weight only to those pieces of information which accord with their earnest and honorable desire that the peace of the world should remain unbroken."

It is the trend of human nature—hard to resist—to interpret facts to accord with preconceived prejudices. It must be guarded against to the utmost in intelligence work. The proposed merger of our service intelligence sections would facilitate this error rather than reduce it. The old American principle of checks and balances is as applicable to intelligence collection and evaluation as it is to administration.

PHYSICAL FITNESS PROGRAM

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that the gentleman from Utah [Mr. KING] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. KING of Utah. Mr. Speaker, I have read with great interest today the reports that President John F. Kennedy last week appointed the eminently successful football coach and athletic director of the University of Oklahoma, Bud Wilkinson, as his special consultant on physical fitness, and I feel compelled by this appointment to comment on the problem of fitness.

While I am pleased that the President has a genuine personal interest in physical fitness and already has shown his determination to take positive action to toughen and condition American youth physically, I must express my concern lest the program be unnecessarily limited in its scope.

I earnestly hope that the administration sees, or very soon will come to see, physical fitness is just one prong in a many-pronged attack on a very broad problem—the problem of total fitness.

Our Nation is intensely concerned today over youth fitness, and it has good cause to feel this concern. Every citizen sees juvenile delinquency as a serious problem. Moreover, most Americans today recognize that youth fitness holds the key to both national progress and national security. This realization is reflected in the quickened interest the American public has taken in the public schools and the quality of American education.

Just as man does not live by bread alone, he cannot conquer his problem by muscle alone.

I want to emphasize that I fully appreciate that physical fitness can and does make an important contribution to total fitness. Like many other qualities which characterize the healthy, stable, and useful citizen, physical fitness is earned at a certain price; and that certain price is hard work. With the individual, the very process of cultivating physical fitness helps to cultivate other valuable qualities, such as self-reliance and self-discipline.

Still, I strongly feel the administration should integrate measures to promote physical fitness into a broader program which has as its aim the total fitness of American youth—their intellectual, moral, and spiritual fitness as well as their physical fitness. While the emphasis of physical fitness can indirectly stimulate total fitness, this emphasis will not fully fortify our future citizens for the tough moral and spiritual tests which lie ahead.

Physical fitness alone will not conquer communism.

The president of the Church of Jesus Christ of Latter-day Saints, President David O. McKay, described the problem most eloquently when he observed, and I quote:

Flabbiness of character rather than flabbiness of muscle is at the root of the problems of American youth.

This church has two auxiliaries, the Young Men's Mutual Improvement Association and the Young Women's Mutual Improvement Association, which have been working intently upon youth fitness for 75 years. It has consciously pursued a broad, church-centered, family-centered approach with some very gratifying results.

The Eisenhower administration saw too late that a fitness program which concentrated upon physical fitness alone would not condition American youth for the awesome challenges which confront it. In his last term, President Eisenhower began to recognize clearly that youth fitness demanded a broad approach, which stresses parental fitness, family prayer, and family recreation, religious activity, and many other values besides physical fitness.

Elder Marion D. Hanks, a member of the First Council of the Seventy of the Church of Jesus Christ of Latter-day Saints, who was directly involved in this program, traced the transition for me in a recent letter, in which he observed:

For 4 years we have seen an evolution from this exact status in the Eisenhower administration, whose youth fitness crusade began on exactly the level President Kennedy has now initiated his. In the beginning there was much wasted effort in earnest but somewhat futile attempts to establish uniform standards for testing the physical well-being of American youth. Then additional light was cast on the scene and it became clear

to most that grown men and women who really care about young people cannot sit around and talk to each other indefinitely about muscles. One cannot unbraid an individual's muscles from the rest of him, get the muscles in shape and then pleasantly paste the whole together.

In Washington at the last meeting, it was brought again to the attention of the group that Mr. Hitler had a magnificent physical education program which had produced a race of supermen almost literally. The Russian physical fitness activities are well known for their effectiveness. Most Americans, however, are not satisfied to proceed on the basis of these people. We have something else in mind when we think of young people who are fit to live and fit to function and fit to lead and direct.

I was much impressed with President Kennedy * * * I believe if the President were fully informed about what has happened and is happening, he would not be content to leave youth fitness on a physical basis. I am not of course inveighing against physical fitness. I do not know anyone in the world more interested in that than I am. I am not alone personally interested in it, but approach it as an article of my own religious faith.

Like my distinguished constituent, Elder Hanks, I earnestly hope that the new administration will profit by the trials of the last administration and pursue a broad approach to youth fitness, rather than start at the same narrow point of emphasis at which the Eisenhower administration started 4 years ago. In fact, I take this opportunity to urge that President Kennedy begin immediately to map a program geared to the total needs of total fitness for American youth.

I also take this opportunity to present several passages of the address which Elder Hanks made to the White House Conference on Youth last year. These passages from his message of March 20, 1960, follow:

OUR FOUNDATIONS

Our ideal, though we have fallen short in practice, has always been the dignity and inherent worth of the individual. We believe that men are meant to be free and that they are eternal, brothers to all men, capable of infinite growth, and are ultimately responsible for the use they make of their capacities and opportunities.

We have put great value in the family as the cornerstone of our society, and believe that our Nation's well-being depends upon the strength and sanctity and spiritual foundations of our homes. Our judgment has been that the most rewarding and important career is to have a good family.

We have put our trust in God, education, work, freedom, and responsibility. Our standard of excellence and quality in men has been character, integrity, initiative, patriotism, self-reliance, sincere concern for others and for the future, reverence, courage. These are the ideals and values in which we have traditionally believed and which we have reflected in our highest moments.

Admittedly we have slipped far from the ideal. In everyone's experience are multiple examples of how far we have gone. But is that what America really stands for or really wants? Is it really America's choice of what is good, desirable, excellent?

Being aware of our great economic, educational and scientific strides, reading daily headlines which reflect our moral failings, in the face of possible international incineration, is it not clear that what we really need is the resurrection and reenthronement of standards and convictions which lead to the development of men and women of the highest character? Is not this the chief business of the family, community, nation—of life itself? We have enough of almost everything, think we are good enough to do almost anything, and yet stumble along on the precarious periphery of annihilation because we cannot be sure we have the moral and spiritual maturity to use our great resources to bring about the magnificent blessing to mankind that could eventuate through proper use of our capacities.

There is no doubt in my mind as to what the great majority of our young people want. Our children and youth have suffered from our lack of willingness to exemplify and communicate the ideals and values in which we really believe. Our failure lies in ourselves. We have been bemused with self-seeking and materialistic goals, and have seemed reticent to declare our faith and our spiritual witness. Perhaps we have lacked courage more than knowledge; we have been too long afraid and indifferent. We need to clear our own thinking, recognize our own failings and shortcomings, repent of them and do better.

WHAT YOUTH WANTS

We asked more than 40,000 high school and junior high school students in the State of Utah what are their problems and what are their suggested solutions. Their answers were very much like every other survey I have seen of viewpoints of the young. Their problems center in inadequate family life, lack of communication with adults, and poor parental interest and example. They said they want more chance to work; wholesome entertainment; supervised activity and recreation; discipline, guidance, direction; love and attention from their parents; family counseling, home nights, religious activity; and recreation.

They said they want less automobiles, cigarettes, and alcohol; unoccupied leisure time; movies and magazines with emphasis on sex, horror, crime; parental emphasis on material goals; and adult bad example.

They ask for better law enforcement and stiffer penalties; choice of values by parents; recreation opportunities nearby; religious instruction and example; and home life and relationship with parents.

They want lasting marriages, and children; they want help in scheduling their time and activities. They want to participate in the planning and operation of youth activities and youth centers. They want to belong to a united, interested family.

In short, their ideals and values are those which we have said are the foundation of our concepts of what is wholesome and excellent. Permitted to express themselves freely, they have given back to us, almost in the same language what we have used with them, clear statements of their problems and what must be done to solve them.

OUR JOB

If we are to meet their challenge, we need a change of attitude. Any successful effort must put emphasis on the wisdom, integrity, and strength of the individual. There must be a recovery of idealism and discipline and a willingness to acknowledge guilt and to repent. We need a new moral responsibility in advertising. We need less bearing of false witness by the so-called image industries, less distortion and interpretation of life on its lowest possible level. We need continued educational emphasis on classes and training which are concerned with the worthy ends of life, as well as with the possible extension of life into space, or its extinction. We must have leaders of character and moral fiber who will speak and act according to their convictions.

"PURPOSE" AND "SACRIFICE"

When there is mention of "purpose" and "sacrifice" these days, someone often asks, What is it we should sacrifice and for what purpose?

The answer might well be that we sacrifice some of our selfishness and sinfulness and cynicism; that we give of our time and treasure, our interest and influence and love and good example to the young. The words of Isaiah to ancient Israel help us to answer what we should give and give up, and for what purpose.

"Cease to do evil; learn to do well; * * * relieve the oppressed, judge the fatherless, plead for the widow * * * be willing and obedient * * * deal thy bread to the hungry * * * satisfy the afflicted soul * * * hide not thyself from thine own flesh."

To what effect and with what promise?

"Then shall thy light break forth as the morning, and thine health shall spring forth speedily * * * then shalt thou call, and the Lord shall answer * * * and shall guide thee continually, and * * * thou shalt raise up the foundations of many generations."

Another ancient prophet has added:

"And ye will not suffer your children that they go hungry, or naked; neither will ye suffer that they transgress the laws of God, and fight and quarrel one with another, and serve the devil * * * but ye will teach them to walk in the ways of truth and soberness: ye will teach them to love one another, and to serve one another" (Isaiah 1: 16, 17, 19; 58: 7–12; Book of Mormon—Mosiah 4: 14–15).

Our purpose is the redirection of individuals, families, the Nation, to the "old virtues" of family life, fidelity, patriotism, modesty, faith, prayer, reverence, and the whole truth.

Our purpose is to seek to motivate the young with the spark of adventure and challenge and search forever characteristic of their age and disposition. They need to know that ours is a time of unequaled demand for physical and social and intellectual readiness, and for the spiritual and ethical excellence which will give meaning and direction to their lives. They need to see themselves as purposeful participants in one of the most crucial and challenging times in history, and to feel a sense of personal responsibility for the outcome. I would pray that my own and all other children may feel the spirit of the great statement of Theodore Roosevelt:

"Aggressive fighting for the right is the noblest sport this world affords."

The young should learn that there is vital need for pioneering on the existing frontiers—of space and service and the spirit. They need to understand that they and all men have limitations which cannot be outdistanced by power or thrust, however explosive. They must recognize their need for Almighty God. They must learn to respond to the soul's upreach as well as to the mind's outreach. They need to learn the virtue of service and the holiness of prayer. They need not alone pulpit pronouncement, but adult example of the fusing of precept and personal righteousness; not diatribe but direction, not critics, but models.

Our purpose is to help them get what they need. To achieve it, we must be honest with ourselves. Thoreau once said:

"There are thousands hacking at the branches of evil to every one who is striking at the roots."

THE ROOT OF THE CHALLENGE

The root of our problem is the strange habit we have developed of thinking and speaking and writing as if the kind of people we are doesn't matter, so long as we have a program, a curriculum, a plan, a standard measuring system, a research paper, a structured approach. I do not undervalue or minimize good programs or planning, but the perplexity of our times testifies that this is not the supremely important thing. I had reason to look at the PTA creed the other

night. Its objectives are wonderful. The Children's Charter of 1930 is a choice expression of objectives and wisdom. They have been around a long time. The point is that such value as has come from them, and it is considerable, has come because of the application of the principles by people of character and courage. This is our most important need. We need the action-inducing idealism of the "stouthearted men" theme:

"Start me with 10 who are stouthearted men and I'll soon give you 10,000 more."

We need fewer of what the Scriptures call "whited sepulchres" and more "judgment, mercy and faith." We need to plan well, and to realize that the kind of people we individually are matters infinitely much.

Justice George Sutherland of the U.S. Supreme Court once wrote:

"The saddest epitaph which can be carved in memory of a vanished liberty is that it was lost because its possessors failed to stretch forth a saving hand while yet there was time."

With strong personal convictions as to the lateness of the hour and the extreme seriousness of the circumstances, I am yet convinced that there is in the great body of American youth the desire and the capacity to preserve themselves and this bounteously blessed land for the purposes for which God intended them. I am sure that there is among adult Americans the strength and leadership to give the young the direction and inspiration and example they need, and to provide for them a climate in which they can realize their great possibilities for creative, constructive, happy lives. I am grateful for the tens of thousands of American homes where there are daily family prayers and regular family nights, where religious faith and activity are centered around the parents, where loving, interested fathers and mothers are accepting the full implications of their sacred stewardship.

I am grateful also for the multitude of interested adults who have the wisdom and willingness to provide good example and excellent leadership for great numbers of fine young people in churches and organizations and community programs. I appreciate the great scouting program in the Nation and the thousands of devoted leaders who give their time and energy to this worthy adventure. In my own church several hundred thousand volunteer adult leaders of youth give freely of their resources and energy and enthusiasm in directing programs of "spiritualized recreation." On many other fronts and in many other places there is much to be seen which is encouraging and comforting.

But we have far to go. Dr. Frank Crane once wrote of having seen a teamster who had unhitched his horses and was giving them their midday oats beneath the shade of a tree. "From one of the animals I noticed the collar had been taken, and observed that his neck was sore."

I said: "Pretty hard, isn't it, to make a horse pull with a sore shoulder against the collar?"

"Yep," the man answered, "plum tough. But you know, there wouldn't be much work done in this world, mister, if only horses and folks that are plum fit had to do it."

OUR NEED

We admit we are not "plum fit." What we need is faith and courage—faith in God, in life, in ideals, and values which are worthy of us as individuals and a nation; courage to look at our own hearts and habits and lives, to survey what we know about the ideals and values of the world in which our children and youth live, and then to repentantly and resolutely get about the task. We have a supremely important incentive, the opportunity, the tools, and—we pray—the time.

In conclusion, Mr. Speaker, I respectfully urge that President Kennedy look to the image which the people have of him in shaping his approach to the program of youth fitness. True, millions admire him because he practices what he preaches about physical fitness; because his brilliant record of military service and public service reflects the physical courage which he has often mentioned as an important value.

He stands today as one of the most popular, and most exciting figures in the world. But he has not earned this fame playing touch football. When the world looks to him with hope, it sees the whole man. When parents look at him as an inspiring example which American youth should strive to emulate, they see his spiritual strength, his intellectual drive, and his moral courage, above his physical courage. This is the image which inspires the people of the free world and the youth of this Nation, and it represents the kind of fitness which the President's fitness program should strive to develop in American youth.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. LIBONATI (at the request of Mr. HEMPHILL) for 1 hour on tomorrow, March 29, to revise and extend his remarks and to include extraneous matter.

Mr. ZABLOCKI (at the request of Mr. HEMPHILL) for 1 hour on March 30, and that his special order for today may be vacated.

Mr. MULTER (at the request of Mr. HEMPHILL) for 15 minutes on March 29, and 1 hour each on April 20 and 21.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. TABER to revise and extend his remarks on H.R. 5954 and to include a table.

Mr. FLOOD (at the request of Mr. HEMPHILL) was given permission to revise and extend his remarks made in the Committee of the Whole on the bill S. 1 and include extraneous matter and tables.

Mr. BRADEMAS.

Mr. LINDSAY.

Mr. PELLY.

Mr. JOHANSEN.

(The following Members (at the request of Mr. HEMPHILL) and to include extraneous matter:)

Mr. ANFUSO in two instances.

Mr. DINGELL.

Mr. EVINS in two instances.

Mr. JONES of Alabama.

Mr. FISHER.

Mr. CLARK.

Mr. EDMONDSON.

(The following Members (at the request of Mr. LINDSAY) and to include extraneous matter:)

Mr. SCHWENGEL.

Mr. SCHERER.

Mr. OSMERS.

ENROLLED BILLS SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 3980. An act to amend the transitional provisions of the act approved September 6, 1958, entitled "An act to protect the public health by amending the Federal Food, Drug, and Cosmetic Act to prohibit the use in food of additives which have not been adequately tested to establish their safety," and for other purposes.

H.R. 4363. An act to amend Public Law 86-272 relating to State taxation of interstate commerce.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following titles:

H.R. 3980. An act to amend the transitional provisions of the act approved September 6, 1958, entitled "An act to protect the public health by amending the Federal Food, Drug, and Cosmetic Act to prohibit the use in feed of additives which have not been adequately tested to establish their safety," and for other purposes.

H.R. 4363. An act to amend Public Law 86-272 relating to State taxation of interstate commerce.

ADJOURNMENT

Mr. HEMPHILL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 26 minutes p.m.), under its previous order, the House adjourned until tomorrow, Wednesday, March 29, 1961, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

720. A communication from the President of the United States, transmitting amendments to the budget for the fiscal year 1962 involving an increase in the amount of $1,954 million for the military functions of the Department of Defense (H. Doc. No. 124); to the Committee on Appropriations and ordered to be printed.

721. A letter from the Comptroller General of the United States, transmitting a report on the audit of the Development Loan Fund, a wholly owned Government corporation, for the fiscal year ended June 30, 1960 (H. Doc. No. 126); to the Committee on Government Operations and ordered to be printed.

722. A letter from the Acting Director, Bureau of the Budget, Executive Office of the President, transmitting a report that the limitation on salaries and expenses, Office of Alien Property, for the fiscal year 1961, had been apportioned on a basis indicating a need for a supplemental estimate of appropriation; to the Committee on Appropriations.

723. A letter from the Assistant Secretary of the Navy (Installations and Logistics), transmitting the semiannual report by the Department of the Navy relating to those

military construction contracts awarded on other than a competitive basis to the lowest responsible bidder for the period June 30 through December 31, 1960, pursuant to Public Law 86–500; to the Committee on Armed Services.

724. A letter from the Comptroller General of the United States, transmitting a compilation of General Accounting Office findings and recommendations for improving Government operations relating for the most part, to the fiscal year 1960; to the Committee on Government Operations.

725. A letter from the Administrator, General Services Administration, transmitting a draft of a proposed bill entitled "A bill to repeal a certain provision of the Independent Offices Appropriation Act, 1961 (74 Stat. 434), regarding the disposal of surplus real property"; to the Committee on Government Operations.

726. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession contract which will authorize Temple Bar, Inc., to provide facilities and services at the Temple Bar site, Lake Mead National Recreation Area, pursuant to the act of July 14, 1956 (70 Stat. 543); to the Committee on Interior and Insular Affairs.

727. A letter from the Secretary of the Air Force, transmitting a draft of a proposed bill entitled "A bill to amend title 10, United States Code, to authorize the Secretary of a military department to sell goods and services to the owner of an aircraft or his agent in an emergency, and for other purposes"; to the Committee on Armed Services.

728. A communication from the President of the United States, transmitting amendments to the budget for the fiscal year 1962 involving an increase in the amount of $30,100,000 for the Atomic Energy Commission and an increase in the amount of $125,670,000 for the National Aeronautics and Space Administration (H. Doc. No. 125); to the Committee on Appropriations and ordered to be printed.

729. A letter from the president, Girl Scouts of the United States of America, transmitting the 11th Annual Report of Girl Scouts of the United States of America for the fiscal year ending September 30, 1960, pursuant to Public Law 272, 83d Congress (H. Doc. No. 127); to the Committee on the District of Columbia and ordered to be printed with illustrations.

730. A letter from the Administrator, National Aeronautics and Space Administration, transmitting a draft of a proposed bill entitled "A bill to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction of facilities, and for other purposes"; to the Committee on Science and Astronautics.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 3572. A bill to place in trust status certain lands on the Crow Creek Indian Reservation in South Dakota; without amendment (Rept. No. 203). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 567. A bill to authorize longer term leases of Indian lands on the Torres-Martinez Reservation in Riverside County, Calif.; with amendment (Rept. No. 204). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 4279. A bill to authorize the payment of per diem to members of the Indian Arts and Crafts Board at the same rate that is authorized for other persons serving the Federal Government without compensation; without amendment (Rept. No. 205). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 3898. A bill to authorize the use of funds arising from a judgment in favor of the Nez Perce Tribe of Indians, and for other purposes; without amendment (Rept. No. 206). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 3575. A bill to amend the act of August 9, 1955, to authorize longer term leases of Indian lands on the Agua Caliente (Palm Springs) Reservation and the Seminole Reservations in Florida; with amendment (Rept. No. 207). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 3562. A bill to permit the Secretary of the Interior to revoke in whole or in part the school and agency farm reserve on the Lac du Flambeau Reservation; without amendment (Rept. No. 208). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 2195. A bill to authorize the Secretary of the Interior to convey land to the Diocese of San Diego Education and Welfare Corp.; with amendment (Rept. No. 209). Referred to the Committee of the Whole House.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 4500. A bill to donate to the heirs of Anthony Bourbonnais approximately thirty-six one-hundredths acre of land in Pottawatomie County, Okla.; without amendment (Rept. No. 210). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ABERNETHY (by request):

H.R. 5968. A bill to amend the District of Columbia Unemployment Compensation Act, as amended; to the Committee on the District of Columbia.

By Mr. BAILEY:

H.R. 5969. A bill to provide for a program of civil works in economically distressed areas; to the Committee on Public Works.

H.R. 5970. A bill to authorize the reimbursement of owners and tenants of certain real property acquired by the Architect of the Capitol for their moving expenses; to the Committee on Public Works.

By Mr. BEERMANN:

H.R. 5971. A bill providing for the disposition of judgment funds of the Omaha Tribe of Indians; to the Committee on Interior and Insular Affairs.

By Mr. CLARK:

H.R. 5972. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

H.R. 5973. A bill to provide that the proceeds of the Federal manufacturers excise taxes on automobiles, trucks, and buses, and parts and accessories shall be used to finance the Federal highway program; to the Committee on Ways and Means.

By Mr. CORBETT:

H.R. 5974. A bill to amend the Civil Service Retirement Act, as amended, with respect to the method of computing interest earnings of special Treasury issues held by the civil service retirement and disability fund, to provide for permanent indefinite appropriation to said fund, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. CURTIS of Massachusetts:

H.R. 5975. A bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted each year without deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. DOMINICK:

H.R. 5976. A bill to amend title 28 of the United States Code relating to venue in certain actions involving public lands; to the Committee on the Judiciary.

By Mr. GRIFFIN:

H.R. 5977. A bill to amend the Internal Revenue Code of 1954 to permit an individual who moves to obtain employment to deduct moving and traveling expenses, and to permit him to treat as a capital loss any loss incurred on the sale of his home; to the Committee on Ways and Means.

By Mr. JARMAN:

H.R. 5978. A bill to amend section 202(c) of the Interstate Commerce Act to provide for partial exemption from the provisions of part II of such act of terminal area motor carrier operations performed by or for common carriers by water in interstate commerce subject to the Shipping Act, 1916 and the Intercoastal Shipping Act, 1933; to the Committee on Interstate and Foreign Commerce.

By Mr. KING of California:

H.R. 5979. A bill to amend the Internal Revenue Code of 1954 to repeal the 3 cents per pound processing tax on coconut oil, and for other purposes; to the Committee on Ways and Means.

By Mr. LANE:

H.R. 5980. A bill to provide for the establishment of Cape Cod National Seashore; to the Committee on Interior and Insular Affairs.

By Mr. LESINSKI:

H.R. 5981. A bill relating to increases in compensation granted to wage board employees; to the Committee on Post Office and Civil Service.

By Mr. McDOWELL:

H.R. 5982. A bill to amend the Historic Sites Act to provide that the effect on sites, buildings, and objects of historic value of projects involving the expenditure of Federal funds shall be taken into account in the planning of such projects, and to provide for the publication of a compilation of historic sites, buildings, and objects; to the Committee on Interior and Insular Affairs.

By Mr. MACDONALD:

H.R. 5983. A bill to provide for the preservation of buildings in the Nation's Capital which are of historic and cultural importance, to provide that the Commission of Fine Arts shall report to the Commissioners of the District of Columbia regarding such buildings, and for other purposes; to the Committee on the District of Columbia.

H.R. 5984. A bill to amend the Historic Sites Act of 1935 to provide for the preservation of buildings of regional or local historical or cultural significance, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 5985. A bill to amend the Public Buildings Act of 1959 to provide for the preservation of Federally owned buildings which are of historical, architectural, or cultural significance, and for other purposes; to the Committee on Public Works.

By Mr. GEORGE P. MILLER:

H.R. 5986. A bill to make available to children who are handicapped by deafness the specially trained teachers of the deaf needed to develop their abilities and to make available to individuals suffering speech and hearing impairments the specially trained speech pathologists and audiologists needed to help them overcome their handicaps; to the Committee on Education and Labor.

H.R. 5987. A bill to amend title 38, United States Code, to provide veterans' benefits for individuals who served with the Russian Railway Service Corps; to the Committee on Veterans' Affairs.

By Mr. MORRISON:

H.R. 5988. A bill to provide for the appointment of two additional judges for the juvenile court of the District of Columbia; to the Committee on the District of Columbia.

By Mr. MURRAY:

H.R. 5989. A bill to amend the Civil Service Retirement Act, as amended, with respect to the method of computing interest earnings of special Treasury issues held by civil service retirement and disability fund, to provide for permanent indefinite appropriation to said fund, to the Committee on Post Office and Civil Service.

By Mr. OLSEN:

H.R. 5990. A bill to authorize the Secretary of the Interior to construct a national aquarium in the District of Columbia; to the Committee on the District of Columbia.

By Mr. POAGE:

H.R. 5991. A bill to eliminate the category of the "wheat unfit for human consumption" for the purposes of section 22 of the Agricultural Adjustment Act of 1933, and for other purposes; to the Committee on Agriculture.

By Mr. RODINO:

H.R. 5992. A bill to amend title 38, United States Code, to establish a Court of Veterans' Appeals and to prescribe its jurisdiction and functions; to the Committee on Veterans' Affairs.

By Mr. SANTANGELO:

H.R. 5993. A bill to amend section 1552, title 10, United States Code, and section 301 of the Servicemen's Readjustment Act of 1944 to provide that the Board for the Correction of Military or Naval Records and the Boards of Review, Discharges, and Dismissals shall give consideration to satisfactory evidence relating to good character and exemplary conduct in civilian life after discharge or dismissal in determining whether or not to correct certain discharges and dismissals; to authorize the award of an Exemplary Rehabilitation Certificate; and for other purposes; to the Committee on Armed Services.

H.R. 5994. A bill to authorize the Secretary of Health, Education, and Welfare, to make grants to the States to assist in the provision of facilities and services for the day care of children; to the Committee on Education and Labor.

By Mr. SHORT:

H.R. 5995. A bill to amend the Internal Revenue Code of 1954 to authorize the amortization over a 5-year period of facilities constructed or acquired by farmers for use in the feeding of beef cattle; to the Committee on Ways and Means.

By Mr. BROYHILL:

H.R. 5996. A bill to provide that annuities paid from the District of Columbia teachers' retirement and annuity fund shall be adjusted simultaneously with general adjustments in salaries for teachers and school officers covered by the District of Columbia Salary Act of 1955 as amended; to the Committee on the District of Columbia.

H.R. 5997. A bill to increase annuities payable to certain annuitants from the District of Columbia teachers' retirement and annuity fund, in amounts equivalent to the increases provided by the District of Columbia Teachers' Salary Increase Act of 1960; to the Committee on the District of Columbia.

By Mr. CORBETT:

H.R. 5998. A bill to amend section 505 (d) of the Classification Act of 1949, as amended, with respect to certain positions in the General Accounting Office; to the Committee on Post Office and Civil Service.

By Mr. DANIELS:

H.R. 5999. A bill to amend the Public Health Service Act to provide for the establishment of a hospital in the State of New Jersey for the treatment of persons addicted to the use of habit-forming narcotic drugs; to the Committee on Interstate and Foreign Commerce.

By Mr. EVERETT:

H.R. 6000. A bill to amend section 1072 of title 10, United States Code, to provide medical care for individuals who have completed 20 years of Federal service and at least 8 years of active duty; to the Committee on Armed Services.

By Mr. FALLON:

H.R. 6001. A bill to provide for apportioning the expense of maintaining and operating the Woodrow Wilson Memorial Bridge over the Potomac River from Jones Point, Va., to Maryland; to the Committee on the District of Columbia.

By Mr. GALLAGHER:

H.R. 6002. A bill to amend the Public Health Service Act to provide for the establishment of a hospital in the State of New Jersey for the treatment of persons addicted to the use of habit-forming narcotic drugs; to the Committee on Interstate and Foreign Commerce.

By Mr. HALPERN:

H.R. 6003. A bill to amend title II of the Social Security Act to increase benefit amounts, provide disability insurance benefits without regard to age, to provide full retirement benefits for men at age 62 and women at age 60, to increase the limitation on the amount of outside earnings permitted from $1,200 to $2,500, and for other purposes; to the Committee on Ways and Means.

By Mr. LANE (by request):

H.R. 6004. A bill to amend the act entitled "An act to provide for the registration and protection of trademarks used in commerce, to carry out the provisions of certain international conventions, and for other purposes," approved July 5, 1946, as amended; to the Committee on the Judiciary.

By Mr. LINDSAY:

H.R. 6005. A bill to provide for the enforcement of civil rights, and for other purposes; to the Committee on the Judiciary.

H.R. 6006. A bill to amend the National Defense Education Act of 1958 to eliminate the requirement of an affidavit provided by subsection 1001(f)(1) thereof; to the Committee on Education and Labor.

By Mr. MURRAY:

H.R. 6007. A bill to amend section 505(d) of the Classification Act of 1949, as amended, with respect to certain positions in the General Accounting Office; to the Committee on Post Office and Civil Service.

By Mr. RANDALL:

H.R. 6008. A bill to provide for the designation of parts of U.S. Highways Nos. 61 and 71 as a part of the National System of Interstate and Defense Highways; to the Committee on Public Works.

H.R. 6009. A bill to amend title 38, United States Code, to provide for the payment of pensions to veterans of World War I; to the Committee on Veterans' Affairs.

By Mr. THOMPSON of Louisiana:

H.R. 6010. A bill to restate terms of the grant covering the Rockefeller Wildlife Refuge and Game Preserve to permit it to comply with current Louisiana law; to the Committee on Merchant Marine and Fisheries.

By Mr. KING of Utah:

H.R. 6011. A bill to establish a commission to conduct an impartial and scientific study and investigation to determine the effects on the public health of the practice of adding various chemicals to food products and beverages; to the Committee on Interstate and Foreign Commerce.

By Mr. CONTE:

H.J. Res. 346. Joint resolution authorizing and requesting the President to set aside and proclaim an appropriate month during 1961 as American Bike Month; to the Committee on the Judiciary.

By Mr. BRADEMAS:

H.J. Res. 347. Joint resolution providing for the issuance of a proclamation designating March 25 as Greek Independence Day; to the Committee on the Judiciary.

By Mr. FULTON:

H.J. Res. 348. Joint resolution to authorize and request the President to proclaim the third week of May of each year as National Art Week; to the Committee on the Judiciary.

By Mr. JARMAN:

H.J. Res. 349. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. ANFUSO:

H. Res. 240. Resolution creating a select committee to conduct studies and investigations of the problems of consumers; to the Committee on Rules.

By Mr. CURTIN:

H. Res. 241. Resolution favoring an international agreement for a suspension of nuclear weapons tests; to the Committee on Foreign Affairs.

By Mr. KEITH:

H. Res. 242. Resolution expressing the sense of the House of Representatives with respect to the expansion of oceanographic research; to the Committee on Merchant Marine and Fisheries.

By Mr. LINDSAY:

H. Res. 243. Resolution providing the erection of a tablet in the Hall of the House of Representatives (or immediately adjacent to the entrance) to record the fact that the 7th Regiment, New York State Militia, which arrived in Washington on April 25, 1861, in response to President Lincoln's call for troops to defend the Nation's Capital at the outset of the Civil War, was quartered in the Hall of the House of Representatives from April 25 to May 2, 1861; to the Committee on House Administration.

By Mr. McMILLAN:

H. Res. 244. Resolution providing salary increase for No. 1 assistant tally clerk; to the Committee on House Administration.

By Mr. MORSE:

H. Res. 245. Resolution expressing the sense of the House of Representatives with respect to the expansion of oceanographic research; to the Committee on Merchant Marine and Fisheries.

By Mr. TUPPER:

H. Res. 246. Resolution expressing the sense of the House of Representatives with respect to the expansion of oceanographic research; to the Committee on Merchant Marine and Fisheries.

By Mr. PHILBIN:

H. Res. 247. Resolution expressing the sense of the House of Representatives with respect to the expansion of oceanographic research; to the Committee on Merchant Marine and Fisheries.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. KING of Utah: Memorial of the Senate of the 1961 Legislature of the State

of Utah, memorializing the Congress of the United States to oppose National Preservation Act; to the Committee on Interior and Insular Affairs.

Also, memorial of the Senate and House of Representatives of the State of Utah, memorializing the favorable consideration by the Secretary of the Interior and the authorization by Congress of the Dixie project; to the Committee on Interior and Insular Affairs.

Also, memorial of the Senate of the 1961 Legislature of the State of Utah, memorializing the Congress of the United States to provide adequate facility for the crossing of the Colorado River in the vicinity of Hite, Utah; to the Committee on Public Works.

Also, memorial of the Senate of the 1961 legislature of the State of Utah, memorializing Congress to enact legislation regulating importing of lead and zinc; to the Committee on Ways and Means.

Also, memorial of the Senate of the 1961 Legislature of the State of Utah, memoralizing the Congress of the United States to provide legislation designed to afford adequate protection for domestic industry in the field of international trade; to the Committee on Ways and Means.

By Mr. STRATTON: Memorial of the Legislature of the State of New York, memorializing the President and Congress of the United States to provide adequate funds to the U.S. Army Corps of Engineers for necessary surveys and plans for, and to initiate the construction of a deepwater canal linking Lakes Erie and Ontario; to the Committee on Appropriations.

By the SPEAKER: Memorial of the Legislature of the State of Nebraska, memorializing the President and the Congress of the United States relative to ratification of the proposed amendment to the Constitution of the United States granting representation in the electoral college to the District of Columbia; to the Committee on the Judiciary.

Also, memorial of the Legislature of the State of Utah, memorializing the President and the Congress of the United States to renew the Sugar Act and to provide for implementing long term sugar legislation with equitable distribution of foreign quotas among friendly nations; to the Committee on Agriculture.

Also, memorial of the Legislature of the State of Washington, memorializing the President and the Congress of the United States to cause a stamp to be issued commemorating the 150th anniversary of the establishment of Fort Okanogan; to the Committee on Post Office and Civil Service.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BATES:

H.R. 6012. A bill for the relief of the estate of George S. Rumley; to the Committee on the Judiciary.

By Mr. CASEY:

H.R. 6013. A bill for the relief of the Houston Belt & Terminal Railway Co.; to the Committee on the Judiciary.

By Mr. CONTE:

H.R. 6014. A bill for the relief of Stephen A. Eskin; to the Committee on the Judiciary.

By Mr. DAVIS of Tennessee:

H.R. 6015. A bill for the relief of Chi Yan Chu; to the Committee on the Judiciary.

By Mr. DULSKI:

H.R. 6016. A bill for the relief of William Thomas Dendy; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 6017. A bill for the relief of Jackson Ti Sen Chow; to the Committee on the Judiciary.

By Mr. HÉBERT:

H.R. 6018. A bill for the relief of Mate Sumic and Branka Letica; to the Committee on the Judiciary.

By Mr. LINDSAY:

H.R. 6019. A bill for the relief of Wing Sien Fong; to the Committee on the Judiciary.

By Mr. MACHROWICZ:

H.R. 6020. A bill for the relief of Stojan Vuckovic; to the Committee on the Judiciary.

By Mr. GEORGE P. MILLER:

H.R. 6021. A bill for the relief of Lt. Don Walsh and Lt. Lawrence A. Shumaker; to the Committee on the Judiciary.

By Mr. O'BRIEN of Illinois:

H.R. 6022. A bill for the relief of Panagiotis P. Panagopoulos; to the Committee on the Judiciary.

By Mr. O'NEILL:

H.R. 6023. A bill for the relief of Hong Mon Kuo, also known as Jack Hong, and his wife, Hong Yee Mee Fong; to the Committee on the Judiciary.

By Mr. ROGERS of Florida:

H.R. 6024. A bill for the relief of Ernesto J. Sacerio; to the Committee on the Judiciary.

By Mr. SMITH of California:

H.R. 6025. A bill to confer jurisdiction on the U.S. Court of Claims to hear, determine, and render judgment on the claim of George Edward Barnhart against the United States; to the Committee on the Judiciary.

By Mr. VINSON:

H.R. 6026. A bill to provide for the conveyance to Carolina Freight Carriers Corp., a corporation of the State of North Carolina, of certain lands and any improvements thereon located in Bibb County, Ga.; to the Committee on Public Works.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

106. By Mr. HOSMER: Petition of certain residents of the 18th Congressional District of California, who request enactment by Congress of H.R. 2302, a bill to provide penalties for membership in the Communist Party, and to permit the compelling of testimony relating to such membership and the granting of immunity from prosecution in connection therewith; to the Committee on Un-American Activities.

107. By Mr. KING of Utah: Resolution adopted by the Utah Poultry & Farmers Cooperative at the 38th annual meeting, February 25, 1961; to the Committee on Agriculture.

108. Resolution of the Provo Junior Chamber of Commerce, Provo, Utah, opposing any legislation that limits the powers of Un-American Activities Committee or destroys its ability to function by deprivation of necessary appropriations to cover its costs and expenses; to the Committee on Rules.

109. By Mr. McCULLOCH: Petition of Mrs. Esther Donovan, director, Auglaize County Department of Welfare, Wapakoneta, Ohio, and others of the department, for the inclusion of Auglaize County and the State of Ohio in the experimental food stamp plan, and for the permanent substitution of the food stamp plan for the present plan of distribution of surplus commodities for poor relief; to the Committee on Agriculture.

110. By the SPEAKER: Petition of Jinko Akamine and others, Okinawa, requesting passage of legislation authorizing the Government of the Ryukyu Islands to make a disbursement for compensation payable for damage for loss of private properties and bodily harm; to the Committee on Foreign Affairs.

EXTENSIONS OF REMARKS

Financing the Balance of the Federal Highway Program

EXTENSION OF REMARKS

OF

HON. FRANK M. CLARK

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. CLARK. Mr. Speaker, I have today introduced legislation that I believe will provide adequate financing for the balance of the Federal highway program. This legislation uses only highway-user taxes as was intended by the Congress when the basic 1956 act became law. It, further, contemplates the completion of the system by 1972, as was also intended by the 1956 Highway Act. I believe this legislation is the best possible approach to this program. It adds no new taxes but simply, and in all equity, transfers from the general fund to the highway trust fund those user taxes which have up to now been kept out of the fund.

My bill is a fairly simple one. It provides for the transfer of the remaining 5 percent of the tax on trucks and 5 percent of the tax on parts and accessories, and five-sevenths of the tax on automobiles. This would provide for the period ending fiscal year 1972 aproximately $11.9 billion, which combined wtih the borrowing authority now existing in present law would be more than sufficient to finance the rest of the program.

In addition, the so-called Byrd amendment, or section 209(g) of the Highway Revenue Act of 1956, is repealed. I believe that if we are to finish this program on schedule we should face the situation fairly and squarely and allocate funds to the States in such a manner that they will know how to plan for future years' construction, and provide enough financing to take care of these allocations. In other words, this time we must make a decision and set up a firm financing plan to provide for the balance of the program. I believe my bill does just this and I hope it will receive the serious consideration of all the Members.

Let me conclude by saying that I am a firm believer in good highways and I believe they are essential to our national self-interest. I believe this program should be completed on schedule, and I believe that highway-user taxes should be used to finance this program.

Civil Rights Progress

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article, by the distinguished Senator from Hawaii [Mr. LONG], on the subject of civil rights legislation, which appeared in the Honolulu Advertiser on March 12, be printed in the CONGRESSIONAL RECORD.

I should like to know how he obtained that much space in a daily newspaper. It was a remarkable achievement.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL RIGHTS PLAN PERKING
(By Senator OREN E. LONG)

The outlook is good for progress in the civil rights field under the Kennedy administration. The President and the majority leadership in Congress have skillfully avoided the boobytrap which has destroyed civil rights efforts so often in the past—a bitter, drag-out fight over legislative procedure.

To have pressed Congress immediately for a sweeping civil rights program, with the dramatic threat of a filibuster, would have been a spectacular gesture by the new administration.

But the President and the majority leadership in Congress were well aware that any such grandstand play would have jeopardized the administration's entire legislative program.

Instead, the administration has wisely chosen first to use the tools at hand—tools which the previous administration also had, but failed to use fully. These tools are the Executive actions which can be taken under existing law and authority.

Some of these steps are being taken quietly, with little or no publicity. Others are public actions such as the President's Executive order setting up the new Committee on Equal Employment Opportunity. This is indicative of the new administration, showing what can be done if the effort is made.

As the New York Times commented on March 8:

"For some years it has been the official policy of the Government not to discriminate against its own employees because of race, creed, color, or national origin. And the same policy has been required of companies in Government contract operations. But enforcement by the two previous committees in this field was much too sketchy—especially in the case of private contractors—largely through the lack of clearly defined powers and also personnel.

"President Kennedy's order meets both these shortcomings with an imaginative and hard-hitting program—hard hitting in its possibilities, but tempered by education and persuasion."

Although progress will be made by Executive action under the Kennedy administration, this is not to say that legislative action is not also needed. That is why I have joined with Senator HUBERT HUMPHREY of Minnesota in introducing a seven-point civil rights legislative program.

The bills are:

S. 1253—Bar racial discrimination in the use of facilities or equipment used for interstate travel. This bill would apply to terminal facilities and local transportation to and from terminals in the same degree as to the transportation equipment itself.

S. 1254—Extend to all members of Armed Forces the protection now afforded to Coast Guard personnel against bodily attack. The bill would make an attack upon any serviceman in uniform a Federal offense.

S. 1255—Strengthen criminal statutes and provide additional civil remedies to persons deprived of their civil rights. This would be accomplished by outlawing certain actions that may be prejudicial to the rights of citizens under the Constitution and by providing civil remedies against persons contravening such rights.

S. 1256—Define lynching as an assemblage which: (1) commits violence on any citizen because of race, ancestry, or religion; or (2) exercises by physical violence any corrective measure over a prisoner, suspect, or convict to prevent apprehension, trial, or punishment. So defined, lynching would be a Federal criminal offense with severe penalties.

S. 1257—Extend indefinitely the Civil Rights Commission as now established. Under the present law which expires November 8, 1961, the Commission would be eliminated as of that date.

S. 1258—Create an Equality of Opportunity in Employment Commission to administer a program of nondiscrimination in employment. The Commission would be given, subject to judicial review, broad powers of preventing discrimination and investigating employment conditions.

S. 1259—Outlaw the poll tax as a voting requirement in all elections where Federal officers are chosen.

This bill would affect only the five States which still retain a poll tax.

I am hopeful that in due course, after the other major parts of the administration's legislative program are acted upon and the threat of a filibuster is therefore weaker, Congress will give proper consideration to the bills which Senator HUMPHREY and I have proposed.

To me, the program envisioned by the bills is more than the sum of its parts. Each bill is designed to correct or ameliorate some specific evil or injustice which is now prevalent or is possible under present law. But I believe the program would represent much more.

Its enactment would be a milestone in the slow progress of humanity toward humanitarianism—a way station on the long road toward the realization of the American dream.

Emerson C. Itschner

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. EDMONDSON. Mr. Speaker, the Army Engineers paid well-deserved tribute yesterday to a great soldier-engineer, Lt. Gen. Emerson C. Itschner.

In a retirement review at Fort Belvoir, the pride of the Engineers passed before the retiring chief of the corps to salute him for a job well done.

General Itschner has been a sterling example of patriotic service, and the Presidential Medal which was pinned on his uniform yesterday was recognition of that service.

During the years of his leadership, the Corps of Engineers has undertaken some of the biggest jobs in its history, including the tremendous Arkansas River development program.

In the Second District of Oklahoma, General Itschner has personally inspected all of the major works in this great program, and has given tremendously of his time, energy, and great talent to speed the work of flood control and water development.

I am certain that hundreds of my distinguished colleagues in this body will join me in expressing the hope that General Itschner will enjoy a fruitful and satisfying retirement, secure in the knowledge that he has made his country stronger through his service.

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. BRADEMAS. Mr. Speaker, on March 25, 1821, the Greek way of independence began when the archbishop of Patras raised the flag of freedom in the monastery of Aghia Lavra and the people of Greece dedicated themselves to the attainment of their liberty from the Ottoman Empire.

On March 25, 1961, Greece celebrated the 140th anniversary of the beginning of that struggle.

Freedom-loving civilizations can profit greatly from the lessons of the classical age of Greece. These are the lessons of excellence, education, freedom, and public service.

The survival of our political freedom may depend on how well we learn these lessons. In a world threatened by the tyranny of communism, we must strive always for excellence, for the probable consequence of mediocrity is the enslavement of the human mind.

To mark the occasion of Greek Independence Day, I have today introduced in the House of Representatives, the following resolution:

JOINT RESOLUTION PROVIDING FOR THE ISSUANCE OF A PROCLAMATION DESIGNATING MARCH 25 AS GREEK INDEPENDENCE DAY

Whereas the democratic ideals that have made the United States of America the greatest free nation in the world were born many centuries ago in Greece; and

Whereas these ideals have kindled in the hearts of the people of Greece the determination that no sacrifice is too great for the cause of freedom and democracy; and

Whereas in every country people of Greek origin celebrate March 25 as Greek Independence Day, this day marking the beginning on March 25, 1821, of a seven-year struggle of the people of Greece to win their independence from the Ottoman Empire; and

Whereas free men in every nation rejoice that the principles of democracy are again firmly established in the land of their birth: Therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be authorized and re-

quested to issue a proclamation designating March 25 of each year as Greek Independence Day and that he invite the people of the United States to observe such day with appropriate ceremonies.

Meeting of the Pacific Regional Roads Conference of the International Road Federation, Sydney, Australia, February 27 to March 2

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. JONES of Alabama. Mr. Speaker, it has recently been my privilege to chair a three-man delegation of the Public Works Committee that was designated to represent the Congress at the recent Pacific Regional Roads Conference of the International Road Federation. This meeting was held in Sydney, Australia, from February 27 to March 2, and was attended by more than 250 delegates from 17 countries, including Burma, China, Ceylon, Fiji Islands, Hong Kong, India, Indonesia, Japan, Malaya, New Zealand, South Africa, Philippines, Thailand, Turkey, United Kingdom, Australia, and some 30 representatives in various fields from our own country. I would like to briefly report to the Congress the results of this meeting.

May I preface these remarks by saying that I found this trip an extremely profitable one and the exchange of views that took place at this meeting, both in an official and in an unofficial capacity, beneficial to myself, to the other Members of the Congress who accompanied me and, I hope, to our country as a whole. We attended this meeting basically to consider the interrelated highway problems that crisscross our entire world, but, in addition to that, I personally, and I am certain my colleagues, obtained a deeper and fuller understanding of other problems of the peoples with whom we met, particularly with reference to the Commonwealth of Australia.

I was deeply impressed by Australia, by the Australian people and by the rapidly developing expansion of this great continent. I found these people to be very similar to ourselves, to be deeply interested in our affairs and to be bound to us both in a spirit of friendship and also in a very important military fashion. My brief visit to Australia convinced me that we have indeed in the people of that nation real friends, ones who admire and respect us and are ready to work shoulder to shoulder with us in solving the many problems that face us in this troubled world today.

I was privileged to be one of the two principal speakers at the opening session of the Pacific Regional Conference of the International Road Federation. Might I digress for a moment to explain for the benefit of the members that the International Road Federation came into being some 13 years ago as a result of the realization that high wastages were occurring through the inadequacy of road systems throughout the world.

The advance of scientific and industrial developments have resulted in the production of new and wide ranges of all types of vehicles possessing greatly enhanced efficiency potentials. These can contribute direct and substantial reductions in the cost of living if road systems which will enable the full effect of vehicle improvement to be achieved are constructed.

The truth, however, is that gains in efficiency through better management techniques, improved equipment, work developments, new inventions, and increased output per worker have not resulted in the reduction of prices which the consumer should enjoy because much of the savings is dissipated by the excessive cost of using inefficient transport systems.

The realization of this worldwide handicap, which prevents the fruit of enterprise, energy, and invention reaching those who should benefit, in 1948 brought into existence the International Road Federation whose basic purpose was and is to develop better roads throughout the world by an interchange of ideas among all nations and as a result of these interchanges, which create better roads, bring about better living for all.

I am sure you will agree this is a worthwhile purpose to which all of us who are interested in the development of highways for future use and the advancement of economic status of mankind should pay careful attention.

At this meeting among other subjects that were discussed was the need for expanded highway programs; new development in road research; the future of highways and highway transportation; highway construction and maintenance and traffic engineering, as well as that overall most important problem which is ever present, that of proper highway financing.

In keeping with our increased interest in the International Road Federation the United States sent to this particular meeting the largest delegation, some 30 members, including technical experts, a highway safety expert, one of our most efficient highway engineers, Mr. D. C. Greer of Texas, and a representative of the U.S. International Cooperation Administration.

I am certain that out of the interchange of ideas that developed at this meeting our experts in highway matters have brought back to this country further information that will enhance the development of our own road program. Further, I believe, our experts contributed to the meeting information that will be beneficial to the highway users of the other countries who were present at this meeting.

Although this was the main purpose of our visit to Australia, we also took the opportunity while in that country to visit the Australian capital of Canberra which is still in the process of being constructed.

This is a wholly planned city some 200 miles from Sydney which is being built and developed in a manner similar to that of Brasilia in Brazil, South America. We were deeply impressed by the modern progressive appearance of this capital. While in Canberra we also took the opportunity to meet with several members of the Australian House of Representatives for an exchange of ideas on problems affecting both our countries.

I would be remiss in my comments on Canberra if I did not mention briefly two most impressive memorials—one the American War Memorial built by the Australian-American Society out of private funds which commemorates the part played by our men in the victory in the Pacific in World War II. Further, we had an opportunity to visit one of the most vivid examples of spirit and pride I have ever seen in my public or private career and that is the Australian War Memorial which tells fully, in my mind, the spirit of the Australian people.

Of particular interest to us as members of the Public Works Committee was the vast Snowy Mountain project now underway in Australia. Although time did not allow for a full and sufficient examination of this tremendous project, we were able to briefly consider the main aspects of what is being attempted in the field of water resources by the Australian Government.

Knowledge of the Snowy Mountain project requires a background as to the problem of water resources in Australia.

The average annual flow of Australia's rivers, if spread evenly over the continent, would give a depth of water about 1½ inches. The United States of America on the other hand, from its 10 main rivers alone, would obtain a depth of water of almost 6 inches.

It is vital that full use be made of Australia's water resources. This is the principle on which the Snowy Mountains scheme is based.

Remnants of an ancient alpine range skirt Australia's eastern seaboard. By European, Asian, and American standards these mountains are not high. In fact, compared with the might and grandeur of the Himalayas, Australia's mountains are merely foothills, the highest peak, Kosciusko, rising to an elevation of only 7,314 feet. And yet Australia's Great Dividing Range is vital to the life of her people.

In southeastern New South Wales and the adjacent areas of Victoria, the section of this range known as the Snowy Mountains forms the central and highest area of the Australian Alps. Snow-clad for 5 or 6 months each year this area is the source of the westward flowing Murray and Murrumbidgee Rivers which cross dry but otherwise fertile plains stretching over hundreds of miles to the coast of South Australia. Irrigation farming on these plains is already a well established and prosperous industry, but further substantial expansion of production depends on augmenting the flow of these rivers.

The Snowy River rises in the same area as the Murray and Murrumbidgee Rivers. It receives a large share of the runoff

from the winter snowfields but flows in the opposite direction of the nearby southeastern coast, traversing an area of reliable and adequate rainfall where water is not required for irrigation.

Not only are the waters of the Snowy River considerable in volume but also, they flow from high altitudes. By diverting them inland through long tunnels driven under the mountain ranges they can be utilized for the double purpose of producing very large quantities of electricity for industry and of enabling 1,000 square miles of drylands on the western plains to be brought into use for flood production.

With this background proposals for the development of Snowy Mountain first came into existence in 1884 and finally, on August 1 of 1949 the Snowy Mountain Authority came into existence. Detailed investigations and construction work started immediately.

This act is now supported by a comprehensive agreement between the Commonwealth of Australia and the States of New South Wales and Victoria covering the construction and operation of the scheme, the distribution of power and water and other development matters. Basically what is intended hereunder is to use by diversion the waters of the Snowy River combined with the Murray and Murrumbidgee Rivers to create large hydroelectric power stations and, at the same time, provide ample water all year round for the vast inland areas of New South Wales, Victoria, and South Australia through which these rivers flow. It is one of the largest civil engineering projects ever undertaken in Australia and one of the largest of its type in the world. It involves the construction of 9 large dams and several smaller ones, at least 11 power stations, over 100 miles of large diameter tunnels, over 80 miles of aqueducts, shafts ranging up to 1,100 feet deep, and hundreds of miles of mountain roads in rugged alpine country.

The total cost of the whole scheme is estimated at $748 million and it will provide nearly 2 million acre-feet of water per annum enabling irrigation production to be increased in value by approximately $60 million per year. In addition, the output from the Snowy Mountain operation will provide approximately 2½ million kilowatts of power and 5,300 million kilowatt-hours per annum of energy. I have outlined very roughly what this project contemplates and attempts, but I think even this brief mention of it will point up the progressive attitude of the Australian Government and the Australian people in the field of water resources.

This trip to Australia was a difficult one involving long flights over vast stretches of water and land mass which gave little rest or comfort to the delegation en route. But our short sojourn in Australia more than rewarded us for any difficulties we experienced in reaching Sydney.

But once we reached Sydney and had an opportunity to fully participate in the road conference, to meet with the delegates from the southeast Pacific area nations and to see firsthand the spirit and vigor of these peoples, and particularly of the Australians, any discomfort we may have experienced en route quickly vanished and we found ourselves caught up in the spirit and drive of these Australian people. They are indeed true friends of the United States. They were really delighted to see us. They made us feel at home. They want more and more American recognition and interchange of ideas and I think this should be a two-way street. I trust that over the years to come there will be a continuing flow of ideas between our Nation and that of the Commonwealth of Australia and that delegations in all fields that affect the national interest of both countries will take the opportunity to visit back and forth to develop the strong bonds of friendship and mutual interest that now ties these two great nations together.

Speaking for myself and the members of our delegation, I can truly say this was a unique and stimulating experience. I am proud to have been part of this particular meeting and to have a firsthand opportunity to see even briefly one of the most important sections of our world community.

The Meaning of Courage

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. EVINS. Mr. Speaker, courage is a prominent word in the philosophy and the life of President John F. Kennedy. He has been called upon to show personal courage in overcoming a physical disability. He has written a book "Profiles in Courage"—a tribute to bravery in public life—and his inaugural address called upon Americans and our free world allies to show courage in the critical hour with which we are all confronted.

The President in response to a request from Parade magazine has given a personal definition of courage which I believe should be preserved, and I ask unanimous consent that the President's definition and meaning of courage be reproduction in the CONGRESSIONAL RECORD.

Parade's succinct article on President Kennedy's definition of courage follows:

THE MEANING OF COURAGE

(By President John F. Kennedy)

"Courage takes many forms. It can mean bravery under fire, an inner struggle for self-awareness, or the willingness to risk career, reputation, and friends in steadfast adherence to principle and conviction.

"This last is the courage I have written about—the kind of courage which all of us, sooner or later, may be given the opportunity to demonstrate. For at all the levels of our national life, each man is sometimes called upon to stand for what he believes to be right against the pressures and opinions of friends, fellow workers, constituents, or the force of popular attitude.

"At such a time each individual must look within himself for the resources to pursue his own course. But all the rest of us can contribute to the vitality of our democracy by refusing to join in unreasoning attacks upon those with whom we disagree; and by respecting them for having the strength to wage such a lonely struggle."

President John F. Kennedy's personal courage has been tested many times. In his 43 years, he has faced crises like these below:

PREWAR

Kennedy—frail, gaunt, weedy—nonetheless tried out for freshman football at Harvard. Knocked off the squad by a severe back injury, he became instead a backstroker on the swimming team.

Just before the Harvard-Yale meet, he was hospitalized with grippe. Kennedy arranged for his roommate, now Representative TORBERT MACDONALD, to smuggle in steaks to keep up his strength. He did exercises in his room, and once crept off to the pool to practice. The coach clamped down, however, and a substitute replaced him in the big meet.

WARTIME

Kennedy visited Great Britain during the German blitz, wrote his first book, "Why England Slept," in an attempt to wake up America to the dangers of nazism. His trip so moved him that he came home and tried to enlist in the Army. Turned down because of his back troubles, he took special exercises for 5 months to pass the Navy's fitness test. After Pearl Harbor, he persuaded his influential father to help get him a battle assignment.

Kennedy's experiences as a PT-boat commander in the South Pacific have been much publicized, but they still have the ring of a movie thriller. A Japanese destroyer ran down his torpedo boat, slicing it in half. Kennedy was slammed to the deck, jarring his chronically ailing back.

Despite acute pain, he rescued several crewmen. Clutching the strap of one man's lifejacket in his teeth, Kennedy towed him to the nearest island. He swam for 5 hours.

After that, Kennedy built up a reputation for courage virtually to the point of recklessness. Says his old squadron commander, Al Cluster of Van Nuys, Calif.: "Jack took so many chances, it got so the crew didn't want to go out with him."

Finally Kennedy picked up malaria, to go with his back troubles. Emaciated and fever ridden, he was compelled to go home. The Navy gave him a back operation and a discharge.

POSTWAR

Kennedy's ailing back nagged him throughout his early years in politics. He ran three times for the House, waging whirlwind campaigns. He won each election. In 1952, when he ran for the Senate, every step was agony. He could not climb stairs without dragging one leg. When he was not campaigning, he was in a hot bath, trying to ease the pain.

By 1954, Kennedy was on crutches, and his malaria had flared up again. At his wedding to Jacqueline Bouvier, the pain was so bad he could scarcely kneel at the altar. He decided upon drastic action to rid himself of his problems.

His doctors told him a double fusion of the spinal discs might cure him—or cost him his life. The chances, they estimated, were about 50–50. Characteristically, Kennedy took the gamble.

For weeks he lay at the brink of death. He was given his church's last rites; only his family was allowed to see him. He progressed so slowly that doctors sent him to Florida in the hope sunshine might speed his recovery. He left Washington on a stretcher.

Shortly afterward, he was back for a second operation, to remove a plate from his spine. Again, his life was despaired of. Says his father, Joseph P. Kennedy: "God's hand is on Jack's shoulder. I have sat at his

bedside three times when everyone thought he would die before morning. Everyone but Jack, Jack knew he would come through."

(The White House physician, Dr. Janet Travell, has told Parade that today Kennedy's back is entirely well.)

The final operation was successful. Kennedy spent a few more weeks in Florida, then came back to the Senate, having been gone nearly 7 months. A wheelchair and crutches were waiting for him at the airport. Kennedy waved them away. "I threw away my crutches 2 days ago," he told reporters.

Later, a few vigilant reporters noted that he still seemed to be limping slightly as he climbed the steps of the Capitol. Kennedy saw them watching and grinned. Then he gritted his teeth and climbed on.

Up those steps lay the road to the White House.

Need for a Select Committee on Consumer Problems

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. ANFUSO. Mr. Speaker, I am today introducing a resolution to create in the House a Select Committee on Consumer Problems.

The committee, as proposed in my resolution, is to consist of nine Members of the House of Representatives, appointed by the Speaker. Its duties shall be to conduct studies and investigations of the problems of consumers, with particular reference to the following:

First. The administration of Federal laws relating to consumers, in order to determine whether the administration of these laws serve the needs of the American consumer.

Second. The extent to which Government agencies adequately serve the needs of consumers or give due consideration to consumer problems.

Third. The collection of facts and information on consumer problems which would be of public interest generally and would also aid the Congress in enacting remedial legislation.

My bill provides, however, that the select committee "shall not invade any subject matter under active consideration by any standing committee of the House." The committee is authorized to submit preliminary reports of its activities, as well as a final report on the results of its study and investigation at the close of the present Congress.

Mr. Speaker, I was particularly pleased to note several days ago that President Kennedy is setting up an Office of Consumer Counsel in the White House to represent consumer interests. It is also reported that Dr. Persia Campbell will be named to this post. If true, this will be an excellent choice. Dr. Campbell has served as consumer adviser to Gov. Averell Harriman during the years he served as Governor of New York and she has a great deal of knowledge and experience in this field.

Several years ago, when I served on the House Agriculture Committee, I was instrumental in the creation of a Consumers Study Subcommittee, of which I was the chairman. Our subcommittee made several important studies at the time on trend in food prices, food marketing costs, agricultural surpluses and farmer-consumer problems, on meat processing and distribution, food stockpiling, the food stamp program, and several other subjects. The subcommittee was very effective in giving the American consumer a voice, and also in bringing about better understanding between farmers and consumers as to their specific problems.

On several occasions we were privileged to have Dr. Campbell testify at our hearings, and she was most helpful to the subcommittee. After I left the Committee on Agriculture in January 1959, the Consumers Study Subcommittee was dissolved. As far as I know, there is no other committee or subcommittee in the House now which deals with consumer problems specifically.

During the 1960 presidential election campaign, Mr. Kennedy several times mentioned in his speeches that he would appoint someone in his administration to look after consumer interests. This promise he is now keeping.

Mr. Speaker, it is one thing to look after consumer interests such as is to be done by the President's Consumer Counsel, and another thing for Congress to have a committee which is to study and investigate consumer problems with the idea of serving the needs of consumers and giving them the necessary protection through legislation. I believe Congress has a direct responsibility here and should assume this responsibility as soon as possible. Aside from the direct interests of the consumers, there is involved here the general economic condition in the country, matters of consumer interest which come before our regulatory agencies and in such Departments as Agriculture, Labor, Commerce, Health, Education, and Welfare, and others.

Just as Congress gives a voice to farmers, to labor, to education, to science, to the armed services, to the veterans, to business and finance, and to other phases of our national activity through its committees, so it must give a voice to the consumer, the housewife, the elderly people, the family wage earner, who struggle with the problem of the high cost of living and how to cope with it. This can be accomplished through the establishment of a committee such as is proposed in my resolution.

Mr. Speaker, our economists and statisticians have figured out that in 1960 the personal consumption expenditures in the United States reached about $328 billion, which is approximately two-thirds of our gross national product. In 1961, they estimate that these expenditures will rise another $10 or $11 billion. This, in itself, is reason enough why the American consumer's voice should be represented at the highest levels in government.

Think of all the instances that have come to light in recent years involving price rigging, fraudulent advertising, low standards of purity and wholesomeness of food and other articles, misleading labeling, deceptive packaging, misrepresentations in manufacturing, and other ways to deceive the American consumer. This requires not only continual study and investigation, but also careful oversight by Congress. It is time to stop making an easy victim of the consumer and to see that he obtains his dollar's worth in the marketplaces of our Nation.

It is not enough merely to have a Consumer Counsel at the White House or even advisory committees in one department or another. This is too big and too vast a part of our economy which deserves greater recognition. A congressional committee to deal with consumer problems would be the best answer.

President Kennedy has shown deep concern and understanding of the problems of the American consumer when he stated recently:

> The housewives who shop for their families—the wage earners who pay the rent and meet the bills—all have a vital interest in the activities of government which affect the value, the quality and accessibility of the goods which they buy. And yet those interests have been virtually unrepresented before the agencies, the congressional committees and the executive departments whose work has a direct impact on the daily life and long-term standard of living of the American consumer.

Mr. Speaker, time is of the essence. I think it is of utmost importance to act on my resolution and to set up as soon as possible the Select Committee on Consumer Problems so that it can undertake its work in the near future.

Library of Congress and World Understanding

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. SCHWENGEL. Mr. Speaker, on Sunday, March 5, I was the speaker at the International Crossroads breakfast at the Central YMCA in Washington, D.C.

On this occasion, I spoke on the "Library of Congress and World Understanding." These remarks were well received and I have had several requests to make them available in the CONGRESSIONAL RECORD so that other Members and interested parties could read them.

Under leave to extend my remarks, I ask that the speech "Library of Congress and World Understanding" appear in the RECORD.

LIBRARY OF CONGRESS AND WORLD UNDERSTANDING

It has always been my conviction that an afterbreakfast speech ought to be considerably shorter than an afterdinner speech. (One reason is that your audience is apt to be more alert and more critical in the morning.) The heavier indulgence of dinner is apt to make an audience more receptive, more acquiescent, more amiable,

and less conscious. I like an audience like this because I happen to be partial to small and intimate groups. This is a sort of board of directors and I can talk to you with a certain earnestness—perhaps even persuasiveness—that permits me a kind of confidential relationship with you I would not attempt with larger groups.

For the subject I want to talk to you about is the "Library of Congress as a Force for World Peace Through Cultural Communication."

Culture may be said to be accrued education.

And education is the open road to communication. And once you have these—education and its handmaiden, communication—you have the beginnings of a major breakdown of prejudice: racial, religious, cultural.

There are certain important repositories of world culture.

In a very active and dynamic sense this institution the world over—the Young Men's Christian Association—is a great center of deposit for the cultures, the thinking, the religious outlook, the education, and the recreation of whole varieties of people in the family of mankind.

Libraries to be sure are everywhere the repositories of world culture. And they have been since the days of Alexandria of antiquity. In this sense and in our time the Library of Congress occupies a special and a very dominant place.

Now I like to think of a library not as a museum although it is that, too.

Rather I like to think of a library as a workshop and a think shop where we carry out the admonition to seek the truth.

I like to think of a library as a scintillating, interesting, exciting, strength-giving, and dynamic force for broad human understanding.

The reason the United Nations is perpetually pleading for peace, peace when there is no peace, is because the basis for human understanding does not exist among the peoples of the earth. It is one of the tragedies of mankind that misunderstanding can be quickly and easily engendered. But understanding and mutual appreciation are difficult to come by.

There is nothing I believe more strongly as a politician who must appeal to people and present himself to them for their approval, than this simple truth. That is, it is impossible to hate people you know. It is possible to hate individuals and whole peoples if you know them somewhat. It is possible to form dislikes and nurture them out of some kind of perverse satisfaction. But there is no such thing as really knowing your man, or knowing your people, or of being fully informed, and then finding in information and in knowledge a basis for dissension or disagreement. Oh, it may very well be that your problem is not that you do not know the other man; but rather that the other man does not know you. And ignorance, whether on your side of the fence, or the other side of the fence, is just as destructive.

That is why I feel it so important to disseminate as a living and vibrant force the sum of human knowledge. That is why I am so proud that the Library of Congress may be singled out as one factor in justifying America's leadership of a free mankind. The Library of Congress is not a warehouse for old and new books. It is not a massive edifice for miles upon miles of bookshelves and decks and stacks and dry-as-dust volumes about a dead past and a stagnant present and an unexplored future.

For me the Library of Congress is the cultural showcase of America; just as a library anywhere may be or should be a cultural showcase—an influence to make good men able and able men good.

It is a living testimony of our interest in all of mankind from the dim days of antiquity to the immediate moment. It is a humming, busy, cultural factory and inventory of ideas and policies and living action and progress. It is concerned not only in hewing out new paths in library science as such. It is concerned with providing for men everywhere, the free and the slave, the half-free and the half-slave, the truths about the condition of man.

A savant from Ceylon, a professor from Bonn, a scientist from Japan, a finance analyst from Wall Street or the Bank of England, a statesman from anywhere, finds a hospitable and an inviting atmosphere and a precisely tailored source of knowledge and research for a general or a particular quest here in our Library of Congress. Or it may be a delegation or delegations from the far corners of the earth. Here in this atmosphere of academic freedom, here amid these volumes, among this Library personnel, they find welcome and friendship and assistance. Here is the congenial atmosphere of a scholar among scholars. They find this atmosphere even if they come—as some do—with suspicion and perhaps a suppressed hostility. If we are successful in our Library of Congress, we shall have disabused them of their prejudice. And we shall have sent them home wondering deep down whether somewhere in their home propaganda they have not been misled. For they come here from Moscow and Prague and Belgrade and from Budapest and Albania and everywhere.

How exactly—you may ask—is all this implemented?

For one thing, and just as a single example, the Library of Congress performs a prodigious service, a function, in the international exchange of official publications. On the combat front of ideas, in the areas where policy is made and action is taken, the Library of Congress is a practically unbounded pool of limitless depth for the ascertainment of facts, opinion, commentary, truth, and apocrypha. I can give it to you in figures but they hardly tell the story:

I mentioned the exchange program. When the present Librarian, L. Quincy Mumford, accepted the post he now holds, the Library had only three exchange agreements with institutions in the Soviet Union. Today there are 300 such agreements.

I ask: Is there a more vital area of communication for the knowledge and welfare and well-being of all mankind everywhere?

In addition to this the Library has a worldwide network of about 20,000 exchange agreements with governmental agencies, universities, and other research institutions.

This brings in over half a million items a year.

Without going into the filing techniques I can tell you that in about a half decade the number of publications from the Iron Curtain countries has jumped from 32,620 publications to 64,330 ingeniously indexed so as to make them easily identifiable and available.

There is, for example, an Africana Section.

The Library has an incomparable 1,500,000-volume collection of scientific and technical materials. There is besides a massive quantity of potent and valuable and needed scientific abstracts. But the emphasis on science is no greater than the emphasis on the humanities. One is not pampered at the expense of the other. Rather they are supplemental and complementary in the total story of world culture. And this is an abiding principle in the Library under its present leadership.

When I examined the most current data on the Library I found it impossible to tell the story adequately in a breakfast talk. How can I tell you about the Library's holdings of American and international history and politics except to say it is fabulous. There are original and private documents from the Presidents. There are the instruments of our freedom and the original materials that surround these instruments. There is bibliography and library science and the publications of learned societies. Intensive use is made hourly and daily and the year around of the Library's files of American and foreign newspapers, its maps and atlases. The Library is, of course, rich in rarities ranging from the Gutenberg Bible and the rough draft of the Declaration of Independence to Abraham Lincoln's first drafts of his Gettysburg Address.

I ask you to consider what an immense contribution all this is to the betterment of human understanding. For, of course, understanding is the key to peace. Members of Congress must know quickly and accurately and fully all the facets of an issue about which they are asked to make a decision. Here the Library of Congress steps in with its invaluable Legislative Reference Service. These are scholars and savants and research people and specialists, carefully selected, of proven ability and background, who stand by to brief legislators—usually in writing—on the facts. This is the Service that—with hardly more than 200 people—answered more than 81,000 inquiries in 1960 from Members of Congress and from committees of Congress. Many of these inquiries called for highly technical reports, analyses, assessments of assembled data, and conclusions upon which legislators could predicate judgment and decision. The materials thus supplied are highly prized, not only because of accuracy and depth, but even more because of disinterestedness and objectivity.

Since we are talking about the contribution to human understanding let me throw in here another statistic. In fiscal 1960 more than 700,000 readers were supplied with books and other materials and were given other reference assistance. Of course there are other services of the Library which I cannot now pause to describe: its interlibrary loan system, for instance, reaching to libraries all over the world. From the Library of Congress through its National Union Catalog on cards you can learn the location of some 8,500,000 books printed before 1956 in more than 700 libraries in the United States and Canada. An auxiliary catalog records the location of some 550,000 works in Slavic, Hebrew, Japanese, and Chinese. I could talk to you about the Library's library for the blind, the Copyright Office, the Library's cultural activities in the field of music and literary readings. The Library is a vast storehouse of Americana from folk music to motion pictures. When I use the word "understanding" and talk about Americana I have in mind also that the Library has in one form or another the songs of many Indian tribes. It has a growing archive of Latin American poets and their poetry and it has these on tape.

What I have just told you explains why I made it a point to be here today: human understanding.

Nothing in a book, not a whole planet of libraries, can take the place of this, I hope, warm, personal, and friendly contact we are having here today at this Young Men's Christian Association which will enhance our understanding of each other. The very words "Christian association" carry a world of meaning for the mission in human understanding I am trying to perform and that the Library of Congress performs on a huge and mighty international and national stage. This meeting, personal and intimate and friendly, is basic, and the books and paraphernalia of culture are, and must always remain, supplemental. What we learn from books supports what we learn from human contact and vice versa. As we broaden our knowledge of each other we deepen it. We give it sustenance—encourage its growth. Once this knowledge is rich and full, it may not always lead to mutual love but it surely can and should lead to mutual respect. This will shorten the road to peace.

What the influence of libraries everywhere—and the Library of Congress especially—prove above all else, is the great value of variety in human tradition and culture. Let each of us, as a people, develop and cherish our own culture and tradition, our own religious and spiritual values. If we live up to the tenets of our faith I think—by and large—we shall avoid trespass.

What needs to be established is that all peoples in the variety of their cultures and traditions are asked only to respect and honor each other. What is dangerous is not learning, knowledge, friendly and scholarly criticism and judgment of each other; what is dangerous is ignorance and the resulting suspicion. What we need to remember is not that power per se is a menace, but power without a sense of morals and spiritual values is a menace. This is why in the field of communication and exchange, in the field of mutual knowledge, institutions like the Library of Congress, are a prime potential.

I am inestimably proud as an American to be told by reliable experts that the Library of Congress is the greatest of all libraries in our time and that it is perhaps the greatest in all history. I am proud, not as one is proud of a possession or a property. I am proud as one who is proud of an asset that makes for world comity, world peace, world understanding.

You have honored me both by having me and by listening so intently—I close with hope that I may have stirred your heart and mind to feel and think on these things and with a plea that when you take a book you first thyself prepare to read with zeal and mark with care—and when thou hast read what there is writ then let thy best practice to second it then twice each precept read shall be once in the book and next in thee.

And remember—that there is an admonition to go and teach and preach. Another seer has told us that it is our business to make other men wiser and better as we can make or find opportunity.

University of Cincinnati 1961 NCAA Champions

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. SCHERER. Mr. Speaker, too often here in Washington events both at home and abroad cause us to view with alarm. This week all Americans, especially those from the city of Cincinnati, can point with pride to the University of Cincinnati Bearcats basketball team.

On last Saturday night at Kansas City, Mo., the Cincinnati Bearcats defeated the Ohio State Buckeyes in the National Collegiate Athletic Association finals and became the 1961 national champions.

Mr. Speaker, for 3 years prior to 1961 the Cincinnati Bearcats, led by that great all-American, Oscar Robertson, had won the title of the Missouri Valley Conference, the toughest in the country. The team went to the NCAA those 3 years but did not quite bring back the big prize, although rated the top team in the Nation in 1959–60.

The 1960–61 season for the Bearcats did not look too good. All-American Oscar Robertson had graduated. Charles Mileham, the university's fine athletic director for many years, had been promoted to a University of Cincinnati vice presidency. The team's great coach, George Smith, had succeeded Mileham as athletic director. The Bearcats had a new coach, Ed Jucker, assisted by Tay Baker and John Powless. There were no all-Americans on this team around which to build.

At the beginning of the season the Bearcats were not even rated in the top 20 in the country. Most sportwriters outside Cincinnati, who had drooled over the "Big O," looked for other heroes and completely ignored Cincinnati.

For the first few weeks of the new season it looked as if they might be right. The once-powerful and feared University of Cincinnati Bearcats had only a 5-to-3 record. The coaches and team, however, quietly but with confidence and determination, supported by a small but loyal University of Cincinnati boosters club, went to work on a long, tough, and grueling schedule. They won 21 straight games from some of the toughest teams in the country.

Gradually their phenomenal wins forced skeptical sportswriters and coaches to push them into the top 20 teams, then into the select top 10. They went on to win what no one expected—the fourth straight Missouri Valley Conference title.

As the season ended, the Cincinnati team found itself rated No. 2 in the Nation, second only to Ohio State. Ohio State, with the all-American Jerry Lucas, according to many was supposed to be the greatest basketball team ever assembled.

For years big Ohio State, defending NCAA champion, had looked down its nose at the University of Cincinnati. It had refused to even consider scheduling and playing the Bearcats. The two had not faced each other on the court for 38 years.

Last Saturday night at Kansas City these two great teams were forced to meet as both won their way to the NCAA finals.

In what students of basketball called one of the finest and most thrilling contests in the game's history, the University of Cincinnati Bearcats beat the Ohio State Buckeyes 70 to 65 to become the 1961 NCAA champions—the No. 1 team in the Nation.

Mr. Speaker, this all-American team, coached by the phenomenal Ed Jucker, displayed all those qualities of sportsmanship and character so vitally needed by this Nation today; namely, skill, spirit, devotion, determination, and courage. It is comprised of the following players: Mark Altenau, Cincinnati; Carl Bouldin, Cincinnati; Jim Calhoun, Carr Creek, Ky.; Fred Dierking, Valley Stream, N.Y.; Dale Heidotting, Cincinnati; Paul Hogue, Knoxville, Tenn.; Ron Reis, Cincinnati; Larry Shingleton, Madison, Ind.; Tom Sizer, Middletown; Tom Thacker, Covington, Ky.; Frank Turner, Knoxville, Tenn.; Bob Wiesenhahn, Cincinnati; and Tony Yates, Cincinnati.

There are many other Cincinnatians who deserve much credit for the glory that this team has brought to Cincinnati. Among them are Dr. Walter Langsam, president of the University of Cincinnati; Ralph Burseik, its vice president; Dr. William Schwarberg, assistant director of athletics; Hod Blanye, sports publicity director; Jeff Hanselmann, assistant sports publicity director; Ed Coons, ticket manager; Dr. Don Jacobs, team physician; Joe Keefe, team trainer; Bill Roth, team manager; Joe "Scotty" Kolp, equipment manager; Roy Hodgins, program manager; and Don Galvin, cameraman.

Mr. Speaker, no team could enjoy the prestige that has been achieved by the 1961 University of Cincinnati aggregation without the splendid coverage and cooperation which has been given by the Cincinnati Enquirer and the Cincinnati Post and Times-Star and their outstanding and truly objective sportswriters, Dick Forbes and Walter Forste.

We in the Congress salute the 1961 University of Cincinnati Bearcats.

Financing the Highway Program

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. OSMERS. Mr. Speaker, there is great interest throughout the country in continuing the vital Federal-State highway program. President Kennedy has made proposals for the imposition of special taxes on the trucking industry to meet part of the rising costs of this necessary program.

It is my considered judgment that we must not repeat the mistakes made years ago in railroad taxation by imposing discriminatory and ruinous burdens on trucking at this time.

I have set forth my views on highway program taxation in a letter to Chairman MILLS of the House Ways and Means Committee and I ask unanimous consent to have the letter placed in the CONGRESSIONAL RECORD.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 28, 1961.

Hon. WILBUR D. MILLS,
Chairman, Ways and Means Committee,
House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: The Committee on Ways and Means is now considering the President's proposals for financing the Federal-State highway program. The purpose of this letter is to set forth briefly my views on the subject for the consideration of the committee.

President Kennedy proposes a 3-cent-a-gallon increase in the tax on diesel fuel, as well as steep increases in the excise taxes on trucks, truck tires, tubes, and tread rubber. With a few exceptions, as a general principle, I oppose the imposition of any excise taxes on necessities during peacetime, particularly when they bear heavily on a specific industry. That is why I have been urging Congress for several years to approve my bills which would repeal certain remaining World War II excise taxes on such items

as transportation, communications, appliances, cameras, luggage, etc. Therefore, in my opinion, the President's recommendations for sharp increases at this time in the excise taxes on trucks, truck tires, tubes, and tread rubber should not be approved.

The 75-percent increase in the diesel fuel tax proposed by the President would be borne entirely by about 15 percent of the heavy-duty trucks now operating. In my opinion, such a discriminatory increase would put a number of trucking companies out of business completely and seriously injure many others, with resulting unemployment. Thus, the anticipated revenue from diesel fuel taxes would be lower, thereby partially defeating the purpose of the increase. It seems to me, that if there is need for additional revenue to continue this highway program, as planned, it should be met by a modest increase in the present 4-cent tax on all gasoline and diesel fuel such as the half-cent proposed by President Eisenhower.

In my judgment, an economically sound trucking industry is necessary for a healthy economy just as an adequate highway system is an absolute requirement for the continued growth and development of all motor transportation including the trucking industry. Accordingly, the Federal-State highway program will continue to have my full support, as will any equitable taxation to pay for it.

Discriminatory overly burdensome taxation was a major factor in placing the Nation's railroads in the trouble they are in today. Let us not repeat the mistakes of history by taxing large segments of the trucking industry out of business. There are some who feel that harmful taxes on trucks will somehow help railroads. Two wrongs never make a right. Railroad problems must be solved affirmatively here in Congress and at the State capitals, not by crippling the trucking industry.

For the reasons set forth, I urge the Committee on Ways and Means to reject these discriminatory taxes on the trucking industry.

Sincerely yours,

FRANK C. OSMERS, Jr.

Tribute to the Seventh Regiment

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. LINDSAY. Mr. Speaker, today I have the honor to introduce a resolution to provide for the erection of a tablet in the Hall of the House of Representatives—or immediately adjacent to its entrance—commemorating the 100th anniversary of the quartering of the 7th Regiment, New York State Militia in this Hall. The 7th Regiment arrived in Washington on April 25, 1861, in response to President Lincoln's request for troops to defend the Nation's Capital at the outset of the Civil War. They were quartered in the Hall of the House of Representatives from April 25 to May 2, 1861.

On April 25, 1861, the 7th Regiment, New York State Militia, marched up Pennsylvania Avenue in the city of Washington and was reviewed by President Lincoln in front of the White House. The arrival of the 7th Regiment in Washington was described by Messrs. Nicolay and Hay, President Lincoln's secretaries as "an epoch in American History."

It is difficult for us to realize, a century later, the drama underlying the arrival of this one regiment of militia troops in tension-charged Washington on April 25, 1861. Its significance lay in the fact that this was the best-known regiment of militia troops of its day and its arrival in Washington in response to the President's call was the first tangible demonstration of the willingness of the people to aid the Union.

After the firing upon Fort Sumter on April 12, 1861, President Lincoln called for the militia of the several States of the Union, to the aggregate number of 75,000 to defend the Union and provide for the execution of its laws. He also arranged, through Brevet-Lt. Gen. Winfield Scott, as Chief of Staff of the Army, that certain of the militia troops thus called forth would be assigned to protect and defend the Capital.

President Lincoln knew well the importance of and the need for defending Washington against attack. At the time of his militia proclamation seven States had already seceded, including South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas. They were joined a few days later by the State of Virginia, Washington's southern neighbor across the Potomac. North of Washington, telegraph wires and railroad transportation from the north were severed at Baltimore. The city of Washington was almost completely surrounded by those hostile to President Lincoln's determination to defend the Union.

President Lincoln and his principal advisers expected the war to begin in the city of Washington, with a drive to capture the White House and the Capital. It was said "that the White House is turned into a barracks." Two Senators, Cassius M. Clay and James H. Lane, both with military backgrounds, formed a last-ditch "palace guard," to protect the White House and the safety of the President. This feeling that Washington was the immediate target of the seceded States was shared by the press of the South. The Richmond Examiner declared:

> There is one wild shout of fierce resolve to capture Washington City at all and every human hazard.

There was reason for concern for the safety of Washington. The Regular Army, totaling about 17,000 officers and men, was stationed for the most part in the West and Southwest. The civil servants in Washington were predominantly citizens of the seceded States. After the fall of Fort Sumter, Regular Army officers from the South resigned their commissions and returned to their home States to offer their services to the Confederacy.

Any well-organized attack upon Washington would have succeeded. However the Virginia troops did not cross the Potomac. Instead the Virginia Volunteers, on April 18, 1861, the day after the secession of the Old Dominion, marched north and captured the Federal fort at Harpers Ferry and with it a tremendous supply of weapons, ammunition, and equipment. Two days later, on April 20, 1861, the commander of the U.S. Naval Yard at Norfolk, Va., fearful of the capture of the yard by Virginia troops, destroyed $30 million of naval ships, guns, equipment, and munitions.

It was in such an atmosphere of concern for the safety of the Capital and confusion as to the intentions of the forces of the seceded States, that the 7th Regiment marched up Pennsylvania Avenue in Washington to the relief of President Lincoln and the members of his Cabinet. The 7th Regiment brought a measure of security to the city of Washington, but more importantly, it was the harbinger of men and arms to come, and a symbol of the desire of a united people to fight for and defend the Union of the States.

Just as the arrival of the 7th Regiment in the city of Washington on April 25, 1861, was a symbol of the desire of the people to defend their Union, so also it served in New York City.

Prior to the departure of the 7th Regiment from New York City there was reason to believe that the North would not support a war against the seceded States. The mayor of the city of New York, Fernando Wood, had called seriously for the secession of New York City from the State and from the United States. Rumblings of discontent were heard throughout the North, but with President Lincoln's proclamation calling forth the militia, on April 25, 1861, and the response of the 7th Regiment to that call, fear for the safety of the Nation and concern over the support which might be rendered by the people to the Federal Government was assuaged.

The service of the 7th Regiment in defense of the Nation's Capital, and specifically, in defense of the Halls of Congress and the White House, was an important duty which should be recorded by the erection of a tablet in the Hall of the House of Representatives because this regiment, the first organized, fully equipped and armed regiment to respond to the President's call for volunteers, typified the spirit of unity in support of President Lincoln's determination to preserve the Union, and is a lasting tribute to the patriotism of the citizen-soldier.

Postmaster General Day's Reply

EXTENSION OF REMARKS

OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. JOHANSEN. Mr. Speaker, on March 14, I placed in the RECORD a copy of a letter which I had that day addressed to the Honorable J. Edward Day, Postmaster General, containing a number of questions regarding personnel and other matters involving the Post Office Department on which he had acted or publicly commented.

Under permission to extend and revise my remarks, I include his reply of March 17.

On the floor of the House I today discussed the matter of Project Turnkey, in the course of debate on the Treasury-Post Office appropriation bill. Subsequently I expect to have additional comments regarding some of the other matters referred to in the exchange of letters with the Postmaster General.

While I am by no means satisfied with many phases of the Postmaster General's response to my inquiries, I appreciate the promptness of his reply.

Postmaster General Day's letter follows. I have retained in my files the names of the persons affected by the personnel actions as included in a list which accompanied the letter:

OFFICE OF THE
POSTMASTER GENERAL,
Washington, D.C., March 17, 1961.

Hon. AUGUST E. JOHANSEN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN JOHANSEN: This is in response to your letter of March 14 and will answer the specific questions which you asked:

1. Of the 4,000 regional people, all except about 130 held career civil service status as of January 20, 1961. Two assistants to the regional directors have been replaced since my administration took office, and we contemplate replacing the remaining 13 assistants to the regional directors and many of the 15 regional directors. Actually four of the assistants to the regional director positions were vacant on January 20, 1961. One of the regional directors had already applied for disability retirement, and 11 others have either applied for retirement or have voluntarily accepted appointment to other high salary positions. Names of all of these regional directors and assistants to the regional directors are attached, along with the name of the one person whose regional job has been abolished. That one job had been created in December, 1960, specifically for the incumbent who was then assistant to the regional director. Civil service laws and regulations have been complied with in every respect. I do not feel free to deliver the civil service records of these people to you.

2. In the Washington headquarters, 21 employees with competitive status, and principally having very high grades, have been adversely affected. Five of them were in excepted positions. The positions of eight have been abolished, and the incumbents have received reduction-in-force notices. Of the remaining eight, two have resigned and six have voluntarily accepted change to lower grade positions. A list reflecting these names and their changes in position is attached. I do not feel free to deliver their civil service records to you.

3. Undistributed copies of the two issues of the Postal Service News were withdrawn from circulation because they contained inaccuracies and potentially erroneous statements regarding policies which were being considered for change, and it would have been confusing to the employees of the Postal Service to have allowed further distribution.

4. My public statements regarding Turnkey have been accurate. The statement of mine to which you refer was made February 9, 1961, in reference to the previous administration's publicity to the effect that Turnkey was a completed and completely working post office and was the world's first automated post office, which previous publicity was not accurate. The Post Office Subcommittee of the House Appropriations Committee, after its inspection of Turnkey, launched an investigation and requested the Post Office Department to withhold any further payment to Intelex Systems, Inc., until the congressional investigation is finished.

5. It would be historically inaccurate if the plaques installed on buildings dedicated after January 21, 1961, bear the names of officers from a previous administration. Plaques on buildings dedicated subsequent to that date bear the names of President Kennedy, myself, and Deputy Postmaster General Brawley.

6. A proposal has been received and is being considered by the Post Office Department that it consider changing to flat payment in cash the $100 per year uniform allowance to letter carriers in lieu of the present reimbursement basis. No decision to change from the present system has been made.

Sincerely,

J. EDWARD DAY,
Postmaster General.

Lifting of Ban on Importation of Russian Crabmeat Ignores U.S. Fishing Industry

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. PELLY. Mr. Speaker, a few days ago, as a result of numerous complaints from interested constituents, my attention was attracted to an administration proposal to lift the ban on the importation of Russian crabmeat into the United States.

I immediately addressed a letter to the Secretary of State, The Honorable Dean Rusk, protesting any such action, in the strongest possible language. My objections were based on the effect the policy decision would inevitably have on the economy of the vital fishing industry in my district and State of Washington.

I deliberately avoided any reference to the obvious appeasement implication in the lifting of this ban. That letter was mailed on March 16. Four days later, on March 20, I was advised by telephone that within 30 minutes the Treasury Department would formally announce by means of a press release the lifting of the ban.

Three days later, on March 23, the State Department finally favored me with a "too little and too late" reply to my formal protest. Too late in that the announcement had already been made and too little, by way of justification of the decision—and I quote from the State Department's letter:

> The Secretary of the Treasury, pursuant to his responsibilities, under the applicable law, (sec. 307 of the United States Tariff Act), found that there is no current evidence that prison or forced labor is still being used in the production of Soviet canned crabmeat. On the basis of this judgment, he determined that the prohibition should be removed.

The fallacy of this argument is obvious. Indeed, it would be laughable were we not dealing with such a serious matter involving the foreign policy of the United States.

But I challenge either the State Department or the Treasury Department to produce documented evidence of any proper investigation to determine whether or not Soviet canned crabmeat is still packaged by slave or prison labor.

Neither the CIA or any other cloak-and-dagger agency has filed any report to substantiate this statement. Consequently, the only obvious current evidence is that furnished by the Kremlin itself.

If my judgment is wrong in this instance, then let the administration's policymakers present documented evidence to support their statement "that prison or forced labor" is not currently being used in the production of Soviet canned crabmeat.

Furthermore, the untimely haste involved in finalizing a policy decision involving, as it does, an important segment of our domestic economy, is certainly subject to critical review and censure. Why was the fishing industry never consulted or invited to express its view?

If the fishermen and the fishing industry of the Pacific Northwest are to be the expendable shock troops in this friendly gesture to the Kremlin, they should at least be told what they are dying for. Instead, and by administrative edict, to paraphrase the gladiators of ancient Rome, the fishermen of America can only stand before the State Department and say "We who are about to starve salute you."

So, Mr. Speaker, I urge that the House Committee on Foreign Affairs undertake an investigation of this policy decision, so destructive to the vital fishing industry in the Pacific Northwest. Otherwise, I predict that the housewives of America will enter the fray, wielding the most potent weapon of all, a national boycott against the purchase of Soviet crabmeat—crabmeat tainted, either directly or indirectly, with the blood of freedom-loving people from all four corners of the earth.

Reports Submitted by Department of Interior on Wilderness Preservation System

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert in the CONGRESSIONAL RECORD copies of the reports submitted by the Department of the Interior to the chairman of the House Committee on Interior and Insular Affairs and the chairman of the Senate Committee on Interior and Insular Affairs on my bill, H.R. 1762, and similar legislation to create a national system of wilderness preservation. The administration has endorsed such legislation.

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 17, 1961.

DEAR MR. ASPINALL: Your committee has requested reports on H.R. 293, H.R. 299, H.R.

496, H.R. 776, H.R. 1762, H.R. 1925, and H.R. 2008, all of which relate to the establishment of a national wilderness preservation system.

We urge the enactment of this proposed legislation for the establishment of a national wilderness preservation system. We recommend that it be amended in conformance with a similar proposal, S. 174, and our suggested amendments thereon, as set forth in our report of February 24, 1961, copies of which are enclosed.

Wilderness resources contain basic values and provide undeniable benefits to the American people. Establishment of a wilderness system is in the public interest and we believe the current proposals recognize equitably the various facets to the problem of wilderness preservation. We believe that many if not all of the objections that have been raised in the past to wilderness proposals are resolved by the current bills.

These proposals would delimit the wilderness system to well-defined areas and would prescribe an orderly method for establishment of the system. Also, these proposals prescribe sound procedures applicable to both executive and legislative branches of the Government in determining the particular areas or parts of Federal reservations to be included in the wilderness system.

The Bureau of the Budget has advised that, subject to your consideration of our recommended amendments, the enactment of this proposed legislation would be in accord with the President's program.

Sincerely yours,

JAMES K. CARR,
Acting Secretary of the Interior.

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., February 24, 1961.

DEAR SENATOR ANDERSON: Your committee has requested a report on S. 174, a bill to establish a national wildlife preservation system for the permanent good of the whole people, and for other purposes.

We urge the enactment of this proposal. We suggest hereafter certain minor amendments to the bill that we believe would be desirable.

Wilderness resources contain basic values and provide undeniable benefits to the American people. We believe this has been amply demonstrated from the previous hearings of your committee on wilderness proposals. In our opinion, the establishment of a wilderness system, along the lines outlined in this bill is in the public interest.

This proposal recognizes equitably the various facets to the problem of wilderness preservation. We believe that it resolves many, if not all, of the objections that have been raised in the past to wilderness proposals. It clearly delimits the wilderness system to well-defined areas and prescribes an orderly method for establishment of the system. It prescribes sound procedures applicable to both the executive and legislative branches of the Government in determining the particular areas or parts of Federal reservations to be included in the wilderness system.

The system to be established by this bill would be composed of federally owned lands. Portions of the National Park System, wildlife refuges, and game ranges administered by this Department, and portions of the national forests administered by the Department of Agriculture would be included in the system. It should be noted in this connection that the National Park System areas, wildlife refuges, and game ranges that we administer would not be included immediately following enactment of the proposal in the wilderness system. Portions of these areas would be selected and included in this system over a 10-year period, in accordance with prescribed procedures set forth in the bill. In the case of the national forest areas, however, there would be included in the wilderness system immediately upon enactment of the legislation those national forest areas classified by the Department of Agriculture as wilderness, wild, primitive, or canoe. The primitive group of areas, however, would be subject to subsequent review over a 15-year period in order to determine which of these areas should be retained in the system.

One of the major provisions of the bill is contained in section 3(h). This subsection provides that the addition of new wilderness areas to the system or the elimination of the areas from the system that are not specifically provided for by the bill shall be made only after specific authorization by law for such addition or elimination. We believe this requirement is desirable.

Section 2 of the bill contains a statement of policy that would express the desire of the Congress to secure for present and future generations the benefits of an enduring resource of wilderness. Sections 2 and 6 contain the general provisions that would govern the administration of wilderness areas as well as prescribe the purposes and uses of the system. Significantly, the bill provides that the system shall be administered for the use and enjoyment of the American people, in such manner as will leave the system unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of the areas, and the preservation of the wilderness character. This provision is very similar to the requirements now applicable, pursuant to the basic National Park Act of 1916 (16 U.S.C. 1–3), to the National Park System. On this point we observe that wilderness type areas constitute an important segment of the National Park System and have contributed heavily over the years to the enjoyment by the American people of wilderness values.

We believe that section 6(a) is worthy of special note. This subsection provides that nothing in the act shall be interpreted as interfering with the purposes stated in the establishment of or pertaining to, any park, monument, or other unit of the National Park System, or any national forest, wildlife refuge, game range, or other area involved, except that any agency administering any area within the wilderness system shall be responsible for preserving the wilderness character of the area and shall so administer such area for such other purposes and also to preserve its wilderness character. This provision, we believe, has the effect of preserving the status quo to the maximum extent in the management of the Federal reservations in question, subject however to the overall requirement that the administering agencies carry out the essential requirements set forth in the bill for wilderness preservation.

While the bill prohibits, consistently with wilderness preservation, as prescribed in section 6(b), commercial enterprises within the wilderness system, roads, motor vehicles, motorized equipment, et cetera, it provides in section 6(c)(4) that commercial services may be performed within the wilderness system to the extent necessary for activities which are proper for realizing the recreational or other purposes of the system.

In addition to the general provisions relating to administration of the wilderness system, there are specific provisions in the bill that are applicable to national forest areas. These provisions would permit certain uses to continue that are already well established within the forest areas in question. Also, certain additional uses may be authorized by the President upon his determination that such use or uses in the specific area will better serve the interests of the United States and the people thereof than will its denial. In the case of wildlife refuges and game ranges, the bill provides that any existing use or form of appropriation authorized or provided for in the Executive order or legislation establishing such areas and which use exists on the effective date of the act may be continued under such authorization or provision. In this connection, we note that the bill makes no provision for special uses within the National Park System. We believe this is appropriate and is consistent with long established policies and standards, established by the Congress for administration of that system.

There are other provisions that are worthy of mention. Boundary adjustments may be made in wilderness areas in accordance with certain prescribed procedures by the appropriate Secretary after public notice and hearing, subsequent recommendations to the President and transmittal of such recommendations to the Congress. The boundary adjustment may be accomplished if the Congress makes no objection thereto. We note that in the case of areas of the National Park System the bill provides for the inclusion of those areas of more than 5,000 acres where such areas exist without roads. The Secretary would be required to determine what portions of the parks would be required for roads, utilities, et cetera. The bill contains no minimum acreage limitations regarding wildlife refuges and game ranges to be included in the system.

We recommend the following amendments to this bill:

1. On page 5, line 7, strike out the word "ten" and insert in lieu thereof the word "fifteen".

This amendment is suggested in the interest of uniformity. Fifteen years are allowed in the bill for the review of certain national forest areas to determine their suitability for inclusion in the wilderness system. We believe that National Park System areas, as well as the wildlife refuges and game ranges, should be governed by the same requirement.

2. On page 6, line 16, beginning with the word "Further" strike out the language in the sentence up to and including the word "area" in line 20, and substitute in lieu thereof "The purposes of this Act are hereby declared to be within and supplemental to but not in interference with the purposes for which parks, monuments, and other units of the National Park System are administered".

This amendment is desirable in the interest of clarification. It is in harmony with a similar provision relating to national forests in section 3(b)(2).

3. On page 7, line 10, strike out the word "ten" and insert in lieu thereof the word "fifteen".

As previously explained regarding a similar amendment relating to national parks, this amendment is suggested for the purposes of uniformity. If this amendment is adopted, in the interest of promoting further clarification, the next amendment would be desirable.

4. On page 7, line 10, insert a period immediately following the word "Act" and strike out the rest of the sentence beginning with ", and" in line 10 and ending with the word "jurisdiction." in line 16.

5. On page 8, line 10, following the words "shall" insert ", if found to be justified by the Secretary,".

6. On page 9, revise line 8 to read "(g) Public notice when given by either the Secretary of the".

We consider this amendment to be desirable in the interest of clarification. Subsection (g) provides that "The public notice by either the Secretary of the Interior or the Secretary of Agriculture that any areas to be proposed under the provisions of this Act for incorporation as part of the wilderness system shall segregate such area from any or all appropriation under the public land laws to the extent deemed necessary by such Secretary." The only requirement for

the giving of public notice, however, is contained in subsection (e) concerning modification of boundaries. We believe the language of subsection (g) probably would be limited in application to boundary modifications under subsection (e). On the other hand, it appears that the intent of subsection (g) is to have the provision apply also to new areas. Our amendment is suggested in order to permit the giving of notice, and the segregation of the lands in question from the public land laws pursuant to subsection (g), in the discretion of the particular Secretary. There would be no need to give notice or use the authority under subsection (g) to segregate the lands within the National Park System from the public land laws as these areas are already segregated from such laws.

7. On page 9, line 22, following the word "any" insert the word "new".

This is a clarifying amendment.

8. On page 10, line 7, strike out the words "privately owned" and insert in lieu thereof the words "non-Federal".

This is a clarifying amendment.

(9) On page 10, line 25, and on page 11, line 1, strike out the words ", except that any", and insert in lieu thereof ". Each".

This amendment is suggested for clarification. So far as the national parks are concerned, the present language indicating that an exception is required to preserve the areas for wilderness purposes is inaccurate. These areas, as we have indicated previously are administered in keeping with wilderness standards.

The Bureau of the Budget has advised that, subject to your consideration of the foregoing amendments, enactment of S. 174 would be in acordance with the President's program.

Sincerely yours,

STEWART L. UDALL,
Secretary of the Interior.

Excessive Importation of Lamb and Mutton Must Be Curbed

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. FISHER. Mr. Speaker, on last Friday I introduced H.R. 5935, which reads as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That paragraph 702 of the Tariff Act of 1930 (19 U.S.C., sec. 1001, par. 702) is amended by inserting "(a)" after "702." and by adding the following subparagraph:

"(b)(1) Sheep, lambs, mutton, and lamb, provided for in subparagraph (a), entered, or withdrawn from warehouse, for consumption, during any calendar year, in excess of the average annual quantity thereof imported during the five-year period ending December 31, 1960, shall be subject to duty at the following rates, in addition to any other duties imposed upon the importation of such articles:

"Mutton and lamb, 10 cents per pound.

"Sheep and lambs, $1.50 per head.

"(2) The quantity of the above articles entitled to enter under this subparagraph during the unexpired portion of the calendar year 1961 without payment of additional duty shall be the annual quota quantity less one-twelfth thereof for each full calendar month that has expired in such year."

SEC. 2. The amendments made by the first section of this Act shall take effect as soon as practicable, on a date to be specified by the President in a notice to the Secretary of the Treasury following such negotiations as may be necessary to effect a modification or termination of any international obligation of the United States with which the amendment might conflict, but in any event not later than sixty days after the date of enactment of this Act.

Mr. Speaker, the need for this legislation becomes apparent when we survey the vast increase in the imports of lamb and mutton, especially during the past 3 years, from countries with much lower production costs than ours. I am alarmed because dressed lamb is being landed in this country, duty and freight paid, and offered to our retail outlets at prices 10 to 15 cents per pound below our dressed market. Making the situation even more critical is the fact that lamb and mutton imports are arriving here at a time when our own live lamb market is experiencing a 15-year low in prices.

Even though Australian and New Zealand meat board officials, as well as American packers and importers, have given assurance that it is not their intention to injure the American lamb producers through the importations of lamb and mutton, there arrived in Newark, N.J., early this month the S.S. *Essex* from Australia with 220½ tons of lamb cuts and 2,016,512 pounds of boneless mutton. It arrived here right in the midst of the lowest U.S. lamb prices since the end of World War II.

In view of this record, who can say the imports are not excessive, and who can say that these excessive imports have not and are not now doing serious damage to our domestic producers? The record speaks for itself. Five years ago, before the massive upsurge in importations of lamb and mutton began, our lamb market was fairly stable and steady. The domestic demands were being met. But 5 years later, after the vast increase in imports, what do we find? We find the American lamb growers getting the lowest prices for their lambs since World War II.

The bill I have introduced would not prevent 1 pound of lamb or mutton from coming into the United States. It simply provides that whenever in any calendar year imports exceed those based on the average annual quantity imported during a 5-year period, that the tariff would be increased from present extremely low levels on the remaining quantity shipped in during the year. This would partially compensate for the increased costs of production in this country.

Lamb producers in the United States, through research, breeding programs, promotion, and through innovations in greater operating efficiency, such as fencing, reseeding, health measures, and conservation practices, are endeavoring to reduce costs of production. Progress has been made. But it is obvious that even with very peak efficiency, high operating costs in the United States would prevent our ever being able to produce lambs which could compete pricewise with those from New Zealand, Australia, and Iceland.

Let us again look at the record. Dressed lamb imports rose from 1.4 million pounds in 1955 to an alltime high of 12.4 million pounds in 1960. Last year mutton imports so overshadowed the market that prices for domestic ewes dropped to approximately $2.75 per hundredweight live. In many cases this would not even pay freight and handling charges from the ranch to the market.

While shipments of live lambs are halted at the present, at least temporarily, such imports could again become a threat as they did last year. Duties on live lambs have been reduced from $3 per head in the Tariff Act of 1930 to 75 cents per head. My bill provides for a partial restoration of this duty, or an increase to $1.50 per head whenever lamb imports in any 1 year exceed the average annual importations for a 5-year period.

Mr. Speaker, it is evident that my bill is a fair one, not only from the standpoint of our own growers but also as applied to our friends who choose to make use of the American market for disposal of their lamb and mutton. An escape clause action under section 7 of the Trade Agreements Act would permit maximum duties considerably higher than those set forth in this bill.

Ever-increasing importations of lamb and mutton furnishes a good example of how an American industry can be seriously adversely affected as a result of our foreign trade policies of the past 25 years. We must encourage foreign trade, but in the administration of our trade policies let us not lose sight of the well-being of our own people. Other countries do not hesitate to protect their own people against the adverse effect of excessive imports. Why should we not do as much for our citizens?

I know a great number of my colleagues share my concern over domestic industry and job losses occasioned by the flood of imports. It is my hope that prompt and favorable consideration can be given this bill by the Ways and Means Committee.

The Sergeant Alvin C. York Committee

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. EVINS. Mr. Speaker, the need of a great American hero, Sgt. Alvin C. York, now disabled and bedfast, has come to the attention of the patriotic citizens of this Nation as Speaker SAM RAYBURN last week accepted the chairmanship of the Help Sergeant York Committee and donated his personal check for $1,000 to begin the campaign to raise funds to pay off Sergeant York's income tax indebtedness to the Government. Other members of this committee are Hon. Robert F. Kennedy, the Attorney General, Hon. Silliman Evans, publisher of the Nashville Tennessean, Actor Gary Cooper, who played the part

of Sergeant York in the film of his deeds of heroism, and the Representative of the Fourth District of Tennessee, Sergeant York's Congressman, who is serving as treasurer of the committee.

The press, radio, and TV of the Nation has rallied to the cause and has helped focus attention on Sergeant York's difficulties. Among the newspapers which have given the York matter excellent coverage are the Nashville Tennessean, the New York Journal American, the Baltimore Sun and the National Tribune-the Stars and Stripes. Both Ed Sullivan and Dave Garroway of TV fame have contributed much to the fundraising campaign. We have passed the halfway mark as contributions of generous Americans continue to be received at our office for this purpose.

Mr. Speaker, under unanimous consent, I include a representative sampling of these articles from the press across the country on the Sergeant York campaign in the CONGRESSIONAL RECORD.

The articles follows:

IRS TO SETTLE YORK'S TAX DEBT FOR $25,000—SPEAKER SAM RAYBURN KICKS OFF CAMPAIGN TO GET NEEDED FUNDS

(By Lois Laycook)

WASHINGTON.—The Internal Revenue Service agreed yesterday to settle Sgt. Alvin C. York's tax debt for $25,000 and House Speaker SAM RAYBURN immediately kicked off a national drive to raise the money.

The speaker announced the formation of a "Help Sergeant York Committee" to conduct the fund-raising campaign.

Appointed to the committee to serve with Rayburn as chairman were Attorney General Robert F. Kennedy, Representative Joe L. Evins, Democrat of Tennessee, Silliman Evans, Jr., publisher of the Nashville Tennessean, and Gary Cooper, Hollywood film star.

RAYBURN called a rare Saturday afternoon press conference to announce the action.

He told reporters that the Government had agreed to lop off almost $150,000 of its claim against Sergeant York which it said the World War I hero owed in taxes, penalties and interest on royalties from a book and the 1941 film version of his life, "Sergeant York," starring Cooper.

In New York, Cooper said:

"I worked with Sergeant York when we filmed the movie and he is a great patriotic American. I am delighted and pleased to take part in a drive to raise money to pay off Sergeant York's tax debt."

IRS contended York owed $172,000, a figure which the Tennessee Medal of Honor winner vigorously disputed. In announcing the settlement and plans to conduct a campaign in York's behalf, RAYBURN said:

"This is a matter that appeals very much to my heart. Alvin York was the greatest hero of World War I. He's had a great deal of financial trouble in recent years. He's very ill now and will not be a well man during the rest of his life. He has had two severe strokes.

"I am interested for another reason. I was born about 50 miles from where Sergeant York lives."

RAYBURN was born in Roane County, Tenn.

In Nashville, Tennessean Publisher Evans said after RAYBURN'S announcement:

"I feel very honored to be associated with this project to ease the financial burdens of Sergeant York, one of the greatest heroes of the Volunteer State, home of so many illustrious warriors."

To start the fundraising drive, RAYBURN presented Representative EVINS with a personal check for $1,000. EVINS, who represents York's district in Congress, will serve as secretary-treasurer of the campaign.

"I hope this check made out to the Alvin C. York Fund will challenge others to give at least $24,000 more so we can take this debt off the mind of this great hero," RAYBURN declared. "In fact I hope the campaign will raise more than $25,000. Sergeant York has only a small pension and a little social security. That makes it pretty thin as far as making a living is concerned."

York received the Congressional Medal of Honor for killing 25 Germans and capturing 132 singlehandedly October 8, 1918, during World War I. He is still Tennessee's most famous war hero.

RAYBURN told newsmen EVINS first approached him several weeks ago after talking with the Attorney General and officials of the Internal Revenue Service on the possibility of settling York's tax troubles.

"We decided on a course if we could get a reasonable compromise," the Speaker said, "We now have a letter from Internal Revenue stating that the Government will compromise for $25,000."

EVINS had previously introduced a bill to wipe out the tax debt. However, RAYBURN said the Congressman later agreed that settling income tax difficulties was "not a proper subject for legislation."

In announcing Evans' appointment to the committee, RAYBURN said the Nashville publisher "has been interested in this matter and he has wanted to find some way to get this man out of debt."

The Speaker expressed the hope the campaign will receive wide publicity.

He said checks should be made to the Alvin C. York Fund and mailed to Representative JOE L. EVINS, House Office Building, Washington, D.C.

Representative EVINS said the checks will be deposited with the House Sergeant of Arms office in the Capitol.

He praised RAYBURN for his most generous gesture in presenting a $1,000 check to the fund.

He said various American Legion posts in Tennessee have previously raised approximately $2,000 to help pay off the debt "so we are starting off with $3,000."

York received $150,287.76 in 1942 and 1943 for the book and movie rights to his life story. The Internal Revenue Service held this income to be taxable as ordinary income rather than as capital gains.

York disagreed with this ruling and petitioned the U.S. Tax Court for a redetermination of his liability as capital gains. Complicating the case was York's earlier action in giving almost all the money he had received from the royalties to York Institute and other schools. IRS held he could not deduct these gifts as charity.

The case, although set for trial several years ago, has been continued from time to time because of York's long illness. Meanwhile, IRS estimated interest and penalties ran the tax debt up to $172,000.

York has a monthly income of $135.45 as a veteran's pension, $32 monthly from social security, and $10 monthly from the Government paid to all Congressional Medal of Honor winners.

J.F.K. JOINS DRIVE TO HELP SERGEANT YORK

(By Marianne Means)

WASHINGTON, March 22.—President Kennedy, a war hero with a deep sense of history and an admiration for courage in battle, is taking a personal interest in the troubles of a man whose name has become part of America's heroic tradition.

The President learned of the plight of Sgt. Alvin C. York, the greatest hero of World War I, through the Attorney General, Robert Kennedy.

Robert was told last week by Internal Revenue Commissioner Mortimer Caplin that Sergeant York, who wiped out 25 Germans by himself and captured 132 in one battle in 1918, was in deep income tax trouble. The IRS claims that Sergeant York owes $172,000 in unpaid back taxes.

Mr. York, now an invalid of 73, ekes out a bare existence in a rugged mountain farm in Tennessee, and simply doesn't have the money.

The near-illiterate soldier never did have any money, really. The funds from his book and movie in 1941 which the Government wants to tax all went to build a small Bible school and high school.

Robert Kennedy remembered Sergeant York's heroism, and recalled he had hoped to stop to see Mr. York while campaigning in Tennessee this fall, although he had not had time. He asked Mr. Caplin: "What can we legally do?"

Robert Kennedy told his big brother J.F.K. about Sergeant York's problem, and the President too was sympathetic. The Attorney General's legal department ruled, however, that an Executive order from the President relieving Sergeant York of his tax liabilities would be illegal.

So the President instructed the executive departments, specifically the Treasury which harbors IRS, to do whatever possible to assist Sergeant York. Representative EVINS, Democrat, of Tennessee, Mr. York's Congressman, had tried repeatedly to get tax relief through congressional action, but with no success.

REDUCE DEBT

The Attorney General, Mr. Caplin, and Mr. EVINS huddled in three long meetings. Finally it was Speaker RAYBURN, who was born less than 50 miles from Sergeant York's home in Tennessee, who suggested the solution.

He proposed a fundraising drive, and promised to donate the first $1,000. Robert Kennedy went along with the idea, and promised another $1,000. The Internal Revenue Service compromised and reduced Sergeant York's indebtedness to $25,000, the amount the fund drive set as its goal.

Robert Kennedy told the President about the way out for Mr. York which had been found. The President said he was pleased something could be done.

Speaker RAYBURN, as chairman of the Help Sergeant York Committee, launched the fund drive.

Another besides Messrs. Rayburn, Kennedy, and Evins serving on the fund drive committee is Actor Gary Cooper. Mr. Cooper played the role of Sergeant York in the movie based on his life.

The fund drive, although only 4 days old, has already pulled in $5,000, Representative EVINS, who is acting as treasurer, reports.

RAYBURN OPENS DRIVE TO AID SERGEANT YORK—GIVES $1,000 TOWARD $25,000 SETTLEMENT OF WORLD WAR I HERO'S TAX DEBT

WASHINGTON, March 18.—Speaker RAYBURN, Democrat, of Texas, personally launched a nationwide subscription campaign today to raise $25,000 to pay off the tax debt of Sgt. Alvin C. York, of Tennessee, the World War I hero.

The 73-year-old soldier is now ill and bedridden in his hillside home, probably never to be active again. For many years he had owed the Government a debt of $172,000 that had its origin in a gesture of generosity by York and a misunderstanding of the Federal tax system.

The Government, after years of discussion, will compromise with York, the holder of the Nation's most coveted medal—the Congressional Medal of Honor. It has agreed to accept $25,000 in full settlement of the claim.

YORK MIGHTY GRATEFUL

In Tennessee, York said he was "mighty grateful." The big mountaineer added:

"Those tax folks have been a-houndin' me so long and I been a-fightin' them so long I just thought it'd never end."

He chuckled over the reduction of the debt. "Seems funny," he said, "talking about reducin' something I don't owe."

RAYBURN DONATES FIRST

Speaker RAYBURN made the first donation to the fund—a check for $1,000—and as he handed it to the secretary-treasurer of the fund, Representative EVINS, Democrat, of Tennessee, York's Congressman, the Speaker said:

"I hope this initial gift will move other like-minded citizens to come forward and donate the other $24,000 so that we may ease the last days of one of the Nation's greatest war heroes."

"This is a matter very close to my heart," RAYBURN said at a special news conference today.

He said that he had accepted the chairmanship of the Sgt. Alvin C. York Fund and that other members of the committee will be the Attorney General, Robert F. Kennedy, the publisher of the Nashville Tennessean, Silliman Evans, Jr., and the actor who played the role of Sergeant York in the film about the war hero, Gary Cooper.

1918 ACT OF HEROISM

It was on a dull, chilly October day of 1918 that Sergeant York came upon a German machinegun nest deep in the Argone Forest and performed the act of heroism that won him world acclaim.

After York had killed 25 of the German machinegunners, he captured the remaining 132 men—4 officers and 128 enlisted men—and marched them back to American field headquarters.

For this exploit he was awarded the Congressional Medal of Honor, and heaped with other honors when he returned to the United States.

Cordell Hull, a fellow Tennessean, and RAYBURN, who was born in Tennessee only 50 miles from York's home—both then Members of Congress—greeted the hero when he came home from the war and took him to the Halls of Congress, where he received great welcome.

MOVIE RIGHTS SOLD

Later York wrote a book, which he sold, along with the movie rights for $150,287 in 1942 and 1943.

But, believing he would have only a modest, if any, amount of taxes to pay on the proceeds, York donated the entire sum to establish a Bible school and York Institute in Tennessee.

York regarded the contribution as a charity but the then Internal Revenue Bureau ruled it was not a tax-free gift. The Bureau ruled that his tax liability was $85,442.03.

York disputed this, and appealed to the Tax Court in the 1940's. The case has never come to trial and meantime, RAYBURN said, York has had many financial troubles.

FARMING PROHIBITED

Once a powerful, 6-foot-2-inch mountaineer, York lived on a 395-acre farm in Fentress County near Pall Mall, Tenn. But now he can no longer farm, as a result of a cerebral hemorrhage 7 years ago. He is partially paralyzed and bedridden.

He has also had lobar pneumonia, heart trouble, high blood pressure, and a hemorrhage of his right eye.

RAYBURN noted that York is not able personally to pay off his obligation to the Government and that this inability "weighs heavily on his mind as he does not want to be in debt to his Government."

The old veteran has an income of $177.45 a month—$135.45 as a veteran's pension, $32 from social security and $10 as a Medal of Honor winner.

INTEREST MOUNTS

The Internal Revenue Service stated that with accumulated interest amounting to about 102 percent York's total debt on the basis of the original claim would now amount to $172,000.

But a letter was forwarded to RAYBURN today saying that the debt would be settled on payment of $25,000.

"I hope enough people of the country will remember this great soldier and relieve him of the worry that he owes his country something," the Speaker said.

RAYBURN said that Representative EVINS will serve as secretary-treasurer and that checks should be made payable to the "Sgt. Alvin C. York Fund and sent to EVINS at the Capitol.

PRECEDENT FEARED

RAYBURN pointed out that a number of bills have been introduced in Congress to relieve York but said, "I do not think this is a proper matter for legislation." It might set a bad precedent, he said.

EVINS disclosed that the American Legion of Tennessee had raised $2,000 toward relief for York.

RAYBURN said as he handed EVINS his $1,000 check, "I hope this challenges 24 other people to give $1,000."

He recalled that York once could have cashed in his experiences for a vast fortune but rejected offers aggregating more than $1 million with the simple statement "This uniform is not for sale."

FORM COMMITTEE TO AID SERGEANT YORK—RAYBURN HEADS GROUP TO ASSIST AILING HERO; VETERANS OF WORLD WAR I PRESENT CHECK FOR $500

On Saturday, House Speaker SAM RAYBURN called for public subscription to help Sgt. Alvin C. York, of Pall Mall, Tenn., with his tax indebtness. York was the outstanding hero of World War I and won the Congressional Medal of Honor together with dozens of other military decorations from a number of allied governments.

Serving with Rayburn, who wrote a personal check for $1,000 to inaugurate the drive, were Attorney General Robert F. Kennedy, Congressman Joe L. Evins, who represents York's home district in Tennessee, Silliman Evans, Jr., publisher of the Nashville Tennesseean and Movie Actor Gary Cooper, who played the part of York in the story of York's life.

CALLS FOR CONTRIBUTIONS

RAYBURN has called upon patriotic and generous Americans throughout the country to come to the assistance of the ailing hero of World War I. York, who suffered a cerebral hemorrhage 7 years ago, is paralyzed from his waist down and confined to his mountain home at Pall Mall. In addition to this, he is under constant harassment from the Internal Revenue Service, who have charged him with owing some $172,000 in taxes upon his movie and his book depicting the story of his life.

York insists that the Revenue Service is in error in its claims for tax payment. He declared that virtually all of the proceeds from the movie went for the establishment of two schools in his Tennessee mountains. Government tax officials admit that the legal question is a most complex and involved one.

Representative EVINS has introduced legislation to alleviate York of this tax burden but his efforts have met with no success. After a conference with Speaker RAYBURN and the Commissioner of Internal Revenue the Government offered to compromise the claim if a payment of $25,000 was made. Accordingly, RAYBURN and EVINS formed the Help Sergeant York Committee and are appealing to all patriotic Americans for voluntary subscriptions.

The once powerful York, who killed 25 Germans and captured 132 more, an act which won for him the Nation's highest military award, the Congressional Medal of Honor, is now bedridden and has no assets. He relies for his existence on a non-service-connected World War I pension of $135.45 per month plus $32 monthly social security benefits and he is also awarded $10 monthly as a Congressional Medal of Honor winner. This adds up to $177.45, much too little to care for the ailing World War I hero in his present physical condition.

SERVED WITH YORK

National Commander John E. Erickson, of the Veterans of World War I, who served in the same company with York and witnessed his parade of German prisoners in 1918, visited the Tennessee mountain man in November of last year. He found York cheerful in spite of his physical disabilities but worried considerably over the tax burden which hung over him. One of the major legislative objectives of the Veterans of World War I was to sponsor legislation which would provide relief for York from his tax liabilities.

On Tuesday of this week, National Senior Vice Commander John Bashara of the Veterans of World War I, on behalf of the VWWI, presented a check to House Speaker SAM RAYBURN in the amount of $500 for the Help Sergeant York Fund. This action was taken after every member of the national board of administration had been polled over the telephone as to his position on the award to the committee. Every board of administration member voted for the donation.

It is understood that other veterans organizations have promised substantial amounts to the committee and Congressman EVINS reports that on Tuesday morning some 200 letters had been received by the committee. These returns have not as yet been tabulated so that there is no account of the moneys that have been received. EVINS said scores of small contributions had poured into his congressional office on Monday.

President Kennedy has been personally interested in seeing that York is alleviated of his tax indebtedness and is being advised on the progress of the matter through the Attorney General. The President has instructed the executive departments, specifically the Treasury, to do all that is legally possible and appropriate to assist Sergeant York in his difficulties. Contributions for York are being received at the following address: Help Sergeant York Committee, Washington, D.C.

HELP SERGEANT YORK COMMITTEE

The organization of the Help Sergeant York Committe by House Speaker SAM RAYBURN, of Texas, and Congressman JOE L. EVINS, from Sergeant York's congressional district in Tennessee, should meet with the hearty approval of every patriotic American. The Tennessee mountaineer who had to struggle with his conscience to enter military service in World War I, has suffered cruel vicissitudes in recent years.

York received approximately $150,000 in 1942 and 1943 for book and movie rights to his life story. The Internal Revenue Service held this income to be taxable as ordinary income and the approximate tax amounted to about $85,000. York questioned the Internal Revenue statistics and asked the Tax Court for a redetermination of his liability on the basis that this income was taxable at capital gains rates. York gave almost all of the receipts from the movie to establish a Bible school and the York Institute in his beloved Tennessee mountains.

Some 7 or 8 years ago Sergeant York suffered a disabling stroke and has been an invalid since that date. His only income is a

non-service-connected pension for service in World War I of $135.45, $32 monthly from social security and $10 monthly as a Congressional Medal of Honor winner, a total of $177.45 monthly. This is a meager sum to sustain York in his present physical condition and his aged wife. Added to his straightened circumstances was the harassment of a threat of a suit by the Internal Revenue Service to collect the sum allegedly due the Government.

Representative EVINS had introduced legislation asking forgiveness of the Government debt and he had been promised the support of the major veterans organizations in seeking this remedial legislation. EVINS found that there were a number of obstacles in the path of securing favorable action upon his legislative proposal so he met with House Speaker RAYBURN and together they formulated the idea of setting up a committee to raise the necessary funds to pay off York's tax debt. The Internal Revenue Bureau had indicated that it would accept a compromise offer of $25,000 to settle the indebtedness.

On last Saturday, Speaker RAYBURN announced the formation of the Help Sergeant York Committee and at the same time wrote his personal check to the committee in the amount of $1,000. Serving with the House Speaker and Congressman Evins on the committee are Attorney General Robert Kennedy, Silliman Evans, Jr., publisher of the Nashville Tennessean, and Gary Cooper, who played the part of York in the movie. Representative EVINS is serving as treasurer of the committee.

York, who is now 73 years old, lives on his mountain farm near Pall Mall, Tenn. He was once a powerful 6-foot-2, 210-pound mountain strong man. He is now partially paralyzed and bedridden as a result of the cerebral hemorrhage which struck him down 7 years ago. Since 1942 he has suffered lobar pneumonia, heart trouble, high blood pressure, a hemorrhage in his right eye, and the cerebral hemorrhage.

Upon his return to the United States at the close of World War I, York was besieged with flattering contracts and offers which would have made him a rich man. He was offered a million dollars by various promoters but he told them, "This uniform is not for sale."

York was one of the founders of the American Legion and represented the 82d Division at the organizational meeting in Paris before he returned home.

The National Tribune-The Stars and Stripes deems this effort a most commendable one and we hope that not only veterans and veterans' organizations will respond to this appeal, but every patriotic American should feel it his duty to help alleviate the distressful condition in which this ailing World War I hero now finds himself.

CAPITOL COMMENTS

(By Hon. JOE L. EVINS, Member of Congress, Fourth District of Tennessee)

SGT. ALVIN C. YORK

On January 3, 1961—the opening day of the 87th Congress—your Representative introduced a bill for the relief of Sgt. Alvin C. York of Fentress County—to relieve Tennessee's distinguished World War I hero of his tax indebtedness to the Government.

This effort has resulted in the formation of a committee to raise funds to pay off Sergeant York's tax indebtedness. Both the bill and the fundraising campaign has had the same end in mind—tax relief and peace of mind for the greatest hero of World War I, who is now disabled and bedfast.

The change from one course to the other came after many conferences and attempts to work out the most satisfactory method of relieving Sergeant York of additional tax claims arising from the filming of his life story and heroic deeds.

In an effort to get a favorable report on our bill—H.R. 1305—your Representative conferred with the new Commissioner of Internal Revenue and later with the Attorney General of the United States, Robert F. Kennedy. Both the Commissioner and the Attorney General were very sympathetic with the purpose of this bill and expressed a desire to be of assistance, but indicated that by providing a favorable report a precedent would be established for other veterans with tax cases. They indicated also that they were precluded from participating in the case as the matter is now pending in the U.S. Tax Court.

The Attorney General in one conference expressed the belief that his brother, President Kennedy, would favorably receive the idea of an Executive order to relieve Sergeant York of his tax indebtedness if this were found to be a proper course of action. However, the top legal minds of the Treasury Department, the Justice Department and Legislative Counsel of the House of Representatives expressed opposition to this course of action—no matter how bad the need.

Following the end of World War I, Congressman SAM RAYBURN and Cordell Hull were among those meeting and greeting Sergeant York on his return from Europe.

Speaker RAYBURN listened sympathetically to your Representative as he requested his assistance in securing passage of our bill. However, the Speaker proposed the forming of a special committee to raise funds to settle the tax case and agreed to serve as chairman of the committee with your Representative as treasurer. Others serving on the committee include Attorney General Robert F. Kennedy, Mr. Silliman Evans, Jr., publisher of the Nashville Tennessean, and Gary Cooper, who played the role of Sergeant York in the movie.

The response from all sections of the country has been generous and most encouraging. At this writing the campaign has reached a total of $13,700—slightly more than half the goal set to settle the long-pending case. Generous Americans all across the Nation have been sending some large and many small contributions as an expression of appreciation of the heroic service of Sergeant York in helping to preserve freedom for our Nation.

The Textile Industry and National Economic Growth

EXTENSION OF REMARKS
OF
HON. B. EVERETT JORDAN
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. JORDAN. Mr. President, on Friday, March 24, the Secretary of Commerce, the Honorable Luther H. Hodges, delivered a very fine address at the annual meeting of the American Cotton Manufacturers Institute, at Miami Beach, Fla. I had the pleasure of introducing Secretary Hodges to that fine group.

I ask unanimous consent that his complete address be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TEXTILE INDUSTRY AND NATIONAL ECONOMIC GROWTH

(Address by Secretary of Commerce Luther H. Hodges at the annual meeting of the American Cotton Manufacturers Institute, March 24, 1961, Miami Beach, Fla.)

It is a particular pleasure for me to be here this morning. I have been away from the textile business for more than 10 years now, but I have kept up with your program and your problems. It is good to be with you and share your warmth again.

And I might add, to share the warmth of this lovely Florida sunshine, which the Commerce Department's Weather Bureau so thoughtfully arranged.

I suppose my main distinction in this new, young Kennedy administration is that I happen to be the oldest member of the Cabinet and its only tie with the 19th century. Well, I concede my age and I confess I am not quite the downfield man in touch football that some of my colleagues may be. Nevertheless, as I remarked the other day to a reporter who seemed transfixed by my antiquity at age 63, "I do drive a Thunderbird." And for your own private information, I am seriously considering installing a supercharger on it.

This administration, pledged to a new vigor in American affairs, has now had 64 working days, including Saturdays and Sundays, in which to set about the critical task of getting this economy moving forward again. Much has been accomplished in the brief time, but much remains to be done.

Many people seem to expect of us in 8 weeks what was done in the previous 8 years.

I have said on several public occasions recently that President Kennedy's legislative program, generally supported by the public, is helpful in showing to our people that their Government is trying to assist in areas where they cannot help themselves. The effect is to build a national spirit of confidence and cooperation which is essential if we are to move forward soundly toward a stronger economy and a stronger Nation.

This is not necessarily in conflict with President Kennedy's ringing declaration in his great inaugural address, "Ask not what your country can do for you—ask what you can do for your country."

I realize, and have said so publicly, that many of us are not doing our part. We are not really trying, not really selling. Many of us are asking the country to take care of us before we have done all we can.

These situations may represent a minority, but they are still serious. May I just say to you and to others, we must all do our part if we are to turn things around for your industry and for the whole economy.

The turning of the business tide—getting people back to work and reviving lagging purchasing power and markets—has been, and is, the essential first step for recovery. But full economic recovery in 1961 involves far more than the spin of the business cycle.

Confronting us, over and above the present recession, is a problem of chronic slack in the economy, a growing gap between what we can produce and what we do produce. This problem, evidenced by our disturbingly slow rate of growth in recent years as compared with other industrialized nations, is in need of urgent solution if America is to meet the demands of national well-being and security and the obligations of world leadership.

Because the problem affects your industry directly, I should like to emphasize it in some detail today.

First, let me say that while this administration is not a businessman's government, neither is it an antibusiness government. In attitude and action, it is committed to the support of the private enterprise system and a sound currency and to a relationship with business marked not by antagonism and suspicion, but by respect, understanding, and fruitful collaboration.

"We know," the President said recently to the National Industrial Conference Board, "that your success and ours are intertwined and that all elements in national economic growth are interdependent."

For its part, this Government intends to take every possible action, consistent with the public interest, which will promote the growth and prosperity of business and enable it to attain its full economic potential.

In return, we expect business to meet its obligations: to help itself and to exert to the fullest measure its powers of innovation, initiative, and hard work.

In short, we seek a true alliance with business—one in which both the public and private sectors of the country will, by fulfilling individual obligations, move forward together toward our goals of economic growth, plant modernization, and price stability.

We in the Department of Commerce bear a very special responsibility to such an alliance. Commerce is the Government's primary business development agency. Under this administration, the Department's total resources are firmly committed to the goal of strengthening the economy and allowing business to prosper. These resources are both vast and fundamental.

Within the walls of the Department is the Bureau of Foreign Commerce, which, at the direction of President Kennedy, is today mustering a vigorous campaign to expand the export side of our Nation's business.

Commerce is also the home of the Bureau of the Census, perhaps the most important of our vital information services; the Office of Business Economics, which keeps the national economic accounts that measure current activity in terms of gross national product, national and personal nicome, the balance of international payments, and the rest; the Business and Defense Services Administration, a source of invaluable information on specific industries and a main point of contact for business in its dealings with the Government; the Weather Bureau; the Coast and Geodetic Survey; the Patent Office; and the Office of Technical Services, which is charged with collecting and disseminating the flood of American and translated foreign scientific and technical articles so essential to the scientific and business community.

The Bureau of Public Roads is part of the Department of Commerce, and so is the Maritime Administration. The area redevelopment program has been centered in Commerce for many years. In addition, the Department has important national security responsibilities, particularly the planning for economic mobilization in a national emergency.

All these vital functions are today being massed and strengthened in a comprehensive effort to stimulate the American economy to realize its fullest potential. It is in the spirit of such an effort that this administration has approached the problems of the textile industry.

As you probably know, the President last month appointed an interagency committee of Cabinet rank members under my chairmanship, to examine the current economic plight of textiles and to recommend to him ways in which the Government and industry acting together might better conditions. This Committee, which includes Secretary of the Treasury Dillon, Secretary of Agriculture Freeman, Secretary of Labor Goldberg, and Under Secretary of State Ball, has now received an extensive report from an examining subcommittee, and it expects to send forward recommendations to the President in the next few weeks.

Naturally, you would like to know what the subcommittee reported and what our Cabinet Committee may recommend to the President.

As regards the subcommittee (or study committee) report, let me say that under the chairmanship of Mr. Hickman Price, Assistant Secretary of Commerce for Domestic Affairs, it did an outstanding job. I believe that Mac Cheatham, Bob Jackson and others will agree with this. They held many sessions at which representatives of industry, labor and others "spoke their piece" and made suggestions.

There was already available to the Committee a wealth of statistical data, but your association and others clarified and elaborated on this data.

The subcommittee was asked to make no specific recommendations but to specify various possible solutions.

Let me quote here our press release following the Cabinet rank meeting of last Thursday, March 16, which just that morning had received the subcommittee report.

"Secretary of Commerce Luther H. Hodges issued the following statement today after a meeting of the Interdepartmental Textile Committee:

" 'The subcommittee of the Interdepartmental Textile Committee filed its report this morning, and we have not yet had an opportunity to fully consider it.

" 'However, the report consists largely of a synopsis of the testimony received and a statement of many possible courses of action—ranging from no action at all to the imposition of quotas.

" 'I would prefer not to comment upon their report until the full Committee has had an opportunity to give it the serious and thorough consideration the gravity of the problem merits.

" 'The subcommittee did not make any recommendation, but listed possible courses of action for the Cabinet members' consideration.' "

Now as to the Cabinet group—it met for about 2 hours to review in a preliminary way the summary report of its subcommittee and agreed to meet again the first part of April. I can assure you that your problem has already had more top executive attention than it previously received.

But the solution, or the easing, of the problem is not simple, is not easy, and it presents many collateral problems as you can well imagine. Justice Holmes used to say that "the important thing is not where we are, but where we are going."

Thus I shall not burden you with a lengthy recapitulation of your problems, which you probably know better than I, anyway. It is enough to note, I think, that because of lagging growth, total textile mill production last year was only 21 percent above the average for 1947–49, compared with 64 percent for all manufacturing production. In cotton broad woven goods, output, measured in yardage, has been below the level of 1947 for the past 4 years.

Total textile-mill employment has been trending downward since 1955, industry profits have been running well below the average for all manufacturing and overcapacity has been an increasing reality. From 1947 through 1960, a total of 838 mills, which formerly employed more than 249,000 workers, were liquidated.

This deterioration has been brought on by a number of elements. First, increased competition from paper and plastics has reduced the size of several textile markets. In automobiles, for example, where interiors used to be finished with textile products, it is now customary for seat covers, headlining, side panels, and floor coverings to be made from nontextiles.

A shift in consumer expenditure patterns, resulting in a dropoff in clothing's share of the consumer dollar, has also been a factor. In addition, there have been strains and dislocations caused by the introduction of newer fibers and, more important, by the industry's intense internal competition, and its continuing difficulty in gearing its output to what the market can absorb at a profitable price.

This particular affliction has produced a long-term series of 2-year ups and downs, quite apart from the course of the general business cycle.

Finally, and of greater consequence, there has been a sharp rise in imports of textile products.

In 1960 imports of cotton cloth, which were 122 million yards 4 years ago, rose to 455 million yards, and for the first time since 1875, total cotton cloth imports exceeded exports. The inflow, mainly from Japan and Hong Kong, but also from other areas, amounted to 6 percent of the total domestic consumption of raw cotton.

In certain product lines, however, the ratio of imports to production was most substantial.

Gingham imports were more than 22 percent of domestic output, and the inflow was also high in velveteens, coarse sheetings, and in some types of apparel. Imports of blouses, for instance, amounted to more than one-third of U.S. production.

This sharp reversal of the Nation's role as textile exporter, has, understandably, caused great concern. It has alarmed both labor and management of this industry, and it has been the subject of lengthy study by the Congress under the energetic leadership of Senator PASTORE's committee.

Since January 20, it has also been one of the major preoccupations of the present national administration: first, in terms of our obligations to the domestic economy; second, in light of our commitments to the free world and to the cause of increased international trade through the reciprocal removal of unnecessary trade barriers.

Because of its adverse balance of payments, the United States today needs most urgently to maintain and improve its present favorable balance of trade. To do this, though, we must raise our exports, not our tariff and quota walls.

As the President said in his balance-of-payments message to the Congress: "A return to protectionism is not a solution. Such a course would provoke retaliation; and the balance of trade, which is now substantially in our favor, could be turned against us with disastrous effects to the dollar."

There are other effects to consider.

In the cause of freedom, human dignity, and our own national security, we stand committed to assist the developing countries of the world in their drive for a higher standard of living. These countries need to earn abroad so that they can spend and improve within. Should we turn from them and close our markets to their goods, they will turn from us and look elsewhere for allies—and I am afraid in only one direction.

As Secretary of Commerce, the agency charged by statute with fostering, promoting and developing foreign as well as domestic commerce, I have a continuing, advisory role to play in the setting of U.S. tariffs and quotas. Although the basic power to fix tariffs belongs to the Congress, the President, under the Trade Agreements Act of 1934, has certain authority to enter into agreements with foreign nations to effect

changes in tariffs which are mutually beneficial to both parties.

We at Commerce participate, along with other Federal agencies, in the negotiation of tariff changes through GATT, the General Agreement on Tariffs and Trade. But the direct responsibility for recommending tariff changes under the escape clause, which provides aid to industries in distress, lies squarely with the Tariff Commission. The Commerce Department can only suggest to the President that he accept or reject their recommendations.

There are one or more avenues which can be taken which will help you and at the same time preserve our international position but they need careful consideration. I have been particularly impressed with the workings of the voluntary quota agreement which we concluded with Japan in 1957. Under this agreement, you may recall, the Japanese voluntarily agreed to limit and diversify their cotton textile shipments to the United States for a 5-year period.

The original agreement provided for an annual overall ceiling of 235 million square yards equivalent—approximately the rate of 1955—although this was later raised to 247 million yards. Five major subgroups with separate ceilings were established: cloth; made-up goods; woven apparel; knit goods; and miscellaneous. Within these groups, specific ceilings were set for 14 sensitive items.

While there was some flexibility provided for movement from one quota group to another, quotas for items specifically enumerated could not be increased. Although this arrangement has had the defects of its virtues—that is, it has covered only one source of imports—I believe it has been most effective from our standpoint.

I think, too, that through international machinery, voluntary agreements might well be concluded on a much broader base. Expanded to cover all important sources of imports through multilateral concurrence, voluntary quotas could go far toward safeguarding the domestic industry without jeopardizing our interest in trade. The voluntary quota situation is, however, complicated today by the emergence of several nations and areas as important textile exporters.

Taking the largest new shippers, these are Hong Kong, India, Egypt, and Spain. Since 1958, U.S. imports of cotton manufactures from Hong Kong have climbed from an equivalent of 60 million square yards to 271 million yards, a gain of 352 percent. Imports from Spain, Egypt, France, and Portugal have risen from an equivalent of 5 million yards to 230 million yards, a staggering 4,500 percent, and those from Formosa, Korea, Pakistan, and India have shot up from 8 million yards to 112 million a jump of 1,300 percent.

A national administration cannot settle the textile problem in a vacuum or without regard to other matters. But I think I can promise that you will get a decision, you will get action.

That's the way President Kennedy operates, and I believe in the same thing.

Whatever action the President finally takes on imports, you, the leaders of this industry, will still have much to do. Only by your determined efforts to raise productivity, modernize equipment, improve merchandising and selling methods, and pursue research to a far greater extent can textiles achieve their full potential and escape from the slough of lagging growth.

Productivity in textiles has risen impressively in recent years and you are to be commended for what you have done. It must continue to rise, if you are to lower your prices and enlarge your markets. Capital spending for new plant and equipment, which has bumped up and down with the industry's cycles, needs consistent expansion.

Roughly one-fourth of all the textile machines now in place were installed at least 20 years ago and your competition abroad is generally in better shape. In research and development, spending has increased markedly in the last decade, but it still lags, as a percentage of profit, far behind the outlays of all manufacturing. Between 1953 and 1959, research and development expenditures by textile companies increased from $26 million to $35 million a year, a gain of about 35 percent.

However, in the same period the research and development expenditures of all manufacturing companies more than doubled from $3.3 billion to $8.6 billion. That's a gain of 161 percent. What is more, this investment of $8.6 billion by manufacturing companies equaled 53 percent of their total aftertax profits.

On the other hand the R. & D. expenditures of the textile industry equaled only 8.4 percent of its aftertax profits.

There is need for much more research, backed by the industry itself, and especially in the areas of new end uses which might recapture the industrial market.

Finally, the industry has far to go in improving its marketing techniques and its understanding of market forces if it is to escape its chronic cycle of expansion and contraction.

The ACMI has done much to bring cooperation and realism to the industry, but I need not tell you that until and unless you have more unselfishness and more long-range planning and thinking, nobody can really help you stay in business and make a profit; and this comment has no direct relationships to imports.

Now let me take off my Textile Committee "hat" and put on my Department of Commerce one.

Let me commend to you right here the excellent new economic studies now being developed by the Textiles and Clothing Division of the Department of Commerce. Three studies have already been released and the newest, a report on the role of inventories in the textile cycle, is just out. Others are to follow in a series.

Get them. Read them. They can be most helpful.

In closing let me say that I am confident, more than ever today, that this country and your great textile industry can achieve in the next decade an economic greatness and security of which we can all be deeply proud. If the past is beyond our control, and the present only tentatively within it, the future can be very much within our grasp and can be, to a great extent, what we make it.

This is the challenge and the opportunity which we as allies face. With solemn hope, I trust we shall not be found wanting.

Thank you for inviting me to be with you.

Washington Daily News Publishes Anfuso Article on U.S. Science Academy

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. ANFUSO. Mr. Speaker, today's issue of the Washington Daily News carries a special 24-page section on "Science in the Nation's Capital," containing many interesting articles which show that Washington is rapidly becoming the science city of America.

Among the articles published, is one written by me and entitled "Why Not a U.S. Science Academy Here?" in which I discuss the proposal to establish a Science Academy. As my colleagues well know, I had introduced a bill H.R. 1 on the first day of the present session. It so happens that today and tomorrow the House Science and Astronautics Subcommittee, of which I am the chairman, is holding hearings on this bill. This is, therefore, very timely and for this reason I wish to insert my article into the RECORD:

WHY NOT A U.S. SCIENCE ACADEMY HERE?

(By Representative V. L. ANFUSO)

I have had bills in the previous two Congresses advocating the establishment of a Science Academy along somewhat different lines. The new bill, H.R. 1, has been completely rewritten after consultations with leading scientists, educators, and Government officials, and after hearings held in recent months by a House Science and Astronautics Subcommittee of which I am chairman.

The proposal to establish a National Science Center is intended to meet future national needs for trained manpower and new scientific knowledge, and also to help win the scientific and technical phase of the cold war. As proposed in the bill, the Science Center would be comprised of:

THE BEST

First. An educational institution of the highest caliber to be known as the National Science Academy, intended for both undergraduate and postgraduate studies in science and engineering.

Second. Research institutes in various scientific fields for the promotion of scientific knowledge and research to advance the Nation's economy, health, welfare, and progress.

Third. A scientific career service for obtaining and retaining the personnel necessary to carry out the scientific, technological and research functions of the U.S. Government. Graduates of the Science Academy and other qualified persons able to meet its standards would be eligible for placement in the Scientific Career Service.

COEDUCATIONAL

The educational institution would be open to young men and young women desiring to make a career in science, while the research institutes would invite outstanding scientists to work in their laboratories on scientific, medical, and other projects designed to benefit humanity.

The realization of my proposal would unquestionably have a beneficial impact on scientific progress and education in this country, and it would also go far in building up the image of America as a nation devoted to the utilization of science for the benefit of all mankind and for the attainment of a peaceful world. A science center of this type, dedicated to peaceful purposes, would help raise our prestige in the eyes of all nations to new and greater heights.

GRADUATE WORK

Graduate training will be provided for those who have completed undergraduate studies at accredited schools and possess special qualifications for graduate work in the sciences. A 6-year straight-line program leading to a doctor's degree is authorized for undergraduates. Also authorized are a program of college scholarships in science and engineering at other schools and a program of graduate fellowships both at the re-

search institutes of the Academy and at other colleges and universities.

Research institutes in specialized fields of science are to be established, among them an Institute of Meteorology, an Institute of Oceanography, an Institute of Astronautics, an Institute of Medicine, and others deemed necessary.

A limited number of foreign nationals from friendly countries may be admitted, provided they pass a security check, but their number shall not exceed 10 percent of the total number of science trainees attending the Academy.

The proposed Science Center would be nonmilitary in nature and would emphasize the peaceful pursuits of the United States in the sciences, which can and must be separated from military scientific research. It would compete with the so-called Freedom University in Moscow by inviting foreign students to come to the United States to study and to develop into mature scientists able to help their underdeveloped countries. Here they could pursue their studies and research in freedom, observe our way of life, and become convinced of our peaceful intentions.

"GAP"

The Science Center would fill a gap presently existing in trained scientific personnel by providing education and training for young men and young women who, under present circumstances, could not obtain such an education. Outstanding graduate students and noted scientists from all over the country would be attracted to the Academy and its research institute. Creation of a science career service would elevate the scientist's stature in the public eye as a man interested in the promotion of human welfare and peace. At the same time, the U.S. Government would be guaranteed of a sufficient supply of scientists in this fast-moving era of world competition.

The research institutes, which we would strive to make the largest in the world, would provide the most modern facilities available for research. The best scientific brains from our own country, as well as selected scientists from abroad, would be invited to work there.

There is no need to stress the importance of the basic and engineering sciences in the world today. My bill would go a long way toward meeting our most urgent national problems in science and engineering: The shortages of trained manpower (and womanpower) for private and public employment, of qualified science teachers, and of facilities and funds for scientific research. The bill would also help to overcome our lag compared with the U.S.S.R. in the annual number of graduates both in engineering and in many forms of natural science.

REDS AHEAD

In 1959, for example, the U.S.S.R. produced about three times as many graduate engineers as the United States. The figures given by our National Science Foundation show 38,000 graduating in the United States, compared with 106,000 in the U.S.S.R. More surprising still, the United States is lagging even in the total number of professional engineers: 850,000 compared with the Soviet figure of 894,000. In graduates specializing in purely scientific studies, apart from engineering, the only field in which we lead the U.S.S.R. at the present time is the physical and mathematical sciences.

The Science Academy and its research institutes would serve to stimulate the people of the underdeveloped countries in furthering their economic growth, in improving their national health, in developing their human and material resources, and in attaining a higher standard of living. In this way, we could be instrumental in creating through science a world of abundance where no people need be in want. In the years to come, this important institution would pay for itself in many ways through better education, advanced research, scientific progress, and good will.

SENATE

WEDNESDAY, MARCH 29, 1961

The Senate met at 10 o'clock a.m., and was called to order by STROM THURMOND, a Senator from the State of South Carolina.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

O Thou God of life and light, our glad hearts thrill at the risen glory of the awakening earth robed in the blooming garb of spring.

As common bushes, lately so bare, are now aflame, and the time for the singing of birds has come, may a spiritual springtime make our own hearts even as the garden of the Lord, where barren branches may be clothed with the beauty of holiness, and the flowers of humility and charity lift their fair petals above the fallow ground.

Prepare our hearts for the solemn glory of a malefactor's cross and for the splendor of an empty tomb. By the sign of that cross, on which Thy Son gave His deathless spirit to Thy keeping, strengthen us with might for the good fight we must wage against the gates of hell, knowing that joy is the fruit of sorrow; that strength comes out of weakness, and triumph out of failure; that song comes through sacrifice, gain through loss, and life through death.

In that faith may we fare forth, greeting the unknown with a cheer, sure that the third day cometh.

In His conquering name we pray. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

Mr. THURMOND. The clerk will read a letter from the President pro tempore.

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., March 29, 1961.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. STROM THURMOND, a Senator from the State of South Carolina, to perform the duties of the Chair during my absence.

CARL HAYDEN,
President pro tempore.

Mr. THURMOND thereupon took the chair as Acting President pro tempore.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, March 28, 1961, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

FIFTH SEMIANNUAL REPORT OF SECRETARY OF INTERIOR—MESSAGE FROM THE PRESIDENT

The ACTING PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was referred to the Committee on Interior and Insular Affairs:

To the Congress of the United States:

I transmit herewith the Fifth Semiannual Report of the Secretary of the Interior prescribed by section 5 of the act of August 21, 1958, entitled "To provide a program for the discovery of mineral reserves of the United States, its Territories and possessions by encouraging exploration for minerals, and for other purposes."

JOHN F. KENNEDY.
THE WHITE HOUSE, *March 29, 1961.*

EXECUTIVE MESSAGES REFERRED

As in executive session,

The ACTING PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed the following bill and joint resolution, in which it requested the concurrence of the Senate:

H.R. 5954. An act making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1962, and for other purposes; and

H.J. Res. 32. Joint resolution to designate the first day of May of each year as Law Day, U.S.A.

HOUSE BILL REFERRED

The bill (H.R. 5954) making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1962, and for other purposes, was read twice by its title, and referred to the Committee on Appropriations.

LIMITATION OF DEBATE DURING THE MORNING HOUR

Mr. MANSFIELD. Mr. President, under the rule, there will be the usual

morning hour for the transaction of routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. MANSFIELD, and by unanimous consent, the following subcommittees or committees were authorized to meet during the session of the Senate today:

The Freedom of Communications Subcommittee of the Committee on Interstate and Foreign Commerce;

The Internal Security Subcommittee of the Committee on the Judiciary;

The Foreign Relations Committee;

The Constitutional Rights Subcommittee of the Committee on the Judiciary.

EXECUTIVE COMMUNICATIONS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following communications and letters, which were referred as indicated:

HOUSING AND URBAN IMPROVEMENT

A communication from the President of the United States, transmitting a draft of proposed legislation to assist in the provision of housing for moderate and low income families, to promote orderly urban development, to extend and amend laws relating to housing, urban renewal, and community facilities, and for other purposes (with accompanying papers); to the Committee on Banking and Currency.

NATIONAL OCEANOGRAPHIC PROGRAM

A communication from the President of the United States, relating to a proposed national oceanographic program (with accompanying papers); to the Committee on Interstate and Foreign Commerce.

APPROPRIATIONS TO NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

A letter from the Administrator, National Aeronautics and Space Administration, Washington, D.C., transmitting a draft of proposed legislation to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction of facilities, and for other purposes (with an accompanying paper); to the Committee on Aeronautical and Space Sciences.

AUTHORIZATION FOR SECRETARY OF A MILITARY DEPARTMENT TO SELL CERTAIN GOODS AND SERVICES

A letter from the Secretary of the Air Force, transmitting a draft of proposed legislation to amend title 10, United States Code, to authorize the Secretary of a military department to sell goods and services to the owner of an aircraft or his agent in an emergency, and for other purposes (with an accompanying paper); to the Committee on Armed Services.

REPORT BY DEPARTMENT OF THE NAVY ON MILITARY CONSTRUCTION CONTRACTS AWARDED WITHOUT FORMAL ADVERTISING

A letter from the Assistant Secretary of the Navy (Installations and Logistics), transmitting, pursuant to law, a report by that Department on military construction contracts awarded without formal advertising, during the 6-month period from June 30, 1960, to December 31, 1960 (with an accompanying report); to the Committee on Armed Services.

AMENDMENT OF ACT RELATING TO HEIGHT OF BUILDINGS IN THE DISTRICT OF COLUMBIA

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to amend the act entitled "An act to regulate the height of buildings in the District of Columbia," approved June 1, 1910, as amended (with an accompanying paper); to the Committee on the District of Columbia.

DISPOSAL OF CERTAIN SURPLUS REAL PROPERTY

A letter from the Administrator, General Services Administration, Washington, D.C., transmitting a draft of proposed legislation to repeal a certain provision of the Independent Offices Appropriation Act, 1960 (74 Stat. 434), regarding the disposal of surplus real property (with an accompanying paper); to the Committee on Government Operations.

AUDIT REPORT ON UNEMPLOYMENT AND SICKNESS INSURANCE PROGRAM, RAILROAD RETIREMENT BOARD

A letter from the Comptroller General of the United States, transmitting an audit report on the unemployment and sickness insurance program, Railroad Retirement Board, fiscal years 1959–60 (with an accompanying report); to the Committee on Government Operations.

REPORT OF FEDERAL MARITIME BOARD AND MARITIME ADMINISTRATION

A letter from the Secretary of Commerce, transmitting, pursuant to law, a report of the Federal Maritime Board and Maritime Administration, for the fiscal year 1960 (with an accompanying report); to the Committee on Interstate and Foreign Commerce.

REPORT OF GIRL SCOUTS OF THE UNITED STATES OF AMERICA

A letter from the president, and interim national executive secretary, Girl Scouts of the United States of America, New York, N.Y., transmitting, pursuant to law, a report of that organization, for the fiscal year ended September 30, 1960 (with an accompanying report); to the Committee on Labor and Public Welfare.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the ACTING PRESIDENT pro tempore:

Petitions signed by Kiichiro Nakama, chairman of the Kin Son Assembly, and sundry other officials and citizens of the Ryukyu Islands, praying for the enactment of legislation to provide compensation for damage to or loss of private properties used by U.S. Armed Forces and for personal death or injury suffered by Ryukyuan individuals caused by U.S. Armed Forces personnel before the effective date of the Japanese Peace Treaty, and so forth; to the Committee on Foreign Relations.

CONCURRENT RESOLUTION OF MICHIGAN LEGISLATURE

Mr. HART. Mr. President, I ask unanimous consent to have printed in the RECORD Senate Concurrent Resolution 20, adopted by the Senate and the House of Representatives of the State of Michigan, the latter action having been taken March 23, 1961. The resolution reflects, I feel, the overwhelming judgment of all segments of the Michigan community. I hope it will persuade my colleagues of the necessity for the action proposed.

There being no objection, the concurrent resolution was ordered to be printed in the RECORD, as follows:

SENATE CONCURRENT RESOLUTION 20

Concurrent resolution relative to the repeal of the Federal excise tax on automobiles

Whereas the automotive industry has experienced a serious sales depression, which has created a grave situation of consequent curtailment of production, unemployment, economic hardship and exploding demands on tax-supported public services. It has been disruptive of Michigan's and the Nation's economy; and

Whereas repeal of the Federal excise tax on automobiles is urgently needed to reverse these trends and regain State and National prosperity; Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Michigan Legislature respectfully requests the Congress of the United States to effect public hearings by the U.S. House of Representatives on the proposition of the repeal of the Federal excise tax on automobiles; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the President of the Senate, and the Speaker of the House of Representatives, and to each member of the Michigan delegation to the U.S. Senate and the House of Representatives.

Adopted by the senate, March 15, 1961.

FRED I. CHASE,
Secretary of the Senate.

Adopted by the house, March 23, 1961.

NORMAN C. PHILLES,
Clerk of the House of Representatives.

RESOLUTIONS OF CENTRAL COOPERATIVES, INC., SUPERIOR, WIS.

Mr. WILEY. Mr. President, I present, for appropriate reference, a series of resolutions adopted at the 44th annual meeting of the Central Cooperatives, Inc., Superior, Wis., held March 20 and 21, 1961. I ask unanimous consent that the resolutions may be printed in the RECORD.

There being no objection, the resolutions were received, appropriately referred, and ordered to be printed in the RECORD, as follows:

To the Committee on Finance:

"RESOLUTION 1

"Resolution on withholding of income tax

"Whereas the State governments of Wisconsin and Minnesota are confronted with the problem of equitably collecting the State income tax; and

"Whereas certain groups and individuals are avoiding the payment of their full share of State income tax; and

"Whereas this assembly, representing consumers, has by its previous actions stood for equitable taxation in all its forms: Be it

"*Resolved*, That we go on record in support of the withholding method of collecting State income taxes, just as Federal income taxes are now withheld."

"RESOLUTION 5

"Resolution on sales tax

"Whereas the Legislatures of Wisconsin and Minnesota are faced with the issue of sales tax; and

"Whereas a sales tax would be a heavy burden on low income families, and would place the bulk of the tax load on those least able to pay: Be it

"*Resolved*, That this delegation go on record continuing our opposition to a sales tax."

To the Committee on the Judiciary:

"RESOLUTION 2

"Resolution on Co-op Month

"The more than 100,000 families who own and participate in the cooperatives in the States of Michigan, Minnesota, Wisconsin, North and South Dakota represented by delegates at this 44th annual meeting of Central Cooperatives, Inc., wish to express their sincere appreciation to the Governors of our Midwestern States who in 1960 proclaimed the month of October as Co-op Month.

"These proclamations were deeply appreciated as a sincere recognition of the fact that cooperatives are important and respected parts of our free enterprise system, and permit people to organize and control their own businesses.

"We hope to see this recognition of cooperatives continued and extended to all States in these United States."

"RESOLUTION 8

"Resolution on monopoly

"Whereas in keeping with the concept of abundance of production at the lowest possible cost, this annual meeting of Central Cooperatives, Inc., stands opposed to unregulated monopoly in all its forms; and

"Whereas a unit of government, for reasons of efficiency, grants monopolistic privileges in the form of franchises, or other types of exclusive or semiexclusive rights, such monopolistic practices must be closely regulated and supervised in order to prevent abuses: Therefore be it

"*Resolved*, That we stand for fair, vigorous, and impartial enforcement of the antitrust laws and other measures such as those creating the various Federal and State regulatory agencies which have the authority and power to assure the protection of the rights of consumers; and

"Furthermore, among the best ways to provide a yardstick by which efficiency of monopolistic production can be measured is to encourage the growth of all cooperatives. The existence of the cooperative type of organization in all economic fields can serve to increase productive efforts and also provide a standard against which the consumer can measure costs, prices, and service."

To the Committee on Labor and Public Welfare:

"RESOLUTION 3

"Resolution on youth program

"Whereas youth of today will lead co-ops tomorrow; and

"Whereas CCI has a scholarship program as one method of developing interest of youth in cooperatives and in higher education: Be it therefore

"*Resolved*, That this scholarship program be continued; and be it further

"*Resolved*, That additional methods of developing youth interest be earnestly sought by CCI and local co-ops; and be it further

"*Resolved*, That local co-ops be encouraged in every way to send youth delegates to CCI annual meeting and report back to the local association."

"RESOLUTION 6

"Resolution on 'The Word for Co-ops'

"Whereas the Cooperative League of the United States of America has published a booklet entitled 'The Word for Co-ops'; and

"Whereas 'The Word for Co-ops' is an informative and inspirational outline; and

"Whereas every co-op manager could benefit personally by reading this booklet; and

"Whereas the contents of this booklet can be used advantageously in creating a better image of co-ops in the minds of the public: Be it therefore

"*Resolved*, That CCI see to it that at least one copy of 'The Word for Co-ops' be provided each CCI affiliated co-op (manager), with all haste, so that he and members of his board may use it in furthering better public relations for his local cooperative and cooperatives in general."

To the Committee on Interstate and Foreign Commerce:

"RESOLUTION 4

"Resolution on true simple interest

"Whereas Central Cooperatives, Inc., has always represented the interests of consumers and has helped protect the consumer against inflation and business abuses; and

"Whereas the consumers' interest is always underrepresented in the conflict of pressure groups in legislative bodies of our National and State Governments: Be it

"*Resolved*, That this annual meeting go on record in support of legislation to force lenders to state their charges in terms of true simple interest."

To the Committee on Agriculture and Forestry:

"RESOLUTION 7

"Resolution on watered ham

"Whereas the U.S. Department of Agriculture saw fit to issue on last December 29, without prior notice, an arbitrary decree permitting all meat packers in interstate commerce to pump up to 10 percent water into smoked hams, pork shoulders, shoulder picnics and shoulder butts beginning January 1, 1961; and

"Whereas consumers were not asked their opinion via a direct public hearing, and the objections since it became known have been very lively, proven by a storm of protest in our co-op stores and supermarkets; and

"Whereas the water becomes expensive to buy inside of a ham, and is actually a form of adulteration; and

"Whereas the sale of water in hams adds nothing to hog producers' income but rather, further detracts from it; Therefore be it

"*Resolved*, That we forthrightly condemn such practice and the manner in which the ruling was carried out; and that besides sending area Congressmen copies of this resolution we urge all co-op members and patrons to write their Congressmen asking for whatever steps are needed to repeal this ruling; and we further ask for suitable legislation to also stop this practice in intrastate commerce."

Ordered to lie on the table:

"RESOLUTION 9

"Resolution on expression of appreciation

"We, the delegates of the 44th annual meeting of Central Cooperatives, Inc., appreciate the forward-looking message of Representative JOHN A. BLATNIK last evening and thank him for it.

"We express our appreciation to the management and staff of Hotel Duluth for the fine facilities, their courtesy, and accommodations.

"We also wish to extend our recognition and appreciation to the Cooperative Guilds for their service with the coffee break, to Mrs. Ingrid Bartelli for her informative luncheon speech, to our beloved Jerry Voorhis, and to our foreign guest, Olavi Solonen of O.T.K. Cooperative, Finland, for their greetings, and to the judges of the co-op scholarship contest: Sister Mary, College of St. Scholastica; Dr. Orville Manion, Wisconsin State College; Dr. Harold Hayes, UMD; Mrs. Lydia Peterson, Northland College."

RESOLUTION OF NASSAU COUNCIL OF CHURCHES, HEMPSTEAD, N.Y.

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Nassau Council of Churches, of Hempstead, N.Y., relating to the role of the Government in education.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the people of this Nation are at the present time witnessing a struggle on our national scene dealing with the role of Government in education; and

Whereas committees of our National Congress are now considering, and ultimately the Congress itself will consider the whole problem of Federal aid to education: Now, therefore, be it

Resolved, by the house of delegates of the Nassau County Council of Churches in their regular meeting of March 21, 1961, That we register our belief in public education as an important part of the foundation of our democracy and are happy when it can be strengthened.

We support proposed legislation which will grant aid to public education and we deplore the endeavor of any group to secure support for private or parochial schools, because we believe it is in opposition to our heritage of separation of church and state and divisive in character.

RESOLUTIONS OF THE TOWN OF VESTAL, N.Y.

Mr. KEATING. Mr. President, I ask unanimous consent to have printed in the RECORD two resolutions from the town of Vestal, N.Y., pointing up the need for better coordination and cooperation between Federal and local programs for sewage disposal and sewer treatment.

Many towns are facing problems similar to those outlined in these two resolutions. I sincerely hope that action can be taken on the local and Federal level to facilitate the solution of this problem and to abate rather than increase the serious problems of many communities regarding water pollution and sewage disposal.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED MARCH 1, 1961

Whereas the town of Vestal has previously hereto undertaken the construction of a sewage treatment plant to serve sewer district No. 1 in the town of Vestal; and

Whereas the town of Vestal is currently studying the feasibility of the construction of an additional sewage treatment plant to serve sewer district No. 4 in the town of Vestal; and

Whereas the study for sewer district No. 4 includes the possibility of a single sewage treatment plant to serve sewer district No. 4 and Endwell sewer district of the town of Union; and

Whereas this board has familiarized itself with the costs of sewage treatment plants and the costs of construction and operation of sewage treatment plants to serve the needs of the citizens of the town of Vestal; and

Whereas to the knowledge of this board it appears that the costs of construction and operation of sewage treatment plants to serve the citizens of this town are such as to create a substantial additional tax burden upon its citizens; and

Whereas the pollution abatement program for the Susquehanna River is of benefit to numerous communities and municipalities in addition to the town of Vestal; and

Whereas the Federal Government has an existing program for aid to local municipalities for construction of sewage treatment plants; and

Whereas this board has given due and proper consideration to all of the relevant facts and circumstances appertaining to the construction of sewage treatment plants; and

Whereas the program of pollution abatement of streams and rivers is a desirable and commendable program and to the benefit of the citizens and industries of this town as well as other communities and municipalities; and

Whereas the State and Federal Governments have for the most part preempted the sources of revenues that are or might be available to local municipalities; and

Whereas this board considers it to be in the public interest to continue its program so as to effect complete compliance with the orders and directions of the water pollution control board and the department of health within the near and foreseeable future: Now, therefore, be it

Resolved, That the town of Vestal record by resolution in the minutes of this meeting that it recommend to Hon. Howard Robison, Member of Congress, from this congressional district, and Hon. Jacob Javits and Hon. Kenneth Keating, Senators from this State, as well as Hon. George Ingalls, State assemblyman from this State assembly district and Hon. Warren M. Anderson, State senator from this senatorial district, the early enactment of legislation at both the State and Federal levels for the participation by the State and/or Federal Governments in a program of increased aid to local municipalities for the construction of sewage treatment plants and for the payment of the operating costs thereof and for debt reduction incurred in connection therewith; and be it further

Resolved, That this board recommend to the aforesaid members of the legislative bodies hereinbefore referred to, the early enactment by the State and/or Federal Governments of a program of Federal and/or State aid which will recognize and aid two or more municipalities that combine for the construction of a single sewage treatment plant to serve their combined needs by permitting such projects that serve more than one municipality to receive a grant equal to the pro rata total of each project's allowable grant; and be it further

Resolved, That this resolution shall take effect immediately and that the town clerk shall be authorized, empowered and directed to furnish certified copies thereof to the State and Federal legislators hereinbefore named and set forth.

RESOLUTION ON VESTAL-UNION SEWAGE TREATMENT PLANT

Whereas previously hereto the town of Union on behalf of Endwell sewer district and town of Vestal on behalf of sewer district No. 4 have held joint conferences and made various studies concerning the proposition of constructing a sewage treatment plant in the town of Vestal to serve both municipalities; and

Whereas the town board has received and studied the Wegman report relating to the joint project and has received and studied a copy of the so-called Blatnik bill presently pending before the Congress; and

Whereas the town board has received assurances that the Blatnik bill will in all probability receive favorable action within the next few months and during the present session of the Congress; and

Whereas the town board has given careful study and consideration to all of the relevant facts and circumstances pertaining to this matter, including the feasibility of constructing a plant to serve only sewer district No. 4, town of Vestal: Now, therefore, be it

Resolved, That the Town Board of the Town of Vestal record in its official proceedings the following declaration of its policy with relation thereto:—

1. That based upon the Wegman report and the assumption of favorable action and passage of the Blatnik bill by the Congress within the next few months and at the current session thereof, the town of Vestal finds that it would be in the best interest to join with the town of Union for the construction of a sewage treatment plant in Vestal, N.Y., to serve both Endwell sewer district and sewer district No. 4, town of Vestal;

2. That the town of Union should construct the improvement and that the town of Vestal enter into a long-term contract for the use thereof at a rate for its proportional use not in excess of the rate paid by the town of Union for its proportional use;

3. That the town board will recommend the abatement of all real estate taxes upon the improvement to be assessed by the town of Vestal and Vestal Central School District;

4. That the town of Vestal reserve the right after August 1, 1961, if this project for the construction of a joint facility is not consummated prior to that time, or if there is a change in circumstances, to proceed with the design and construction of its own sewage treatment plant on its site in Vestal in accordance with the preliminary plans therefor already filed with the New York Department of Health for sewer district No. 4, town of Vestal; and be it further

Resolved, That the town clerk be authorized, empowered and directed to forward certified copies of this resolution to persons and agencies as directed by the supervisor; and be it further

Resolved, That this resolution shall take effect immediately.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations, with an amendment:

S. 1067. A bill to amend Public Law 503, 84th Congress, so as to provide annuities for the widows of certain Foreign Service officers who retired prior to the effective date of the Federal Employees Group Life Insurance Act of 1954 (Rept. No. 129).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, without amendment:

S. 108. A bill to amend the Indian Long-Term Leasing Act (Rept. No. 133);

S. 200. A bill to amend the act entitled "An act relative to employment for certain adult Indians on or near Indian reservations," approved August 3, 1956 (Rept. No. 134); and

S. 1294. A bill to supplement and amend the act of June 30, 1948, relating to the Fort Hall Indian irrigation project, and to approve an order of the Secretary of the Interior issued under the act of June 22, 1936 (Rept. No. 135).

By Mr. CHURCH, from the Committee on Interior and Insular Affairs, without amendment:

S. 1295. A bill to authorize the use of funds arising from a judgment in favor of the Nez Perce Tribe of Indians, and for other purposes (Rept. No. 136).

By Mr. CHURCH, from the Committee on Interior and Insular Affairs, with an amendment:

S. 1299. A bill to amend the act of June 4, 1953 (67 Stat. 41), entitled "An act to authorize the Secretary of the Interior, or his authorized representative, to convey certain school properties to local school districts or public agencies" (Rept. No. 137).

REPORT ENTITLED "CONSTITUTIONAL AMENDMENTS" (S. REPT. NO. 130)

Mr. KEFAUVER. Mr. President, from the Committee on the Judiciary, I submit a report entitled "Constitutional Amendments," pursuant to Senate Resolution 239, 86th Congress, 2d session, as extended. I ask that the report be printed.

The PRESIDING OFFICER (Mr. DODD in the chair). The report will be received and printed, as requested by the Senator from Tennessee.

REPORT ENTITLED "IMMIGRATION AND NATURALIZATION" (S. REPT. NO. 131)

Mr. EASTLAND. Mr. President, from the Committee on the Judiciary, I submit a report entitled "Immigration and Naturalization," pursuant to Senate Resolution 237, 86th Congress, 2d session, as extended. I ask that the report be printed.

The PRESIDING OFFICER. The report will be received and printed, as requested by the Senator from Mississippi.

REPORT ENTITLED "TRADING WITH THE ENEMY ACT" (S. REPT. NO. 132)

Mr. EASTLAND. Mr. President, from the Committee on the Judiciary, I submit a report entitled "Trading With the Enemy Act," pursuant to Senate Resolution 236, 86th Congress, 2d session, as extended. I ask that the report be printed.

The PRESIDING OFFICER. The report will be received and printed, as requested by the Senator from Mississippi.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. THURMOND, from the Committee on Armed Services:

Gen. Carter Bowie Magruder, Army of the United States (major general, U.S. Army), to be placed on the retired list in the grade of general;

Lt. Gen. Emerson Charles Itschner, Army of the United States (major general, U.S. Army), Lt. Gen. Robert Milchrist Cannon, Army of the United States (major general, U.S. Army), Lt. Gen. Thomas Leonard Harrold, Army of the United States (major general, U.S. Army), Lt. Gen. Gordon Byrom Rogers, Army of the United States (major general, U.S. Army), and Lt. Gen. John Albert Dabney, Army of the United States (major general, U.S. Army), to be placed on the retired list in the grade of lieutenants general;

Lt. Gen. Guy Stanley Meloy, Jr., Army of the United States (major general, U.S. Army), to be assigned to a position of importance and responsibility designated by the President, in the rank of general; and

Maj. Gen. Andrew Thomas McNamara, U.S. Army, Maj. Gen. John Knight Waters, U.S. Army, and Maj. Gen. Hugh Pate Harris, Army of the United States (brigadier general, U.S. Army), and to be assigned to positions of importance and responsibility designated by the President, in the rank of lieutenants general.

Mr. CANNON. Mr. President, from the Committee on Armed Services, I report favorably the nominations of two lieutenant generals in the Marine Corps

and one lieutenant general in the Air Force, and ask that these names be placed on the Executive Calendar.

The PRESIDING OFFICER. The nominations will be placed on the Executive Calendar.

The nominations were placed on the Executive Calendar, as follows:

Lt. Gen. Thomas A. Wornham, U.S. Marine Corps, to be placed on the retired list in the grade of lieutenant general;

Maj. Gen. Alan Shapley, U.S. Marine Corps, for commands and other duties determined by the President, in the grade of lieutenant general while so serving; and

Lt. Gen. Donald N. Yates (major general, Regular Air Force), U.S. Air Force, to be placed on the retired list in the grade of lieutenant general.

Mr. CANNON. In addition, I report favorably 412 nominations in the Army in the grade of major and below and 2,487 nominations in the Navy and Marine Corps in the grade of lieutenant commander and lieutenant and below. These names have already appeared in the CONGRESSIONAL RECORD. In order to save the expense of printing on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Vice President's desk, for the information of any Senator.

The PRESIDING OFFICER. The nominations will be received and will lie on the desk, as requested by the Senator from Nevada.

The nominations ordered to lie on the desk are as follows:

Harry W. Miller, and sundry other officers, for promotion in the Regular Army of the United States;

Vincent J. Ciccone, and sundry other persons, for appointment in the Regular Army;

James J. Lane, and sundry other persons, for appointment in the Regular Army of the United States;

R. C. Clack, and sundry other distinguished military students, for appointment in the Regular Army of the United States;

Edwin V. V. Sutherland, for appointment as professor of English, U.S. Military Academy;

William W. Watkin, for appointment as professor of earth, space, and graphic sciences, U.S. Military Academy;

Richard V. Aamodt, and sundry other Naval Reserve Officers, Training Corps candidates, for permanent appointment in the line of the Navy;

James C. Belleson, and sundry other Naval Reserve Officers, Training Corps candidates, for permanent appointment in the Supply Corps of the Navy; and

Charles E. Harbison, and sundry other officers of the Marine Corps, for temporary promotion in the Marine Corps.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. ENGLE (for himself and Mr. KUCHEL):

S. 1462. A bill to amend the act of September 2, 1960 (74 Stat. 734), in order to authorize the Secretary of Agriculture to establish minimum standards of quality for any variety of grapes and plums covered by such act, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HART:

S. 1463. A bill for the relief of Traian Radulescu;

S. 1464. A bill for the relief of Wolfgang Stresemann; and

S. 1465. A bill for the relief of Philip Ignatius Veira; to the Committee on the Judiciary.

By Mr. KEATING:

S. 1466. A bill to amend title V of the Agricultural Act of 1949, as amended, to require terms and conditions of employment comparable to those offered Mexican workers be offered domestic agricultural workers, and for other purposes; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. KEATING when he introduce the above bill, which appear under a separate heading.)

By Mr. MUSKIE:

S. 1467. A bill to amend section 314 of the Public Health Service Act of 1944; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. MUSKIE when he introduced the above bill, which appear ununder a separate heading.)

By Mr. WILLIAMS of Delaware:

S. 1468. A bill to provide deductions in computing gain from operations of life insurance companies for certain mutualization distributions made in 1960 and 1961; to the Committee on Finance.

By Mr. BURDICK:

S. 1469. A bill to amend the National School Lunch Act to provide for a more equitable distribution of the funds available under such act, and for other purposes; to the Committee on Agriculture and Forestry.

S. 1470. A bill to include the holders of star route and certain other contracts for the carrying of mail under the provisions of the Civil Service Retirement Act; to the Committee on Post Office and Civil Service.

By Mrs. SMITH of Maine:

S. 1471. A bill for the relief of Marie McPherson Eighmey; to the Committee on the Judiciary.

By Mr. KEFAUVER:

S. 1472. A bill for the relief of Norma Coupland; to the Committee on the Judiciary.

By Mr. YOUNG of Ohio:

S. 1473. A bill for the relief of Athol Alfred Layton and his wife, Leah Kett Layton, and their children, John Gordan Layton and Christopher Thomas Layton; to the Committee on the Judiciary.

By Mr. KEFAUVER:

S. 1474. A bill to curb monopolistic control of professional boxing, to establish with the Department of Justice the Office of the National Boxing Commissioner and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. KEFAUVER when he introduced the above bill, which appear under a separate heading.)

By Mr. LONG of Louisiana:

S. 1475. A bill to amend and strengthen the Federal Water Pollution Control Act to provide for flow regulations for water pollution and quality control and other purposes; to the Committee on Public Works.

(See the remarks of Mr. LONG of Louisiana when he introduced the above bill, which appear under a separate heading.)

By Mr. LONG of Louisiana (for himself and Mr. ELLENDER):

S. 1476. A bill to restate terms of the grant covering the Rockefeller Wildlife Refuge and Game Preserve to permit it to comply with current Louisiana law; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. LONG of Louisiana when he introduced the above bill, which appear under a separate heading.)

By Mr. HRUSKA:

S. 1477. A bill to amend section 144 of title 28 of the United States Code; to the Committee on the Judiciary.

By Mr. SPARKMAN (by request):

S. 1478. A bill to assist in the provision of housing for moderate and low income families, to promote orderly urban development, to extend and amend laws relating to housing, urban renewal, and community facilities, and for other purposes; to the Committee on Banking and Currency.

(See the remarks of Mr. SPARKMAN when he introduced the above bill, which appear under a separate heading.)

By Mr. METCALF (for himself and Mr. MANSFIELD):

S. 1479. A bill to authorize assumption by the various States of civil or criminal jurisdiction over cases arising on Indian reservations with the consent of the tribe involved; to permit gradual transfer of such jurisdiction to the States; and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. CANNON:

S. 1480. A bill for the relief of Erkki K. Kerttula; to the Committee on the Judiciary.

By Mr. SPARKMAN (for himself and Mr. YARBOROUGH):

S. 1481. A bill to extend and to provide additional funds for the veterans' direct home loan program; to the Committee on Banking and Currency.

(See the remarks of Mr. SPARKMAN when he introduced the above bill, which appear under a separate heading.)

By Mr. CLARK (for himself and Mr. MORSE):

S. 1482. A bill to authorize loans to private nonprofit schools for the construction of elementary and secondary school facilities; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. CLARK when he introduced the above bill, which appear under a separate heading.)

By Mr. YARBOROUGH (for himself and Mr. SPARKMAN):

S. 1483. A bill to extend the veterans' guaranteed home loan program; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. YARBOROUGH when he introduced the above bill, which appear under a separate heading.)

AMENDMENT TO TITLE V OF AGRICULTURAL ACT OF 1949

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a bill to require that terms and conditions of employment comparable to those offered Mexican workers be offered to domestic farmworkers under Public Law 78. I offered this amendment on August 30 of last year as an amendment to the bill extending Public Law 78. In light of the need to act on this measure before the present 6-month extension expires, I again offer the same amendment in the form of this bill in order that others will have an opportunity to study and review this proposal.

There are a number of bills now pending in the Senate which would provide new programs and rights for migrant farmworkers. I have studied these measures carefully, and am a cosponsor of a bill to provide for the registration of migrant farmworker crew leaders, under similar provisions as those which now apply in New York State.

The plight of migrant farm workers is of serious concern to a great many Americans. While I think there is much that can and should be done, I offer my

amendment as a logical and constructive first step in creating better working and living conditions for migrant farmworkers.

Under present provisions of the program for supplementation of the domestic agricultural labor force with workers from Mexico, the Secretary of Labor now has authority to require employers to offer domestic workers wages and standard hours of work comparable to those offered to foreign workers. Under the international agreement negotiated with the Republic of Mexico, however, growers must provide, at their own cost, workmen's compensation or occupational insurance coverage for the Mexican farmworkers, as well as free transportation, free housing, written contracts and work guarantees.

These provisions have resulted not only in the failure to make farm employment attractive to domestic workers, but also in the preemption of their employment opportunities by foreign workers. Many employers make only limited efforts to attract domestic workers to available farm employment. They prefer to rely upon the ready supply of foreign workers.

My bill would assist in correcting this situation by requiring that, before the Secretary of Labor can make the certification required in making foreign workers available in an area, he must find that the employers are offering domestic workers, not only wages and hours of work, but also other conditions of employment comparable to those offered the foreign workers.

This amendment does not require that precisely the same terms and conditions be offered as are extended to Mexicans. It is contemplated that there would be some recognition of the differences between the situation of the domestic workers and the foreign workers. For example, where employees have their own homes in the area of employment, it would not be reasonable to require the employer to offer free housing to domestic workers. The same thing would be true of an offer of free transportation. Under the amendment, however, an employer could be required to offer workmen's compensation or on-the-job insurance to the domestic worker, just as he offers it to the Mexican worker.

The employer could also be required by the Secretary of Labor to offer the domestic worker, as he now does the Mexican worker, a written contract and to guarantee the domestic worker employment during at least three-quarters of the time covered by the contract. He could likewise be required to offer the domestic worker subsistence on days when he could not offer work.

To sum up, my amendment would require the employer, and permit the Secretary of Labor the opportunity, to attract and recruit domestic workers under conditions at least comparable, but not identical in all respects, with the conditions offered to the foreigners. It could be used by the Secretary to insure that a true labor shortage was the basis for admitting the foreign workers and not the unwillingness of employers to make reasonable job offers to Americans.

In light of present high unemployment and in light of the unsatisfactory living and working conditions of migrant farmworkers in many areas, I think this is a reasonable and logical first step. New York State has done a great deal to provide adequate living conditions for migrant farmworkers. My bill would give to the Secretary of Labor the necessary authority to match the great strides which New York and other States have made in meeting this problem.

I ask unanimous consent that the text of the bill be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1466) to amend title V of the Agricultural Act of 1949, as amended, to require terms and conditions of employment comparable to those offered Mexican workers be offered domestic agricultural workers, and for other purposes, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That clause (3) of section 503 of the Agricultural Act of 1949, as amended, is amended to read as follows: "(3) reasonable efforts have been made to attract domestic workers for such employment at terms and conditions of employment reasonably comparable to those offered to foreign workers."

AMENDMENT OF SECTION 314 OF PUBLIC HEALTH SERVICE ACT OF 1944

Mr. MUSKIE. Mr. President, I introduce, for appropriate reference, a bill which would simplify Federal grants-in-aid to States for public health services and provide greater flexibility in the allocation of certain categorical public health service funds in the States. Similar legislation has been introduced in the House of Representatives. I ask unanimous consent that the bill remain at the desk through Thursday, April 6, 1961, to enable additional Senators to give consideration to joining as cosponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, the proposed legislation was drafted as the result of the second report to the President of the Advisory Commission on Intergovernmental Relations, of which I am a member. Two weeks ago I introduced a bill—S. 1344—proposed by the Commission to remove inequities in the Federal credit for inheritance and estate taxes paid to States. This proposal was recommended in the first report of the Advisory Commission.

The proposed legislation which I have introduced today would amend the Public Health Service Act of 1944, to permit States, at the discretion of the Governor in each case, to transfer up to one-third of the Federal funds granted in any one of five health categories to one or more of the other four such categories. The following five categorical grants are involved: general health assistance, cancer control, heart disease control, tuberculosis control, and venereal disease control. The bill would not affect the remaining categories of mental health, maternal and child health, and crippled children's services.

In addition, the bill would establish a uniform allotment and matching formula for Federal grants to States in the special categories listed above. A number of different formulas now apply to these five categories.

Under the bill, funds would be allocated to the States on the basis of population, with matching requirements established according to per capita income in the individual States. Matching requirements would range from one-third State funds to two-thirds Federal funds for the lowest income States, to two-thirds State funds to one-third Federal funds for the highest income States. This formula follows the general principle established under the Hill-Burton program.

This proposed legislation, Mr. President, is designed to improve the flexibility of federally supported public health service programs administered by the States, without removing the present overall direction of these programs in accordance with the priorities set by Congress. Initially, several of these categories were established to allow the Federal Government to stimulate State activity. Today the major cost is borne by the States, with the Federal Government playing an important supporting role.

By allowing the States to transfer up to one-third of the funds in the five categories listed, we would provide sufficient flexibility for State administrators in meeting peculiar and changing local needs, without endangering the integrity of the overall program. It should be noted that the proposed allowance for transfers would not be applied to the categories of mental health, maternal and child health, and crippled children services, since functional lines of responsibility between the Federal Government and the States do not coincide in these categories.

This legislation, Mr. President, represents the considered opinion of members of the Advisory Commission on Intergovernmental Relations, State and territorial health and budget officers, and other experts in this field. It offers a sensible improvement in an important facet of intergovernmental relations. I hope a number of Senators will join me in sponsoring this legislation.

I ask unanimous consent that the text of the bill be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1467) to amend section 314 of the Public Health Service Act of

1944, introduced by Mr. MUSKIE, was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 314 of the Public Health Service Act of 1944 is amended (1) by striking out of subsection (d) thereof the following: "(2) the extent of the venereal-disease problem, the extent of the tuberculosis problem, and the extent of the mental health problem and other special health problems, respectively, and (3)" and inserting in lieu thereof "and (2)"; and (2) by adding at the end thereof the following:

"(m) To enable the Surgeon General to assist, through grants, States, counties, health districts, and other political subdivisions of the State, and public and nonprofit agencies, institutions and other organizations, in establishing and maintaining organized community programs of cancer control, including grants for demonstrations and the training of personnel, there is hereby authorized to be appropriated for each fiscal year such sums as may be necessary for such purposes. The Surgeon General shall, in accordance with regulations, from time to time make allotments from sums appropriated under this subsection to the several States on the basis of (1) the population, and (2) the financial need of the respective States. Upon making such allotments the Surgeon General shall notify the Secretary of the Treasury of the amounts thereof.

"(n) Not more than one-third of the amounts allotted to any State pursuant to subsections (a), (b), (c), (e), and (m) of this section may, at the option of the State concerned, subject to matching from funds of the State and its political subdivisions pursuant to subsection (h) of this section, be transferred among such programs."

SEC. 2. Subsection (h) of section 314 is amended by striking out "and (e)" and inserting in lieu thereof "(e), and (m) (including amounts transferred to such purposes pursuant to such subsection (n)),", and by striking out "an amount determined in accordance with regulations" and inserting in lieu thereof the following: "an amount determined by the Surgeon General, on the basis of the financial ability of the respective States, of not less in the case of the State having the least financial ability, than one-third of the total amount spent from such allotments and funds of such State and its political subdivisions, and not more, in the case of the State having the greatest financial ability, than two-thirds of the total amount spent from such allotments and funds of such State and its political subdivisions".

RESTRICTION OF MONOPOLISTIC CONTROL OF PROFESSIONAL BOXING

Mr. KEFAUVER. Mr. President, I introduce for reference to the appropriate committee a bill to curb monopolistic control of professional boxing, to establish within the Department of Justice the Office of the National Boxing Commissioner, and for other purposes.

I ask unanimous consent that the bill lie on the table until the close of business on Tuesday, April 4, 1961, and I invite other Senators to join with me in the sponsorship of this most needed piece of legislation.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from Tennessee.

The bill (S. 1474) to curb monopolistic control of professional boxing, to establish within the Department of Justice the Office of the National Boxing Commissioner, and for other purposes, introduced by Mr. KEFAUVER, was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. KEFAUVER. Mr. President, I have a statement explaining the provisions of the bill, outlining the need for its adoption, and containing the text of the bill. I ask unanimous consent that the statement and the text of the bill be printed at this point in my remarks.

There being no objection, the statement and bill were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEFAUVER

The Washington Post of March 15, 1961, carried a UPI dispatch stating that the heavyweight boxing champion, Floyd Patterson, may defend his title against the No. 1 contender, Sonny Liston, in September of this year. If this match is held, and Liston wins, we face the ugly prospect of having the heavyweight championship revert to mob control.

There was compelling evidence presented at the December 1960 boxing hearings of the Antitrust and Monopoly Subcommittee that Liston was controlled by three powerful racketeers—Frank "Blinky" Palermo, John Vitale, and Frank Carbo—operating through a "front" manager, Joseph "Pep" Barone. There has not been the slightest evidence since the December hearings that Liston has cleaned house.

I attach to this statement an article which appeared in the Washington Post of March 15, 1961, and a column appearing in the New York Journal on March 16, 1961.

This unwholesome situation makes clear the present state of professional boxing and the urgent need for the legislation which I will introduce today.

Underworld domination of professional boxing was the subject of extensive hearings before the Antitrust and Monopoly Subcommittee in June and December of 1960. These hearings produced overwhelming evidence of the decay and degeneration of a major sport. At the root of this evil condition was a massive conspiracy between racketeers and other undesirables to suppress competition and maintain monopoly control over major boxing contests throughout the country.

At the close of the December hearings I announced my firm intention to introduce corrective legislation. Accordingly, I am now introducing a bill to establish the Office of the National Boxing Commissioner within the Department of Justice.

The primary purpose of the present bill is to aid the States in their efforts to drive the racketeers out of boxing and, thus, to end their monopolistic control of one of our most popular sports.

I am convinced that only through a nationwide licensing system can we accomplish this end.

Of course, the success of such a licensing system depends upon adequate criminal sanctions and investigative facilities. With these factors in mind, I have included, within the bill, criminal penalties for violation of the act and provisions to utilize the services of the Federal Bureau of Investigation.

The interstate nature of major boxing contests is well established in law. In *United States* v. *International Boxing Club of New York* (348 U.S. 236), decided January 31, 1955, the Supreme Court held that the promotion of championship boxing contests on a multistate basis and the sale of rights to televise, broadcast, and film such matches for interstate transmission constituted trade and commerce among the States within the meaning of the Sherman Act.

On August 25, 1959, Gov. Edmund G. Brown, of California, stated that "professional boxing smells to high heaven" and recommended a congressional "cleanup." This statement by Governor Brown confirmed my own observations, and on the following day I directed the subcommittee to conduct an investigation of the monopoly aspects of the boxing business.

The hearings before the subcommittee reduced to cold facts material which had previously been in the realm of suspicion and rumor. The subcommittee members were shocked and dismayed to learn that officials of the giant International Boxing Club, leading promoters for a decade and more, were allies of Frank Carbo, the underworld czar of the sport. The IBC is no longer in existence, and Carbo is on trial in a Federal court for extortion. The outcome of that trial, and the demise of the IBC, will be of little consequence, however, unless we stamp out the Carbos of tomorrow before they attain positions of such awesome influence and affluence.

I will now explain some of the more important provisions of the bill, and the reasons for their inclusion.

Section 4 establishes, within the Department of Justice, an office to be known as the Office of the National Boxing Commissioner, to be headed by a Commissioner with rank and compensation equal to that of an Assistant Attorney General. My advocacy of a one-man commission was greatly influenced by the success of Judge Kenesaw Landis as commissioner of professional baseball. And, it must be remembered that the situation in boxing today is somewhat analogous to the period after baseball's Black Sox scandals when Judge Landis assumed office. Since the Office of Commissioner will be vitally concerned with the criminal and antitrust aspects of professional boxing, it is logically situated within the Justice Department.

Section 6 provides the Commissioner's Office with jurisdiction over all licenses issued pursuant to the act. Professional boxers, managers, promoters, and matchmakers engaging in interstate bouts are required to obtain a license. I believe it prudent for the Commissioner's Office to restrict its licensing provisions to those persons who perform the most important functions in the boxing business. Burdening the Commissioner with an avalanche of licenses to process and supervise would defeat the purposes of the bill.

The powers of the Commissioner are defined in section 5. Under this section, the Commissioner is given broad authority to carry out the mandates of the act. I wish to call particular attention to subsections (d) and (e) of section 5. Subsection (d) authorizes the Commissioner, with the approval of the Attorney General, to utilize the services of such employees of the Department of Justice as the Commissioner may deem necessary or desirable to enable him to effectively carry out the provisions of the act. Of course, this subsection will enable the Commissioner to utilize the much needed services of the Federal Bureau of Investigation. The subcommittee's inquiry established that most State and local commissions' investigative staffs were woefully

inadequate or nonexistent. Witness the testimony before the subcommittee of Mr. Harry Falk, a distinguished member of the California commission:

"We investigate the applicants (for licenses) at some considerable length.

"I think, at least to the extent of making a thorough investigation, that very few of the States do that.

"I am hopeful that in California we are somewhat effective in keeping out the hoodlums and doing good for boxing. I believe several of the national magazines and national newspapers even have complimented California on doing an excellent job in that regard.

"However, I want to confess to the committee that, assuming that California has the proper attitude and assuming California is doing a good job, we cannot cope with the problem. We admit that we are not effective in controlling boxing or eliminating the hoodlums."

Under subsection (e) of section 5 the Commissioner is authorized to obtain from any department, agency or independent instrumentality of the United States any information he deems necessary to carry out his duties under the act. This provision should facilitate free exchange of information between the Commissioner's Office and such agencies as the Bureau of Narcotics and the Bureau of Internal Revenue.

Section 5(f) allows the Commissioner, with the approval of the Attorney General, to establish regional offices. It may prove to be highly impractical to conduct the nationwide business of the Commissioner's Office through one office situated in Washington, D.C.

Despite many suggestions to the contrary, I have decided to limit the life of the Commissioner's Office. Under section 15, the act will terminate 5 years from the date of its enactment. It is my fervent hope that at the conclusion of that period boxing will be rid of its present underworld control and that further Federal supervision will be unnecessary.

I wish to emphasize that this bill in no way preempts either the State's authority or responsibility to regulate professional boxing. By law, the Office of Commissioner has no jurisdiction over bouts of a purely intrastate nature. By the provisions of the bill, the Commissioner's Office is primarily a licensing authority and is largely excluded from the administration, supervision and conduct of boxing matches, whether they be interstate or intrastate in nature.

Section 14 reads, "Nothing contained in this Act shall be construed as prohibiting any board, commission, or other agency, created by or pursuant to the law of any State, Commonwealth, or possession of the United States, from exercising any of its powers, duties, or functions with respect to the regulation or supervision of professional boxing or professional boxing contests." This section makes it patently clear that the bill merely requires that certain participants in interstate bouts—boxers, managers, promoters, and matchmakers—must be licensed by the Office of the National Boxing Commissioner; other agencies are not precluded from supervision of such contests as may occur in their jurisdictions.

Section 3 defines the terms "professional boxer," "manager," "promoter," and "matchmaker" as used in the act. May I direct your attention to subsection (5) which includes within the definition of "promoter" any person or corporation engaged in the making or transmitting of a closed circuit telecast of an interstate boxing match. Testimony before the subcommittee disclosed that a new type of boxing promoter—the closed circuit TV magnate—has arisen in recent years. The purses of Floyd Patterson and Ingemar Johansson in their heavyweight championship bouts were mainly derived from the closed-circuit TV revenue. Corporations engaged in closed circuits TV wield immense power over the conduct of major boxing contests; yet, they are neither licensed nor regulated by the Federal Government—as are the regular TV networks. The exclusion of these companies from the jurisdiction of the Commissioner's Office would hamper and weaken the regulation and control of interstate bouts.

Section 6(b) provides standards for the issuance and renewal of licenses. By virtue of this section, the Commissioner is given latitude in determining whether an applicant is a proper licensee. Under the bill I am introducing, the Commissioner's refusal to issue or renew licenses is, of course, subject to a hearing and judicial review.

Section 8 sets forth the conditions under which a license may be suspended or revoked. Here again, provisions are made for a hearing and judicial review as prescribed in section 15.

Sections 7, 9, and 10 of the bill can be properly classified as the full disclosure sections. I am most anxious to eliminate the undercover payments and covert arrangements which now plague professional boxing. The subcommittee heard testimony that the International Boxing Club channeled over a quarter of a million dollars to the wife of gangster Frank Carbo, a notorious bookmaker named Max Courtney, and a freewheeling unlicensed promoter, Jack Kearns. No State or local commission knew of these transactions. The bill's disclosure provisions are designed to enable an alert Commissioner to detect the "secret deal" and the under-the-table payoff. Section 7 states that any contract which is entered into by a licensee of the Commissioner's Office, and which relates directly or indirectly to any professional boxing contests, shall be in writing and filed with the Office of the Commissioner. By the provisions of section 9, boxers, managers, promoters, and matchmakers must submit detailed financial reports concerning boxing contests in which they have participated, and section 10(a) requires each licensee to keep accurate and comprehensive records of all financial transactions relating to interstate matches. Subsection (b) of section 10 makes these records available to the Commissioner's Office for examination and inspection.

Section 13 provides criminal penalties for willful failure to comply with the disclosure provisions and false statements in any application or report filed with the Commissioner's Office. In each case malefactors face a maximum penalty of 5 years imprisonment and a heavy fine.

As I previously stated, there was a testimony before the subcommittee that Frank Carbo, John Vitale and Frank Palermo, a trio of undercover boxing racketeers, were arranging important matches for the No. 1 heavyweight contender, Sonny Liston, and sharing in his purses. Under subsection (a) of section 13, all three of these underworld figures could be prosecuted for acting as managers-in-fact without first procuring a license under the act. Violation of this subsection, which is primarily directed against the behind-the-scenes manipulator in professional boxing, may result in 5 years imprisonment.

Our investigation has established that the undercover elements in professional boxing constitute a veritable "Who's Who in Gangland"—Russell Bufalino, Mickey Cohen, Jimmy Doyle, and Tony Ducks, to name a few. In fact, most of the racketeers turned up in the boxing investigation had appeared before the old Senate Crime Committee or more recently before the Rackets Committee, headed by Senator McCLELLAN. It is clear that the criminal provisions of this bill provide the Attorney General with an arsenal of weapons in the drive against organized racketeering.

Cleaning out the hoodlums must be the first order of business for boxing's Commissioner. However, we should not neglect the other problems which sorely beset professional boxing. Therefore, under section 11 of the act, I have provided for a five-man Boxing Advisory Board. By subsection (e), the Board is charged with the responsibility of making recommendations to the Commissioner for the improvement of boxing and the welfare of its participants. The Board might well consider such matters as the advisability of interstate compacts, pension and insurance plans for boxers, the adoption of uniform rules and regulations by the States and the developing of young boxing talent. Board members will serve without compensation.

I do not support the many proposals to abolish professional boxing. We do not cure the cancer by killing the patient. However, the plain fact is that boxing cannot survive as a major sport unless some drastic steps are taken.

I am not asking Government to intrude in a sport which has never been regulated or controlled. According to the Ring Record book, there are 51 State and local commissions in existence throughout the country. I am asking that simultaneous jurisdiction over a restricted area of boxing regulation—the licensing of boxers, managers, promoters, and matchmakers engaged in interstate bouts—be given to a national authority as well as to State and local governments. I am doing so at the request of many State authorities who recognize that major boxing contests, because of their interstate character, are presently beyond the power of any State to regulate fully and effectively.

On February 21 of this year, at the conclusion of the second series of boxing hearings, Governor Brown stated in a letter to me: "We in the State find ourselves helpless to control boxing to the fullest extent necessary. Our State athletic commission has done a substantial job on regulating boxing within the borders of California, but the problems of the business are interstate in nature.

"The fact is that no matter how stringent are the rules, our State commission adopts, it cannot eliminate the hoodlum influences from the boxing business without Federal assistance.

"We do not ask for Federal control of boxing, but we do ask for Federal help.

"I recommend most earnestly the creation of a Federal Boxing Commission with power to license all participants in interstate boxing matches. I am pleased that my views in this matter coincide with your own.

"Only through such a nationwide licensing procedure can we successfully hope to counteract the criminal forces which have to a startling degree exerted power in the boxing business."

Governor Brown also stated:

"I believe that I speak for most of the people of California in expressing the hope that Congress will pass such needed legislation at this session."

I have been most impressed by Governor Brown's statement. California has been in the forefront of the States fighting organized crime in boxing. If the California authorities, with all their vast resources, cannot cope with the hoodlum problem without Federal assistance, how are the smaller States faring?

Evidence at the hearing indicated that not only are the individual States helpless in combating interstate racketeers but efforts to have the States band together for their common protection have been futile and unrewarding. Commissioner Alfred Klein, of Pennsylvania, representing that State and an organization known as the National Boxing Association, spoke of the fierce competition between the States for revenue-producing bouts; and Harry Falk, a member of the California commission and

former vice president of the NBA, said that there were no prospects for interstate compacts in the near future.

In introducing this bill, I am keenly aware of the contributions made by boxing to the sports tradition of our Nation. This awareness, has strengthened my resolve that boxing must not pass from the national scene.

If we are to succeed in reviving this sport we must see to it that our youthful athletes are not victimized and corrupted by unscrupulous managers and promoters; not tempted by bribe offers; not obligated to engage in sham or collusive matches; not required to pay homage to the underworld; not judged by their criminal connections rather than there abilities; and do not end their careers in poverty, broken in mind and spirit.

In no other sport today would such conditions be tolerated. We should no longer tolerate them in boxing. I therefore ask for support of this bill.

[From the Washington Post, Mar. 15, 1961]

MIAMI BEACH, FLA., March 14—Heavyweight Champion Floyd Patterson, about $800,000 richer after Monday night's knockout over Ingemar Johansson, made a declaration of independence today and confirmed that he will fight again this year for Feature Sports, Inc.

"I will pick the opponent for my title defense," said the champion with the small white brow-patch over his swollen left eye. "I expect to defend between June and September."

He said he would prefer to defend in New York City, his home bailiwick. That is a stock Patterson statement.

Nevertheless, the United Press International learned authoritatively that Patterson will make his next defense at Philadelphia against top contender Sonny Liston in September.

He said Liston of Philadelphia must clean house before he can expect to get a title shot, must sever his connections with the questionable men associated in his ownership.

"I know who those men are," he continued, "and they'll have to take a back seat."

But when asked to name them, he chuckled and replied, "I'm not lookin' to get bumped off."

SONNY LISTON'S CASE

MIAMI BEACH, FLA., March 16.—I asked Sonny Liston what he thought of Floyd Patterson.

"I think he is a great champion," he replied as if he had rehearsed this falsehood with an actor's care.

He noticed my astonishment. The laughter made his immense body tremble.

"You don't mean that?" I said.

"No," he said. "He's afraid of me. I view it this way. He's just using any excuse so that he don't have to fight me. He's worrying about who manages me. I ain't worried about who's managing him."

The mob is supposed to own Liston who has done jail-time for crimes of violence. He is considered the best heavyweight in the effete division. But Patterson will not fight him, the champion has stated, unless he is handled by people whose respectability is guaranteed.

"Is Blinky Palermo your undercover manager?" I asked.

"I have a contract with Pep Barone," he said. "That's who I signed with and that's who I get my orders from. I mean who I get the fights off."

"Have you asked Barone to sell your contract?"

"What can I do?" he asked.

PUBLIC OPINION

We were sitting at a table in the coffee shop of the Haddon Hotel on the beach. Although Liston has difficulty reading and writing, a red-tipped ballpoint pen was clipped to the pocket of his blue plaid sports shirt which bulged with a notebook.

"Patterson's got a contract with Cus D'Amato," said Liston. "Cus' name's on it. I'm quite sure he don't sit up all night and watch Cus. He don't sleep with Cus all night to see what he's doing every minute."

"Are you going to stick with Barone?" I asked.

"He's been good to me as far as it goes," Liston said. "I've found nothing wrong with him. He helped me this far."

"You have no future," I said, "as long as Barone manages you."

"I'll keep fighting," he said.

"With whom?" I asked.

"I don't know," he answered. "I think public opinion should force Patterson to fight me. They can see he is making excuses. I done time. But after a man pays his debt to society, I don't see why he should pay with the rest of his life. Anyway, I'm the one whose going to be fighting him. Just the two of us is fighting, no one else."

He glanced at the diamond ring on his left pinky which is as large as a ball park hotdog.

"He didn't have them other guys investigated," Liston said. "He should of investigated Pete Rademacher who was an amateur. An amateur fighting a professional, he could get hurt bad. Did he investigate that?"

THE ANGLES

Barone sat down at the table, a tense, graunt-faced man.

"He don't want to fight my guy," the manager said. "He's just using all them angles."

"He must be the NBA," Liston said. "They take away Archie Moore's title, they take away Ray Robinson's title. They don't fight certain guys. But him, he don't want to fight me, he does what he wants."

"Have you had any offers for Liston's contract?" I asked Barone.

"I've had people ask me if I wanted to sell," Barone said, "I had one offer—some guy named Reilly from New York. He wanted to give up $100,000 for a million-dollar proposition."

"Are you Blinky Palermo's front man?" I asked.

"I have a contract with Sonny," he said. "Sure, I done business with Blinky. I was promoting in Allentown. Blinky had all the good fighters. I had to deal with him. Who else in the boxing business didn't?"

"Would you sell the contract if you had a good offer?" I addressed the manager.

"I'm no piece of furniture," said Liston, suddenly angry. "I'm no hog or dog to auction off. You want Cus to be my manager? I feel Pep took a chance when he first got me. I was doing nothing then. Am I supposed to make him pick his friends, my manager? Am I to tell him who to talk to?"

"If Sonny's in St. Louis he'd still be in trouble," Barone said. "They were laying on him out there. He kept in trouble because the cops were picking on him. He lived in Philadelphia a year with his wife. What about the money I spent?"

"What does your wife think of this situation?" I asked.

"She says it takes time," he said.

"I read an interview in which Ingemar Johansson said he would fight you," I said.

"Sure," Liston said, "he ain't got the title now. Ain't Patterson saying he would fight me when he ain't got the title?"

FAST HANDS

The conversation drifted to the Patterson-Johansson fight.

"The mandatory eight count helped Patterson," he said. "In the first round when he got knocked down, it could of won it for him. Johansson, he run out of gas. He didn't get his second wind. Patterson, he's not as big as most heavyweights. He's little. I hear about those fast hands. They don't bother me. I just keep sticking him."

In his last important fight, Eddie Machen lasted 10 rounds with him.

"Machen run," Liston said. "But I don't think Patterson would run like him. Ain't Patterson got pride? Ain't that what they say? If he's got pride, why ain't he fighting me? How could he have pride without fighting me?"

He sat there, big and uncomfortable in the coffeeshop chair and I said he looked fat.

"Im 220," he said. "If I'm fighting, I'd weigh 211."

He has never been knocked down.

"I've never even been wabbled up," he said. "Cleveland Williams, he hit me good, right on the nose. But I don't wabble up."

He is a slow-moving pug who comes behind a left jab and uses a clubbing right.

"I'm fighting Machen and the referee keeps telling me keep the punches up," he said. "If I could of worked on his body, I'd of wore him down."

"Isn't Patterson easy to hit with a right hand?" I said.

"You know why I ain't going to hit Patterson with no right hands?" he said.

"No," I answered.

"Because he ain't going to get in there and fight me," he said.

He laughed, as if this were very funny.

S. 1474

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The National Boxing Commissioner Act."

DECLARATION OF POLICY

SEC. 2. The domination and monopolistic control of professional boxing contests by racketeers and other undesirable persons has become a matter of serious concern to the Congress and the Nation. These boxing contests, because of their interstate character, are presently beyond the power of any State to fully and effectively regulate. It is therefore the sense of the Congress that there is a need to establish for a period of five years within the Department of Justice the Office of the National Boxing Commissioner to license participants in professional boxing contests in or affecting interstate commerce.

DEFINITIONS

SEC. 3. As used in this Act—

(1) The term "professional boxing contest" means any boxing contest, exhibition, or match in or affecting interstate commerce between contestants who receive, or who by contract, agreement, or other arrangement are authorized to receive, monetary or other consideration for their services;

(2) The term "professional boxer" means any individual who participates in or undertakes to participate in any professional boxing contest as a contestant for monetary or other consideration;

(3) The term "manager" means any individual or corporation which (A) undertakes, offers to undertake, or has undertaken to represent in any way the interest of any professional boxer in the procurement, arrangement, or the conduct of any professional boxing contest in which such boxer is to participate as a contestant; or (B) receives or is entitled to receive 15 per centum or more of the gross purse of any professional boxer for any services relating to any professional boxing contest in which such boxer has participated or is to participate as a contestant;

(4) The term "purse" means any financial guarantee or any other compensation, or part thereof, which any professional boxer receives or is entitled to receive for participating as a contestant in any professional

boxing contest, without regard to the source of such guarantee or compensation;

(5) The term "promoter" means any individual or corporation which (A) undertakes, offers to undertake, or has undertaken to arrange for the conduct of any professional boxing contest; (B) undertakes, offers to undertake, or has undertaken to arrange for the making or transmitting of a closed circuit telecast of any professional boxing contest; or (C) receives or is entitled to receive 10 per centum or more of the gross promotion proceeds resulting from any professional boxing contest for any services relating to any such contest;

(6) The term "promotion proceeds" means any financial guarantee or any other compensation, which any promoter receives or is entitled to receive for participating as a promoter in any professional boxing contest, without regard to the source of such compensation;

(7) The term "matchmaker" means any individual who undertakes, offers to undertake or has undertaken, on behalf of any promoter, to render any services incident to the arrangement of the conduct of any professional boxing contest;

(8) The term "corporation" means any corporation, partnership, association, or other business entity existing under or authorized by the laws of the United States, any State, Commonwealth, or possession thereof, or any foreign country;

(9) The term "questionable individual" means any individual who (A) has pleaded guilty, or entered a plea of nolo contendere, or has been found guilty by a judge or jury with respect to any criminal offense punishable by imprisonment for any period exceeding six months in any jurisdiction; (B) while licensed under this Act, has violated any provision thereof or any rule or regulation promulgated pursuant thereto for which such license was suspended for a period exceeding thirty days or revoked; or (C) has by act or omission conducted himself in a manner detrimental to the best interests of professional boxing; and

(10) The term "questionable corporation" means any corporation which (A) has in its service any officer, director, or stockholder possessing the beneficial ownership of 20 per centum or more of its stock in any class who is a questionable individual; (B) while licensed under this Act, has violated any provision thereof or any rule or regulation promulgated pursuant thereto for which such license was suspended for a period exceeding 30 days or revoked; or (C) has by act or omission conducted itself in a manner detrimental to the best interests of professional boxing.

ESTABLISHMENT OF THE OFFICE OF THE NATIONAL BOXING COMMISSIONER

SEC. 4. There is hereby established in the Department of Justice an office to be known as the "Office of the National Boxing Commissioner" (hereinafter referred to as the "Office of the Commissioner"), to be headed by a Commissioner with rank and compensation equal to that of an Assistant Attorney General. The Commissioner shall be appointed by the President by and with the advice and consent of the Senate, and shall serve at the pleasure of the President during the life of the Office of the Commissioner.

POWERS AND AUTHORITY OF THE COMMISSIONER

SEC. 5. (a) The Commissioner is authorized to establish such rules and regulations; prescribe such forms of applications, reports, contracts, entries, and other papers; issue such instructions; and perform such other acts as he may deem necessary in the administration or enforcement of the provisions of this Act.

(b) The Commissioner is authorized to assist any State or local athletic commission (1) by making available such information or other data acquired by him under this Act, and (2) by providing such legal and other assistance, as may be requested by any such commission.

(c) The Commissioner is authorized, in accordance with the civil service laws and regulations and the Classification Act of 1949, to appoint such employees of the Office of the Commissioner as he deems necessary in order to carry out the provisions of this Act.

(d) The Commissioner is authorized, with the approval of the Attorney General, to utilize the services of such employees of the Department of Justice as the Commissioner may deem necessary or desirable to enable him to effectively carry out the provisions of this Act.

(e) The Commissioner is authorized to obtain from any department, agency, or independent instrumentality of the United States with the consent of the head thereof any information he deems necessary to carry out his duties under this Act; and each such department, agency, and instrumentality is authorized to furnish such information to the Commissioner upon his request.

(f) The Commissioner is authorized, with the approval of the Attorney General, to establish offices of the Office of the Commissioner whenever, in the opinion of the Commissioner, the establishment of such offices is necessary to accomplish the purposes of this Act.

(g) The Commissioner, or any officer or employee of the Office of the Commissioner designated by the Commissioner, is authorized to hold such hearings, sit and act at such times and places, administer such oaths, and take such testimony as the Commissioner or such officer or employee may deem advisable. The Commissioner shall have such powers of subpena and compulsion of attendance of witnesses and production of documents as are conferred upon the Securities and Exchange Commission by subsection (c) of section 18 of the Act of August 26, 1935 (15 U.S.C. 79r), and the provisions of subsection (d) of such section shall be applicable to all persons summoned by subpena or otherwise to attend or testify or produce such documents as are described therein before the Commissioner or his designee; except that application to any court for aid in enforcing any such subpena may be made only by the Commissioner. Subpenas may be served by any person designated by the Commissioner.

LICENSES

SEC. 6. (a) The Commissioner may issue to any individual or corporation a license to participate as a professional boxer, manager, promoter, or matchmaker in any professional boxing contest. No individual or corporation may on or after the sixtieth day following the date of the enactment of this Act participate, directly or indirectly, as a professional boxer, manager, promoter, or matchmaker in any such contest unless such individual or corporation holds an unsuspended and unrevoked license issued by the Commissioner under this Act.

(b) A license may be issued or renewed under this Act only upon the determination by the Commissioner that the issuance or renewal thereof is in the public interest and in the interest of the lawful conduct of activities in professional boxing. Each individual or corporation which makes application for the issuance or renewal of any license under this Act may be required to furnish evidence satisfactory to the Commissioner to demonstrate, in the case of an individual, that he is not a questionable individual, and in the case of a corporation, that it is not a questionable corporation.

(c) Any individual or corporation which is denied a license under this section shall, upon his or its request filed in writing with the Commissioner within ten days following any such denial, be entitled to a hearing with respect thereto. Any such hearing shall be conducted by the Commissioner in accordance with the applicable provisions of the Administrative Procedure Act.

(d) Any license issued or renewed under this Act shall expire on the 31st day of December next following the date on which it was issued or renewed.

FILING OF CONTRACTS

SEC. 7. Any contract, including any amendment, change or modification thereof, entered into on or after the sixtieth day following the date of enactment of this Act by the holder of any license issued by the Commissioner, which relates directly or indirectly to any professional boxing contest, shall be made in writing and shall be filed with the Commissioner within five days after it has been entered into.

SUSPENSION OR REVOCATION OF LICENSES

SEC. 8. (a) The Commissioner may, without hearing, suspend for any period not exceeding thirty days any license issued under this Act whenever he determines such action to be in the public interest or in the interest of the lawful conduct of activities in professional boxing.

(b) The Commissioner may suspend for any period exceeding thirty days or revoke any license issued under this Act whenever he determines after hearing that the holder of that license—

(1) is a questionable individual;

(2) is a questionable corporation;

(3) has been disciplined by any agency or authority of any State or political subdivision thereof exercising regulatory power or control over professional boxing;

(4) has violated any provisions of this Act or any rule or regulation promulgated pursuant thereto;

(5) has willfully falsified a material fact or fraudulently concealed a material fact in any application, report, statement, or other paper filed under this act, or has induced, aided, or abetted any other individual or corporation to do so;

(6) has willfully refused to permit the Commissioner, or any authorized officer or employee of the Office of the Commissioner, to examine any books, papers, or records relating directly or indirectly to any professional boxing contest, or has induced, aided, or abetted any other individual or corporation to do so; or

(7) has willfully neglected or refused to make a report or statement, or file a contract as required under this act, or has induced, aided, or abetted any other person or corporation to do so.

(c) Hearings under subsection (b) shall be conducted in accordance with the applicable provisions of the Administrative Procedure Act.

BOXERS, MANAGERS, PROMOTERS AND MATCHMAKERS TO SUBMIT FINANCIAL REPORTS CONCERNING CONTESTS

SEC. 9. Within 7 days after the close of any professional boxing contest, each professional boxer, manager, promoter, or matchmaker licensed under this Act who participated in, rendered any service with respect to, or received or is entitled to receive any share of the purse or promotion proceeds of that contest shall file with the Commissioner, in writing, a full and complete financial report with respect to such contest prepared in such manner and form, and containing such information, as the Commissioner shall prescribe by regulation. Each such report shall include a detailed account of the distribution to any individual or corporation of any part of the purse and of the promotion proceeds resulting from such contest, including the share thereof which each professional boxer who participated in such contest, and each manager, promoter, or matchmaker who ren-

dered any service in or in connection with such contest, filing such report received or is entitled to receive.

INSPECTION OF BOOKS, PAPERS, AND RECORDS

SEC. 10. (a) Each licensee under this Act shall keep and maintain such accurate and comprehensive records of all transactions relating directly or indirectly to professional boxing contests as the Office of the Commissioner may by regulation require.

(b) All books, papers, and records of any such licensee, which relate directly or indirectly to professional boxing contests, shall be made available by such licensee for examination or inspection, at any reasonable time, to the Commissioner, or to any officer or employee of the Office of the Commissioner authorized in writing by the Commissioner to examine or inspect such books, papers, and records.

BOXING ADVISORY BOARD

SEC. 11. (a) A Boxing Advisory Board is hereby established to advise and assist the Commissioner in the performance of his duties under this Act. The Board shall consist of five members appointed, by the Commissioner with the approval of the Attorney General, to serve during the existence of the Board. Members of the Board shall be selected in such manner as to provide for the greatest practicable geographical representation on the Board.

(b) Members of the Board shall serve without compensation, but shall be reimbursed for travel, subsistence, and other expenses actually and necessarily incurred by them in the performance of duties vested in the Board.

(c) Service of an individual as a member of the Board shall not be considered as service or employment bringing such individual within the provisions of sections 281, 283, 284, 434, or 1914 of title 18 of the United States Code, or section 190 of the Revised Statutes (5 U.S.C. 99).

(d) The Board shall elect a Chairman from among its members. The Board shall meet at the call of the Chairman, or at the call of a majority of the members thereof.

(e) It shall be the duty of the Board—

(1) to advise the Commissioner from time to time concerning any or all matters relating to professional boxing;

(2) to make recommendations to the Commissioner for the improvement of professional boxing in the public interest, and for the welfare of all individuals participating therein; and

(3) to issue information relating to professional boxing in the form of publications or otherwise, for the use of agencies, commissions, or associations engaged in the regulation or supervision of professional boxing.

JUDICIAL REVIEW

SEC. 12. Any individual or corporation aggrieved by any order of the Commissioner in refusing to issue or renew a license under section 6 of this Act, or any order of the Commissioner suspending or revoking a license under section 8(b) of this Act may obtain a review of any such order by filing in the court of appeals of the United States for any judicial circuit wherein such individual resides or has his principal place of business or such corporation has its principal office, or in the United States Court of Appeals for the District of Columbia, and serving upon the Commissioner, within sixty days after the entry of such order, a written petition praying that the order of the Commissioner be modified or set aside in whole or in part. Upon receipt of any such petition, the Commissioner shall file in such court a full, true, and correct copy of the transcript of the proceedings upon which the order complained of was entered. Upon the filing of such petition and receipt of such transcript, such court shall have jurisdiction to affirm, set aside, modify, or enforce such order, in whole or in part. In any such review, the findings of fact of the Commissioner shall not be set aside if supported by substantial evidence. The order of the court affirming, modifying, or setting aside, or enforcing, in whole or in part, any such order of the Commissioner shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28 of the United States Code.

CRIMINAL PENALTIES

SEC. 13. (a) Whoever participates, directly or indirectly, as a promoter, manager, or matchmaker in any professional boxing contest without first procuring a license under this Act to act in such capacity shall be fined not more than $5,000, or imprisoned not more than five years, or both.

(b) Whoever participates as a professional boxer in any professional boxing contest without first procuring a license under this Act to act in such capacity shall be fined not more than $1,000, or imprisoned not more than one year, or both.

(c) Whoever shall wilfully falsify a material fact, or fraudulently conceal a material fact in any application, report, statement, or other paper filed under any requirement of this Act shall be fined not more than $5,000, or imprisoned not more than five years, or both.

(d) Whoever, in violation of any provision of this Act, shall willfully neglect or fail to make any report or statement or file any contract with the Commissioner shall be fined not more than $5,000, or imprisoned not more than five years, or both.

STATES NOT PROHIBITED FROM ACTING

SEC. 14. Nothing contained in this Act shall be construed to prohibit any board, commission, or other agency, created by or pursuant to the law of any State, Commonwealth, or possession of the United States, from exercising any of its powers, duties, or functions with respect to the regulation or supervision of professional boxing or professional boxing contests.

TERMINATION OF ACT

SEC. 15. (a) Except as otherwise provided in subsection (b) of this section, this Act shall terminate upon the expiration of five years from the date of its enactment.

(b) The termination of this Act shall not be construed to affect any warrant of arrest, prosecution, suit, action, proceeding, or liability, civil or criminal, brought or existing on the day immediately preceding the date of such termination. Any such warrant, prosecution, suit, action, proceeding, or liability shall be heard and determined in accordance with the provisions of this Act in the same manner and to the same extent as if it had not terminated.

AMENDMENT AND STRENGTHENING OF FEDERAL WATER POLLUTION CONTROL ACT

Mr. LONG of Louisiana. Mr. President, I introduce for appropriate reference a bill to amend the Federal Water Pollution Control Act in order to provide for flow regulations for water pollution and quality control.

More than 3 years ago it became apparent to me that the pollution factor in the Red and Arkansas Rivers was something of great concern to the people who live in the vast areas surrounding those watersheds and who depend largely for their existence and well-being on those streams.

As a result of this concern, I joined with others in urging that the Congress appropriate sufficient funds to permit the Public Health Service to undertake the necessary water quality surveys as a means of determining the source of salinity and other pollution in the Red and Arkansas Rivers and to permit this agency to work closely with the Corps of Engineers, which has as its regular business the job of undertaking flood control and navigation projects for the Nation.

The Congress, realizing the importance of this work, appropriated the needed funds and the survey is now rapidly nearing completion. It is my feeling that the good work we have done in this respect should now be followed up by providing for a low-flow survey that will permit the Surgeon General to acquire the needed information and compute present and future requirements for water releases from our federally constructed reservoirs and to use this information to maintain water quality and control pollution of the navigable waters of the Nation. This work of collecting these data and making the information known to other interested agencies will involve close coordination with other agencies of the Government and the amendment I propose is necessary in order to strengthen the existing regulations for water pollution as provided for in the Federal Water Pollution Control Act.

This amendment will make it possible for the Congress and the agencies who execute the will of the Congress to have available to them at the appropriate time the information they need to see to it that future reservoirs are constructed not only to furnish relief against impending floodwaters, but also to give due consideration to the collection and proper distribution of much-needed water of good quality.

It is my feeling that the amendment which I propose will meet with the approval of the Department of Health, Education, and Welfare and others who have a strong interest in our future plans for water economy.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1475) to amend and strengthen the Federal Water Pollution Control Act to provide for flow regulations for water pollution and quality control and other purposes, introduced by Mr. LONG of Louisiana, was received, read twice by its title, and referred to the Committee on Public Works.

RESTATEMENT OF TERMS OF GRANT COVERING THE ROCKEFELLER WILDLIFE REFUGE AND GAME PRESERVE

Mr. LONG of Louisiana. Mr. President, on behalf of myself, and my colleague, the senior Senator from Louisiana [Mr. ELLENDER], I introduce for appropriate reference, a bill to restate the terms of the grant covering the Rockefeller Wildlife Refuge and Game Preserve to permit it to comply with current Louisiana law.

On September 30, 1920, the Rockefeller Foundation donated approximately 85,000 acres of land in Cameron

and Vermilion Parishes to the State of Louisiana.

The act of donation of these lands, to be known as the Rockefeller Wildlife Refuge and Game Preserve, contained among its stipulated conditions one that provided, in the event oils or minerals were discovered upon or under the donated lands, that the revenues from such oils and minerals mined and developed should be used, first, for the purpose of paying the maintenance expenses of the refuge and game preserve. Any surplus in revenues coming from such mining development should be used by the State of Louisiana for the development and improvement of that State's public schools or public health work.

Oil and gas leases have been granted on this land and now produce royalties. Meanwhile, article IV, section 2 of the constitution of the State of Louisiana of 1942, provided for the setting aside of 10 percent of the royalties received by the State from mineral leases on State-owned lands for the construction of roads, highways, bridges, et cetera, in the parish producing the minerals. Under this provision of the State constitution, 10 percent of the royalties from the Rockefeller Wildlife Refuge should be given to the parishes of Cameron and Vermilion for construction of roads, et cetera, except for the condition in the original donation by the Rockefeller Foundation, which required any revenues other than those used for maintenance of the refuge and game preserve to be used for public schools and public health.

The bill I introduce today would authorize the State treasurer of Louisiana, who is presently unwilling to do so without the approval of the United States, to use and apply 10 percent of the Rockefeller Wildlife Refuge royalties for construction of roads and such in Cameron and Vermilion Parishes, as provided in the constitution of the State of Louisiana, and would waive any right of the United States to claim violation of the deed of donation because of such use and application of revenues.

The Rockefeller Foundation on April 6, 1944, transferred to the United States all of its rights and interest in these lands. As to the proposal to use the revenues from these lands for purposes other than originally set down in the deed of donation, the Rockefeller Foundation, in a letter of May 31, 1960, to the office of the district attorney for the parish of Cameron, stated that it would not raise on its own initiative any question about the proposed use before any court or legislative body.

Therefore, if the United States enacted this bill, waiving its rights to claim violation of the original deed of donation, then the State of Louisiana will be able to set aside 10 percent of the royalties from mineral production on Rockefeller Wildlife Refuge and Game Preserve, to be used by the parishes of Cameron and Vermilion for their own road, highway, bridge, and so forth, construction.

There can be no doubt about it, if the grant had been made subsequent to the passage of the constitutional amendment that made 10 percent of the royalties go to a road fund, the grant would have been worded to include this. The bill I have introduced merely removes the technicality that prevents the State treasurer from complying with the State constitution with respect to fund raising from this land.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1476) to restate terms of the grant covering the Rockefeller Wildlife Refuge and Game Preserve to permit it to comply with current Louisiana law, introduced by Mr. LONG of Louisiana (for himself and Mr. ELLENDER), was received, read twice by its title, and referred to the Commiittee on Interstate and Foreign Commerce.

HOUSING ACT OF 1961

Mr. SPARKMAN. Mr. President, I introduce, by request, a bill entitled "Housing Act of 1961." As you know, on March 9, the President sent his housing message to the Congress. The bill I now introduce would implement, for the most part, the President's housing program as set forth in that message.

In general, I was impressed with the President's message because it proposed a program of action, not only in the field of housing, but also in the equally challenging field of community development. His message proposed programs which would redeem the pledge, made by the Congress in the Housing Act of 1949, of a decent home and suitable living environment for every American family.

According to the President's message, his policy for housing and community development is to be directed toward the following three basic national objectives:

First. The renewal of our cities and the assurance of sound growth in rapidly expanding metropolitan areas.

Second. The provision of decent housing for all our people.

Third. The encouragement of a prosperous and efficient construction industry as an essential component of general economic prosperity and growth.

These are not new objectives, but I was pleased to hear the President speak in support of them.

Indeed, it is refreshing to all of us, who over the years have led the fight for a better housed America, to know that we have a strong ally in the Executive.

The bill I am now introducing would implement the President's housing message and would put a new housing program in motion.

Of course, I have not had time, since the draft bill reached me, to study all of its technical aspects; and certainly, like many others, I wish to consider very carefully all of the provisions. Arrangements have been made for hearings to start next week—on April 4—on this bill. It is my hope that the Senate will have concluded its consideration of, and will have acted upon, a 1961 omnibus housing bill by the first of May. Such a schedule will naturally be a difficult one, for, besides the President's proposals, 17 other housing bills are now pending before the subcommittee, and they set forth new ideas and propose ways of amending existing law in order better to serve the housing needs of the people. Certainly we shall seek to give very careful consideration also to these pending measures.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1478) to assist in the provision of housing for moderate and low income families, to promote orderly urban development, to extend and amend laws relating to housing, urban renewal, and community facilities, and for other purposes, introduced by Mr. SPARKMAN (by request), was received, read twice by its title, and referred to the Committee on Banking and Currency.

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed at the end of my remarks a brief summary of the bill which I am now introducing.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. SPARKMAN. Mr. President, I wish to give notice that at 10 a.m., on Tuesday, April 4, the Subcommittee on Housing of the Banking and Currency Committee will begin hearings on this bill and other bills pending before the subcommittee—that includes both the bills I have listed as well as other bills which may be introduced between now and then—in room 5302, New Senate Office Building.

All persons who desire to appear and testify at the hearings are requested to notify, as soon as possible, Mr. Carl A. S. Coan, staff director, Subcommittee on Housing, Senate Banking and Currency Committee, Capitol 4-3121, extension 6640.

Mr. President, I ask unanimous consent to have printed in the RECORD a list of the bills, their principal sponsors, and a short description of each bill now pending before the Subcommittee on Housing.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

EXHIBIT 1

BRIEF SUMMARY OF ADMINISTRATION HOUSING BILL OF 1961

I. HOUSING FOR MODERATE INCOME FAMILIES

(a) Broadened FHA section 221 program: 40-year, no-downpayment mortgages for housing for low and moderate income and displaced families. Program for displaced families continues on permanent basis. Program for others would expire July 1, 1963. Insurance claims could be paid in cash. Program covers sales and rental housing. Mortgage ceiling $9,000 for single-family home, but up to $15,000 in high cost areas.

(b) Low-interest FHA-insured loans on rental and cooperative housing: Housing for low and moderate income and displaced families. Nonprofit organizations, cooperatives, local public agencies, and limited-dividend corporations eligible borrowers. Low-interest rates discretionary. Authority to waive insurance premium. Insurance claims could be paid in cash. FNMA special assistance for all loans.

II. HOME IMPROVEMENT AND REHABILITATION

(a) FHA insurance of a loan, up to $10,000 maximum (in addition to any mortgage on the property), for home improvement and rehabilitation. Maturities up to 25 years, interest rate up to 6 percent. Insurance

claims could be paid in cash. FNMA special assistance authorized if housing is in urban renewal areas.

III. EXPERIMENTAL HOUSING AND APARTMENT UNIT MORTGAGE INSURANCE

(a) New program of FHA-insured mortgages for testing housing using new techniques in building, design, materials, or construction, which otherwise may not qualify under normal mortgage insurance criteria. Insurance claims could be paid in cash.

(b) FHA authorized to insure mortgages on individual units in apartments (condominiums).

IV. NATIONAL HOUSING ACT AUTHORIZATIONS

(a) FHA authority: General mortgage insurance authority extended 4 years, and title I loan insurance authority extended 2 years.

(b) FNMA authority: Authority for special assistance functions increased by $750 million.

V. HOUSING FOR ELDERLY AND LOW INCOME

1. Housing for the elderly

(a) Direct loans: Authorization for appropriations increased by $50 million. Public bodies made eligible for loans in addition to private nonprofit sponsors under present law. Separate $5 million sublimitation on "related facilities" removed.

2. Public housing

(a) Additional payment for elderly: Up to $120 per year additional Federal payment for units occupied by elderly families where needed to prevent project default.

(b) Increased cost limits on units for elderly: Per room limit increased by $500 because of higher per room cost of small units.

(c) Dwelling unit authorization: Authority for approximately 100,000 additional units (up to the limit originally authorized in the Housing Act of 1949).

(d) Occupancy: Local responsibility for establishment of preferences for occupants. Authorization under special circumstances for an overincome family to remain, at an unsubsidized rent, until suitable housing is available.

(e) Demonstration programs: PHA authorized to make grants to local bodies to develop and demonstrate new or improved means for providing housing for low income families; $10 million limit on appropriations.

VI. URBAN RENEWAL AND PLANNING

(a) Urban renewal grant authorization: Increased by $2.5 billion.

(b) Federal relocation payments: Increased amounts to displaced businesses if increase over present amount is shared by locality as part of project cost.

(c) Urban renewal property for low and moderate income rental housing: Urban renewal property could be sold to a limited-dividend or nonprofit corporation, cooperative, or public body at fair value for its use in providing new or rehabilitated rental or cooperative housing for occupancy by families of low or moderate income.

(d) Rehabilitation demonstrations: Local public agency could demonstrate rehabilitation techniques by acquiring properties in urban renewal area, improving them as part of project cost, and reselling them to private owners.

(e) Nonresidential exception: Increased from 20 percent to 30 percent.

(f) Urban planning grants: Federal share increased from one-half to two-thirds, and authorization for appropriation increased by $80 million.

VII. COMMUNITY FACILITIES

Authorization for public facility loans would be increased by $50 million.

State limitation on advances for public works planning increased from 10 percent to 12½ percent. Areawide projects, the construction of which might require a number of years, made eligible for these advances.

VIII. FARM HOUSING

The farm housing provisions of the Housing Act of 1949 which are administered by the Farmers Home Administration of the Department of Agriculture would be extended for 5 years and a requirement for mortgage security would be relaxed.

IX. MISCELLANEOUS

Miscellaneous changes made in various existing laws for clarification or to eliminate administrative difficulties.

EXHIBIT 2

LIST OF BILLS BY PRINCIPAL SPONSOR AND DESCRIPTION PENDING BEFORE THE SENATE SUBCOMMITTEE ON HOUSING

S. 517, Senator JAVITS; a bill to reduce FHA mortgage insurance premium and to increase the State limitation and relocation payments under the urban renewal program.

S. 518, Senator JAVITS; a bill to increase the State limitation for Federal loans under the college housing program.

S. 582, Senator SMATHERS; a bill to establish an International Home Loan Bank for the purpose of fostering savings and loan institutions in underdeveloped countries; and to permit Federal savings and loan associations to invest a portion of their funds in the International Home Loan Bank and in savings institutions located outside the United States.

S. 605, Senator BUSH; a bill to increase the urban renewal grant authority through appropriations acts up to $3.1 billion over 6 years; to increase relocation payments; to enable local public agencies to undertake demonstration pilot projects for rehabilitation; to develop a system of priorities for grants to States which assist communities; to remove the predominantly residential requirement, and to make other changes in the basic urban renewal legislation.

S. 608, Senator CASE of New Jersey; a bill to permit the use of urban renewal funds to defray part of the additional construction cost required by a change in design of a Federal-aid highway passing through an urban renewal area.

S. 726, Senator KEFAUVER; a bill to expand the public facility loan program of the Community Facilities Administration of the Housing and Home Finance Agency.

S. 766, Senator JAVITS; a bill to create a Federal Limited Profit Mortgage Corporation to assist in the provision of housing for moderate-income families and for elderly persons.

S. 846, Senator ERVIN; a bill to permit Federal savings and loan associations to invest in or lend to business development credit corporations up to a maximum of one-half of 1 percent of outstanding loans or $250,000, whichever is the lesser.

S. 858, Senator WILLIAMS of New Jersey; a bill to authorize the HHFA to assist States and their political subdivisions in preserving open-space land in and around urban areas.

S. 1127, Senator WILLIAMS of New Jersey; a bill to amend title V of the Housing Act of 1949 to authorize the Secretary of Agriculture to insure loans and to make direct Federal loans for the provision of housing for domestic farm labor.

S. 1226, Senator BUSH; a bill to increase the college housing loan authorization through appropriations acts up to $250 million a year for each of the next 8 years, and to increase the State limitation.

S. 1245, Senator SPARKMAN; a bill to increase the college housing loan authorization by $100 million, plus $250 million a year for each of the next 5 years, and to increase the State limitation.

S. 1249, Senator HOLLAND; a bill to amend title V of the Housing Act of 1949 to authorize the Secretary of Agriculture to insure loans and to make direct Federal loans for the provision of housing for domestic farm labor.

S. 1324, Senator KEFAUVER; a bill to authorize the donation of a certain tract of land in connection with an urban renewal project undertaken in the city of Knoxville, Tenn., under title I of the Housing Act of 1949.

S. 1452, Senator SPARKMAN; a bill to provide specific authority to Federal savings and loan associations to make loans up to 5 percent of assets for the financing of accommodations for occupancy by the aging.

S. 1453, Senator SPARKMAN; a bill to provide specific authority to Federal savings and loan associations to make loans up to 5 percent of assets for the purchase of certificates of beneficial interest issued by urban renewal trusts.

S. 1454, Senator SPARKMAN; a bill to provide specific authority to Federal savings and loan associations to make nonamortized loans up to 5 percent of assets to facilitate trade-in housing.

EXTENSION OF VETERANS' ADMINISTRATION DIRECT HOME LOAN PROGRAM

Mr. SPARKMAN. Mr. President, I introduce, on behalf of myself and the senior Senator from Texas [Mr. YARBOROUGH] a bill which would extend the VA direct home loan program to July 25, 1967, and which would gradually phase this program out.

I am joining with my good friend from Texas, Senator YARBOROUGH, in introducing another bill which will likewise extend the VA-guaranteed loan program for the same period, and likewise will gradually phase that program out.

The VA direct home loan program was established in 1950 by Public Law 475, 71st Congress, after the Congress became aware that many veterans desiring to purchase or build homes in remote or outlying areas could not obtain guaranteed loans or, for that matter, any mortgage financing on reasonable terms with which to purchase or build sorely needed homes for themselves. Originally the program was scheduled to expire in approximately 1 year after enactment, but the Congress from time to time has extended the program so that the present termination date would be July 25, 1962, for World War II veterans, and January 31, 1965, for veterans of the Korean conflict.

Ever since the direct loan program was authorized in 1950 there has always been a waiting list of veterans needing a direct loan. The reason for the waiting list is due to the limited funds authorized for the program and the large number of veterans living in the rural areas where private financing is not available.

For example, on April 1, 1958, there were 13,084 veterans on the waiting list. When the funds were received under Public Law 85–364 the Veterans' Administration made the funds available to those on the list and started a new list for future loans.

The waiting list increased month by month to a point where on October 1, 1959, there were 59,000 veterans on the waiting list for a direct loan.

During the months of October and November 1959, the Veterans' Administration regional offices sent out letters

to the veterans on the waiting list, instructing them that, if they did not complete the forms enclosed and make application to the voluntary home mortgage credit program for a loan and notify the Veterans' Administration within 30 days after they had made the application to the VHMCP, their names would be removed from the Veterans' Administration direct loan waiting list. This procedure did not get loans for the veterans through the voluntary home mortgage credit program because this program has failed to provide new or additional funds for veteran home buyers. Many veterans, realizing that the voluntary home mortgage credit program had not helped get loans in the past, did not file the application as instructed by the Veterans' Administration; they were therefore taken off the direct loan waiting list. Many of the veterans removed by this procedure still want and need a direct loan.

This procedure was followed throughout the country by all regional offices and 23,238 veterans were removed from the direct loan waiting list during the 2-month period.

Even with this procedure to reduce the waiting list, the Veterans' Administration had 33,762 veterans still on the waiting list on December 1, 1959.

Many thousands of our veterans living in the rural areas, small towns, and cities need a direct loan today, as there are no private loans available. Even though many thousands are in this condition, only 29,454 have bothered to get their name on the waiting list as of March 1, 1961. Many of the 29,454 on the waiting list know they will more than likely not get a loan, for there is not enough money to go around. If there were ample funds available for the direct loan program there is no doubt the number of veterans applying would be many, many times the number on the list today.

Mr. President, I ask unanimous consent to insert at the end of my remarks a chart showing the number of veterans on the waiting list for direct loans as of March 1, 1961.

(See exhibit 1.)

Mr. SPARKMAN. Mr. President, a careful review of the Veterans' Administration guaranteed and direct loan programs as of January 1, 1961, shows that 5,751,596 home loans have been guaranteed or made under the 2 programs. These approximately 6 million loans amounted to $50.6 billion, with an exposure or liability of approximately $30 billion. Yet the programs have made money for the taxpayers and U.S. Treasury. After repayment to the U.S. Treasury for moneys used, plus interest and deducting all losses, the Veterans' Administration guaranteed and direct loan programs have a surplus, as of January 1, 1961, in excess of $59 million.

This surplus has been created on loans that have a reasonable and realistic interest rate varying from 4 percent to 5¼ percent. Losses and interest paid the U.S. Treasury have been deducted to arrive at the profit figure of over $59 million. The interest payments to the Treasury are in excess of $120 million, as of January 1, 1961.

Each time the expiration date of the direct home loan program has come near, there has always been a surge of applications for such loans, and each time the Congress has not wanted to shut off worthy veterans who wish to use the program to obtain housing for themselves and their families.

We have now moved some 20 years away from the start of World War II, and one might say that we are moving into the generation of the children of World War II veterans. It, therefore, seems logical to phase out this program gradually. By doing so, we now give notice that the program will come to an end, and all those who wish to take advantage of the program may make their plans to do so.

My bill would extend the entitlement of World War II veterans for direct loans on a formula basis. Under the formula, a World War II veteran would have 10 years from the last period of active duty during World War II, plus a period equal to 1 year for each 4 months of active duty, in which to exercise his right under the direct loan program.

The same formula would apply to veterans of the Korean conflict.

In order that sufficient funds would be available for loans under the program, the bill would provide for a loan authorization of $1.1 billion, of which $100 million would become available upon enactment in order to help care for the existing backlog of direct loan applications. The remainder of the authorization would become available in this manner: $400 million after June 30, 1961; $200 million after June 30, 1962; $150 million after June 30, 1963; $150 million after June 30, 1964; $100 million after June 30, 1965; and $100 million after June 30, 1966.

Mr. President, I believe that the extension of the entitlement for World War II veterans to obtain a direct loan is sensible, and I believe the moneys authorized over the next few years to phase out the program is the best and most comprehensive way to accomplish the aims desired.

Source: Veterans' Administration.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1481) to extend and to provide additional funds for the veterans' direct home loan program, introduced by Mr. SPARKMAN (for himself and Mr. YARBOROUGH), was received, read twice by its title, and referred to the Committee on Banking and Currency.

EXTENSION OF WORLD WAR II AND KOREAN WAR HOME LOAN GUARANTEE PROGRAM

Mr. YARBOROUGH. Mr. President, for myself and on behalf of the distinguished Senator from Alabama [Mr. SPARKMAN], I introduce for appropriate reference a bill to extend the World War II and Korean war home-loan guarantee program.

The Senator from Alabama, who cosponsored the bill with me, has exercised great leadership in the Senate and in Congress not only on behalf of housing, but on behalf of veterans' rights. In fact, he was a Member of the House when the first GI bill of World War II

was enacted, and which made a notable contribution to veterans' legislation.

The proposed additional time during which veterans of World War II and the Korean war would be eligible to obtain a guaranteed loan under the bill would be determined as follows:

World War II veterans would have 10 years from date of discharge, plus an additional year for each 3 months of active duty, but in no case is a loan to be provided after July 25, 1967, and in no event will eligibility expire prior to July 25, 1962. Veterans with service-connected disabilities would be eligible without regard to length of service until July 25, 1967.

Korean conflict veterans would have 10 years from date of discharge plus an additional year for each 3 months of active duty; but in no case is a loan to be provided after January 31, 1975; and in no event will eligibility expire prior to February 1, 1965. Veterans with Korean conflict service-connected disabilities would be eligible, without regard to length of service, until January 31, 1975.

Another bill has been introduced today by the Senator from Alabama [Mr. SPARKMAN], for himself and me, for the purpose of making a similar extension of the veterans direct home-loan program. Although the guarantee extension will be before the Subcommittee on Veterans' Affairs of the Committee on Labor and Public Welfare, while the direct loan extension will be studied by Senator SPARKMAN'S Subcommittee on Housing of the Committee on Banking and Currency, I am hopeful that action of the two subcommittees can occur simultaneously, so that these bills can come before the Senate for consideration at the same time.

Mr. President, it is common knowledge in the Senate and in the country that even though the World War II home loan guarantee program has run for 15 years, many of the 9 million veterans eligible under this program have been prevented from utilizing their guarantee rights by the high interest rate situation that has existed during a major part of this period. Because of the high interest rates, GI mortgage moneys have been unavailable for extended periods of time. Since we now have real hope and promise of lower, more reasonable interest rates in the money market, it would be most wise on the part of the Congress to extend the home loan program, thereby giving many World War II veterans an opportunity to utilize this home purchase aid.

Aside from the interest rate situations, there are hundreds of thousands of other veterans who have met their financing needs through conventional or FHA loans, but who could now benefit from GI financing to acquire larger and better homes as their families increase in size or as their income levels improve.

There are, of course, other factors to which the Congress should look in evaluating the merit of extending this program.

As Senators know, we have weak spots in the economy in many areas. Housing starts for the Nation were down sharply in 1960. When the housing market is active, many segments of the economy are stimulated—lumber, masonry, steel, plumbing, electrical appliances, furniture, and a host of other related products and industries. Jobs and business expansion opportunities follow suit.

There is every reason to believe that economic stimulation will result from this extension. We recall that the economy was benefited by the extension of this program in April 1958, at a time—in a recessionary period—when the economy needed assistance toward recovery.

Mr. President, all of us know of the outstanding performance of our veterans in meeting their obligations to repay home loans. Only about 1 percent of the 5½ million home loans have resulted in claims. That is a percentage of less than one-tenth of 1 percent.

The claims paid have amounted to only 8 cents on every $100 of the original principal amount of the loans guaranteed. The loss that the Government has sustained has been infinitesimal. About 1½ million of these loans have been fully repaid.

After weighing these factors, one against the other, one is compelled to conclude that this valuable program must be extended. By extending this worthwhile benefit, our veterans will continue to receive, at an insignificant cost to the taxpayer and at great benefit to our national economy, recognition for their unstinting service.

By the same token, we furnish an important support to the homebuilding industry, thus adding to the vitality and the strength of this program.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1483) to extend the veterans' guaranteed home loan program, introduced by Mr. YARBOROUGH (for himself and Mr. SPARKMAN), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

INDIGENT DEFENDANTS IN CRIMINAL CASES—ADDITIONAL COSPONSOR OF BILL

Mr. KEFAUVER. Mr. President, I ask unanimous consent that the name of the senior Senator from North Carolina [Mr. ERVIN] be added as a cosponsor of S. 655 which I introduced on January 30 of this year in behalf of the senior Senator from New York [Mr. JAVITS] and myself. S. 655 was referred to the Committee on the Judiciary of which I am a member.

This bill provides for the representation of indigent defendants in criminal cases in the district courts of the United States. It was introduced at the request of the Department of Justice and was passed in the Senate during the 86th Congress.

Indigent people often lack the funds to hire professional services for pleading their cases and the burden falls on the small number of criminal attorneys volunteering their legal services. S. 655 would establish a regular Office of Public Defender to be compensated by the district courts whose duty it would be to undertake the defense of indigent defendants.

I welcome Senator ERVIN as a cosponsor of this important legislation and express the hope that the bill can be enacted without further delay.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRINTING OF MINORITY VIEWS ON SENATE REPORT NO. 128

Mr. McNAMARA. Mr. President, yesterday, in filing the report of the Senate Subcommittee on Problems of the Aged and Aging, as approved by the Committee on Labor and Public Welfare, I inadvertently omitted to request unanimous consent for formal inclusion of the minority views.

Therefore, I now ask unanimous consent that the minority views of Senator DIRKSEN, a distinguished member of the Subcommittee on Problems of the Aged and Aging, be included as part of the report of the subcommittee.

The PRESIDING OFFICER. Without objection, it is so ordered.

APPOINTMENT BY THE VICE PRESIDENT—SENATE OFFICE BUILDING COMMISSION

The PRESIDING OFFICER. On behalf of the Vice President, the Chair appoints Senator THRUSTON MORTON, of Kentucky, to be a member of the Senate Office Building Commission, to fill the vacancy created by the resignation of Senator JOHN SHERMAN COOPER, of Kentucky.

NOTICE OF HEARING ON NOMINATION OF DAVID LOWELL LADD TO BE COMMISSIONER OF PATENTS

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Wednesday, April 5, 1961, at 10:30 a.m., in room 2228, New Senate Office Building, on the nomination of David Lowell Ladd, of Illinois, to be Commissioner of Patents.

At the indicated time and place persons interested in the hearing may make such representations as may be pertinent.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr PASTORE:

Address entitled "Liberalism's Responsibility," delivered by Senator PELL before the National Civil Liberties Clearing House, at Washington, D.C., on March 23, 1961.

INCREASED NONDEFENSE SPENDING PROPOSALS BY PRESIDENT KENNEDY

Mr. MILLER. Mr. President, during the past few days, the general taxpaying public has been subjected to an unprecedented amount of conflicting and confusing information about the budget. Polls show that most of the voters are

favorably impressed by the President's activities, but interviews reveal that hardly anyone knows what these activities are going to cost. There is strong suspicion that the polls would show entirely different results if the inflationary or tax increase results were known by those being interviewed.

President Kennedy has attempted to shift the blame for a deficit budget on former President Eisenhower, saying his estimate of receipts was too rosy. Republicans are charging that there are unrealistically low estimates in the President's budget, and that actual costs will be far greater than the estimates. Running through these arguments is a failure to distinguish between authorizations for spending and actual appropriation askings, coupled with claims by certain Democratic spokesmen that some programs are "self-financing," although the time for the tax increases needed to sustain them is postponed.

I have attempted to bring some order out of this confusion by preparing a statement of the increased nondefense spending proposals made by President Kennedy. It shows that deficit spending of at least $608 million for the fiscal year 1961 and $2.422 billion for the fiscal year 1962 can be laid at the President's own doorstep, because of his recommendations for increased spending, without taking into account the national defense program increases. Most taxpayers, I am sure, would go along with necessary increases in the national-defense budget, even at the cost of more taxes. However, I seriously doubt that they would approve of more tax increases—or inflation—for the President's increased nondefense spending programs, all at the same time.

When we have another round of inflation and tax increases, or both, I want the people to know that the resultant sacrifice they will have to make will not be made for the sake of national defense. I want them to know precisely that their sacrifice will be made for nondefense spending at a time when we are beginning to pull out of what the chairman of the President's own Council of Economic Advisers has termed "a very mild recession."

I ask unanimous consent that this analysis be printed at this point in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

Increases over Eisenhower spending program for fiscal years 1961 and 1962 by President Kennedy [1]—Continued

DETAILED BREAKDOWN—continued

[In millions of dollars]

	1961	1962
Department of State (mainly for Africa)		6
Department of the Treasury (mainly Internal Revenue and Coast Guard)		25
Atomic Energy Commission		−10
Federal Aviation Agency		10
National Aeronautics and Space Administration		85
National Science Foundation		29
Railroad employees temporary unemployment compensation	24	
Tennessee Valley Authority		2
U.S. Information Agency		8
Veterans' Administration:		
Veterans disability compensation rate increase		65
Direct housing loans		30
Total, Veterans' Administration		95
The judiciary (judgeship bill)		4
Chilean reconstruction	25	50
General Services Administration	20	2
Housing and Home Finance Agency:		
College housing loans	11	45
Low-cost housing		65
Urban renewal		54
Public facility loans		30
Housing for the elderly		10
Other		10
Total, Housing and Home Finance Agency [3]	11	214
Net additional nondefense spending per Kennedy Mar. 24 message	1,108	2,332
Social security increases not supported by current tax revenue		1,000
Total increased nondefense spending		3,332
Reduction in Eisenhower estimated revenues per President Kennedy's estimate	−500	−900
Net deficit due to nondefense spending under President Kennedy's program	608	2,422

[1] As of Mar. 29, 1961.

[2] Under the table of "Changes in the fiscal 1962 budget" is an item entitled "OASDI liberalization and medical care (budget effect)," showing a gain over the Eisenhower budget of $52,000,000. Note that this item is admittedly only one of budget effect. In point of fact, it covers 2 Kennedy programs, a 5-point social security liberalization which would provide an outlay of over $1,000,000,000 in the first year and the Kennedy program of medical care for the aged under the social security system, the estimated first year cost of which would be an additional $1,000,000,000. In the case of the former, there would be additional spending in the first year of about $1,000,000,000 not offset by taxes, because these would not be collected until the year 1963. Such spending, however, would be from trust fund operations requiring borrowing from the U.S. Treasury and as such, would not appear in the general expenditure budget.

[3] If President Kennedy further accelerates the activities of the Housing and Home Finance Agency, the estimate of $214,000,000 additional expenditures for fiscal 1962 will increase accordingly.

LAOS

Mr. BRIDGES. Mr. President, the situation in Laos is a very difficult one. The Senator from New Hampshire and generally the members of his party here have expressed great determination to back the President in his efforts to bring about a peaceful solution of the Laos problem, and we have urged that our country work closely with the other powers in the so-called SEATO Conference and that any move there be a cooperative move with all countries cooperating in whatever steps are taken.

I have taken increasing note of the fact that there persist rumors that the

Russians, in order to be willing to agree, after a cease-fire, on a free neutral government for Laos, are going to insist that certain members of the ruling cabinet of Laos—if we succeed in bringing about a free neutral government there—be Communists. I believe we have followed a rather tragic pattern in that respect in the past. We have observed the experience in that connection in various European countries, including Czechoslovakia, where there was a coalition government which was supposed to be completely fair. But the Communists succeeded in having Communists appointed as the Minister of Interior and as some of the other very important ministers. They then proceeded to take over the Government. We saw an attempt at a similar situation in China. The intention was to establish a neutralist government there. We have seen similar developments in other countries; these are good illustrations.

In these various situations, eventually—whether in months or in a year or two—the Communists, by boring from within, exercised their power and control, with the result that the other elements of those governments were swallowed up, and eventually the Communists took over those countries.

That is one of the fears I have in connection with the situation in Laos. I believe it concerns the Senate, the House of Representatives, and every American citizen. I very sincerely hope that the U.S. position, as it develops, will be that we will follow carefully that point and will see to it that avowed Communists are not taken into any free neutral government in Laos, if a neutralist administration is formed.

I hope the President and our administration will make that inescapably clear in their dealings in connection with this very difficult situation. I say this as one who backs up the President and our country's position in standing firm in regard to Laos. Knowing that Laos is the key to southeast Asia, I am wholeheartedly for a strong, firm stand. I only wish to caution the country at this time of the possibility of something happening there that has happened in other countries, and to forewarn our country and the American people that such a situation would end in disaster.

Mr. MANSFIELD. Mr. President, I have listened with interest to what the distinguished senior Senator from New Hampshire has just said. I think it may be well to recall for the record that, several years ago, there was a so-called coalition government in Laos, at which time Souvanna Phouma, then Premier but now in exile, took into the Government his half brother, Prince Souvanna Souphanouvong, who was and is the head of the Pathet Lao, a group closely allied with the Communists in North Vietnam, and very possibly allied with the Communists in China.

That particular coalition did not work out too well, with the result that a split occurred in time; but I think it should be stated again for the record, that the Pathet Lao, under Prince Souphanouvong, did not take over the government at that time.

I am certain that the questions raised by the distinguished senior Senator from New Hampshire, the senior Republican in this body, have been given consideration by this administration, as consideration has been given to all other facets of the peculiarly difficult, delicate, and dangerous situation which exists in Laos.

So I think I am on safe ground in assuring the Senator from New Hampshire that what he has had to say, and what others have had to say, and all the facets of this particular problem, are being considered by this administration.

Mr. BRIDGES. Mr. President, I wish to thank the distinguished majority leader for his statement. I am very happy that the administration is alerted on the problem. I raise it only as a matter of precaution and caution. I am glad to have his assurances.

Mr. MANSFIELD. I understand and appreciate what the Senator has said.

DEVELOPING THE PRESTIGE OF THE HEARING EXAMINER

Mr. HART. Mr. President, a most interesting article appears in the February issue of the American Bar Association Journal concerning the role of hearing examiners in the Federal administrative agencies.

The author, a very distinguished member of the bar, Charles S. Rhyne, has written a very interesting article on the subject. It would seem constructive to me that Members of this body should have the benefit of the article, and I ask unanimous consent that it appear in the RECORD as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEVELOPING THE PRESTIGE OF THE HEARING EXAMINER

(By Charles S. Rhyne)

One of the matters in which the incoming national administration has expressed special interest, in advance of taking office, is effectuating improvement of the process of the Federal administrative agencies.[1]

During the past 6 years, numerous important groups, including the House Legislative Oversight Subcommittee, the Senate Subcommittee on Administrative Practice and Procedure, the President's Conference on Administrative Procedure, and the Hoover Commission, have been engaged in studies of administrative proceedings in the Federal regulatory agencies, the measures needed to eliminate abuses, and the means to make the proceedings more effective.

Out of the many problems covered in these studies, there have developed, as might be expected, differing points of view and proposals and some controversy in particular areas. Singularly, however, there has been unanimous agreement that the hearing examiner, who serves as trial judge and applies agency policy for the regulatory agency, plays a key role in the administrative process.

[1] At a press conference Nov. 10, 1960, the President-elect, Senator John F. Kennedy, announced that he had asked former dean Landis, of the Harvard Law School, for a study and report, in December, on the Federal administrative agencies with a view to maximizing the effective dispatch of their business. New York Times, Nov. 11, 1960; p. 20.

Representative OREN HARRIS, chairman of the House Legislative Oversight Subcommittee, recently stated:

"In the course of these studies and hearings it has become apparent, and practically all witnesses have agreed that the hearing examiner is of central and crucial importance to the success and integrity of agency adjudication. * * * Our studies in fact demonstrated that the role and effectiveness of the hearing examiner cut across and had an impact upon a large proportion of the basic problems affecting the regulatory agencies." [2]

Along similar lines, Judge E. Barrett Prettyman, of the U.S. Court of Appeals for the District of Columbia Circuit, in his excellent and important recent book on "Trial by Agency," noted that the Attorney General's Committee on Administrative Procedure of 1941 had "rightly expressed the view that the heart of formal administrative adjudication is the recognition of the importance of the hearing officer—that is, by the salary paid, the independence encouraged and accorded, and the importance attached to his decisions."

Judge Prettyman further stated:

"The President's Conference made a thorough examination of the hearing officer problem. As so many inquirers have concluded, this is the key to adjudication, just as the competence of the trial judge is the key to judicial performance." [3]

IMPORTANCE OF HEARING EXAMINERS

These conclusions must be obvious to anyone who is familiar with administrative proceedings in the modern Federal regulatory agencies. In those proceedings, which have a vital impact upon major industries, upon individual and property rights and upon our entire economy, the hearing examiners sit as trial judges and expounders of agency policies in cases involving complex and technical issues of fact and law, which are of a magnitude, complexity, and importance equal to that involved in the highest level of proceedings coming before the Federal district courts.

One of the urgent problems, therefore, is how to make these proceedings, which admittedly are protracted, more expeditious and more manageable. The role of the hearing examiner is central, since the important key to the solution of this problem lies in the fairness and intelligence with which the hearing is conducted and the control exerted over the size and quality of the hearing record. Here there is no substitute for the leadership, guidance, and firm control which may be provided by a fair and competent hearing examiner who, in addition, has the capacity to make good use of techniques designed to eliminate unnecessary delays and to shorten proceedings—such as the prehearing conference and proceedings in the nature of discovery.

Another major factor in making the complicated contested cases manageable is the presence of a comprehensive and helpful initial decision based objectively on the record and written by the hearing examiner who presided over the hearing and who has lived with the case from the beginning. The writing of such a decision calls for the talents expected of a good appellate judge. Any lawyer who is familiar with the work of our major regulatory agencies knows that it would be a physical impossibility for the members of the regulatory boards or commissions to make a personal study of the entire voluminous records in the cases which come before them for final decision. But their important and difficult task of making

[2] Statement submitted on June 24, 1960, to the Special Subcommittee of the House Post Office and Civil Service Committee on Supergrades in Federal Government.

[3] "Trial by Agency," pp. 45–46, 49.

decisions which are both intelligent and durable becomes far more manageable if the boards and commissions have the benefit of a clear and comprehensive initial decision by the presiding examiner. This decisional role of the hearing examiner is of particular importance to the private practitioner who has a stake in maintaining and improving the effectiveness of a system in which the final decision issued by the commission is based upon the record, including the briefs of the parties and the initial decision of the presiding examiner. The importance of this point will be readily appreciated by the bar, which fought and won, with the adoption of the Administrative Procedure Act, a long battle to get away from the institutional decision system. Under that system the hearing examiner was frequently bypassed, and the agency determination was prepared by anonymous staff subordinates who were unseen by the litigants and to whom the parties had no opportunity to address their arguments. That system obviously was not calculated to create in the parties a feeling of confidence that they had been accorded a fair hearing.

NEED FOR MORE COMPENSATION

It must be obvious to all who are interested in improving and accelerating the administrative hearing process that effective performance requires hearing examiners of topnotch caliber. The bar has a special interest in urging the establishment of conditions that will enhance the prestige of the hearing examiner and thereby assist the Federal Government to recruit, attract, and retain as hearing examiners lawyers of the highest degree of competence. Prompt legislative authorization for increasing the compensation of hearing examiners to a level commensurate with their role and responsibilities would make a major and long overdue contribution to this end. Representative OREN HARRIS has recently strongly underlined the importance of such a step, in the following statement:

"Because of the central role played by hearing examiners in the administration of the statutes within the jurisdiction of the House Committee on Interstate and Foreign Commerce, that committee has a serious and substantial interest in measures designed to create the conditions which will make it possible to attract and retain the highest possible caliber of men as hearing examiners.

It is our belief that an increase in the compensation provided for hearing examiners in the major regulatory agencies, to a level commensurate with their complex and important duties and responsibilities, will constitute a major step forward toward the objectives outlined above.[4]

Unfortunately, in spite of the good intentions of Congress when it enacted section 11 of the Administrative Procedure Act, the compensation of hearing examiners in the Federal Government has fallen behind that provided for other top agency personnel and a serious imbalance has been created. In recent years supergrade positions at levels of GS–16, GS–17, and GS–18 have been allocated to top legal and technical staff in the regulatory agencies. However, supergrades have never been allocated to hearing examiner positions. Accordingly the maximum hearing examiner grade today is GS–15, with compensation at $18,730 in the beginning step. The imbalance in the compensation level provided for hearing examiners is strikingly illustrated when it is noted that hearing commissioners of the U.S. Court of Claims, whose functions are generally comparable, currently receive a salary of $19,000 per year, by act of Congress.

[4] Statement to Subcommittee on Supergrades in the Federal Government, supra.

Because of this imbalance, the Chairman of the Civil Service Commission addressed a historic letter on February 25, 1960, to the chairmen of the Senate and House Judiciary and Civil Service Committees calling the attention of Congress to the serious problem resulting from the growing inadequacy of compensation for hearing examiners and recommending that the entire matter be reviewed by Congress. The American Bar Association, of course, has been working vigorously toward this end, commencing with the adoption of a resolution by the House of Delegates in 1957 urging the enactment of legislation to compensate hearing examiners at the GS–18 supergrade level, and during the past 3 years a number of different bills have been introduced in Congress proposing compensation for hearing examiners at this level. Unfortunately, none of these bills have yet been brought to hearing.

The most recent development in this area occurred last June, when the Subcommittee on Supergrades of the House Post Office and Civil Service Committee, under the chairmanship of Representative JAMES C. DAVIS, announced the scheduling of hearings for the latter part of that month to consider, among other problems, the matter of supergrades for hearing examiners. Due to the press of other urgent business, the Davis subcommittee was compelled to postpone the scheduled hearings and the adjournment of Congress made it necessary for further consideration of this matter to go over to the next session. However, prior to adjournment, there were filed with the committee a large number of strong statements from important sources, supporting increased compensation for hearing examiners in the major regulatory agencies. These included the statement by Representative HARRIS, already referred to, and statements by the Chairmen of the Federal Trade Commission, the Federal Power Commission, the Civil Aeronautics Board, and the National Labor Relations Board supporting supergrades for their hearing examiners.

Students of the administrative process recognize, of course, that the improvement of the quality of administrative justice cannot be brought about by any one measure. But there can be little doubt that the simple step of increasing the compensation of hearing examiners to a level commensurate with the importance of their functions would make a major contribution in this area, and this proposal is ripe for action now.

Judge E. Barrett Prettyman has stated that "* * * administrative law is important, indeed * * * it is the most important category of law current in our land."[5] Can there be any doubt that the bar has a vital interest in seeking the establishment of conditions that will insure that hearing examiners who conduct these important administrative proceedings will be of the highest possible stature? Further strengthening the status of hearing examiners and enhancing the dignity of their office is but the logical sequence of the reforms initiated by the Administrative Procedure Act. As the Supreme Court has said of that act (in *Universial Camera Corp.* v. *N.L.R.B.*, 340 U.S. 474, 494), "enhancement of the status and function of the trial examiner was one of the important purposes for administrative reform."

By enacting, in 1946, the Administrative Procedure Act, which separated the adjudicatory from the other functions of the Federal administrative boards and commissions and provided for the selection and appointments of impartial hearing examiners, Congress clearly elevated the importance of the role of the hearing examiner. A next logical, culminating step in carrying out one of the policies of the Administrative Procedure Act is to provide the hearing examiners with compensation commensurate with their responsibilities.

THE BLACK MAN'S IRONIC BURDEN

Mr. HART. Mr. President, John Steinbeck's article in the Saturday Review was reprinted recently in the Washington Post. It is a simple and forthright statement of everyday reactions which all too often we skip over or fail to understand.

I ask unanimous consent that it be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Mar. 2, 1961]

THE BLACK MAN'S IRONIC BURDEN

(By John Steinbeck)

I am constantly amazed at the qualities we expect in Negroes. No race has ever offered another such high regard. We expect Negroes to be wiser than we are, more tolerant than we are, braver, more dignified than we, more self-controlled and self-disciplined. We even demand more talent from them than from ourselves.

A Negro must be 10 times as gifted as a white to receive equal recognition. We expect Negroes to have more endurance than we in athletics, more courage in defeat, more rhythm and versatility in music and dancing, more controlled emotion in theater. We expect them to obey rules of conduct we flout, to be more courteous, more gallant, more proud, more steadfast.

In a word, while maintaining that Negroes are inferior to us, by our unquestioning faith in them we prove our conviction that they are superior in many fields, even fields we are presumed to be trained and conditioned in and they are not.

Let me give a few examples.

In the Alabama bus boycott we knew there would be no Negro violence—and there wasn't. The only violence was white violence.

In the streets we expect courtesy from Negroes even when we are ugly and overbearing.

In the prize ring we know a Negro will be game and will not complain at a decision.

In Little Rock we knew that any brutality would originate among the whites.

If there is racial trouble, we are convinced that Negroes will not strike the first blow, will not attack in the night, will not set off bombs, and our belief is borne out by events.

We expect Negroes to be good-tempered and self-controlled under all circumstances.

But our greatest expectation is that they will be honest, honorable, and decent. This is the most profound compliment we can pay any man or group. And the proof of this shows in our outrage when a Negro does not live up to the picture we ordinarily have of him.

With thousands of burglaries, muggings, embezzlements reported every day, we are upset when a Negro is found doing what so many whites do regularly.

In New York, with its daily reports of public thefts, deceits, and assorted political and fiscal raids on public money and treason against public trust, one Negro who succumbs to the temptation to do what many white people do fills us with dismay and the papers are full of it. What greater compliment can we pay to a people?

Finally, let me bring it down to cases.

I have children, as many of you whites who read this have. Do you think your children would have the guts, the dignity, and the responsibility to go to school in Little Rock knowing they would be insulted, shoved, hated, sneered at, even spat upon day after day, and do it quietly without showing anger, petulance, or complaint? And even if they could take it, would they also get good grades?

Now I am a grown, fairly well-educated—I hope intelligent—white man. I know that violence can produce no good effect of any kind. And yet if my child were spat on and insulted I couldn't trust myself not to get a ball bat and knock out a few brains. But I trust Negroes not to, and they haven't.

I think so much of those schoolchildren in Little Rock—a small handful who carry the will and conscience, the hopes and futures of millions in their arms. They have not let their people down. I think, what quiet pride their grandchildren can have in them knowing they came of such stock.

And then I think of the faces of the mob that tried to keep them out, faces drooling hatred, cursing and accursed faces, brave only in numbers, spitting their venom at children. And some of those faces, masked, sneaking in the night to plant a bomb—the final weapon of a coward.

What pride can their descendants take in their ancestry? But of course they will forget, or lie, or both.

Perhaps some of the anger against Negroes stems from a profound sense of their superiority, and perhaps their superiority is rooted in having a cause and an unanswerable method composed of courage, restraint, and a sense of direction.

BROTHERHOOD WEEK, FEBRUARY 19–26, 1961; NATIONAL CONFERENCE OF CHRISTIANS AND JEWS

Mr. HART. Mr. President, last month we observed National Brotherhood Week. However, the very appropriate message of Commissioner Robert E. McLaughlin, President of the Board of Commissioners, government of the District of Columbia, was not printed in the RECORD. This forthright message to the 26,000 District government employees has special significance in light of President Kennedy's efforts to further foster this spirit of brotherhood in government.

I therefore ask unanimous consent that the message be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GOVERNMENT OF THE
DISTRICT OF COLUMBIA,
EXECUTIVE OFFICE,
Washington, D.C.

To: All employees of the District government.

Subject: Brotherhood Week, February 19–26, 1961, National Conference of Christians and Jews.

Brotherhood Week will be observed February 19–26, 1961. It is sponsored by the National Conference of Christians and Jews to help promote the ideal of brotherhood in our country. I am again happy to serve as honorary chairman of Brotherhood Week for the District of Columbia.

The brotherhood of man has been a basic tenet of our philosophy of government ever since the founding of the Republic. This concept is implicit in the fundamental charters of our liberties and freedoms: the Declaration of Independence; the Constitution of the United States and its Bill of Rights; the Emancipation Proclamation, and other historic documents which have charted the course of democracy. These great pronouncements have but reflected the will of the great majority of our people, whereby countless hosts of immigrants of every race, creed, and nationality have been received into the bosom of our Nation and given the priceless privilege of American citizenship.

This great amalgamation has no counterpart in history, and it has been undoubtedly the most potent force in the development of our culture, idealism, mighty achievements, and humanitarianism—in short, our national character and extraordinary civilization—which are unparalleled in human experience. This perfection could not have been achieved unless the spirit of brotherhood had appreciably pervaded our country, enabling such a diffused peoples to form one nation and to live in peace and harmony, to prosper and achieve, to open up boundless avenues of opportunity for themselves and their children, to enjoy equality, and to be secure in exercising the freedoms guaranteed by the Constitution.

Without this spirit of tolerance, wisdom, and understanding—which is the essence of brotherhood—this country could not have attained such eminence. Unfortunately, there are still some areas where prejudice, racism, and bigotry continue to thrive, and it is because of this that Brotherhood Week serves such a useful purpose; namely, to focus our attention on these defects in our national character, to evaluate our position in these respects, and to ameliorate these undesirable conditions as much as possible.

Brotherhood Week has special significance for us, as employees of the District of Columbia government. We work, live, and play in the Nation's Capital, or its environs. It is a center of world interest and the focal point of Western democracy. The District of Columbia government is the closest of all to the people who live here, and we as civil servants directly affect everyone here in exercising the functions of such government. We work with, and come in contact with, all classes of people of this city daily.

We should always endeavor to practice tolerance, understanding, and respect toward our coworkers, neighbors, fellow citizens, and visitors in town. We should endeavor at all times to dwell, associate, and work in peace and harmony with one another. We should do this, not only because it will enrich our lives and benefit our country, but because we are morally obligated to do our patriotic duty of setting a good example in civic relationships, as the eyes of the Nation and the world are upon us.

So, on behalf of the Board of Commissioners, I sincerely urge upon every employee of the District government personally, that he or she practice the creed of brotherhood, and recall the Commissioners' public policy on nondiscrimination and their efforts to improve human relations within the District government and within the community. This is something each of us should do, not only during the week set aside for the observance of Brotherhood Week, but each day throughout the year, and from year to year.

Sincerely,

ROBERT E. MCLAUGHLIN,
President, Board of Commissioners,
District of Columbia.

WILEY URGES CHEESE FOR SCHOOL LUNCHES

Mr. WILEY. Mr. President, over the years, cheese, milk, and other health-giving dairy products have been a "dietary gold mine" in the school lunch program.

Across the country, about 13½ million students, including about 265,000 in Wisconsin, are enjoying and benefiting from lunches served in the schools.

Unfortunately, cheese has now been excluded from the program. This, I believe, should be corrected.

Recently, I contacted the Secretary of Agriculture, urging the inclusion of cheese in the lunch program.

I ask unanimous consent to have a copy of my letter to Secretary Orville Freeman, a reply from the Secretary, and a petition signed by a number of dairymen in Wisconsin supporting the idea of putting cheese back in the school lunch program printed at this point in the RECORD.

There being no objection, the letters and petition were ordered to be printed in the RECORD, as follows:

DEAR MR. SECRETARY: I am writing to respectfully urge inclusion of cheese in the national school lunch program.

As I understand it, cheese has not been available for school lunches for several months.

Fortunately, the surplus stockpiles have diminished; however, I believe it would be most worth while to encourage the purchase of cheese on the market for inclusion in the program.

In my judgment, this would add an important healthful food to the diet of our 13½ million students now enjoying school lunches.

In addition, it would help to stabilize the market for dairy products, e.g., by heading off—partially, at least—a dropback of prices, during the flush milk production season ahead.

With appreciation for the consideration I know you will give this matter, and with all good wishes, I am,

Sincerely,

ALEXANDER WILEY.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., March 27, 1961.

Hon. ALEXANDER WILEY,
U.S. Senate.

DEAR SENATOR WILEY: This is in reply to your letter of March 18, requesting that the Department purchase cheese on the open market for use in the national school lunch program.

As you indicated, the Department has not acquired sufficient quantities of this product under price-support operations to permit nationwide distribution to schools. For many months the market price of cheese has been very strong; consequently, very little has been offered by the industry.

We appreciate your desire to have the Department purchase cheese for the national school lunch program. You appreciate, of course, that at this period in the school year the funds made available for direct purchases of food commodities for the national school lunch program have either been expended or obligated. However, if Congress again appropriates money for next year's school lunch program, and the Department does not acquire significant amounts of cheese under price-support activities, we will give proper consideration to this food item when the purchase plans for next year's program are formulated.

Thank you for your letter and your interest in this matter.

Sincerely yours,

ORVILLE FREEMAN,
Secretary.

MARCH 20, 1961.

The undersigned members of the Waupaca County Farm Improvement Association wish to support Senator WILEY in his request of Secretary Freeman to put cheese back in the school lunch program.

Signed by Milton Hintz and 56 other citizens of the State of Wisconsin.

"HAND IN HAND"

Mr. JAVITS. Mr. President, at the Brotherhood Week dinner of the National Conference of Christians and Jews, held at the Hotel Roosevelt in New York, February 16, the motion picture, "Hand in Hand," received the National Brotherhood award for its outstanding contribution to the cause of brotherhood.

It is the prayerful hope of all men of good will that we are steering a sure course to a better world in which brotherhood and mutual understanding for our fellow man, whatever may be his race, color, or creed will prevail. A message that contributes effectively to this goal must be cherished and treasured. It is the theme of this motion picture which was made in England by its sensitive and perceptive young producer, Helen Winston.

"Hand in Hand" is a simple story about two children, a Catholic boy and a Jewish girl, schoolmates and neighbors, whose deep friendship and affection is, for a time, threatened when they are suddenly confronted by the ugly facts of bias and religious prejudice. Terrified by this threat to their happy companionship, the boy and girl nevertheless transcend every difficulty that lies in their path, and come, in the end, to know that God may be worshipped in many ways, but that there is only one God.

This simple story is truly a thing of beauty—an achievement for which producer, director, the players and all associated with the production, including Columbia Pictures, the releasing company, are to be warmly congratulated.

Through the innocent directness and complete faith of the two children, we are all called to account for our frequent failure to perceive the eternal truth that all men are equal and are brothers.

I have no illusions as to the miracles of understanding one motion picture can create, but I think that, in "Hand in Hand," the producer and her coworkers have made a highly articulate and invaluable contribution to the struggle for universal understanding in which we are all so deeply engaged.

It is a happy thing to recognize that, upon the release of "Hand in Hand," sophisticated critics were enthusiastic in their praise of this lovely film, with its simple message of love and brotherhood.

TRIBUTE TO SENATOR HARRISON A. WILLIAMS, JR.

Mr. McGEE. Mr. President, it is often difficult to decide when problems are well enough understood to call for action. Too frequently, action is taken without sufficient knowledge or thought, which, in the end, produces a myriad of unforeseen complications. On the other hand, it is even more the case that sound, practical solutions to serious problems languish for lack of action. Indeed, to know when to draw the line of action is an important measure of sound, legislative judgment.

The St. Petersburg (Fla.) Times editorial page has recently indicated its belief in the legislative judgment of my colleague, Senator HARRISON A. WILLIAMS, JR., of New Jersey, chairman of the Subcommittee on Migratory Labor, in his effort to seek equitable, workable, legislative solutions to the many and complex problems relating to migratory farmworkers and their families. The editorial, after noting the vital importance of the migrant farmworker to our everyday lives, said that "the New Jersey Senator's persistency has been admirable." I concur in that thought and, with the Times, "hope that it finally pays off."

Because of the timeliness of its plea, Mr. President, I ask unanimous consent to have this editorial from the March 4, 1961, St. Petersburg Times, appearing at page 14A, printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER TRY AT WORKER RELIEF

Indefatigable Senator HARRISON A. WILLIAMS, JR., Democrat, of New Jersey, is ready to try it again, but he is sure to encounter, as he has foreseen, the "same classical opposition" to his program to improve the lot of migrant farmworkers that has been argued now for decades.

It might be, however, that despite the expected, almost guaranteed, opposition, he will come closer to success this year than ever before. This is because the Kennedy administration favors his recommendations, whereas in previous administrations, and notably in the last one, there was a split in the Cabinet. Mr. Eisenhower's Labor Secretary Mitchell was for migrant labor reforms, while Agriculture Secretary Benson opposed them.

Mr. WILLIAMS would enact legislation on the simple theory that big farming should have the same responsibilities toward labor as big industry. Indeed, in his view, an employer is an employer, and there is nothing sacrosanct about a farmer who can hire 100 people, as differentiated from a manufacturer who hires the same number.

Therefore, he would establish minimum wages, provide for collective bargaining, and prohibit the employment of children under 15 years of age. This seems nothing more than reasonable, but when the big fruit and vegetable assembly-line producers get finished with it, it is going to seem as if an all-powerful government is thrashing a poor one-gallused, one-mule farmer with a cat-o'nine-tails.

The way Secretary Benson put it, no such program should be enacted because it would cost the producers money. Meanwhile, the average migrant farmworker has had an income of $710 a year, and in most cases an entire family working in the fields and orchards brought in less than $1,000 annually.

Mr. WILLIAMS' proposals would go further than make these fundamental rights available to farm as well as to factory workers. There will be some classic opposition to these, too, but, interestingly enough, the farmers, themselves, probably will be acquiescent in many instances. He would provide Federal payments to States to help pay the cost of education for migrant children, as well as for adult education, would authorize welfare grants, and would set up a construction fund for modern housing for migrants.

The truth of the matter, which seems to escape some lawmakers and their constituents involved, is that the migrant farmworker is an integral part of our national labor force. His production is a vital part of our national economy. Florida, as only one example, would be in a sad state of affairs without them.

At the same time, his problems are peculiar, and therefore need special attention. As important as he is, he still lives, as Mr. WILLIAMS put it, in one of "the islands of despair that exist in this country." The New Jersey Senator's persistency on his behalf has been admirable. Under this administration, let us hope that it finally pays off.

THE JOHN BIRCH SOCIETY

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Washington Daily News of Wednesday, March 29, 1961, entitled "John Birch Founder Would Repeal the 20th Century."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REDS EVERYWHERE: JOHN BIRCH FOUNDER WOULD REPEAL THE 20TH CENTURY

(By Barbara Bundschu)

(The John Birch Society is a semisecret organization with a noble aim: Fighting communism. But its methods have stirred controversy in many U.S. cities. A UPI special reporting team was assigned to assist Barbara Bundschu, New York staff correspondent, in researching and investigating the organization, its purposes, operations and opposition across the Nation.)

Residents of Santa Barbara, Calif., were in for a surprise when they stepped out into the bright and blowy morning of February 26 to pick up their Sunday newspapers. In that quiet and beautiful city of about 60,000, a respected fellow citizen had discovered what he felt was an outrage.

"The editor and publisher of the News-Press is in his 85th year," began a two-column editorial on the front page.

"His entire life has been spent in this community * * *. He lived when conditions were rugged—when West was West and men were men. He lived during periods when if a man or a group of men openly by word of mouth, or the printed word, called our President * * * and others at the head of our Government, traitors, they were made to answer. Such slanders often called for a visit from a courageous and irate group which brought with them a barrel of tar and a few feathers."

TAKING A STAND

Thomas More Storke, rancher and citrus grower, owner of a newspaper since 1900, briefly by interim appointed a U.S. Senator, regent of the University of California, was taking a stand against the John Birch Society and its founder and leader, Robert Welch, of Belmont, Mass.

Mr. Welch, 61, retired from a candy firm 4 year ago to devote his life to fighting communism. What bothered Editor Storke was the way Mr. Welch was fighting it.

In a letter written before he set up the society late in 1958 and still in limited circulation, Mr. Welch told friends that President Eisenhower, his brother, Dr. Milton Eisenhower, the late Secretary of State John Foster Dulles and his brother, Allen Dulles, then and now head of the Central Intelligence Agency, were members of the Communist underground.

"The secret Communist looks and acts just like anybody else, only more so." Mr. Welch had instructed them in the society's "Blue Book." He could be anybody you know.

CAMPAIGN

Exposure of such persons, even through "mean and dirty" techniques, Mr. Welch said, is one of the most effective means of shocking the American people awake in time to save themselves from communism. He also advises members to set up front groups, to infiltrate community organizations and to engage in directed letterwriting to promote specific campaigns of his ultra-conservative society.

"The News-Press condemns the tactics that have brought anonymous telephone calls of denunciation to Santa Barbarans in recent weeks from members of the John Birch Society or their sympathizers," Mr. Storke's editorial said.

"The News-Press condemns the pressures on wealthy residents who fear and abhor communism, to contribute money to an organization whose leader has said that 'for reasons you will understand, there can be no accounting of funds.'"

What is the real nature of this relatively new group on the American political scene? Political scientists would classify it as it is, in itself, an authoritarian society. Mr. Welch does not say the United States should have a similarly authoritarian form of government. But he is far from completely sold on the form we now have. And as for the political concept of a democracy, he regards it frankly as a "weapon of demagogery, and a perennial fraud."

The U.S. Senate on March 8 heard Senator MILTON R. YOUNG, North Dakota Republican, declare that Mr. Welch's accusations against Mr. Eisenhower and others had gone "beyond anything the late Joe McCarthy ever thought of." On the other hand a Senate Internal Affairs Subcommittee has described Mr. Welch's John Birch Society as a "patriotic organization."

At issue between the society and many who might otherwise share Mr. Welch's conservative political and economic views is his persistent reasoning that everything he personally considers wrong is a Communist plot.

At issue between the society and those who condemn it is the tendency of its activities, to suppress if not the right, at least the respectability, of dissent.

John Birch had nothing to do with the group which bears his name. He was a young Fundamentalist Baptist missionary from Georgia who served as an intelligence officer in China during World War II and was killed 10 days after V–J Day by Chinese Communists. He was 27 when he died.

Robert Welch never heard of Mr. Birch until after his death, but he has researched and written his life story. Mr. Welch has memorialized Mr. Birch as "probably the first American casualty in that third world war, between Communists and the ever-shrinking free world, which is still being waged against us." And when he came to found a Communist-fighting organization, he called it the John Birch Society.

In Mr. Birch's name, members of the society are asked to write letters to Congressmen and others, operate in front organizations and through established community groups such as PTA's and chambers of commerce to push campaigns conceived by Mr. Welch as anti-Communist. These include movements to impeach Chief Justice Earl Warren, to repeal the income tax law, to rout the social gospel from the churches, to oppose the North Atlantic Treaty Alliance, foreign aid, the United Nations and cultural, or any other, exchanges with Russia.

Mr. Welch also is a native Southerner, born in North Carolina. He was reared in what he now calls "the intellectually restricting bonds of the unusually narrow Southern Baptist Fundamentalism." He spent 4 years at the University of North Carolina, 2 at the Naval Academy and 2 at Harvard Law School before going into the candy business. He was for years vice president of the James O. Welch Co., headed by his brother, which has factories in Massachusetts and in Los Angeles.

AND GOLF

In his own words—a biographical sketch, Mr. Welch wrote in the third person for society members—he "has one wife, two sons, a Golden Retriever dog, and 14 golf clubs—none of which he understands, but all of which he loves."

He is an affable man who smiles easily and exhibits in his writings a sense of humor, love of poetry and wide knowledge of history and literature.

The John Birch Society was founded December 9, 1958, at Indianapolis, after Mr. Welch delivered a 2-day speech to 11 men he had invited to hear it. That speech is today the Blue Book of the society, the official statement of its aims and methods. It is supplemented by monthly bulletins to members and the magazine American Opinion, which Mr. Welch founded before the society and of which he is editor.

The message and aim is: "less government, more responsibility and a better world."

Mr. Welch quite literally wants to repeal the 20th Century. But unlike many who share this desire, either politically or nostalgically, he views its trend toward collectivism not simply as a mistake but as a sinister conspiracy to change the economic and political structure of the United States so that this Nation can be merged with the Soviet Union without a fight.

FOOL'S PARADISE

"You have only a few more years," he told his listeners at Indianapolis. "We are living in such a fool's paradise as the people of China lived in 20 years ago."

"The danger is almost entirely internal," Mr. Welch said, "from Communist influence right in our midst and treason right in our Government."

The idea that the Nation must mobilize its resources to combat the external danger of Soviet military might and sputnik supremacy is, in Mr. Welch's view, a part of the Communist plot. "In other words, under the guise of fighting communism, we are being stamped into the biggest jump ever towards, and perhaps the final jump right into, socialism and then the Communist camp."

The Los Angeles Times, in an editorial signed by publisher Otis Chandler on March 12, saw an implication of sedition in Mr. Welch's statements. And, like many others, it deplored the identification of conservatism with extremism.

"The Times believes implicity in the conservative philosophy," the editorial said. "It has challenged all these men and most of these institutions (which Mr. Welch attacks) on the soundness of one or more issues. But the Times does not believe that the argument for conservatism can be won—and we do believe it can be won—by smearing as enemies and traitors those with whom we sometimes disagree.

"Subversion, whether of the left or right, is still subversion."

Criticism from the press is not likely to disturb Mr. Welch. He has already told his followers that "the domination of our press, television and radio by Communist influence is now so great that you simply are not allowed to learn or be reminded of the real nature of the beasts to whom we are losing."

"When you hear Mr. Welch's charges out of context . . . their absurdity is plain enough," said the Reverend John A. Crane to his congregation at Santa Barbara's Unitarian Church one February Sunday.

GIFTS

"But when you come upon them in the publications of the society, surrounded and supported by Mr. Welch's rich, flowing language and ideas, their absurdity is well concealed.

"The man is a marvelously gifted demagogue . . .

"There is another factor apart from the magic of Robert Welch that lends power to the movement . . . Both Mr. Welch and his people are genuinely afraid."

SHAPE OF THE FUTURE—ADDRESS BY LT. GEN. ARTHUR G. TRUDEAU

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the body of the RECORD, for the information and interest of this body, an address made on March 3, 1961, before the Nebraska State Legislature, Lincoln, Nebr., by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development, Department of the Army.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY LT. GEN. ARTHUR G. TRUDEAU, CHIEF OF RESEARCH AND DEVELOPMENT, DEPARTMENT OF THE ARMY, BEFORE THE NEBRASKA STATE LEGISLATURE, LINCOLN, NEBR., MARCH 3, 1961

SHAPE OF THE FUTURE

Governor Morrison, Mr. Speaker, honorable members of this legislature, distinguished guests, fellow Americans, it is a great pleasure and a privilege to come here this morning to address this very distinguished legislative body—truly representative of the heartland of our mighty America. Ever high and honorable has been the role of the stanch State of Nebraska and her many distinguished sons in the rise and progress of our country. In fair times and foul through the depth of depression and in the cauldron of war your temper and your spirit have been tested.

Today, as the Nation faces new frontiers in the most dramatic decade in our history, we can draw assurance and inspiration from the courage and the contributions made by your citizens during the fantastic century inaugurated by the great President whose name is honored and perpetuated in this fair city. Throughout the world there is no more honored name.

As a citizen, a soldier, and a public servant let me thank you for sending Nebraskans to Washington who stand in the forefront of our national leadership, and sturdy sons to our Armed Forces who man our battlements today. We need more good people and good Americans such as those you send to Congress and the Armed Forces. In these difficult days Nebraskans are doing yeoman service, not only in the interests of this sovereign State, but for the broader good of the entire Nation and the free world.

As a matter of public policy we hold that whatever helps any section of our country to avoid disaster or achieve progress helps the whole. America's industrial and agricultural achievements—the very success which has made Omaha and Lincoln and your other cities and towns what they are today and will make them better and more prosperous in the future—bring today challenging problems to the leaders of our Government. It is well said that the surest way for a nation to invite disaster is to be

affluent and complacent. Toynbee, the English philosopher, points out that 19 out of 21 great world civilizations failed from weakness within rather than from outside aggression. We must not be No. 20.

President Kennedy recognizes this salient fact and is taking steps to energize our national thinking and strengthen our diplomatic, military, and economic tools. All our people—regardless of their politics—must join ranks now in supporting our President as he leads this mighty Nation in seeking positive solutions to the serious, complex problems that beset us and will continue to beset us in the years ahead. It is absolutely essential, if we are to maintain our preeminence in the future, that we must recognize that we live in an era of great change that demands shifts in direction, in policies and procedures. When we reach the turn of the century, the picture of America today will look as obsolete as a tintype does now. The pattern of today will not meet the challenge of tomorrow.

These are the things we must think about—and act upon. They will call for sacrifice, understanding, and change. Nothing less will permit us to emerge victorious as the end of the century approaches.

There is no example in all our history when the President of this country has seen that something had to be done in the national interest and called for support—that he did not get it. Our people will respond fully to the right kind of national leadership and I can only reinforce President Kennedy's own words, when he said: "I do not believe that any of us would exchange places with any other people or any other generation. The energy, the faith, the devotion which we bring to this endeavor will light our country and all who serve it—and the glow from that fire can truly light the world." If it doesn't, we can be extinguished in the toxic darkness of world communism.

Service—its concepts and practice—is the strong fabric of both our national security and our national prosperity. How well and how wisely we serve determines the effectiveness of our Government, our foreign relations, our world trade, and our military readiness—in effect, our entire way of life.

The spiritual goals so nobly established by our Founding Fathers and so painfully advanced over nearly two centuries of time must provide the guidance and stimulate the action so direly needed if we are to avoid disastrous defeat and promote the cause of freedom, law, order, and progress in this world today.

There is a growing recognition of this fact as America stands today in a world truly torn by revolutionary upheavals and the godless ideology of communism.

One is the social revolution of rising expectations in the underdeveloped areas of the world.

The other phenomenon is the tremendous explosion in science and technology which is now taking place.

If communism were a dead issue today, the rising tide of ethnic nationalism—which burst forth from the agonizing struggles of World War II and since—would alone present us with one of the greatest challenges of all ages. This tide is creating truly significant problems in some overpopulated areas of Africa, Asia, and in some parts of South America. In these depressed areas, peoples—diseased, undernourished, illiterate, impoverished, living in a wheelbarrow or an A-frame economy call—and call loudly—for an improved standard of living.

It is in these areas that a large proportion of the world's population is concentrated. A billion and a quarter peoples living in these underdeveloped areas have an average annual income of less than $100. Their personal property is less than the clothes you have on your back and under the rules of communism this would be all they could ever hope to acquire.

The population of Latin America, for example, is expanding at one of the highest rates in the world. By the turn of the century, there will be more than 500 million Spanish- or Portuguese-speaking peoples living south of our border, outnumbering their English-speaking neighbors—the Canadians and ourselves—nearly 2 to 1.

This population explosion in the underdeveloped areas, aggravated by the flames of nationalism, has certain serious political and military implications. Overcrowded areas with uneducated, underfed populations tend to produce political instability—a condition that has a high potential for causing local conflicts with possible extension into global war. Overcrowded areas are fertile grounds for Communist political and economic penetration—where for a variety of reasons, the Communists find it to their advantage to strike while the iron is hot and to keep it hot by striking. Anarchy and chaos are the wheelhorses of communism.

I seriously question how these uncommitted peoples—peoples whose minds are now being opened—whose imaginations are being awakened—who are no longer repressed by fear but motivated by hope and often by false promises—I question how they will progress in the dramatic decades ahead—unless they find the right kind, and the right number, of educated leaders to direct their paths through peace and progress—through some semblance of law and order. The fires of racial passion threaten to burn through the thin veneer of Western civilization and temperatures are rising.

The situation is compounded by a world where radio and television can be utilized to inflame popular demand for privileges and luxuries that stir the political imagination of minds incapable of evaluating the truth or falsity of any thesis. Motion pictures have also contributed their share to the muddle and confusion aroused by the surging passions they stimulate.

There is a crying need to advance the mental level of man in these areas. The task is tremendous. There must still be at last one billion adults in this world who cannot read or write. Any truly worthwhile and lasting education program in these countries—some of ancient culture and hallowed tradition—must be based on the self-help philosophy. Our aid can only be the catalytic agent that trains the leaders and teachers—who, in turn, must lead and educate their masses.

This is a staggering task if you consider the statistics. In one nation of north Africa, for example, out of a total population of more than 4 million only 57 persons a few short years ago had achieved the equivalent of a cultural education. I know that today the number has increased but not materially in relation to the population. Elsewhere the record was even worse.

President Kennedy is right in pursuing his concept of a University of the Americas to train deserving youths from other countries in our hemisphere. For the cost of 1 month of the Korean war, we could establish and operate several such institutions around the world.

As an example, 6 years ago I advocated the establishment of universities in selected world areas. Among others I suggested a University of the Americas; a University of the Far East; a University of South Asia; and a University of the Middle East.

I particularly suggested a University of East Africa located in Ethiopia and a University of West Africa located in Liberia.

I wonder what their impact would have been?

As we consider such important problems, let us remember that the image of a bipolar world is rapidly changing. Last year in the United Nations we witnessed the growth and extension of a new world power group—the so-called neutralist nations. The influence of these nations will grow in the immediate years ahead and will certainly affect the balance of world power from now on. In less than 10 years, in 1969, the member nations of NATO—the bulwark of our free world—become free to withdraw from the alliance—should they wish to do so. We must guard lest the creation of this new group weakens rather than strengthens major realinements in the free world.

Let's turn now to that other revolutionary phenomenon which is drastically reshaping our world, bringing to today's generation and our children more changes and challenges than were faced by our forebears in any past period of history—the explosion in science and technology.

Modern science today is less than 500 years old and technology is perhaps half of that—but in the last century—2 percent of recorded time—mankind has achieved 90 percent of his technological progress. And the future is even more challenging. Of all the men who have ever been trained in science and technology throughout the world over the 5,000 years of recorded history—on both sides of the Iron Curtain—it is estimated that nine-tenths of them are alive today.

One cannot reflect upon these startling facts without considering their impact on our daily lives. In business and industry—in politics and the military—even in the most fundamental unit, the family—the daily routine has become firmly geared to scientific advances but it is a changing routine.

Not only will national security profit from this amazing age of science and technology, but so will our way of life and literally all mankind, if we have but the wisdom to employ its potential. This will not be easy.

As for what the future may hold for the military, one of the U.S. Army's most pressing problems is how to provide tomorrow's weapons and equipment—and how to do it in the face of mushrooming costs and rapid technological change. All the Armed Forces are similarly affected.

This one thing I know—science and technology can give you today just about anything you want, provided you know what you want, and are prepared to pay the cost.

Now, there was a time when our Army could develop and produce a weapon or a piece of equipment and use it until the day it wore out. Today that era is but a memory. The implications of modern technology—exploding on all fronts and revolutionizing man's concepts of war—are truly fantastic.

While the horse and the lance remained a major weapon system in the world armies for 2,000 years, it is doubtful if the tank and the manned combat airplane—as we know them today—will last a hundred.

All the Armed Forces today struggle with this problem. Last July, on Independence Day, the U.S. Army gave up its last antiaircraft gun and today not a single one is operational in the whole North American air defense system.

Less than 7 years ago, following the Korean armistice, 1,000 of those guns—90's, 120's, and sky-sweeping 75's—girded our continental defense against foreign attack.

Through two wars and a quarter century of time, they were a main reliance. Today, they are an anachronism in a missile age when NIKE missiles ring our great centers of population and industrial power; at a time when we labor unceasingly to perfect our Nike-Zeus missile to protect against the Communist threat of a nuclear hailstorm hurled through space.

A modern Army must be a quick-change artist—especially in this fabulous age of science and technology. It takes long range planning, however. We must start the effort—right now—today—to come up with

the equipment our forces will need in 1970, and later. Otherwise, the future will come upon us with breathtaking speed and find us half prepared.

Science with its related technology is today's new frontier—a frontier with limitless boundaries. Each success in research opens up new, unknown fields for exploration. Yet, as important as scientific discoveries are, they are but exercises until technology shapes and structures them into some practicable form for production and use.

Technology is the tie which threads its way from pure science to the end products measuring human progress and security.

The golden rain of scientific discovery promises to raise the world's standard of living—to give the world's hungary masses more food, better shelter, and other necessities of life. Ultimately, it must increase their purchasing power. New sources of energy are steadily feeding the growing appetite of industry for power and increasing man's productive ability and providing his comforts.

Every military man knows that the effective use of a weapons system which is not available to his enemy or is improperly used by his enemy can be decisive. The Germans failed in World War I to exploit their new chemical weapons system which might have been decisive. Only months later, the Allies failed to exploit the unique capabilities of the new tanks. Twenty-five years later, the Germans made no such mistake with their tanks while improper use of tanks by the French brought them catastrophe.

Too many people today are shortsighted and think of weapons systems in terms of men, munitions, and materiel—and fail to recognize one historical fact—that America's mightiest weapons have been moral in concept and moral in action. Today, as in the past, America possesses two mighty moral forces that are not available to the enemy.

One is our Christian foundation and dedication to individual freedom and the dignity of man. The difficult art of exploiting this great moral strength deserves the most profound study and implementation.

The second unique moral strength we possess and can share is in our incomparable stock of foodstuffs and our ability to produce annual excesses to alleviate malnutrition to a large extent throughout the world. The related problems of marketing, financing, and distribution are staggering but certainly not insurmountable. Here is one area, close to your midwestern hearts, where we have an advantage, unmatchable by the Soviet bloc for decades to come. When we see Red China, with its starving millions and tens of millions, shipping token supplies of food to foster subversion and create chaos, the potency of this moral weapon should be obvious. We must use our advantage in it for the betterment of mankind and the cause of freedom.

The world has a plant storehouse of 300,000 species but has only tested about 3,000 for food use. Of these, 300 are widely grown but only 12 provide us with 90 percent of our plant food supply. The balance should be researched. They may be more nutritional, or at least add new pleasure to our food habits.

The Army, also seeking improvement in the difficult task of feeding our troops in peculiar environments, is interested in such research and in means of preservation and economy in size and shipping weights. Freeze-drying, irradiation, encapsulation, and sonic and microwave processing will all be explored as will new methods of transportation and storage.

New machines, soon to be in production, will provide several times more mechanical and electrical energy than present models, with great reduction in size and weight. Think about some of the fantastic promises of technology glimpsed through electronics and automation. Through automation, technology promises more of the necessities, comforts, and luxuries of life but this will not be achieved without work and effort. Let's hope we can only learn to utilize and distribute our new knowledge and products in an acceptable manner.

The discoveries that we shall reap through satellites and manned space vehicles while probing the universe are truly impossible to predict. We must not lose our sense of balance, but the impact of space on our daily lives will be staggering as the end of our century approaches. Satellites with radio beacons in space operating on solar batteries will serve as navigational aids. They will also keep the world's weather under observation and greatly assist in improving worldwide communications. We must be sure they become a boon and not a threat to our security and our survival. We cannot afford to be outdone in space. The danger is too great.

Now, if technology is to continue to accelerate, greater emphasis must be placed on basic research for new scientific knowledge and on applied research and development for new hardware items. Our national ability to provide adequate defense and to expand world trade in the late 1960's and the 1970's will be determined by the research and development effort our country is presently willing to support.

For that reason, our Army research and development program is maximizing the great scientific discoveries of today—and continually pressing for more progress in all fields—seeking further scientific breakthroughs basic to maintaining a more modern Army of vastly improved power, range, and mobility as part of our Defense Establishment.

Basic research—to penetrate the ever-expanding horizons of science—never is sufficiently funded to produce the expanded dimension needed or at least desired on our technological frontier. We live with a situation in which we must drive ahead with whatever amounts can be made available.

Still, basic research is the sine qua non for new, improved, and expanding facilities and services for increasing the productivity of our industrial and agricultural society and enriching the lives of our people, and for revolutionary strides in improving the overall power and mobility of our military forces.

One of the Army's most important basic areas is materials research. We know that our engineering design prospects are intimately bound up with discovery of new materials with greatly enhanced properties—conducting, semiconducting, insulating, magnetic, and structural—and also important—with improvement of existing materials. In materials research, we are working on a variety of approaches—in plastics, ceramics, cryogenics, pyrogenics, and metallurgy.

It is important to point out that metallurgy is a field that has seen tremendous advances in the last 10 years and can be expected to surge beyond the boundaries of our imagination in the next few years. New metals with amazing characteristics are being created to exploit the great extremes of temperatures, pressures, and purities, which we are encountering or using in the space age. For example, it is estimated that within the next 10 years we shall have beryllium alloys with the strength of steel, but one-fourth the weight. Shortly thereafter will come plastics and ceramics with the same strength-weight characteristics. New steels with vastly improved characteristics are in sight.

These and other materials research sparked developments will redound to the benefit of our civilian industry and commerce as well as to the military reshaping our pattern of living in the decades that lie ahead. Missiles, vehicles, and electronic devices will all benefit from such advances along with automobiles, farm machinery and household goods and appliances.

Research efforts are also underway to bridge the gap between metallurgy and solid state physics. Rich dividends, here, will permit us to chainlink large molecules to act as electronic circuits, giving us measures of increased reliability and space accommodations in our guidance and other electronic systems almost too fantastic to imagine today.

How many of us in these days of wondrous advances remain impressed by the fact that electronic parts have been reduced in size by modular concepts so that now instead of 7,000 parts per cubic foot, we can put 350,000 parts in the same space. Now, even this figure can be increased by a factor of 10 in certain fuse applications, and using solid circuit techniques—or molecular electronics—even this is only a beginning. Just around the corner of tomorrow I predict we shall see good wristwatch radios of the size of an after-dinner mint.

To me, the implications of solid-state advances are truly fascinating. Today, if an electronic computer—using the old conventional vacuum tubes—were to be built with the memory capacity of the human brain it would require more than the space of this great State capitol and a housing which would reach 40 stories high. It would also require all the water from the Missouri and Platte Rivers to cool the operating elements. On the other hand, solid-state devices promise to give us computers—of mere cabinet or room size—that will approach the wonderfully intricate capacities of the human brain.

I expect that, by the turn of the century, electronic language translation equipment, carryable in a brief case, will be available. Then by inserting the correct language component, a person can talk to most anybody in this world using perhaps a 1,000-word vocabulary. I can think of no greater boon to mankind.

Other significant basic research in medicine, chemistry, or unusual power sources which our Army is conducting—such as the nuclear reactor, the fuel cell, the thermionic converter, or the magnetohydrodynamic process—is too numerous for me to cover in the brief time for this talk. But what I have covered should indicate that basic research is an essential ingredient of potential military power as opposed to military power in-being.

These advances illustrate, moreover, the kind of basic research effort which is necessary to feed the insatiable appetite of applied research and development, for without new knowledge—without new science—applied research and development is limited to product improvement. Product improvement, important as it is, will not put us out in front, where we belong, or keep us there in the 1970's.

Let us look now at only one specific area of military interest in our applied research and development effort—the field of continental defense.

We know that science and technology have developed nuclear weapons with explosive power literally beyond our imagination. This firepower differs not only in degree, but in kind, from anything we have known before and hostile intercontinental missiles present the most serious threat our homeland has ever faced.

Of importance to you here in Nebraska are our efforts to provide this Nation with an antimissile defense system that will not only meet the ICBM threat of today but one that possesses a growth potential to defend against the missile threats of tomorrow. The Army sees such a system in Nike-Zeus—the mighty successor to Ajax and Hercules, now guarding America's great centers of population and industry and our Strategic

Air Command against manned aircraft. Zeus is the only intercontinental ballistic missile defense system now under active development anywhere in the free world.

We are proud of the many successful component tests of the Zeus and I believe unquestionably that it is a practical, obtainable concept. An ICBM flies a ballistic trajectory—which mathematically is analagous to a car traveling down a one-way road. This trajectory, I assure you, can be radar predicted with great accuracy. The powerful Zeus radars, working in close harmony with high-speed computers are designed to detect and acquire incoming missile targets—and, in a matter of seconds, are expected to send command signals putting a maneuverable Zeus missile in high-speed flight toward interception and destruction of the target.

I want to stress right here that the 450,000-pound thrust Zeus booster engine is the most powerful single-unit, solid-propellant motor successfully fired in the free world—and that there is an urgent requirement for such a defensive weapon while we seek a meaningful peace. We in the Army are confident that Nike-Zeus can do this job in the 1960's.

Should the Soviets be first to develop an effective antimissile missile and install it as protection for crucial centers of their population, industry, and military might—they will have taken a giant step toward neutralizing the retaliatory striking power of the free world. Command of such a missile system would provide its owner with a strategic advantage of literally indescribable magnitude—a new dimension in modern war or summit meetings.

This defense problem is not only an Army problem—it is a problem for the entire Nation. There is a growing need for Americans in this land to become more security conscious. Time is fast approaching when we must take stock of our civil defense—critically reexamine its structure to see if we have taken all the measures necessary for protection of our people. A strategy for defense which only envisions offensive weapons and ignores the requirements for an active and effective antimissile defense system and an adequate civil defense program means throwing away of the two-edged sword demanded by today's challenge. The capability to fight back against aggression is worthless, unless the determination to do so is also present.

Rudyard Kipling once wrote, as a preface to one of his interesting stories, these meaningful words:

"It was not in the open fight
We threw away the sword,
But in the lonely watching
In the darkness by the ford."

Yes, it is not war, but usually long months and years of affluence and complacent peace that bring on the downfall of nations. Recorded history is replete with epitaphs of great nations that decayed from complacency. It is the weed that saps the energy at the root of all progress. The costliest crop for any community is the crop of complacency. Freedom and peace come not to cowards who cringe, but to brave men, armed and determined to protect them as precious possessions.

A strong civil defense program, based on adequate fallout shelters and warning systems, can contribute much to a strong national defense. Certainly it would significantly better the chances that this Nation could survive a surprise nuclear attack with reduced casualties. To my mind, in these troubled times of power diplomacy, a strong continental defense measurably increases our freedom of action in foreign affairs. Diplomatic dealing without powerful cards is bluff at best—and usually gets "called." Today's international game is no "penny ante."

Now, I have covered the new frontiers of science and technology broadly and described a few of our more promising results. I hope I have given you a flash insight to the future. Remember, it will only be for those with imagination—for those who dare. As Einstein rightly stated: "Imagination is more important than knowledge. For knowledge is limited, whereas imagination embraces the entire world, stimulating progress, giving birth to evolution."

And this brings us back full circle to my beginning thesis—that in this age of surging progress, all Americans—and freedom-loving peoples throughout the world—must come to the realization that our collective security and progress depends as never before upon the imagination and boldness with which we acquire and utilize new scientific discoveries and industrial techniques for the progress and defense of our civilization and for the betterment of mankind. Here, we must sense new horizons—continuously—to meet the critical challenges ahead.

When we wrestle with this problem we should always remember the incisive words of Theodore Roosevelt, great soldier and man of strong convictions, who while speaking of the strenuous life said: "Far better it is to dare mighty things, to win glorious triumphs, even though checkered by failure, than to take rank with those poor spirits who neither enjoy much or suffer much, because they live in the gray twilight that knows not victory or defeat."

In this crucial decade of the sixties and in the decades beyond, our task is clear, our challenge is terrific. The forebears of many of you here braved unknown dangers against great odds to give you this wonderful State that you guide today. We, in our days of difficulty, must also make bold decisions and press on to new frontiers. The comfortable ruts in our thinking must be eliminated like yesterday's roads and new paths must be charted. This will call for great vision and great courage but if America is to continue to be the land of the free it will only be because it is still the home of the brave. I'm sure we know where Nebraska stands.

Thank you very much.

MILITARY DISPERSAL IN HAWAII

Mr. FONG. Mr. President, on Friday, March 24, 1961, there appeared in the Hilo Tribune-Herald, one of the leading newspapers in Hawaii, an editorial entitled "Military Dispersal Remains a Major Necessity."

At the present time, practically all of the defense installations are concentrated on the island of Oahu in the State of Hawaii. The matter of dispersing some of our military installations in Hawaii from Oahu to the neighbor islands has been delayed for lack of appropriations. It is hoped that this Congress will give this matter serious consideration.

I ask unanimous consent that the editorial entitled "Military Dispersal Remains a Major Necessity" be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MILITARY DISPERSAL REMAINS A MAJOR NECESSITY

President Kennedy's warning to the Soviet Union to stop provoking warfare in the tiny kingdom of Laos jars Americans into realizing that the line between peace and war in our day is a slender one.

There are fears that the crisis in Laos could erupt into a new Korea, only far worse in terms of American supply and tactical problems.

For residents of the 50th State it means that the arena of major crisis once more moves into our portion of the globe.

It reemphasizes the vital part this State plays in the defense of all the free world.

It reemphasizes the unpleasant fact that virtually all of the defense mechanism is centered in one small area.

Perhaps in this time of crisis Congress will review the needs for funds to provide military dispersal here in the islands.

The Army has studied the possibility of developing a permanent base for 5,000 men at Pohakuloa, but has been prevented from moving ahead by a lack of money. It has been estimated that the Pohakuloa project would cost $45 or $50 million.

Such dispersal is desirable from a practical standpoint. And it would not significantly increase the threat of direct attack on the big island.

It is the threat of possible attack on the present concentrated defense area in the islands—no matter how remote it may be—that makes dispersal so necessary.

Senators HIRAM L. FONG and OREN E. LONG and Representative DANIEL K. INOUYE may find their fellow lawmakers are now willing to consider the appropriation necessary to develop Pohakuloa to full usefulness.

The big island wants to do its part in meeting the grim obligations of the times.

CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, is morning business concluded?

The PRESIDING OFFICER (Mr. DODD in the chair). Is there further morning business? If not, morning business is closed.

Under the order, the Senate will proceed to take up the calendar.

The clerk will state by title the first bill on the calendar.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will state the first measure on the calendar.

EDWARD W. SCOTT III

The bill (S. 126) for the relief of Edward W. Scott III was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Edward W. Scott III, who was born in the Republic of Panama on May 25, 1938, of an American citizen mother, shall be deemed to have been born in the Canal Zone.

MAN-YEH CHOW

The bill (S. 132) for the relief of Man-Yeh Chow was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the

purposes of the Immigration and Nationality Act, Man-Yeh Chow shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act. The number of refugees to whom permanent residence in the United States may be granted under the provisions of section 6 of the Refugee Relief Act of 1953, as amended, is hereby reduced by one.

CHERIE HELEN BRATTON

The bill (S. 164) for the relief of Cherie Helen Bratton was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Cherie Helen Bratton, shall be held and considered to be the natural-born alien child of Nancy Bratton, a citizen of the United States: *Provided,* That the natural parents of the said Cherie Helen Bratton shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

ALESSANDRO GELLHORN

The bill (S. 217) for the relief of Alessandro Gellhorn was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Alessandro Gellhorn shall be deemed to be within the purview of section 323 of the said Act.

DR. CHIEN CHEN CHI

The bill (S. 225) for the relief of Dr. Chien Chen Chi was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 9 of the Act entitled "An Act to amend the Immigration and Nationality Act, and for other purposes", approved September 11, 1957 (71 Stat. 639), Doctor Chien Chen Chi, who was physically present within the United States on July 1, 1957, shall be held and considered to be the beneficiary of an approved visa petition for immigrant status under section 203(a)(1)(A) of the Immigration and Nationality Act filed on his behalf prior to September 11, 1957.

CONSTANTINOS GEORGIOU STAVROPOULOS

The bill (S. 262) for the relief of Constantinos Georgiou Stavropoulos was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Constantinos Georgiou Stavropoulos shall be held and considered to be the minor natural-born alien child of Mr. and Mrs. John D. Stavropoulos, citizens of the United States: *Provided,* That the natural parents of Constantinos Georgiou Stavropoulos shall not, by virtue of such parentage be accorded any right, privilege, or status under the Immigration and Nationality Act.

ALPO FRANSSILA CRANE

Th bill (S. 285) for the relief of Alpo Franssila Crane was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Alpo Franssila Crane shall be held and considered to be the natural-born minor alien child of Mr. and Mrs. Radford Raymond Crane, citizens of the United States: *Provided,* That no natural parent of the beneficiary, by virtue of such parentage, shall be accorded any right, privilege, or status under the Immigration and Nationality Act.

MAH JEW NGEE (ALSO KNOWN AS PETER JEW MAH)

The bill (S. 292) for the relief of Mah Jew Ngee (also known as Peter Jew Mah) was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mah Jew Ngee (also known as Peter Jew Mah) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

EARL H. PENDELL

The bill (S. 298) for relief of Earl H. Pendell was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Earl H. Pendell, of Baltimore, Maryland, is hereby relieved of all liability to repay to the United States the sum of $4,447.98, representing the amount of overpayment of salary paid to him as a court reporter during the period from September 7, 1955, through March 7, 1959, the payment of such amount having occurred as a result of administrative error.

SEC. 2. The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the said Earl H. Pendell, the sum of any payments received or withheld from him on account of the overpayment referred to in the first section of this Act.

HARRY N. KOUNIAKIS

The bill (S. 330) for the relief of Harry N. Kouniakis was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purpose of the Immigration and Nationality Act, Harry N. Kouniakis shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

HARUO T. HENDRICKS

The bill (S. 417) for the relief of Haruo T. Hendricks was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Haruo T. Hendricks, shall be held and considered to be the natural-born alien child of Sergeant and Mrs. Joel C. Hendricks, citizens of the United States.

FOTIOS GIANOUTSOS (FRANK GIANNOS)

The bill (S. 423) for the relief of Fotios Gianoutsos (Frank Giannos) was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Fotios Gianoutsos (Frank Giannos) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

MRS. MARIA GIOVANNA HOPKINS

The bill (S. 438) for the relief of Mrs. Maria Giovanna Hopkins was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purpose of the Immigration and Nationality Act, Mrs. Maria Giovanna Hopkins shall be held and considered to have been lawfully admitted to the United States for permanent residence as of July 20, 1950, and her residence in the United States since July 20, 1950, shall be held and considered to meet the residence and physical presence requirements of section 316 of that Act.

OK HI SHIN AND TAE SOO CHUNG

The bill (S. 444) for the relief of Ok Hi Shin and Tae Soo Chung was considered, ordered to be engrossed for a

third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Ok Hi Shin and Tae Soo Chung shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

IRENA MARIA KOLLER

The bill (S. 533) for the relief of Irena Maria Koller was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Irena Maria Koller, shall be held and considered to be the natural-born alien child of Mr. and Mrs. Bruno Bruce Haber, citizens of the United States: *Provided,* That the father and stepmother of Irena Maria Koller shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

HANS CHRISTIAN GUNNAR MIKKELSEN

The bill (S. 593) for the relief of Hans Christian Gunnar Mikkelsen was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Hans Christian Gunnar Mikkelsen shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee.

ANGEL ARDAIZ MARTINEZ

The bill (S. 696) for the relief of Angel Ardaiz Martinez was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Angel Ardaiz Martinez shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

MARIA LUISA MARTINEZ

The bill (S. 697) for the relief of Maria Luisa Martinez was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purposes of the Immigration and Nationality Act, Maria Luisa Martinez shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

ANASTASIA STASSINOPOULOS

The bill (S. 713) for the relief of Anastasia Stassinopolous was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Anastasia Stassinopoulos shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

CAPT. ERNEST MOUNTAIN

The bill (S. 894) for the relief of Capt. Ernest Mountain was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Captain Ernest Mountain shall be held and considered to have been lawfully admitted to the United States for permanent residence as of June 30, 1929, upon payment of the required visa fee.

ZLATA DUMLIJAN AND DJURO (GEORGE) KASNER

The bill (S. 939) for the relief of Zlata Dumlijan and Djuro (George) Kasner was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Zlata Dumlijan and Djuro (George) Kasner shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

A. E. WATERSTRADT

The bill (S. 1097) for the relief of A. E. Waterstradt was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding any period of limitations or lapse of time, claim for credit or refund of overpayment of income taxes for the taxable years 1942 to 1945, inclusive, made by A. E. Waterstradt, of Takoma Park, Maryland, may be filed at any time within one year after the date of the enactment of this Act. The provisions of sections 322(b), 3774, and 3775 of the Internal Revenue Code of 1939 shall not apply to the refund or credit of any overpayment of tax for which credit or refund is filed under the authority of this Act within such one-year period.

MICHAEL J. COLLINS

The bill (S. 178) for the relief of Michael J. Collins was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $25,000 to Michael J. Collins, of Rego Park, Long Island, New York, a decorated combat veteran of World War II and the Korean conflict, in full settlement of all of his claims against the United States and as reimbursement to him for expenses incurred in establishing his innocence and to remove injustices resulting to him from his conviction which was based upon fraudulent evidence fabricated and produced by certain unscrupulous members of the United States Army: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

HELEN IRMA IMHOOF

The Senate proceeded to consider the bill (S. 118) for the relief of Helen Irma Imhoof, which had been reported from the Committee on the Judiciary, with an amendment, to strike out all after the enacting clause and insert:

That in the administration of the Immigration and Nationality Act the periods of time Helen Irma Imhoof resided abroad in the employ of the United States Ambassador to Italy shall be held and considered to be residence and physical presence in the United States within the meaning of section 316 of the said Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

KRSTE ANGELOFF

The Senate proceeded to consider the bill (S. 139) for the relief of Krste Angeloff, which had been reported from the Committee on the Judiciary, with an amendment, in line 6, after the word "States", to insert a colon and *"Provided,* That the natural parents of the said Krste Angeloff shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Krste Angeloff shall be held and considered to be the natural-born alien minor child of Mrs. Miles Angeloff, citizen of the United States: *Provided,* That the natural parents of the said Krste Angeloff shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

HAJIME ASATO

The Senate proceeded to consider the bill (S. 274) for the relief of Hajime Asato, which had been reported from the Committee on the Judiciary, with an amendment, in line 6, after the word "date", to insert "of the enactment", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Hajime Asato shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

ERICA BARTH

The Senate proceeded to consider the bill (S. 277) for the relief of Erica Barth, which had been reported from the Committee on the Judiciary, with an amendment, in line 8, after the word "residence", to insert "to such alien", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Erica Barth shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

ANTE TONIC (TUNIC) AND OTHERS

The Senate proceeded to consider the bill (S. 313) for the relief of Ante Tonic (Tunic), his wife Elizabeth Tunic, and their two minor children, Ante Tunic, Jr., and Joseph Tunic, which had been reported from the Committee on the Judiciary, with an amendment, on page 2, line 2, after the word "required", to strike out "number" and insert "numbers", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Ante Tonic (Tunic), his wife, Elizabeth Tunic, and their two minor children, Ante Tunic, Junior, and Joseph Tunic, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

STANLEY BULSKI (ZDZISLAW REKOSZ)

The Senate proceeded to consider the bill (S. 532) for the relief of Stanley Bulski (Zdzislaw Rekosz), which had been reported from the Committee on the Judiciary, with an amendment, on page 2, line 1, after the word "available", to insert a colon and *"Provided,* That the natural parents of the said Stanley Bulski (Zdzislaw Rekosz) shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Stanley Bulski (Zdzislaw Rekosz) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available: *Provided,* That the natural parents of the said Stanley Bulski (Zdzislaw Rekosz) shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

MRS. ELIZABETH CLIFFORD

The Senate proceeded to consider the bill (S. 545) for the relief of Mrs. Elizabeth Clifford, which had been reported from the Committee on the Judiciary, with an amendment, to strike out all after the enacting clause and insert:

That, for the purposes of the Immigration and Nationality Act, Mrs. Elizabeth Clifford shall be held and considered to have been lawfully admitted to the United States for permanent residence on September 30, 1956: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

NICOLAOS A. PAPADIMITRIOU

The Senate proceeded to consider the bill (S. 555) for the relief of Nicolaos A. Papadimitriou, which had been reported from the Committee on the Judiciary, with an amendment, in line 7, after the word "States", to insert a colon and *"Provided,* That the natural parents of the said Nicolaos A. Papadimitriou shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Nicolaos A. Papadimitriou shall be held and considered to be the natural-born minor alien child of Mr. and Mrs. James N. Demmette, citizens of the United States: *Provided,* That the natural parents of the said Nicolaos A. Papadimitriou shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

MICO DELIC

The Senate proceeded to consider the bill (S. 138) for the relief of Mico Delic, which had been reported from the Committee on the Judiciary, with amendments, in line 4, after the word "Act", to insert "the minor child"; in line 6, after the word "natural-born", to strike out "minor", and in line 7, after the word "States" to strike out "Provided, That no natural parent of Mico Delic by virtue of such parentage shall be accorded any right, privilege, or status under the Immigration and Nationality Act"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child Mico Delic shall be held and considered to be the natural-born alien child of Mr. and Mrs. Eli Delich, citizens of the United States.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

HADJI BENLEVI

The Senate proceeded to consider the bill (S. 177) for the relief of Hadji Benlevi, which had been reported from the Committee on the Judiciary, with amendments, on page 1, line 10, after the word "deduct", to strike out "the required" and insert "one"; in line 11, after the word "quota", where it appears the first time, to strike out "or quotas", and on page 2, at the beginning of line 1, to strike out "or quotas are" and insert "is"; so as to make the bill read:

Be it enacted by the Senate and House of Representtaives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Hadji Benlevi shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available: *Provided,* That the said Hadji Benlevi executes and files with the Attorney General, in such form as he shall require, a written waiver of all rights, privileges, exemptions, and immunities under any law or any Executive order which would otherwise accrue to him if he retains this occupational status as a treaty trader.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

IN FIL CHUNG AND OTHERS

The Senate proceeded to consider the bill (S. 546) for the relief of In Fil Chung, In Ae Chung, In Sook Chung, and In Ja Chung, which had been reported from the Committee on the Judiciary, with amendments, on page 1, line 6, after the word "the," to strike out "minor" and insert "natural-born," and in line 8, after the word "States," to strike out "*Provided,* That no natural parent of the beneficiary, by virtue of such parentage, shall be accorded any right, privilege, or status under the Immigration and Nationality Act," and insert "*Provided,* That the natural father of the beneficiaries, by virtue of such parentage, shall not be accorded any right, privilege, or status under the Immigration and Nationality Act"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor children, In Fil Chung, In Ae Chung, In Sook Chung and In Ja Chung, shall be held and considered to be the natural-born alien children of Mr. and Mrs. Elmer Bussmann, citizens of the United States: *Provided,* That the natural father of the beneficiaries, by virtue of such parentage, shall not be accorded any right, privilege, or status under the Immigration and Nationality Act.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

ANDREAS RAKINTZIS (RAKAJES)

The Senate proceeded to consider the bill (S. 663) for the relief of Andreas Rakintzis (Rakajes), which had been reported from the Committee on the Judiciary, with an amendment, on page 1, line 6, after "(73 Stat. 644)", to strike out "Andreas Rakintzis (Rakajes)" and insert "Andreas Rakintozis (also known as Andreas Rakintzis or Rakajes)", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 4 of the Act entitled "An Act to provide for the entry of certain relatives of United States citizens and lawfully resident aliens", approved September 22, 1959 (73 Stat. 644), Andreas Rakintozis, also known as Andreas Rakintzis or Rakajes) shall be held and considered to be eligible for a quota immigrant status under the provisions of section 203(a)(4) of the Immigration and Nationality Act on the basis of a petition approved by the Attorney General prior to January 1, 1959.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "A bill for the relief of Andreas Rakintozis (also known as Andreas Rakintzis or Rakajes)."

EXTENSION OF SUGAR ACT OF 1948

The bill (H.R. 5463) to amend and extend the Sugar Act of 1948, as amended, was announced as next in order.

Mr. MUSKIE. Mr. President, I ask that the calendar call be ended at this point.

The PRESIDING OFFICER. Without objection, the calendar call is ended at this point.

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 113, H.R. 5463, and that it be made the pending business.

The PRESIDING OFFICER The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 5463) to amend and extend the Sugar Act of 1948, as amended.

The PRESIDING OFFICER. The question is on the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill (H.R. 5463), to amend and extend the Sugar Act of 1948, which had been reported from the Committee on Finance, with amendments, on page 1, at the beginning of line 7, to strike out "December 31, 1962" and insert "June 30, 1962"; on page 2, line 3, after the word "thereof", to strike out "June 30, 1963" and insert "December 31, 1962"; in line 8, after the word "thereof"; to strike out "June 30, 1963" and insert "December 31, 1962"; in line 11, after the word "thereof", to strike out "September 30, 1963" and insert "March 31, 1963"; in line 16, after the word "ending", to strike out "December 31, 1962" and insert "June 30, 1962"; in line 19, after the word "ending", to strike out "December 31, 1962" and insert "June 30, 1962", and on page 3, after line 9, to insert a new section, as follows:

SEC. 4. Subsection (b) of section 408 of the Sugar Act of 1948, as amended, is amended by striking out the period at the end of paragraph (3) and inserting in lieu thereof a semicolon, and by adding the following new paragraph:

"(4) As a condition for the importation of any quantity of nonquota purchase sugar from any foreign countries as provided in this subsection, a fee of approximately the difference between the world price and the domestic price of raw sugar, as determined by the Secretary, shall be paid to the United States by the person applying for release of such quantity of sugar."

WILLIAM ATTWOOD, AMBASSADOR TO GUINEA

Mr. DODD. Mr. President, I regret that I was not in the Chamber yesterday afternoon at the time the nomination of William Attwood as Ambassador to Guinea was confirmed.

Mr. Attwood is a resident of New Canaan, Conn., and I am privileged to know him. I regard his selection as one of the outstanding ambassadorial appointments of recent years. He has an intimate knowledge of foreign affairs arising in part from long experience as a foreign correspondent for the New York Herald Tribune and Collier's magazine and for the past 10 years as European editor and foreign editor of Look magazine.

I believe that Mr. Attwood possesses the qualities of character and competence which will make him an outstanding success in the very difficult post to which he has been named by the President.

I am pleased that he was so swiftly confirmed by the Senate and will be able to depart for his post immediately.

ROBERT H. KNIGHT, GENERAL COUNSEL FOR THE DEPARTMENT OF THE TREASURY

Mr. DODD. Mr. President, I take this opportunity to congratulate Mr. Robert H. Knight as he assumes his new post as General Counsel for the Department of the Treasury.

Mr. Knight is a resident of Connecticut, having been born in New Haven and educated at Yale University. He has held important posts in the academic and legal fields and most recently has served as Deputy Assistant Secretary of Defense on International Security Affairs.

Mr. Knight carries to his new post great competence and broad experience, and I am confident that he will fill his new post with distinction.

DIFFERENCES WITHIN THE KREMLIN HIERARCHY AND BETWEEN THE KREMLIN AND RED CHINA

Mr. DODD. Mr. President, there has been much speculation in the Western press about differences within the Kremlin hierarchy and differences between the Kremlin and Red China.

That certain differences do exist, there can be no denying. But how serious are they, and what do they portend for the West?

The consensus until now has been that these differences are very real, and it has been widely recommended that the West should adjust its policy to this reality. It has been suggested that if we make things more difficult for Khrushchev, if we shut the door on agreements that Khrushchev can claim as personal victories, his place will be taken by other more truculent, more Stalinist members of the Kremlin's hierarchy. It has also been suggested that it would be in the interest of the free world to widen the breach between the Kremlin and Red China by admitting Red China to the U.N. and according her diplomatic recognition.

Within the past few weeks, this thesis has been challenged in a series of articles by outstanding experts on communism.

In the current issue of Foreign Affairs, which appeared on March 20, Dr. Philip E. Mosely, director of studies of the council on foreign relations, has published a remarkable article, in which he charges that the Soviet envoys in the West are deliberately spreading false rumors about differences in the Soviet bloc for the purpose of extorting concessions from the West. He points out that, whenever there have been real differences, the Communists have done their utmost to conceal them and deny them.

Mr. Paul Wohl, the noted Soviet expert of the Christian Science Monitor, was even more specific in an article which appeared on February 20. He said there was strong internal evidence that the documents which were leaked to the Western press after the conference of Communist leaders in Moscow last November, were really forgeries. He suggested that the playing into Western hands of forged documents purporting to show Moscow and Peiping at loggerheads was really an instance of collaboration between Moscow and Peiping for the purpose of confusing the West.

This also is the theme of a searching report entitled "That Deceptive Sino-Soviet Split," which appears in the current issue of Air Force magazine.

I recommend all of these articles to the Senators.

Mr. President, I ask unanimous consent to insert in the RECORD at this point the following articles:

First. New York Times article of March 20, entitled "Khrushchev Tales Are Called Trap," by Harry Schwartz.

Second. Foreign Affairs article in its April issue, entitled "Soviet Myths and Realities," by Philip E. Mosely.

Third. The Christian Science Monitor article of February 13 entitled, "Red Bloc Split or Fraud?" by Paul Wohl.

Fourth. The article in the Air Force magazine, March issue, entitled "That Deceptive Sino-Soviet Split."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 29, 1961]

KHRUSHCHEV TALES ARE CALLED TRAP—U.S. EXPERT TERMS RUMORS ON PREMIER'S ROLE AN EFFORT TO LURE WEST TO YIELD

(By Harry Schwartz)

An influential U.S. Government adviser on Soviet affairs charges that Soviet envoys in the West are spreading false rumors about Premier Khrushchev's position as a means of extorting important concessions from Western nations.

Writing in the current issue of Foreign Affairs, Dr. Philip E. Mosely also challenges the widely held notion that rising living standards and educational levels in the Soviet Union are in any way weakening the monolithic power of the Soviet state. Dr. Mosely, director of studies of the Council on Foreign Relations, has played an influential role in shaping U.S. policy toward the Soviet Union during the last two decades.

Dr. Mosely does not specify where the Russians are trying to win concessions by spreading rumors that Mr. Khrushchev needs Western retreats if he is to maintain his power against the challenge of Stalinists.

Dr. Mosely participated last year in a closed conference at Dartmouth that brought leading Soviet and American figures together in Hanover, N.H. It is also known that in recent months the Soviet Ambassador, Mikhail A. Menshikov, has been meeting with influential Americans whom he attempted to convince that an early Kennedy-Khrushchev meeting was essential.

POWER STRUGGLES CONCEALED

When there has been an actual Kremlin power struggle, Dr. Mosely writes, Soviet spokesmen abroad have been the last to refer to this dangerous subject.

"They have tiptoed about * * * strongly denying all signs of dissension at home," Dr. Mosely adds. He interprets the situation about which he writes in these terms:

"The recent whispering campaigns seem designed to pave the way for one-sided concessions by the West, rather than representing an unprecedented rending of the veil of Soviet secrecy. The versatility displayed in this new tactic is, I believe, a sign of stability and great self-assurance. Only a very strong and confident Soviet leader can afford to turn to his profit self-launched rumors of his political vulnerability at home."

Dr. Mosely denounces speculation in the United States last spring that Premier Khrushchev's violent behavior at the abortive Paris summit conference was in any way forced upon him by opponents in the Communist Party Presidium or by military leaders. Such views, Dr. Mosely writes, tend falsely to suggest that Mr. Khrushchev has somehow become a puppet buffeted by contending factions and to underrate his experience and his willpower, and to underestimate the power that he wields.

The result of the improved Soviet standard of living, Dr. Mosely writes, has been to raise Khrushchev's popularity to a peak Stalin never knew, and has positively enhanced Khrushchev's ability to mobilize his people's energies and loyalties behind his foreign as well as his domestic programs.

Dr. Mosely describes as wishful the views of those foreign analysts who have argued that the spread of education among the Soviet people must increase doubt and dissent.

[From Foreign Affairs, April 1961]

SOVIET MYTHS AND REALITIES

(By Philip E. Mosely)

I

It may be useful, on the 8th anniversary of Stalin's death, to review some of the misconceptions and mirages that have plagued Western efforts to interpret the changing Soviet scene under his successors. A stock-taking, even though brief and incomplete, may help Americans to understand better the international environment in which a new administration will have to cope with old and new challenges to its hopes and purposes.

One persistent theme of Western analysis has been the concept of a debilitating and perhaps fatal struggle for supremacy within the Soviet apparatus of dictatorship. One widespread view runs somewhat as follows. A totalitarian system, by its very nature, cannot be legitimate. It cannot provide for the orderly transmission of absolute power. It is bound to be caught in a dog-eat-dog struggle for supreme control. On this premise, the top Soviet leadership is inevitably driven by a continuing and desperate rivalry among competing leaders and cliques. Hence, it is assumed, Khrushchev is constantly engaged in a struggle against multiple challengers within his own apparatus, and the function of "Kremlinology" is to identify his rivals for power by reading the obscure portents of personnel changes and turgid ideological hints.

One extreme interpretation of this alleged instability was current in May and June 1960. Supposedly, Khrushchev's vehement behavior at the abortive summit conference was dictated to him by unseen forces within the top Soviet hierachy, perhaps by a ganging up of military leaders and Stalinist ideologues. Supposedly Khrushchev had initially been willing to overlook the affront of the U–2 flights, with its drastic violation of the Soviet passion for secrecy, and proceed with the summit meeting and President Eisenhower's visit to the Soviet Union, but was forced by a coalition of rivals within the party apparatus to take a stiff line. According to this view, he was actually enjoined to read to the Paris press conference a statement prepared for him in Moscow, while the Minister of Defense, Marshal Malinovsky, sat beside him to make sure that he did not deviate from the text.

Undoubtedly, a genuine struggle for the succession took place after Stalin's death. The arrest and execution of Beria was an important step in the downgrading of the power of the secret police which had been used by Stalin for many years—at least since 1934—as a personal instrument of terror against the party. And the political police had undoubtedly used its role to dominate Stalin by playing on his many fears and phobias. The demotion of Malenkov, in January 1955, and the dismissal of Malenkov, Molotov, and Kaganovich in June 1957, served to consolidate Khrushchev's control. The gestures that Marshal Zhukov made toward promoting his own political prestige and his own control over the army were followed by a swift downfall, in October 1957. Probably the decisive building up of Khrushchev's domination over the party's instruments of power took place approximately between mid-1954 and late 1957. A decisive stage in this process was marked by his famous denunciation of Stalin's arbitrary and cruel rule over the party, at the 20th Party Congress in February 1956.

Basically Khrushchev's structure of rule is very similar to Stalin's, but his style of administration differs from Stalin's in some important respects. Like Stalin, he has and uses his full power to appoint and remove the members of the party presidium, the central

drive wheel of decisionmaking, as well as the members of the Central Secretariat. It is clear, at least since late 1957, that Khrushchev's choice of this body of close collaborators is entirely his own; it is not determined by any factions or cliques operating outside his control. He has strengthened the party's, i.e., his own, control over the military establishment and the secret police. Similarly, through appointing a long roster of party secretaries in the various republics and oblasts, Khrushchev has established securely his control over the party machinery. Through the party's regional machinery he also determines the composition of the party congresses, and it is his handpicked party presidium that selects the membership of the central committee of the party. Whether he has reverted to Stalin's singlehanded manipulation of the secret police, or whether he shares control over it with the presidium, remains obscure. In any case, neither the presidium nor the secret police is likely today to offer any foothold to would-be challengers to his leadership.

If the structure of control remains basically unchanged, in what ways and why has Khrushchev changed the style or atmosphere of Soviet rule? Clearly Khrushchev allows a much freer expression of views within his entourage, and genuine discussions now take place on many issues before he hands down his decisions, as illustrated in the discussions of agriculture in the January 1961 session of the central committee. In this respect Khrushchev has apparently reverted in fact, as he claims, to a more Leninist style of work. New and important decisions, such as those on reducing the size of the armed forces, on raising the rate of investment in agriculture, on changing the requirements for admission to higher education, are often preceded by fairly open discussions and disputes in public channels, even though the basic work of decisionmaking is carried on within the party secretariat, the Council of Ministers, and the party presidium, all of which are ultimately appointed by and responsible to Khrushchev.

Does this somewhat enlarged tolerance or even encouragement of more detailed and more frank discussions of ways and means of implementing Soviet purposes and programs mean, as some analysts have stated, that Khrushchev has allowed the reins of power to slip from his hands? Or that decisions are now made by counting votes within the presidium? Or that Khrushchev can be outvoted by colleagues whom he has appointed? Or that members of the presidium are free to trade votes on various issues and to form alinements of factions for and against Khrushchev? In the absence of firm information on this highly secret sphere of Soviet inner politics, many shaky assumptions have been given wide currency. Sometimes, it is Suslov, supposed guardian of ideological purity, who is touted abroad as leader of an anti-Khrushchev, Stalinist intrigue. Sometimes other names, such as Marshal Malinovsky's, are mentioned as potential rivals even though Malinovsky is not even a member of the presidium.

As an absolute ruler Khrushchev needs frank discussions of ways and means to achieve his purpose. But as head of the Soviet Party, he certainly knows how to suppress factions just as effectively as Lenin and Stalin did. Unlike Stalin in his later years, Khrushchev has seen the need to lay down broad purposes and then to leave the details to his principal subordinates, subject to his constant threat to check on their performance. But to assume from this useful and necessary subdivision of labor and partial delegation of operating responsibilities that he has carelessly let the reins of control slip from his hands and has somehow become a puppet buffeted by contending factions is clearly to underrate his experience and his willpower, and to underestimate the power that he wields. It can also lead to underestimating the skill and determination with which he is pursuing Soviet aims abroad.

The notion that Khrushchev's power is far from absolute or secure has been zealously spread abroad by Soviet emissaries, in supposedly confidential talks. "Our leader faces strong opposition at home in his effort to bring about a relaxation of tension with America" (or Great Britain, or France, as the case may be). "He needs something concrete to prove that he is right and the Stalinists wrong." From this it is but a step to implying that the West can safely abandon some of its positions and programs—West Berlin, the plans for strengthening NATO, Formosa—in order to assure the political survival of the cooperative Mr. Khrushchev and forestall the rise to power of some unnamed and supposedly more militant rival.

In the past, whenever a genuine struggle for power has been taking place within the Kremlin hierarchy, Soviet spokesmen abroad have been the last to refer to this dangerous subject. In those uneasy circumstances they have tiptoed about, avoiding tete-a-tetes without witnesses, and strongly denying all signs of dissension at home. The recent whispering campaigns seem designed to pave the way for one-sided concessions by the West, rather than representing an unprecedented rending of the veil of Soviet secrecy. The versatility displayed in this new tactic is, I believe, a sign of stability and great self-assurance. Only a very strong and confident Soviet leader can afford to turn to his profit self-launched rumors of his political vulnerability at home.

II

One beneficial feature of Khrushchev's new style of rule has been a greatly lessened reliance on the day-to-day use of political terror. Khrushchev has gained great popularity, within the ranks of the party apparatus and among the Soviet population at large, through the greater sense of individual security and the spreading expectation of a somewhat more impartial justice. From this, however, there is a long jump, which many commentators in the West have not hesitated to take, to assuming that the system of political pressure and even of repression has simply disappeared. In this overoptimistic view, there are now no obstacles to a continuous evolution of the Soviet system toward a status of full freedom of person and opinion and, eventually, of active political liberty. Does this idyllic picture correspond to reality?

Today, factory managers, collective farm chairmen, artists and writers, party officials of many ranks no longer fear sudden disappearance, whether through imprisonment or execution or exile to labor camps or to forced residence. To a great extent the atmosphere of terror has been lifted. Some important improvements have been made in the administration of justice. To a considerable extent, the reforms of the past 2 years have separated the functions of investigation, prosecution, and trial. Instead of being investigated, arrested, tried, and sentenced by the secret police, an ordinary citizen can now expect that the evidence gathered by the police, secret or conventional, will be examined by a separate prosecutor's office, which decides whether to bring him to trial. And the trial will be conducted usually by courts which are separate in administrative line of command from the police and the prosecutor's office. Of course, all three arms of justice are controlled by the government, under the direction of the party apparatus; all three are subject to appointment and removal from above. All three are responsible to the party's demand for vigilance, whether against hoodlums, embezzlers, speculators in dachas or cars, or disseminators of Western propaganda.

Although the defendant is entitled in theory to the services of counsel, these may or may not be available in practice and defense attorneys are sometimes punished by the party for an excess of zeal in defending their clients. Outside the system of state courts, the military tribunals are still empowered to judge cases in complete secrecy. Sentences are seldom published, except as a public warning to other potential offenders. Still, with all these defects, intolerable in a true system of law, the new conditions of justice offer a vast improvement over those of Stalin's days, especially for nonpolitical offenders.

In the past, a number of well-run autocracies, without a trace of democratic ideology, have also endeavored to provide their subjects with a regular and safeguarded system of justice, for injustice is a source of serious waste to the state itself. Each person wrongly condemned constitutes a direct loss of resources to the state. And the dread of unpredictable punishment brings with it many other losses, such as fear of taking responsibility, widespread resort to deception, apathy among the people, and corruption within the government apparatus.

The new Soviet leadership has not, as many abroad prematurely assume, laid down its punishing sword. Its secret police are still active. They are still watching and writing things down. The ordinary Soviet subject, especially anyone over 35, can recall earlier periods when police pressure, but not police vigilance, has been relaxed. And he knows that seemingly innocent remarks and even imputed motives can be brought up against him at a later time, when the pendulum has swung back toward renewed vigilance.

In the past 2 years the Soviet state has unsheathed a new weapon against those whom it regards as antisocial elements. By the vote of a neighborhood or block meeting assembled and dominated by party members, any unproductive member of society can be expelled from his place of residence and ordered to live at a distance of not less than 100 kilometers. In recent months, newspaper articles and letters have been demanding the more frequent application of this form of vigilante law. Apparently, this type of exile by popular decree is designed to supplement the specific provisions of the code by holding the threat of ostracism over socially undesirable elements and dissenters. The picture of a Soviet system that has chosen, or been driven—by what forces?—to abandon its police controls and to leave the way open to all kinds of initiatives welling up from below is a most appealing one, but one that can hardly stand the light of Soviet day.

III

But, it is frequently argued, the steady if unspectacular rise in the Soviet standard of living is bound, sooner rather than later, to undermine the dictatorial character of the régime. As people become more prosperous and better fed, housed and clothed, they will raise their spiritual demands. They will exact a right to form their own opinions and eventually to tell the authorities what to do.

The rise in Soviet living standards since 1953 is an important and highly desirable development. Since Stalin's death there has been a very substantial improvement in the supply of food. The enormous waste of time through waiting in line has been reduced. Above all, the Soviet housewife is now confident that she will find in the shops the wherewithal to feed her family. Food costs remain high in relation to average earnings, and the variety and quality are poor in relation to Western standards and Soviet desires. In the major cities clothing is available in relative plenty, and prices, though still high, have been reduced almost by one-half; the quality has also been improved, in large part through importing superior goods from China, East Germany, and Czechoslovakia.

In Moscow a customer can now shop around for quality and style instead of taking whatever is offered. Mark-downs and bargain sales, once decried as examples of inferior capitalist management, have been instituted in some lines, such as TV sets, radios and shoes.

Housing, long a blight on Soviet comfort, is being built on an impressive scale, especially in some 150 principal industrial cities. At last, under the program instituted in 1957, millions of citizens are being moved from old, dilapidated housing, and from a one-room-per-family standard, to new and clean if not very elegant apartments of two, three and even four rooms. Nothing can give greater satisfaction and pride than to see and participate in these benefits.

Soviet people are enjoying their increased purchasing power to the full. The peasants receive a much larger cash income and are demanding more good things to buy. A reform instituted in 1956 has given old-age pensioners, formerly condemned to slow attrition, an adequate basic income, buttressed by nominal rents and free medical care. A parallel measure to raise the minimum wage to 300 rubles (30 new rubles of 1961) has, it is estimated, improved the purchasing power of almost one-third of the employed urban population. On the other hand, successful collective farms are still pressed to share their profits with weaker neighbors, and there have been few major reductions in prices since 1955. Still, Soviet incomes on the average are rising markedly and will continue to do so as personal income taxes are gradually eliminated—though not the much more onerous sales taxes. All this can only bring rejoicing that the Soviet people, hard pressed so long and bitterly tried in a very destructive war and its aftermath, are now enjoying a larger share of the fruits of their labor and their forced savings for investment.

For the outside world, however, one major question still remains: Will the improved standard of living build up pressure on the Kremlin to modify its general line of policy, at home or abroad? Will it cause it to abandon its international ambitions, which have been restated so eloquently in the Declaration of 81 Parties, in December 1960, and by Khrushchev in his program speech of January 6, 1961?

Soviet resources are subjected to multiple and conflicting demands, and since 1953 the Kremlin has given a bigger though modest cut of the pie to the needs of the people. Following his tour of the United States in 1959, Khrushchev promised substantial increases in the allocation of capital for the production of consumer goods; he also announced larger allocations in January 1961. These additional resources, human and material, can be found only by making adjustments in other sectors of the plan, for example in heavy industry, in military programs or perhaps in the still modest program of foreign economic aid. It must not be forgotten, however, that light industry is growing more slowly than heavy industry.

In 1960 a Soviet newspaper took the unprecedented step of printing a letter to the editor which asked if it would not be better to spend less on sputniks and more on housing. Of course, the propaganda machine denounced the unnamed author and denied that there was any conflict. Soviet citizens, having received first installments of the long-promised good life, are eager for the day when the Soviet living standard will, as Khrushchev assures them, overtake that of the United States. Indeed, they would be more than pleased to see it equal that of West Germany or even Czechoslovakia. "Prosperity" and "peace" are powerful slogans in Soviet society as elsewhere, but the effect of their popularity seems quite different there than in countries of free and representative institutions.

One obvious result of the improvement has been to raise Khrushchev's popularity to a peak Stalin never knew. His eagerness to go out among the people, his willingness to explain his policies frequently and at length, his folksy manner, are all valuable assets. A further consequence has been to increase enormously the credibility of Soviet propaganda among the people generally. Formerly, when Stalin proclaimed that the Soviet Union enjoyed one of the highest standards of living in the world, his subjects were instinctively on the alert for new sacrifices or new pressures. Aside from the steady rise of the professional and managerial groups to a distinctly superior way of life under Stalin, most of the people saw no evidence to confirm these lofty claims, and their skepticism about domestic propaganda often carried over the sphere of international politics.

In general, so public opinion analysts tell us, people are best informed about events in which they participate or which they observe at firsthand. They find it somewhat harder to form independent judgments about national affairs. And, except in countries where they have access to a continuing and abundant flow of authentic and contradictory information, they find it still harder to form reliable opinions about events and problems in the external world. The increased confidence with which ordinary Soviet people now accept the leader's word in domestic affairs seems to have a strong carryover in the enhanced faith with which they accept his picture of world events. Far from raising a stronger demand for freedom of information and opinion, the rising standard of living seems, from personal observation by many visitors, to have raised the level of popular trust in the party's propaganda. It has positively enhanced Khrushchev's ability to mobilize his people's energies and loyalties behind his foreign as well as his domestic programs.

IV

If the effect of the slow but steady spread of greater material satisfactions has been to relax one of the major sources of tension between the leaders and the led, will not the ideological grip of the party be gradually undermined by the remarkable spread of middle and higher education to more and more layers of Soviet society? Some analysts have asserted that the Soviet regime is thereby digging its own grave. The expansion of education will, they believe, not only equip its beneficiaries to serve the system better but will inevitably give rise to a spirit of questioning, independent reasoning and critical judgment that will sooner or later destroy the party's ideological control.

Certainly there have been some signs, visible even through the strictly regulated Soviet press, of some stirrings of skepticism and dissent. Apparently, many students—at least in Moscow and Leningrad—were shaken by the events of 1956 in Hungary. Some expressed doubts of the Government's explanation that the popular uprising had been provoked solely by imperialist intrigues. The much freer interpretation of Marxism within Poland has not been without some echoes within the Soviet Union. In the largest cities foreign delegates and tourists are now a commonplace sight. Officially sponsored channels of information, such as the Polish Art Exhibit and the American Exhibition of 1959, have had a wide impact, despite the official effort to discredit the Sokolniki display even before it opened.

Khrushchev's outburst of November 1958 against doubting or dissident students was surely not without cause, and he is not unmindful of the tendency, especially within a part of the younger generation which has grown up since the last period of purge and repression, to press beyond the permitted framework of official dogma. Very often students have shown their boredom with the party's ideology and their eagerness to seek information through other than official channels. Khrushchev's demand, in 1958, that all students should have a 2-year period of productive labor in a factory or on a collective farm, before proceeding to their higher education, was only one expression of his resentment and alarm at the attitudes of a part of the students. However, by the time his proposals were transformed into practice, beginning with the academic year 1959–60, the labor requirement was pretty much waived for students of engineering, pure sciences and medicine, as well as for technologists of all kinds.

The full impact of the new barrier has fallen on those seeking admission to higher training in the ideologically sensitive fields—social sciences, humanities, law, and journalism. The most important provision of the new rules is, of course, the requirement that each candidate, after working at production for 2 years, must present a political recommendation by a social organization, meaning the party or its Young Communist League. As Khrushchev exclaimed in 1958, any student who is dissatisfied with the Soviet system ought to be expelled, so as to make room for the son or daughter of a peasant or worker who will value to the full the state-conferred benefit of higher education.

A spirit of inquiry, dissatisfaction or even dissent can arise even under a totalitarian system, for the demand for individual judgment, for sincerity, lies deep in each individual. This urge may stem from many causes, including boredom, family memories, the influence of Russia's great literature, or the impact of injustices. But the problem of harnessing scientific progress with ideological conformity is not a new one for the Soviet regime. It has persisted, in varying forms, from the beginning. The party and its instruments have developed many ways of shepherding the young toward productive and orthodox careers well rewarded by the state, and away from dangerous thoughts. The controls can never work perfectly, and repression of potential dissent exacts its price today, even though that price is probably far smaller than in Stalin's time. The problem of making a uniform and nondiscussable propaganda interesting or even palatable to young people after it has lost its initial savor of scientific infallibility is a continuing one, as witnessed by the party's long and boring decree on propaganda, issued in January 1960.

By and large, foreign observers are left with the impression that any substantial spread of intellectual questioning is pretty much confined to a few major cities, and primarily to the sons and daughters of fairly well-placed and responsible Communists. It often takes the form of wanting to read everything and examine everything for themselves. It reflects a growing suspicion that the party's choice of information may not be very complete or intelligent. For some it takes the form of wishing for more variety and color in a drab way of life, or of a fascination with the far wider range of literary, artistic, and intellectual stimuli available in the West and even in such friendly states as India. For others it takes a less attractive form among the post-adolescent stiliagi, or teddy-boys, who attempt to ape the manners, dress and haircuts of their Western contemporaries of a few years ago. Naturally, Soviet propaganda tries to equate all interest in the West with the fads and fashions of the stiliagi, and then to lump the latter with "hooligans," an American word which has long since been naturalized in Russian as "khuligany."

With the extreme official and popular emphasis on conformity—extending even to local puritanic attempts to forbid bright-patterned sports shirts and women's slacks

on the otherwise fashionable promenades of Sochi—it would be strange if some high-spirited youths did not assert their differentness in various ways, some of them more intelectual than others. On the whole, however, Soviet youth seems highly conformist. For one thing, the college-level study of politically dangerous subjects, such as history, economics and law, is confined to a relatively few and carefully supervised students. The great majority of students, and often the ablest, are attracted by good stipends and promising careers into technical and scientific. For them, the study of world history or foreign literature, even in its carefully selected doses, ends at about 15. What goes by the name of social studies after that is simply party history, party theory and the current party program of do's and don't's. The widely noted apathy on the part of youth toward the cramming of party ideology into their heads by dull propaganda hacks is probably far more serious than any conscious dissent.

The system of controls and incentives through which the party promotes conformity with its views and goals is reinforced by a strong sense of national pride, even chauvinism. Soviet students are amazed when told that the Moscow subway was not the first one ever built. They assume that the sputniks have proven the superiority of the Soviet system. Most Soviet citizens accept as natural and desirable the extension of the Communist system to other countries, and they are unaware of the methods of control that have been applied or the deep-set hatreds those methods have implanted. They cannot imagine other systems, for example those that allow a genuinely free choice. While often displaying a greedy envy of Western comforts, gadgets and cars, they proclaim with full sincerity the superiority and inevitable triumph of the Soviet system. Needless to say, they are well briefed on American defects, such as economic fluctuations and unemployment, unequal access to higher education, and regional resistances to equal status for citizens of Negro descent. But they seem totally unequipped to reason critically about possible defects in the Soviet system; those that exist have either been removed by the post-Stalin regime or are bound to disappear with the spread of material plenty.

If anything, the slightly widened access to Western information and the presence in their streets of Western tourists makes ordinary Soviet people less aware than before of being cut off from contrary or thought-provoking information. Even the flow of casual foreign sightseers appears to confirm their confidence that Khrushchev is doing everything he reasonably can to reduce tensions and strengthen the prospects for peace.

Despite occasional outbursts of fear and resentment, as in the case of Pasternak's "Doctor Zhivago," the Soviet system of control seems confident of its ability to identify, contain and, if need be, repress such expressions of doubt or dissent as appear among a small minority of its youth. In handling a problem that has plagued it throughout its existence, the party is alert but not unduly alarmed by its newest manifestations. Unlike some wishful analysts abroad, it is confident that it can train a very large part of its youth to serve the state, especially in engineering and the natural sciences, without letting many of them stray from the approved paths of ideological orthodoxy, reinforced as it is today by national pride and arrogance.

V

What does all this add up to? First, that the Soviet system with which the West will be dealing in the 1960's is likely to retain a high level of political stability, based on premises and methods very different from ours. The dictatorship is not likely to be torn to pieces by internecine struggles at the top, to lose control over its people or to surrender its ideology. The party structure is better equipped today to ride through a new succession crisis than it was in 1953. No doubt, names and labels will change, but the concept of a single party, justified in its absolute rule by its monopoly over "truth" and foresight, has been strengthened.

Second, the Soviet leadership will not abandon its ultimate power of life and death over its subjects, even though it now exercises this power with new moderation. Its leaders will resort to terror again if they find that necessary to their aims, but they doubt it will be necessary. The further the Stalinist brand of terror recedes in memory, the more active the confidence and the more energetic the cooperation they can hope to elicit from their people. Any minor movements of dissent can be contained by partial relaxation of controls over intellectual life, combined with methods of repression less cruel than in the past.

Third, the shared desire of the party and the people to raise the standard of living is relaxing very old tensions between the two, is lessening the contrasts between life in Russia and in the West, and is likely to evoke ever greater individual efforts to share in the enlarged rewards offered by the regime for hard work and right-thinking loyalty. Finally, the spread of education may create some annoying worries for the ideological purity of the new generations, but it is not likely to endanger the stability of the regime or its ability to pursue the goals which its leaders set for the Soviet people at home or abroad.

It would surely be comforting if an analysis of the evolution, recent and prospective, of the Soviet system could lead us to a confident conclusion that it contains the seeds of inevitable and desirable changes, and that we have only to fold our hands, lower taxes, buy a third car and wait for this development to occur in the fullness of God's time. Unfortunately, such is not the prospect. During the decade of the 1960's we shall, under present prospects, be dealing with a Soviet system that is growing rapidly in economic, scientific and military strength and which will have fewer rather than more difficulties in preserving political stability and an adequate measure of ideological uniformity. These growing strengths, not offset by equivalent new weaknesses, will enable its leaders to devote greater rather than smaller resources and political determination to achieving the worldwide purposes that have been proclaimed in an evolving pattern of interpretation by Lenin and Stalin and now by Khrushchev.

[From the Christian Science Monitor, Feb. 14, 1961]

RED BLOC SPLIT OR FRAUD?

(By Paul Wohl)

Serious doubt exists as to the accuracy and authenticity of the documents which have recently inspired a worldwide interest in an allegedly serious rift between the Soviet Union and Communist China.

Indeed, there is much internal evidence in the documents which indicates that they may be deliberately planted frauds.

These documents allegedly show that Moscow and Peiping are locked in a long drawn-out struggle which flared up violently last year and continues unabated behind a verbal facade of monolithic unity.

At first glance the documents which have come into the possession of Western authorities seem to be almost as sensational as was the indictment of Stalin's abuses by Premier Nikita S. Khrushchev at the end of the 20th Soviet Communist Party Congress.

ACCUSATIONS QUOTED

Last November at the 81-party conference in Moscow Mr. Khrushchev allegedly referred to China's chairman Mao Tse-tung as "a megalomaniac and warmonger." In Bucharest, last June, Mr. Khrushchev is reported to have likened Mr. Mao to Stalin, accusing him of spinning theories detached from the realities of the modern world.

Chairman Mao, in turn, is quoted as having called the Soviet Premier a revisionist which in Communist terminology is akin to a traitor. At a meeting of the presidium of the World Peace Council in Rome in January 1960, Peiping's spokesman is said to have accused the Soviets of letting China down.

Mutual recriminations seem to cover every phase of Communist policy, starting with Premier Khrushchev's speech on Stalin, which, the Chinese say, should have been cleared with the fraternal parties, to a speech by the secretary-general of the Chinese central committee at the 81-party conference, in which he declared that the Soviet party was opportunistic, that its ideas on disarmament were absurd, that the Soviet view of division of labor among the countries of the Socialist camp was wrong and that China must go its own way.

INCIDENTS RECOUNTED

The Chinese are said to have condemned Soviet policy toward Poland in October, 1956, and claim to have prevented the Soviets from withdrawing their troops from Hungary in November of that year, while the Soviets complained that the Chinese were callous and ignorant and that they had tried to draw them into another world war over Formosa, etc.

These are but a few examples of the mutual accusations contained in the documents in Western hands. These documents, which are attributed to a satellite and to a West European Communist source, are more or less identical and believed to represent a deliberate leak on the part of the Soviets.

The purpose of such a leak would seem to be to convince the West that Moscow is under pressure from Peking and that Chairman Mao and his associates represent a danger to world peace. The West under such circumstances might be more inclined to pay a price for Premier Khrushchev's good services in restraining the Chinese firebrands.

FACTS COMPARED

Actually the documents seem to be a fraud. It is unlikely that Mr. Khrushchev at the Romanian Party Congress should have compared Chairman Mao to Stalin as that the secretive Chinese Communists should have chosen a meeting of the presidium of the World Peace Council to accuse the Soviets of selling them out to the United States.

Stalin, it is recalled, remains "a great Marxist-Leninist" to Communists the world over, while the World Peace Council includes several independent, nonparty pacifists of considerable standing in their respective countries.

Facts and data given in the documents, moreover, are out of line with the sequence of events. The presidium of the World Peace Council of January, 1960, met in London and not in Rome. The Chinese were not represented at that particular meeting.

DEBATES NO SECRET

According to the documents, a Soviet circular accusing the Chinese of indiscipline and deviations was sent to the major parties on June 21. This happens to have been the day on which Premier Khrushchev addressed the Romanian Communist Party Congress. On June 26, when Mr. Khrushchev supposedly launched "a violent and impromptu tirade" against Mr. Mao, the Romanian Party Congress had ended.

The Chinese Communist Party is said to have replied to the Soviet circular on Sept. 10. On Sept. 9 Chinese politburo member Chen Yi sent a message to the Bulgarian Communist Party, stating that to strengthen

our unity with the Soviet Union * * * is our fundamenal policy: herein lies our basic interest * * *." There are many other incongruencies.

That differences between Moscow and Peking exist has been admitted by both sides. Discussions among the Communists are known to be frequently rough and impassioned. But there is no indication whatsoever that these differences have reached the climax hinted at in the doucments.

The playing into Western hands of forged documents purporting to show Moscow and Peking at loggerheads may be such a case of collaboration.

[From Air Force magazine, March 1961]

THAT DECEPTIVE SINO-SOVIET SPLIT

Red is Red whether Chinese or Russian. Recent speculation about the possibility of a split between the Red Chinese and Moscow is wishful thinking. Here are four major points to bear in mind in assessing what you read and hear:

1. The Communists, Chinese or Russian or whatever, deliberately manipulate words to conceal intent and strategy.

2. Moscow and Peiping have agreed on tactics to confuse the free world. Local crises will occur more often. Coexistence maneuvers will be intensified.

3. We must plan now for the day, not far off, when the Red Chinese will have nuclear weapons.

4. The Sino-Soviet threat will continue. It makes little difference who is boss or whether they are equal partners.

Recent developments pose an urgent requirement to reassess the Sino-Soviet threat to the free world.

Is Red China attempting independently to attain a nuclear capability, having been refused Soviet weapons?

Were evident differences between the two powers patched up during the secret meeting of world Communist leaders held at Moscow late last year?

Do apparent Red desires to turn the war in Laos into a "little Korea" represent a Soviet concession to Peiping's demands?

Did the Chinese Communists approve Soviet Premier Khrushchev's inaugural greeting to President Kennedy expressing the hope that, under his Administration, United States-Soviet Union relations once more could be improved?

How does Khrushchev intend to reconcile his most recent cries for "coexistence" with his continuing support for the late Lumumba's forces in the Congo and Cuba's Castro, his efforts to weaken the U.N., and his continued attempts to intimidate our allies into withdrawing our oversea base rights?

These are but a few of the questions posed by recent events. Underlying them all is a primary question which the new administration must seek to answer: What are the main factors of the Sino-Soviet as it exists today, and how is this threat likely to evolve in the future? The interplay of moves and countermoves yet to come in the chess game of international politics nullifies the possibility of a completely definitive answer. But a brief analysis of four essential points may serve to sharpen our perspective considerably.

Wishful thinkers tend to seize upon each report of a purported Sino-Soviet rift as new evidence that eventually the two powers will fight one another and permit us to relax and enjoy life again. Unfortunately, such optimism ignores the important fact which constitutes point number one:

1. A basic reason for current misunderstandings about the functioning of the Sino-Soviet alliance is the Communists' deliberate manipulation of words to conceal actual intentions and strategy.

A voluminous exchange of polemics was published throughout most of 1960 in leading Chinese Communist and Soviet journals. On the surface, it appeared to reflect contradictory positions, but, before jumping to conclusions, it is important to recall that deceit long has been a prime requirement of Communist conflict doctrine. In addition, years of experience have led to new refinements of old techniques.

Dr. Stefan T. Possony, faculty member at Georgetown University's Graduate School and an authority on Communist techniques of semantic warfare, has formulated what serves as a succinct résumé of how the Chinese and Soviets now are using word manipulation in an attempt to deceive us. In an article published in the July 9, 1960, issue of the Saturday Evening Post, Dr. Possony observed:

"As Communist semanticists attained virtuoso skills, they discovered that, in many instances, communications could be made to serve a dual purpose—to say one thing to Communists while simultaneously conveying quite a different message to non-Communists."

The most recent Sino-Soviet polemical exchange, which began in April 1960 and continued into December, is a dramatic example of current Communist skillfulness in the use of double-meaning language to serve the dual purpose of communicating with the comrades while simultaneously confusing the enemy. A careful examination of the record reveals that the so-called debate centered around four key areas:

Which tactical tricks from the Communists' bulging bag were best suited to contemporary conflict requirements?

How should current maneuvers be timed to maximize their effectiveness?

What limits did U.S. nuclear firepower pose on Communist freedom of action to encourage the numerous revolutionary opportunities which were continuing to arise in underdeveloped areas?

How could "contradictions" stemming from the simultaneous existence of revolutionary opportunities in newly emerging states and the continuing necessity to deceive and weaken the United States best be reconciled.

Skillful manipulation of words characterized the entire exchange. Moscow emphasized the necessity for disarmament and coexistence. Peiping, by contrast, repeated in outspoken terms the importance of the roles of violence and warfare in bringing Communists to power. Red Chinese spokesmen also emphasized that the United States continued to be the principal enemy and argued the necessity for Communists to actively support all national liberation movements in underdeveloped areas.

On the surface, the differences in viewpoint seem to be considerable. But after the verbiage had been swept aside, it was clear that Moscow and Peiping were arguing the same principles. The very same bloody messages from Peiping which spoke primarily of violence and struggle also took note of the "greater possibilities, under some circumstances, for the peaceful development of the revolution" (Red Flag, April 1960). And Moscow, while pressing for peaceful coexistence, never failed to admit, simultaneously, that in states possessing strong military capabilities of armed class struggle—i.e., war—would be required to guarantee the success of any Communist attempt to seize power. Sino-Soviet spokesmen were apparently playing their own particular version of vaudeville's endman and interlocutor. More recent developments, discussed below, have confirmed this interpretation.

2. Moscow and Peiping have agreed to concentrate, for the moment, on tactics designed to break down our resistance. Local crises are to be stirred up and caused to occur with increasing frequency. Simultaneously, coexistence maneuvers designed to force us to sign hasty disarmament agreements are to be intensified.

The most recent strategy session of the leaders of the international Communist movement took place behind closed doors at the Kremlin during the weeks immediately following the annual celebration of the anniversary of the Bolshevik revolution on November 7. The Yugoslav leaders were conspicuously absent, the Chinese Communists and the Soviets very much present, and high-ranking Communists from at least 79 other nations, within the bloc and without, were on hand. A lengthy multiparty declaration was widely published early in December. Pravda carried the text on December 6. The published declaration disclosed the broad outline of the tactics Moscow and Peiping intend to emphasize for the moment. The main points set forth in the document were:

While the tactics of "peaceful coexistence" are to be further upgraded, coexistence is not a concession to non-Communists. It is an active form of class struggle, a "policy of mobilizing the masses in launching vigorous action against the enemies of peace * * *." Any and all groups and individuals that can be made to fear a nuclear war and its consequences are to become part of a greatly enlarged temporary coalition of the "peace elements." This expanded "peace front" will be manipulated to wage nuclear war psychopolitically and to join the Communists in pressurizing the West into disarming.

Concurrently, encouragement of "national liberation movements"—i.e. local struggle in underdeveloped areas—is to be intensified. The declaration states: "The breakdown of the system of colonial slavery under the impact of the national liberation movement is a development ranking second in historical importance only to the formation of the world socialist system."

Moscow retains hegemony over the international Communist movement; all strategies will continue to be formulated—or approved—by the Kremlin.

Khrushchev expanded these principles in a January 6 report to key members of the Soviet intelligentsia. In essence he spelled out why renewed attempts to disarm and weaken the West were necessary. The problem of how to unleash nuclear war without absorbing unacceptable levels of destruction in the form of retaliatory blows and fallout must somehow be solved, he said. But the tactical decisions taken at the multiparty meeting must not be interpreted to mean that the pace of the Soviet military buildup was to be slackened.

On January 21, the Chinese Communist Central Committee also issued a statement endorsing the 81-party declaration. No Sino-Soviet disagreement over fundamental principles was apparent.

The one question which neither Moscow nor Peiping has answered so far is this: How do the Communists intend now to go about trying to disarm the West unilaterally while keeping some nuclear weapons for their own later use?

Even before Khrushchev's January 6 speech, high-level Soviet military spokesmen—and Khrushchev himself—had hinted of their preoccupation with how to work out a way to wage nuclear war successfully without suffering, in the process, an unacceptable level of retaliation. History has recorded the Communists' penchant for negotiating international agreements to serve their own ends, only to break them without notice whenever such a move best serves their purposes. Our own security depends upon a suspicious scrutiny of each new "disarmament" maneuver they initiate.

Already, the Chinese leaders have stated publicly that they will not adhere to any disarmament agreement unless they have participated in the negotiating sessions. There also have been hints that soon Red China will explode a nuclear device of its own. Both of these developments, plus

elaborate maneuvers to suggest to the West that a rift between Moscow and Peiping is imminent, could be part of a plan jointly agreed upon in advance, to deceive us. If the United States could be convinced, somehow, to believe that Moscow sincerely intended to adhere to a disarmament agreement, that she was unable to control the behavior of the Red Chinese, and that the Kremlin was displeased over Chinese bellicosity, fresh avenues would thereby be opened for Moscow and Peiping to attempt to retain some nuclear weapons while depriving us of our own. Such a deceptive strategy would pose less risk to the Soviets, in the long run, than cheating on a disarmament agreement, although a combination of both tactics would run true to Communist form.

Even if the United States should agree to such a minimal move as a nuclear test ban treaty, while the Communists retained the freedom to test in China, the likelihood of their eventually winning the weapons lead-time race would be enhanced. Insofar as the Soviet leaders are concerned, this is the prime objective, one to which all other goals must be subordinated.

Further, Khrushchev's current thinking could well be along these lines. If the U.S.S.R. moves present-generation weapons and key military research and development and manufacturing centers to Red China, along with sufficient Soviet personnel to continue operations there, it might be possible to dupe the West into getting rid of its strategic strike capability while the Reds secretly retain theirs. If necessary, once its arsenal had been transferred to remote areas in China, the U.S.S.R. could permit inspection of its own territory on U.S. terms. Then the United States would pretty well have to agree to nuclear disarmament.

Risks to Russia that the Chinese would attempt to seize installations for their own use could be nullified if sufficient Soviet troops guarded them. Since the Chinese will continue to depend heavily on Soviet advanced technology for a long time to come, they cannot go too far in antagonizing the Kremlin; it is unlikely that such elaborate safeguards actually would be necessary. Moreover, the two powers seem really to be working in concert against the West rather than concentrating unduly over tactical priorities.

3. The Chinese Communists seem to be working to acquire nuclear weapons. We should plan now to meet this contingency.

Last fall, Chou En-lai granted an interview to Edgar Snow; the text was published in the January 31, 1961, issue of Look magazine. The interviewer asked: "How soon does China expect to be making nuclear weapons of its own?" Chou replied, laconically: "I can briefly state that I, myself, don't know when we will be making nuclear weapons."

However, other statements by the Chinese leaders have specifically claimed that the Chinese Peoples Republic (CPR) will have nuclear weapons eventually. Western observers agree. For example, a symposium on Chinese science and technology was held in conjunction with the annual convention of the American Association for the Advance ment of Science in New York last December. Robert T. Byer, a physicist at Brown University, estimated that the Chinese Communists could explode their first A-bomb in 5 years. Sir C. P. Snow of Great Britain, speaking at the same meeting, said: "Within, at the most, 6 years China and several other states will have a stock of nuclear bombs."

Both of these estimates were based on analysis of the progress the Chinese have made in implementing their 12-year plan for science, inaugurated late in 1955. The objective was to try to catch up with the technologically advanced nations in key fields. At first the Chinese attempted to inaugurate their plan with a minimum of Soviet help. But setbacks occurred. After talks at Moscow, an agreement was signed on January 18, 1958, which made the plan a joint Sino-Soviet venture. Neither the Chinese nor the Soviets have disclosed what priority, if any, was assigned to military applications of nuclear energy. Nor has Soviet delivery of any nuclear weapons to China been announced. But the Chinese have declared their intent to develop a modern defense industry and to transform China into a strong socialist state as a result of having undertaken the plan. It is safe to assume that they are hard at work to develop a nuclear device, either with or without Soviet assistance. Possessing even a token nuclear capability would greatly enhance the CPR's status in the alliance and in the world at large.

When the Chinese Communists announce to the world that they have successfully tested a nuclear device, we must be prepared to deal with the situation. In the ensuing excitement, the United States must take precautions not to lose sight of several important points.

The event will have great impact on the leaders of the technologically backward nations in Asia and Africa. Irrespective of the true facts, the Communists are likely to play up the test as something the Chinese have accomplished without help from Moscow. African and Asian leaders are already impressed with the phenomenal strides China has made to industrialize an agrarian economy against formidable odds. They visualize China's accomplishments, unlike Moscow's, as symbolic of something they, too, can realistically hope to achieve. Should China explode a nuclear device, these leaders will be appropriately awed.

China will seek to exploit the situation and use its token nuclear capability as a lever for extending its sphere of influence and realizing its objectives in Asia. Attempts to foment revolutions in all the underdeveloped countries of the areas will be intensified, threats may be followed by full-scale invasion attempts by China's conventional forces, and efforts to force Japan to aline herself with the Communist bloc may eventuate.

How far China will go in such maneuvers and how quickly she will move will depend, primarily, on whether or not, in the meantime, Moscow has succeeded in controlling the conduct of the integrated foreign policy of international communism. If the Soviet leaders estimate that their own attempts to attain at least some degree of unilateral Western disarmament have, meanwhile, increased their relative military strength to a point where it is time to take on the United States directly, bellicose Red moves in Asia could serve as the curtain raiser for central war. But if the United States has not backed down in the meantime, the risks Moscow would incur by initiating global war still would outweigh the gains.

Even when she possesses a token nuclear capability, China, unless joined by the U.S.S.R. will not be capable of waging war against the major Western powers. Even if she works at breakneck speed, it will take her some years to advance from a neophyte member of the nuclear club possessing a Hiroshima-type bomb to one controlling the equivalent of today's weapon systems. Military technology continues to advance rapidly. By the time China has brought her military establishment in line with today's standards, tomorrow's weapons will have been phased into the United States and Soviet arsenals.

In the final analysis, the capability of the free world to deal effectively with China's attainment of a token nuclear capability will depend upon the United States refusal, in the meantime, to succumb to the tactics of constant nuclear terrorization that the Communists now are applying against us. In fact, the Kremlin can hand the Red Chinese an obsolete nuclear weapon and help the Chinese to explode it any day the Soviets choose. We should show our courage by calling the Communists' bluff in the right way at the right moment. Meanwhile, we should refuse even to continue to adhere to a gentleman's agreement on a nuclear test ban, a development which is seriously jeopardizing our own research and development efforts. Once we are alerted to all Communist machinations designed to weaken us militarily, psychologically, and politically, we, like they, will lose our fears of nuclear firepower and evaluate Communist psycho-political use of this weapon as realistically as we must also evaluate the possibilities of their using it actually.

4. The Sino-Soviet threat will continue indefinitely, irrespective of whether Moscow retains control or whether Peiping achieves her goal to become an equal partner.

It is impossible to say with certainty whether or not the Red Chinese ever will become a nation sufficiently industrialized to challenge the Kremlin's hegemony over the international Communist movement. So far, China has shown no signs of such potential. Despite understandable differences, the two powers continue to work in concert to try to defeat the principal enemy they commonly share: the United States. Even serious agricultural setbacks in both nations have not forced any relaxation of this ruthless dedication to the main objective—wearing down our resistance and resolution by any and all available means while simultaneously continuing their own military buildup. Eventually, the alliance may evolve into an equal partnership, complicating our already difficult task of meeting the challenges and threats it poses. But relaxing our vigilance and rationalizing our behavior with idle and unrealistic dreams of the day when the Red Chinese will initate war against the Soviets—or vice versa—would be our greatest national mistake, one which there would be no opportunity to rectify.

The Communists have announced their intentions to conduct a ruthless program of diverting our attention from one local crisis to another along the pattern evident in Laos and the Congo. Simultaneously, they have served warning that they will build up pressures for nuclear disarmament by intensifying already existent western fears of nuclear war. Since they have revealed their strategy, we have no justification for cooperating with their attempts to realize their announced objectives.

In the long run, insuring a priori the complete failure of all Communist attempts to disarm us will be the only effective deterrent to our own ultimate capitulation.

ROBERT TABER AND THE FAIR PLAY FOR CUBA COMMITTEE

Mr. DODD. Mr. President, my colleagues may remember that I have made previous reference on this floor to Robert Taber of the so-called Fairplay for Cuba Committee. Taber is the man who testified under oath before the Internal Security Subcommittee that there was no Cuban money supporting that committee, and who was proved a perjurer when we later secured testimony that Taber himself had received thousands of dollars in cash from the hands of Raulito Roa of the Cuban delegation to the United Nations, and that this money was intended to be used for and was used for paying the cost of the advertisement in the New York Times which opened the Fairplay for Cuba Committee's public campaign of fundraising and propa-

ganda dissemination in behalf of Fidel Castro.

The Internal Security Subcommittee has sought without avail to get further testimony from Mr. Taber. Our subpenas have been returned, for the marshals have been unable to find him. It was reported to us that he had fled to Cuba, and I reported this to the Senate some time ago.

Now we have additional word about Robert Taber. The Miami News of Saturday, March 25, 1961, carries a picture of Mr. Taber in the garb of a Castro militiaman. He is lined up with three other individuals similarly garbed, all armed. The picture appears to have been taken against a kind of jungle background.

Under the picture is the caption " 'Militiaman' Robert Taber and Friends." I wish it were possible to insert pictures in the CONGRESSIONAL RECORD, because this picture is worth a thousand words.

Under this picture in the Miami News is a three-column headline "Ex-U.S. Newsman Joins Fidel's Militia." Then comes the story. It is fairly short, and I should like to read it for the information of the Senate:

Robert Taber, the former New York CBS newsman who defected to Fidel Castro's Communist dictatorship in Cuba, has gone all the way in his love for the Cuban revolution.

Now, apparently, Taber has joined the ranks of Castro's people's militia.

A photograph of Taber, who masterminded the Communist-lining Fairplay for Cuba Committee in this country, appeared in this month's issue of Bohemia magazine—published in Havana.

Taber is shown with three other Cubans attired in a militia uniform, a beret, and carrying a Czechoslovakian submachinegun.

The photograph caption states:

Bob Taber, the famous North American newspaperman, dressed as a militiaman and also went to fight with his "checa" what he has always fought with his pen.

The word "checa," according to Carlos Todd, Cuban newsman now publishing the Cuban Information Service in Miami, is slang for Czech weapons.

Taber also has appeared in recent photographs in the Havana press which have shown him cutting sugarcane.

For several weeks Taber also has been a contributing columnist in Castro's El Mundo and Revolucion newspapers in Havana.

He also is engaged in killing anti-Communist Cuban patriots who are today fighting a desperate battle in the Escambray hills of south-central Cuba, Todd comments in his weekly newsletter.

His comrades in the Fairplay for Cuba Committee in the United States are justly proud of him.

In addition to the testimony it took from Robert Taber the Internal Security Subcommittee also has received testimony from several others in connection with its investigation of the Fairplay for Cuba Committee, and we are continuing our investigation of the activities of this committee. We plan to release this testimony which we have already taken about the middle of next week. Further testimony with regard to the Fairplay for Cuba Committee will be taken in the very near future.

I hope every Senator will take time to read the testimony because this is a good example of a Communist-front organization which operated with some success within this country, and found support from many innocent and misled people. It was able to get on the college and university campuses of this Nation, where its work has done untold harm in poisoning the minds of young people.

The Fairplay for Cuba Committee got away with all this without any interference until a committee of the Senate looked at it and found it was a Communist-supported organization, operating right in our midst. This is a classic example of what we are up against—an organization supported by Communist funds, working for Communist purposes, taking a full page advertisement in the New York Times to lie to the American people that it is an American institution devoted to freedom, when in truth it is a Communist front devoted to slavery and tyranny.

I ask unanimous consent that the newspaper article be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EX-U.S. NEWSMAN JOINS FIDEL'S MILITIA

Robert Taber, the former New York CBS newsman who defected to Fidel Castro's Communist dictatorship in Cuba, has gone all the way in his love for the Cuban revolution.

Now, apparently, Taber has joined the ranks of Castro's people's militia.

A photograph of Taber, who masterminded the Communist-lining Fairplay for Cuba Committee in this country, appeared in this month's issue of Bohemia magazine—published in Havana.

Taber is shown with three other Cubans attired in a militia uniform, a beret, and carrying a Czechoslovakian submachinegun.

The photograph caption states:

"Bob Taber, the famous North American newspaperman, dressed as a militiaman and also went to fight with his 'checa' what he always has fought with his pen."

The word "checa," according to Carlos Todd, Cuban newsman now publishing the Cuban Information Service in Miami, is slang for Czech weapons.

Taber also has appeared in recent photographs in the Havana press which have shown him cutting sugar cane.

For several weeks Taber also has been a contributing columnist in Castro's El Mundo and Revolution newspapers in Havana.

"He also is engaged in killing anti-Communist Cuban patriots who are today fighting a desperate battle in the Escambray hills of south-central Cuba," Todd comments in his weekly newsletter.

"His comrades in the Fair Play for Cuba Committee in the United States are justly proud of him."

REEMPLOYMENT OF FOREIGN SERVICE OFFICERS OR EMPLOYEES

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business be temporarily laid aside and that the Senate proceed to the consideration of Calendar No. 115, S. 644.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 644) to amend the Foreign Service Act of 1946, as amended, concerning reemployment of officers or employees.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Foreign Relations with an amendment on page 1, line 11, after the word "serving", to strike out "or shall cause to be paid, by transfer or otherwise, to the Department of State funds necessary to cover gross salary, employer contributions, and gross lump sum leave payment relating to the employment of the reemployed officer or employee. The Department of State shall make to and on behalf of the reemployed officer or employee payments, except those made directly by the employer as authorized in the first sentence of this paragraph to which he is entitled under the provisions of paragraph (a) of this section, and shall make those withholdings and deductions authorized and required by law", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That paragraphs (b) and (c) of section 872 of the Foreign Service Act of 1946, as amended, are amended to read as follows:

"(b) When any such retired officer or employee of the Service is reemployed, the employer shall send a notice to the Department of State of such reemployment together with all pertinent information relating thereto, and shall pay directly to such officer or employee the salary of the position in which he is serving.

"(c) In the event of any overpayment under this section, such overpayment shall be recovered by withholding the amount involved from the salary payable to such reemployed officer or employee, or from any other moneys, including his annuity, payable in accordance with the provisions of this title."

Mr. MANSFIELD. Mr. President, the pending bill has been cleared by the acting minority leader and the ranking Republican member of the Committee on Foreign Relations. It was reported unanimously by the Committee on Foreign Relations. It has the approval of the Department of State and of Mr. Robert Brenkworth, the man most directly involved, who is the disbursing clerk of the Senate. I ask unanimous consent that I may insert at this point in my remarks a statement on the bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MANSFIELD

I do not believe that I can be more brief or more clear in my explanation of S. 644 than by quoting from the brief report of the Committee on Foreign Relations on the bill.

"Section 872(b) of the Foreign Service Act of 1946, as amended, provides that the agency of the Federal Government reemploying a Foreign Service annuitant shall pay to the Department of State the funds necessary to cover salary, employer contribution, and leave payments, and that the Department of State shall in turn pay to the annuitant the portion of his salary that he is entitled to and the portion of his annuity that he is entitled to, making such withholdings and deductions as are authorized and required by law.

"S. 644 was designed to simplify this procedure in some cases by allowing these fiscal arrangements to be handled either entirely by the Department of State as the law now provides or to be shared between the Department of State and the agency which employs the retired officer.

"The committee received favorable reports on the bill from both the executive branch and the Senate Disbursing Office. Both reports suggested, however, that the bill would be even better if it provided that the salary of a reemployed annuitant would in all cases be paid by the new employer. There is no opposition to this change.

"The committee decided on March 21, 1961, to report the bill favorably with the amendment recommended by the executive branch and the Senate Disbursing Office.

"S. 644 also revises section 872 of the Foreign Service Act of 1946, as amended, having to do with the recovery of excess payments, to accord with the change which the bill would make in section 872.

"The Committee on Foreign Relations recommends that the Senate approve S. 644."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

LAW DAY, U.S.A.

Mr. DIRKSEN. Mr. President, yesterday the House passed House Joint Resolution 32, designating the 1st day of May of each year as "Law Day, U.S.A." The joint resolution is at the desk. I ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. (Mr. PASTORE in the chair) laid before the Senate the joint resolution (H.J. Res. 32), to designate the 1st day of May of each year as "Law Day, U.S.A." which was read twice by its title.

The PRESIDING OFFICER. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate proceeded to consider the joint resolution.

Mr. DIRKSEN. Mr. President, the American Bar Association, in cooperation with hundreds of State and local bar associations, has sponsored the observance of Law Day on May 1 of past years, the principal purposes of which are to foster respect for law and a reaffirmation of the American people of their loyalty to the United States of America and a rededication to the ideals of equality and justice under law in their relations with each other as well as other nations. Designation of this day as "Law Day" will also point up the contrast between freedom under law and governmental tryranny.

Schools, courts, civic and service clubs, and churches joined by such organizations as the American Heritage Foundation, the International Association of Chiefs of Police, the Federal Bureau of Investigation, have all cooperated to arrange programs which will bring to the public the real meaning of the observance and a true realization of the privilege we unconsciously enjoy by being Americans.

Inasmuch as May 1 is not far away and the American Bar Association is most anxious to make the necessary arrangements that this day be appropriately celebrated, I ask for immediate consideration of House Joint Resolution 32.

The PRESIDING OFFICER. The joint resolution is before the Senate and open to amendment. If there be no amendment to be proposed, the question is on the third reading of the joint resolution.

The joint resolution was ordered to a third reading, was read the third time, and passed.

THE POST OFFICE DEPARTMENT DEFICIT AND POSTAL RATES

Mr. ROBERTSON. Mr. President, last week during the hearings on the request of the Post Office Department for additional funds to keep it from going into the red, it was developed that we were facing a deficit in the Post Office Department this year of over $800 million, and a deficit even larger than that in the next fiscal year.

I asked the officials at that time what they planned to do about it. They said they understood that the Department would request Congress to increase rates to produce approximately $800 million, and that they would ask the ICC, with $100 million being lost on parcel post, to increase the parcel post rate.

I have written to the Postmaster General a letter asking him to indicate where some of the big losses were occurring. He has written me a letter, dated March 28, which I received this morning. In it he lists newspapers and magazines as costing us $256 million a year, and third-class mail, which some people irreverently refer to as junk mail, costing us $252 million a year.

Then the Postmaster General states that he has plans to recommend to Congress an increase in first-class mail of 1 cent, which will produce nearly $400 million, and an increase in the other rates, to wipe out the deficit.

Mr. President, I ask unanimous consent that the letter and the accompanying figures furnished me today by the distinguished Postmaster General be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OFFICE OF THE POSTMASTER GENERAL,
Washington, D.C., March 28, 1961.

Hon A. WILLIS ROBERTSON,
Chairman, Subcommittee on Treasury-Post Office Departments Appropriations, U.S. Senate, Washington, D.C.

DEAR SENATOR ROBERTSON: I delayed a few days in sending you the information you asked for about postal-rate revision because I thought I might be able to include additional specific facts from the Presidents' submission to Congress.

However, I don't want to let any more time go by.

If you want more detailed development of this situation than that provided in the enclosure, please let me know.

Sincerely yours,

J. EDWARD DAY,
Postmaster General.

BACKGROUND FOR CONSIDERATION OF POSTAL-RATE REVISION

I. GENERAL

The 1962 Federal budget was prepared and submitted to the Congress before the present administration took office.

This budget presupposed enactment by Congress of additional fees and charges totaling $1.8 billion in 1962 in order to achieve a balanced budget and to operate within the permanent debt ceiling.

Of this amount, $843 million was to be provided in 1962 by postal-rate increases.

President Kennedy said in his state of the Union message that his new administration must of necessity work within the budget framework previously submitted.

The Post Office Department previously prepared a schedule of rate revisions to provide the necessary additional postal revenues. The present administration of the Post Office Department, because of the general situation described, proposes this same schedule of rate revision.

II. REVENUES AND EXPENDITURES

According to current estimates, the deficiency of income in 1962 will reach $894 million. This is an alltime high.

	Annual amounts (in millions)		
	1960 (actual)	1961 (estimate)	1962 (estimate)
Total obligations	$3,874	$4,269	$4,424
Net revenue	3,277	3,442	3,593
Postal deficiency (fund basis)	597	827	831
Payment for public service	37	49	63
Total Treasury financing	634	876	894

III. PUBLIC SERVICE ALLOWANCES

In each of its actions since enactment of the Postal Policy Act, 1958, Congress has followed the same pattern in determining public service allowances.

Similar action was assumed for 1962 by the previous administration. This would set public service alowances at $63 million.

IV. THE POSTAL DEFICIENCY

According to the Postal Policy Act, the users of the mail should pay the cost of handling the mail, except for public service allowances.

According to the Department's 1962 estimates without a general rate revision users would pay $831 million less than this cost. (This is $12 million less than the amount set forth in the original budget because of a reduction in proposed expenditures.)

V. THE POSTAL DEFICIENCY BY PRINCIPAL CLASSES OF MAIL

The most recent figures are given in the 1960 Cost Ascertainment Report as follow:

	Revenue surplus (+) or deficiency (−) (in millions)
1st-class mail	−$4
Domestic airmail	+11
2nd-class mail:	
Regular-rate publications	−256
Preferential-rate and free-in-county (after statutory public service allowance)	−90
3d-class mail	−252
4th-class mail	−113

VI. ADMINISTRATIVE RATE REVISIONS

The Post Office Department will soon file a request with the Interstate Commerce Commission for revised rates for parcel post, the service that accounts for most of the loss shown above in fourth-class mail.

The Postmaster General has authority to establish certain rates, such as for international mail, and fees for certain special services, such as postal money orders, registry, special delivery, and collect-on-delivery.

Revisions of these administrative rates are being made and will produce approximately $90 million in 1962 ($15 million additional revenues from international mail was already included in the 1962 budget estimates).

VII. LEGISLATIVE RATES

After public service allowances and after administrative-rate increases are taken into account, there remains $741 million to be obtained from legislative-rate increases.

A 1-cent increase for first-class and airmail would produce $423 million in new revenue, leaving $318 million to be obtained from second- and third-class mail and all other legislative adjustments.

It is expected that a schedule for accomplishing this objective will soon be submitted by the President to the Congress.

THE MERGER OF MANUFACTURERS TRUST AND HANOVER BANK

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a letter which I received this morning from Mr. Horace C. Flanigan, of the board of the Manufacturers Trust Co., of New York, in which he states there were some inaccuracies in the statement I made on the floor of the Senate concerning his alleged contract of compensation in connection with the merger between the Manufacturers Trust Co. and Hanover Bank.

He outlines in his letter the actual contract which he has enjoyed for the past 3 years with Manufacturers Trust Co., and which apparently will be the basis of his compensation when Hanover merges with Manufacturers.

I did not furnish a copy of the letter to the press gallery because the newspapers of the Nation did not publish what I said last Friday, and I therefore assumed that they were not interested in Mr. Flanigan's statement.

However, for the benefit of my colleagues I will say that Mr. Flanigan said I was in error in saying that the airplane would be his private airplane, but that, instead, when he was not using it other bank officials could use it. He states that the limousine with the liveried chauffeur would not be his private limousine, but that when he was not using it, it could be used by other bank officials.

Mr. Flanigan states that the insurance policy of $100,000 on his life was a part of the general pool of all bank officials, and that in view of the fact he was taken on at the age of 65 his policy has depreciated at the rate of $10,000 a year.

With respect to what I said about his being paid a $25,000 a year bonus at the end of his active employment after a period of 10 years, he said it was not a bonus, but deferred compensation; that he would get it only for the number of years that he actually was on duty; first at a salary of $125,000 a year, and later at a salary, as a part-time consultant, of $50,000 a year.

In fairness to Mr. Flanigan I ask that the letter may be printed in the RECORD at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MANUFACTURERS TRUST CO.,
New York, N.Y., March 28, 1961.

The Honorable A. WILLIS ROBERTSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ROBERTSON: In our telephone conversation yesterday, during which I expressed my great surprise and concern at the comments which you made on the floor of the Senate on March 24 about my employment contract with the Manufacturers Trust Co., you stated that you would welcome a full statement of the facts. I am glad to respond to that suggestion.

On September 30, 1957, the board of directors of the Manufacturers Trust Co., considered, in the words of the minutes of the meeting, "the desirability of assuring to the trust company the continuation of the services of the chairman of the board, Mr. Horace C. Flanigan, particularly after he ceases to be the chief executive officer." The board appointed a committee of four outside directors and instructed them to confer with me about the continuation of my services. After 6 weeks' study, the committee recommended and the board approved the following contract that was executed on November 18, 1957:

"This agreement made at New York, N.Y., this 18th day of November 1957, by and between Manufacturers Trust Co., a New York banking corporation, hereinafter referred to as the 'trust company,' and Horace C. Flanigan, hereinafter referred to as 'Flanigan,' witnesseth:

"Whereas Flanigan has been employed by the trust company for more than 25 years and during that period has had an important part in its management and has contributed substantially to its growth and success; and

"Whereas since 1951 Flanigan has been and is now employed by the trust company on a full-time basis as chief executive officer and now has the title of 'chairman of the board of directors'; and

"Whereas the trust company desires to make provision for the continuance of Flanigan's employment as chief executive officer and to obtain the continued benefit of Flanigan's advisory and consulting services as a part-time employee when he ceases to be chief executive officer; and

"Whereas Flanigan is willing to render the services provided for herein on the terms and conditions herein set forth: Now, therefore, in consideration of the premises and the mutual covenants and agreements herein contained the parties hereto agree as follows:

"1. So long as the board of directors of the trust company shall determine, Flanigan agrees to serve the trust company as the chief executive officer on a full-time basis at a salary at the rate of $125,000 per annum payable in approximately equal installments on the customary salary payment dates of the trust company. At any time after November 18, 1959, Flanigan may elect on 30 days' written notice to the trust company to terminate his services as chief executive officer at the expiration of such 30-day period with the same effect hereunder as if such termination were determined by the board of directors of the trust company.

"2. On the termination of Flanigan's services as chief executive officer of the trust company under paragraph 1 hereof and for a period of 5 years from that date, Flanigan agrees to continue as a part-time employee during such 5-year period and render such advisory and consulting services to the trust company as may be reasonably required by the board of directors of the trust company, and subject to their supervision and control. Flanigan shall be required to devote in the aggregate up to but not exceeding one-half of his time during regular business hours to such services. Flanigan, however, shall be required to render such services only at such times and to such extent as his health permits and does not unduly interfere with his other activities which he may be engaged in during the other half of his time not committed to the trust company. Flanigan's annual salary under this paragraph 2 shall be at a rate equal to the sum of $50,000 per annum plus the annual pension Flanigan would have been entitled to receive under the trust company's pension plan, as then in force, if he retired at the conclusion of his services under paragraph 1 hereof, and shall be payable in approximately equal installments on the customary salary payment dates of the trust company. In the event that Flanigan becomes physically or mentally incapable of performing the services provided for in this paragraph 2, the board of directors of the trust company shall have the right to terminate the period provided for as of a date to be determined by the board of directors.

"3. During the period of part-time employment provided for in paragraph 2 hereof the trust company shall provide for Flanigan a suitable office in the building occupied by its branch at Fifth Avenue and 43d Street in the city of New York, and shall also provide him with such secretarial and other services as he may reasonably require in carrying out his obligations under said paragraph 2.

"4. During the period provided for in paragraph 1 hereof as well as during the period provided for in paragraph 2 hereof, the trust company shall pay, or reimburse Flanigan for, expenses paid or incurred by Flanigan in performing his obligations under paragraphs 1 and 2 hereof of the same general nature and to the same general extent now being paid or reimbursed to Flanigan.

"5. During the periods provided for in paragraphs 1 and 2 hereof, Flanigan, in addition to the salary payments provided for in said paragraphs, shall participate in and be covered by such pension, profit sharing, insurance, and other benefit plans as are provided by the trust company for its active employees, and he shall not be treated as a retired employee until the completion of his employment under paragraph 2 hereof.

"6. As a further inducement to Flanigan to enter into this agreement, the trust company, upon the termination of his employment under paragraph 2 hereof, agrees to pay to Flanigan an aggregate amount equal to $25,000 for each full year, and proportionately for each fraction of a year, of his service under paragraphs 1 and 2 hereof, which aggregate amount shall be payable at the rate of $25,000 per annum, and such annual amount to be payable in approximately equal installments on the customary salary payment dates of the trust company. In the event of Flanigan's death prior to the payment in full of the sums provided for in this paragraph 6 hereof, and whether such death occurs before or after the completion of his period of employment under paragraphs 1 and 2 hereof, the balance shall be paid to Flanigan's legal representative promptly after the qualification of such legal representative.

"7. During the period provided for in paragraphs 2 and 6 hereof, Flanigan agrees that he will not directly or indirectly engage in any business which is competitive with the business of the trust company.

"8. The obligation of the trust company to make the payments provided for in paragraph 6 hereof shall be conditioned upon Flanigan's due performance of his obligations under paragraphs 1, 2, and 7 hereof.

"9. This agreement shall inure to the benefit of and be binding upon the trust company, its successors and assigns (including without limitation any corporation which might acquire all or substantially all of the trust company's assets and business or with

which the trust company may be consolidated or merged).

"10. This agreement shall be governed by the laws of the State of New York.

"In witness whereof the parties hereto have executed this agreement the day and year first above written.

"Attest:

"J. F. ADAMS.

"MANUFACTURERS TRUST CO.,

"By E. S. HOOPER,

"H. C. FLANIGAN."

In the light of the facts of this contract, Senator, I believe the record should be set straight to show that—

My employment contract is not one of the terms of the merger of the Manufacturers Trust Co. and the Hanover Bank, but antedated the merger agreement by more than 3 years;

This contract is not a million-dollar bonus or any kind of bonus, but is compensation—part payable currently and part deferred—for services now being rendered and to be rendered under its paragraphs 1 and 2;

No provision of the contract or possible interpretation of it could provide a basis for the statement regarding me that "with no duties to perform he will first be carried on the payroll of the merged institution at a salary of $125,000 per year."

It was my intention that, at the end of the first 2 years following 1957, I would retire as chairman of the board and chief executive officer. In September 1959, the then president of the bank, Eugene S. Hooper, informed me that he was forced to relinquish his office and responsibilities because of ill health. We were most fortunate to secure the services of Charles J. Stewart to replace him as president. Mr. Stewart had been president of the New York Trust Co. and was a general partner of Lazard Freres & Co. when he came to us. He took office in November 1959 and I was urged by members of the board to stay on another year during this transition period. In the fall of 1960, I had notified members of the board that I wanted to retire as chief executive officer at the end of that year in favor of Mr. Stewart. In December, however, active merger negotiations were undertaken by William S. Gray, chairman of the Hanover Bank, and myself. These merger negotiations were interrupted by a business trip that I had to make to California but on my return early in January they were resumed and the merger was agreed upon by the two boards. It is planned that Mr. Stewart will be chairman of the board of the merged bank, R. E. McNeill, Jr., now president of the Hanover, will be president and Gabriel Hauge, now chairman of the finance committee of Manufacturers Trust Co. will be vice chairman. It is also planned that Mr. Gray will become chairman of the finance committee and that I will become chairman of the executive committee.

So much for the contract. Now let me take up the other matters to which reference has been made. It has been said that I am provided a private airplane. The facts are that the airplane was purchased for the Manufacturers Trust Co. in 1946 by the late Harvey D. Gibson, then president of the trust company, and has been in use by the bank since that time. It is available to the bank's executives for use in furthering the bank's interests and has been so used. It is in no sense for my exclusive use.

It has also been said that the bank maintains a deluxe suite at the Waldorf-Astoria for the use of myself and my family. The fact is that I maintain a home in Purchase, N.Y., which is fully staffed all year around and where I live when I am not in New York City attending to bank business and meeting customers. This apartment is also available to other executives of the bank and for meetings incident to bank business. As for my family, occasionally my married children stay there overnight with me when the second bedroom in the apartment is not occupied. In such cases, I have remitted these occupancy costs to the bank.

A further matter relates to a car and chauffeur. It is true that a car and chauffeur are at my disposal for bank business, but when this car is not being used by me it is available for the use of other members of the bank's executive staff. At my home in Purchase, I have a chauffeur and automobiles to take care of my personal needs.

Reference has also been made to a large insurance policy being carried on my life. The policy referred to is part of the bank's group life insurance. This plan was amended in 1960 to increase benefits and make it more equitable. Among other things, it provided that anyone who was over 62, but not over 70, at that time would retain his policy at full value for 5 years. This provision applies not only to me but to many others as well. Starting in 1965, the face amount of the policy of $100,000 will decline 10 percent in each of the succeeding 5 years until it reaches $50,000.

In the light of these facts, Senator, I believe the record should be set straight to show that—

No airplane is being provided for my private use;

No apartment is being furnished for the personal use of myself and my family;

No bank car and driver are provided for my purely personal use;

No special insurance policy is involved other than my participation in the bank's regular group insurance.

These are the facts, Senator, in relation to the points raised by you on the Senate floor. I hope this letter will clarify the situation.

Yours sincerely,

H. C. FLANIGAN.

EXTENSION OF SUGAR ACT OF 1948

The Senate resumed the consideration of the bill (H.R. 5463) to amend and extend the Sugar Act of 1948, as amended.

Mr. MANSFIELD. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MUSKIE in the chair). Without objection, it is so ordered.

Mr. BYRD of Virginia. Mr. President, the bill as reported by the Senate Finance Committee was amended so as to extend the act for 15 months, rather than 21 months, as provided by the House version of the bill. The bill as reported by the Senate Finance Committee provides for payment into the U.S. Treasury of the difference between the U.S. price and the world price on all sugar purchased under the reallocation of the Cuban quota.

The bill as passed by the House and as referred to the Senate Finance Committee provided for extending the act to December 31, 1962. The Finance Committee amendment would terminate the present extension on June 30, 1962. It would appear that, in either event, Congress would need to legislate again on sugar during the 1962 session. The 15-month extension would give to producers, both in the United States and abroad, an additional period of certainty with regard to the oncoming crops.

The reallocation of the Cuban quota to various other sources has granted sudden additional business to those abroad and to those who export and import amounts formerly handled from Cuba.

The committee adopted an amendment which provides that an import duty equivalent to the difference between the world price and the U.S. price shall be assessed on all sugar imported under the reallocation of the Cuban quota. Basic quotas would continue to be imported under the same circumstances as at the present time, without any imposition of an additional import fee. Only importations above the normal quotas would be assessed the extra fee.

Mr. LONG of Louisiana. Mr. President, will the Senator from Virginia yield?

Mr. BYRD of Virginia. I yield.

Mr. LONG of Louisiana. As one who represents a sugar-producing State, I wish to express the gratitude of those of us who have an interest in this legislation. On behalf of the people of our State and the people of other sugar-producing States, I express our gratitude that the Senator from Virginia, the distinguished chairman of the committee, moved to hold hearings on this matter, and moved as expeditiously as possible in that connection.

Unfortunately, the bill did not reach the Senate until a few days ago. But the chairman of the committee arranged to hold hearings, at the request of those who wanted hearings held; and the Senator from Virginia moved as expeditiously as possible to see that opportunity was afforded to report this measure for the consideration of the Senate at the earliest possible moment.

There is no doubt that this proposed legislation is very important. It must be passed immediately if we are to avoid a chaotic situation with regard to the sugar market, contrary to the best interests of our Nation; and the Senator is well aware of the haste that is necessary in this instance.

I regret very much that it was necessary to ask the chairman of the committee to act so expeditiously in connection with this measure; but all of us appreciate that he has done everything within his power to see to it that this matter was handled in the most expeditious fashion possible.

Mr. BYRD of Virginia. Mr. President, I appreciate very much what the Senator from Louisiana has said.

I realize the great importance of this proposed legislation; and we held all the hearings possible in connection with it.

Mr. President, I ask unanimous consent that my statement on the bill be printed at this point in the RECORD, as part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BYRD OF VIRGINIA

Twice last year, and now again early in this year the Senate is faced with a fast

decision with regard to sugar. There seems to have developed a custom that the Senate be required to adopt or reject the bill sent to us from the House during the last hours of the life of the existing bill.

This is as regrettable to me as it is to various of my colleagues. We in the Finance Committe have given serious thought as to how it can be avoided in the future.

Whether we like it or not, we are now faced with a serious dilemma. It would be a serious matter to allow the Sugar Act to lapse. It would mean that there would be no controls on imports except for the normal tariff and excise taxes. Cuba could immediately proceed to unload sugar in this country—domestic growers of cane and sugarbeets would face disaster at the very time when preparations are being made for the 1961 crop. Prices would be affected and those who would like to see the United States in economic difficulty would have reason to rejoice.

We must have a bill before the deadline of March 31st. That is a relatively few hours away. I do hope the Senate will consider the consequences of a failure to get a bill through both Houses in time for the President to sign it.

Even though the time was very limited, the Finance Committee held some brief hearings on the bill. That hearing and the intense discussion during the executive session of the committee yesterday pointed up the fact that the whole Sugar Act and its many ramifications need longer, thorough hearings and an item by item discussion by the members of the committee in executive session. It is my profound hope that in the very near future we may be able to vote out a more permanent, longer term sugar bill that will be fair and equitable to domestic producers, consumers, refiners, and importers. We shall work toward that end.

The bill before the Senate today is the bill as passed by the House, with but two exceptions. The Finance Committee changed the termination date from December 31, 1962, to June 30, 1962. This may not have much effect on the mechanics of the legislation—for it would mean that Congress, sometime during the coming year would need to study another bill. To do it in 1963 would be too late. However, if the new bill is adopted prior to July 1962, foreign producers and our own producers of cane and sugarbeets will have longer notice of what the new legislation will be and such time would be very valuable to them. Actually, there would be little to gain by giving the Congress the 6 months between July 1, and December 31 and it is my understanding that the House Agriculture Committee will accept that change.

The other amendment adopted by the committee would permit foreign countries supplying us with sugar under their regular quotas to continue to do so and to receive the U.S. price which is more than 2 cents above the world price. It would, however, require those bringing sugar into our markets above and beyond the regular quotas of the countries of origin of the sugar in question to pay into the U.S. Treasury the difference between the U.S. price and the world price, taking into consideration of course, such things as tariffs and ocean freight.

This would mean that the world price would be paid for the sugar purchased in foreign countries to replace that which will not be purchased from Cuba.

The bill as passed by the House would relieve the President of the obligation to purchase any part of the sugar formerly supplied by Cuba from any country with which the United States does not maintain diplomatic relations. In plain language this means that the President is not required to purchase any of the Cuban deficit from the Dominican Republic. If it were not for this language in the bill the President would not be able to withhold this bonus from the Dominican Republic, even though we have severed diplomatic relations with that country. This Cuban quota will, under the bill, be allocated to other countries on the basis of present quotas, with special consideration to be given to countries of the Western Hemisphere and to those countries purchasing U.S. agricultural products.

The bill would provide that any deficit in any domestic area quota which formerly would be supplied by Cuba should now go to other domestic areas.

It would assign to any nation with a present quota of at least 3,000 and not more than 10,000 tons a sufficient additional amount to bring each to the total of 10,000 tons.

The countries affected would be Costa Rica, Haiti, Panama, the Netherlands, and Nationalist China.

It would give to the Republic of the Philippines 15 percent of the remainder.

The remaining 85 percent would be prorated to other nations on the basis of their existing quotas, although none need be purchased from any country with which the United States is not in diplomatic relations.

If additional amounts of sugar are needed, purchases may be made from any other foreign nation without regard to allocation, but special consideration must be given to countries of the Western Hemisphere and to those countries purchasing U.S. agricultural commodities.

I firmly believe that this is the best bill that could be devised in the day or two which we had to consider the matter. I hope it will be adopted.

The PRESIDING OFFICER. The question is on agreeing to the committee amendments.

Mr. DIRKSEN. First, Mr. President, I should like to inquire whether there is about to be immediate approval of the committee amendments and passage of the bill. I was given to understand that there was some controversy about some items in the bill. I would be the last one in the world to attempt to prolong this proceeding; but I wish to be sure that all Senators who wish to be heard will be protected.

I see now on the floor the distinguished Senator from Utah [Mr. BENNETT]. Let me say to him that the Chair has stated that the pending question is on agreeing to the committee amendments. I wonder whether that is agreeable to the distinguished Senator from Utah [Mr. BENNETT], the distinguished Senator from Kansas [Mr. CARLSON], and the distinguished Senator from Nebraska [Mr. CURTIS], all of whom are members of the Finance Committee.

Mr. BENNETT. As I understand, there are only two amendments. One reduces the period of time from 21 months to 15 months. I was the author of that amendment in the committee, so I certainly would agree to it here. The other amendment is the so-called Douglas amendment. I had assumed that some motions to delete that amendment would be made. But the amendment was adopted unanimously by the committee, so I am not about to move that the amendment be deleted.

Mr. LONG of Louisiana. Mr. President, could we agree at this point to all the committee amendments except the last one, which I think may be subject to some opposition; but I do not believe there will be any effort to oppose the other amendments.

Mr. BENNETT. Let me ask what the Senator means by "the last one."

Mr. LONG of Louisiana. I mean the Douglas amendment. There was no objection to it in the committee; but I understand there will be some inquiry about it, here on the floor.

Mr. CURTIS. Mr. President, I rise to a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Nebraska will state it.

Mr. CURTIS. If the committee amendments are agreed to, will a further amendment be in order? Let me say that I do not know that an additional amendment will be offered, but I wish to understand the situation. Will the entire bill then be open to amendment?

The PRESIDING OFFICER. In that event, any part of the bill not covered by the committee amendments would be open to amendment.

Mr. CURTIS. Would the entire bill, including the committee amendments, then be open to amendment?

The PRESIDING OFFICER. When an amendment is agreed to, it is not open to further amendment, unless it is reconsidered.

Mr. DOUGLAS. Mr. President, I rise to a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Illinois will state it.

Mr. DOUGLAS. For this purpose, let me ask whether the distinguished Senator from Nebraska contemplates the offering of any amendment other than those now printed in connection with the bill.

Mr. CURTIS. My present answer is that I do not. But I want all to understand what we are doing. That was primarily my reason for asking the question, because only a few Senators are now on the floor.

Mr. CARLSON. Mr. President, will the Senator from Illinois yield to me?

Mr. DIRKSEN. I yield.

Mr. CARLSON. I should like to state that in the committee I discussed a proposed amendment; and sometime today I should like very much to bring it up here on the floor. At the present time I do not intend to offer it as an amendment; but I believe it should be discussed, and I may offer it. I would not wish to be precluded from offering it.

Mr. DIRKSEN. Let me ask the Senator from Kansas whether he has any objection to all the modifications of dates set forth in the bill—which would include all the amendments except the amendment styled No. 4, which is referred to as the Douglas amendment.

Mr. BENNETT. First, Mr. President, will the Senator from Illinois yield to me?

Mr. DIRKSEN. I yield.

Mr. BENNETT. I have just now been told that the senior Senator from Louisiana [Mr. ELLENDER] is interested in this problem, and that before the Senate votes on the committee amendments en bloc, an attempt probably should be made to communicate with Senator ELLENDER, so as to ascertain whether he intends to offer an amendment.

Mr. DOUGLAS. Mr. President, will my colleague yield to me?

Mr. DIRKSEN. I yield to my colleague.

Mr. DOUGLAS. I thank the Senator.

Mr. President, the procedure which we frequently adopt with similar bills is to accept the committee amendments, but with the understanding that a motion to strike any such amendment may subsequently be made. If such a procedure is agreeable to the chairman of the committee, the senior Senator from Virginia [Mr. BYRD], I would suggest that might be the procedure adopted in this case, namely, that we adopt the committee amendments, and then we can proceed on any motion to strike or to add.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. HOLLAND. I am sure a repetition of the unanimous-consent request will advise the Senate as to just what it is that the senior Senator from Virginia has requested. As the Senator from Illinois has stated, if the request is that the committee amendments be adopted en bloc, with the understanding that the bill as amended would be regarded as an original bill and would be subject to amendment of the kind suggested by the Senator from Illinois, I think we would be under no difficulty whatsoever. But I do not know, and that is the reason why I am asking the Senator from Illinois, just what was the unanimous-consent request?

Mr. DIRKSEN. That fact is that the Chair put the question. I thought there was some controversy about some of the amendments. I wanted to be sure that every Senator who had an abiding interest in this matter would be protected. It is not for the Senator from Illinois to make the request, but if the Senator from Virginia asks that the bill as amended be considered as original text, that solves the problem. Then the bill will be amendable in any way.

Mr. HOLLAND. Mr. President, I ask the Senator from Virginia what his unanimous-consent request is.

Mr. BYRD of Virginia. Mr. President, the Senator from Louisiana [Mr. ELLENDER] has asked me a question. The question under discussion is whether the amendments should be adopted en bloc. Let me say, however, that in the consideration of the unemployment insurance bill the Senate refused to give me, as a member of the committee, the right to have the amendments adopted en bloc. Objection was made.

Mr. HOLLAND. Mr. President, may I ask the distinguished senior Senator from Virginia what his unanimous-consent request was in this particular case?

Mr. BYRD of Virginia. I have not made any. The Senator from Louisiana has a very deep interest in the bill. I would like to ask him whether he has any objection to adoption of the amendments en bloc.

Mr. ELLENDER. Not if the bill is subject to amendment.

Mr. BYRD of Virginia. Mr. President, I make a motion that all the committee amendments be considered and adopted en bloc, subject, of course, to the understanding that the bill is subject to amendment, just as an original bill.

Mr. HOLLAND. That the bill will be considered as original text.

Mr. DIRKSEN. Mr. President, will the Chair state the motion before the Senate?

The PRESIDING OFFICER. The Senator from Virginia has moved that the committee amendments be agreed to en bloc, with the understanding that the bill be subject to amendment as though it constituted an original bill.

The question is on agreeing to the motion of the Senator from Virginia.

The motion was agreed to.

Mr. DOUGLAS. Mr. President, the bill and the amendment are extremely important both from the standpoint of the finance of government and possible windfalls which might accrue to favored parties—if the so-called Douglas amendment is eliminated—and the whole foreign policy of the United States in the Latin American countries.

I should like to start off, if I may, by saying the action of the Finance Committee in accepting the amendment which I had the honor to propose is, in my judgment, to be highly commended. I pay special tribute to the distinguished Senator from Virginia [Mr. BYRD] for the cooperation which he showed in the adoption of the amendment.

The Senator from Virginia and the Senator from Illinois are frequently on opposite sides of issues, but in this case we formed an implicitly holy alliance to protect the American consumers and taxpayers. I am very happy to be on his side in this issue, and it pleases me very much.

Mr. BYRD of Virginia. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. BYRD of Virginia. The idea of an alliance is, in the opinion of the Senator from Illinois, if he agrees to the alliance, a holy one; if he disagrees to it, it is an unholy one.

Mr. DOUGLAS. Let me say to the Senator from Virginia this is a time to which I have always looked forward. I have greatly admired the Senator from Virginia, and it has been a source of personal pain to me on the occasions when we have had to disagree. But it is very pleasant now to be associated with him in a measure to save the taxpayers of the country $150 million, and possibly pave the way for even greater reforms in the future.

The amendment, which was adopted unanimously by the Finance Committee, is the first one in many years in which, in connection with the Sugar Act, the interests of the American consumers and taxpayers have been taken into account.

The effect of the amendment is to make certain that the so-called quota premium—the difference between the world price for sugar, which, as of last night, was 3.02 cents, and the domestic highly subsidized price, which was approximately 5.6 cents, that difference minus the transportation cost of approximately three-fourths of a cent——

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. DOUGLAS. May I finish the paragraph? Then I shall yield for a question.

In all, the difference, amounting to about 2.3 cents a pound, which comes to $46 a ton on the 3 million tons which were formerly imported from Cuba, or about $150 million, is to be paid, under the Douglas amendment, into the American Treasury, rather than into the pockets of producers, middlemen, speculators, or others who would otherwise receive windfall profits from the reallocation of the 3 million tons previously given to Cuba.

Now I am glad to yield to the Senator from Nebraska.

Mr. CURTIS. Mr. President, would the distinguished and learned Senator favor the Senate with a definition of the word "subsidy"?

Mr. DOUGLAS. I shall indicate the fourfold nature of the subsidies which have been paid out of the pockets of consumers, but in this present instance——

Mr. CURTIS. I am referring to the definition of the word, rather than the interpretation of the act.

Mr. DOUGLAS. I would refer the Senator to Webster's dictionary. We can find the definition in that volume. But in the present instance I would say that what we are trying to do is provide that the difference between the present American price of sugar and the present world price of sugar, instead of going into the pockets of importers, whoever they may be, go into the pockets of the Treasury, and hence to the American people.

The Senator is well acquainted with the fact that the price of sugar in the Caribbean, where the major portion of the world's sugar in international trade originates, is only slightly over 3 cents. When the sugar reaches the United States it is paid for at the rate of 5.6 cents. With a transportation cost of three-tenths of a cent per pound, this amounts to a "subsidy"—I would define it as such—of 2.3 cents a pound. On a short ton of 2,000 pounds, this represents a direct subsidy of $46 a ton.

Since the previous Cuban quota was approximately 3 million tons, which is to be reallocated, there is a total direct subsidy of about $150 million.

Mr. CURTIS. The distinguished Senator, when speaking of subsidies, refers to sums of money obtained by certain foreign suppliers of sugar?

Mr. DOUGLAS. That is a part of the subsidy. It is not all the subsidy because there are indirect subsidies as well. It is however the only part of the subsidy to which the amendment I have presented is directed. There are other elements in the total subsidy, but at the moment we are not concerned with them.

Mr. CURTIS. The Senator would not go so far as to say, in connection with any commodity or any service, that the fact that a price prevails elsewhere in the world lower than in the United States means the American consumers are subsidizing a commodity or a service in this country?

Mr. DOUGLAS. I would say that if the price in the United States exceeds the price in other countries by more than shipping costs it is indicative of the fact that the American consumer is paying

more than he would pay if he bought foreign goods.

Mr. CURTIS. We must also keep in mind that the salary of a member of the British Parliament is far less than the salary of a United States Senator.

Mr. DOUGLAS. We are not proposing to import any British M.P.'s. [Laughter.]

Mr. CURTIS. I am not suggesting that.

Mr. DOUGLAS. I would be in favor of barring the British M.P.'s from membership in our Congress.

Mr. CURTIS. I am interested in the consumers.

Mr. DOUGLAS. The comment of my friend reminds me of a line from Gilbert and Sullivan,

> The flowers that bloom in the spring,
> Tra la,
> Have nothing to do with the case.

The salaries received by British Parliamentarians and the salaries received by American Members of Congress have nothing to do with the price of sugar.

If my friend does not have further questions to ask, I shall continue my remarks.

In the interests of American consumers, American taxpayers and the proper interpretation of the basic Sugar Act, this amendment should remain in the bill. Under the basic act—the Jones-Costigan Act—the consumers interests supposedly are to be taken into account. But, in practice, this has not been the case and almost every device conceived by man has been used to increase the price to American consumers—both individual and industrial.

The American people do not realize how much the present sugar program is costing them as consumers. When the Jones-Costigan Sugar Act was passed in 1934, it was intended to protect the interests of consumers as well as producers, and in the process also put a floor of protection under the farm laborers and their families in the cane and beet sugar fields. At that time the world price of raw sugar was only about 1 cent a pound, and sugar growers everywhere were experiencing great hardship.

In 1934, however, when the Jones-Costigan Act was passed, the philosophy of the National Recovery Act was dominant under which producers were encouraged to restrict production, raise prices, and improve the condition of their employees. The Jones-Costigan Act was in this tradition and extended its protection to foreign as well as American sugar producers.

Over the 27 years which have passed since then, a whole battery of devices to benefit the producers of sugar have been put into effect. These have helped the producers with little or no attention paid to the interests of housewife and consumer. The facts of the situation are approximately these—I shall use only round numbers:

First. The people of the United States consume roughly 10 million tons of sugar a year.

Second. The average retail price of sugar in 5-pound packages is about 11.6 cents a pound. This would be $232 a ton at retail rates. Wholesale carload rates are about 9¼ cents per pound, or $185 per ton. A weighted composite of the two quotations would be roughly $200 a ton; because about two-thirds of the sugar is used industrially and only about one-third of the sugar is used by families, through direct purchase.

This would mean that the total final sales value of the sugar is approximately $2 billion; that is, $200 a ton for 10 million tons.

Third. About 55 percent or 5.6 million tons of the sugar is produced domestically, of which the Hawaiian production is about 1 million tons and that of Puerto Rico an equal amount.

These are approximate figures. In recent years, I think, in some years the production in those areas has been slightly below and in some years slightly above these figures. Of the 3.4 million tons produced on the mainland, 2.7 million tons are produced in the Beet Sugar Belt area—mostly on the Great Plains—and 0.7 million tons in the cane sugar areas, mostly in Louisiana and Florida. Of the 4.5 million tons imported, about two-thirds have come from Cuba and about 1 million tons from the Philippines.

Fourth. The price of sugar is controlled—and raised—by a combination of methods:

(a) Quotas are fixed which govern the amounts to be produced domestically and also imported from a group of sugar-producing countries.

(b) In addition, an import tariff of 0.5 cent a pound is levied on all sugar from Cuba and the Philippines, while for the relatively small amounts which were formerly imported from elsewhere, the tariff was 0.625 cent a pound. The total receipts from the tariff on sugar to the Treasury have been a little over $40 million a year or around $10 per ton.

(c) A further excise or processing tax of 0.5 cent a pound, or $10 a ton, is levied on all sugar whether produced domestically or imported. This comes, at present, to approximately $100 million a year, or $10 a ton.

(d) Direct production payments of 0.8 cent a pound—$16 a ton—are paid on the first 350 short tons, and graduated downward on further production. Additional allowances for other contingencies are also paid to domestic producers, and together these amount to about $75 million a year.

By the fixing of the quotas a quota premium is arrived at; namely, the difference between the world price and the price to the United States, which, as I have said, amounts to 2.3 cents a pound, $46 a ton for the 4½ million tons, roughly, imported annually. This comes to approximately $207 million a year.

The limitation on the total amount of sugar which can be produced within the United States and imported from abroad causes the U.S. price to be appreciably greater than the world market price. The best measure of this in the past has been the difference between the price in Cuba of sugar destined for the United States and that going to other countries. A year ago this was the difference between approximately 5.6 and 3.1 cents a pound. This came to 2½ cents a pound, or $50 a ton. Today the world price is 3.02 cents. Added to that figure is a 30-cent freight charge and 2.3 cents as a quota premium, bringing the price up to 5.6 cents. Then if the full tariff of 0.63 cent and the 0.50-cent excise tax are added, a total of 6.75 cents is arrived at, after freight, full tariff, quota premium and excise tax. The price would then come to $135 a ton.

It can therefore be seen that the housewives and consumers pay dearly for the present sugar policy. If we add (a) the difference between the price to the United States and the world price, (b) the tariff, and (c) the excise tax, we get a total price increase to the consumer of about 3.5 cents a pound, or about $70 a ton.

We remember that the total domestic consumption is 10 million tons. This comes to a total of $700 million a year.

Against this should be offset the $65 million in revenue over the cost of the production payments, or a net subsidy by the consumers of about $635 million.

I believe the lower figure of $635 million is essentially correct. This, in turn, should be somewhat further reduced by the fact that if we bought all our sugar on the free market, the free market price would probably rise. The extent of this increase would, however, not be as great as is frequently argued, since at the end of the 1958–59 crop, the world surplus was 4½ million tons in stock. The surplus increased slightly during 1959–60, and the special report on sugar issued last month by the Department of Agriculture indicates that in the current crop year (1960–61) world production will be 58 million tons and world consumption will probably be 53½ million tons, so there will be a further surplus of 4½ million tons. I think it is safe to say that at the present time there is a world surplus of approximately 10 million tons.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield.

Mr. LONG of Louisiana. I am not opposing what the Senator is trying to do.

Mr. DOUGLAS. I understand that.

Mr. LONG of Louisiana. I am somewhat interested in the Senator's description of a subsidy. Does he regard a commodity which is protected by a tariff as a subsidized commodity?

Mr. DOUGLAS. I would say it is indirectly subsidized, yes.

Mr. LONG of Louisiana. Many of our manufacturing industries are now protected by tariffs. I have personally made the point from time to time, that an American industry which receives the benefit of a tariff is in many instances in a situation very similar to industries which are directly subsidized.

Mr. DOUGLAS. That is correct. It is an extra cost paid by the consumer. The subsidy system is quite an octopus. I am merely trying to strike at one arm of the octopus.

Ample supplies are now available, and this fact should prevent any appreciable increase in the world price.

On the whole, it would seem safe to estimate that, when all factors are considered, the total subsidy which consumers pay is not far from $660 million

a year, or $66 a ton, and 3.3 cents a pound. The per capita consumption in this country is about 97 pounds a year, of which a third is domestic demand and two-thirds industrial demand. If this total subsidy of 3.3 cents a pound is correct—and I believe it is—it would amount to about $3.25 a year per person, or $13 a year for a family of four on sugar alone. This is a sum approximately equal to a day's wages. Each time a housewife purchases cakes, candy, or soft drinks she also pays a subsidy. Every time a teenager drinks a bottle of Coca-Cola there is a hidden subsidy to the sugar producers. Every time there is a wedding party and cakes are served, the wedding cake has within it a hidden subsidy. Every time a young man gives a box of candy to a lady there is a subsidy in that candy. Every time a teaspoonful of sugar is dropped into a cup of coffee there is a subsidy. The subsidy is ubiquitous, large, but unseen.

This practice has been going on since 1934—27 years.

Mr. LONG of Louisiana. Mr. President, will the Senator yield at that point?

Mr. DOUGLAS. I yield.

Mr. LONG of Louisiana. The practice has been going on longer than that. I once made the mistake of using that date speaking to sugar producers, and I can tell the Senator that it was going on long before that time.

Mr. DOUGLAS. I did not wish to stir up trouble, because under the former tariff system the practice went on prior to that time.

Mr. LONG of Louisiana. For many years.

Mr. DOUGLAS. Yes, indeed.

Mr. LONG of Louisiana. So long that the memory of no living man here runneth back to the point of beginning.

Mr. DOUGLAS. Yes. As a young man I read the debates in the Senate on this issue, and I can remember how the then Senators from Louisiana defended the tariff to the death, and then they began to get allies from the beet sugar States as well.

I hope I do not ruffle the feathers of the domestic producers too much, because we want them on our side in this battle. I only propose to strike at the subsidy which would be paid to some foreign producers, although I think I would be less than honest if I concealed the fact that I believe there is also a subsidy paid to domestic producers. But that is not the present battle.

Mr. BENNETT. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield to the Senator from Utah.

Mr. BENNETT. The Senator from Illinois knows that I am from a beet-producing State.

Mr. DOUGLAS. That is right.

Mr. BENNETT. And the Senator from Illinois is anxious to have me on his side.

Mr. DOUGLAS. On this issue, I certainly am.

Mr. BENNETT. I believe he would not reject my vote on any issue.

Mr. DOUGLAS. I certainly would not.

Mr. BENNETT. The Senator has been making the point that there is a world market for sugar, and that if we were free to buy all our sugar at the world market price, we would save the American sugar consumer a great deal of money.

Mr. DOUGLAS. Yes.

Mr. BENNETT. Does the Senator realize that there is much sugar in the world which is processed through to the refined stage? He has been talking about the world market for raw sugar.

Mr. DOUGLAS. That is correct.

Mr. BENNETT. We could buy whites abroad for about 4 cents a pound. When the Senator talks about subsidies, does he realize that the difference between wages paid to the refining laborer, for example, in Cuba, and the wages paid to Americans to refine Cuban and other foreign sugar, is in itself a form of subsidy? We could take care of our sugar needs by buying whites abroad.

Mr. DOUGLAS. I do not wish to be drawn into a discussion of this theoretical issue with the Senator.

Mr. BENNETT. It is not theoretical.

Mr. ELLENDER. It is real.

Mr. BENNETT. It is very real.

Mr. DOUGLAS. It is not involved in the amendment.

Mr. BENNETT. Very well. Then will the Senator agree that the discussion of his amendment is clearly outside the question of subsidies which are helpful to the beet producers?

Mr. DOUGLAS. I desired to make my point a part of the RECORD. With the permission of the Senator from Utah, however, and his confreres, I am willing to drop it now, inasmuch as it is in the CONGRESSIONAL RECORD, where people can read what I have said. Because of that I feel I have discharged my duty, and I am ready to confine our discussion simply to whether some foreign producers ought to get a subsidy of $150 million a year, or whether the people of the United States should save this amount. However, I am ready to drop this fight temporarily.

Mr. BENNETT. I am sure the Senator is, having got his side into the RECORD. Will he now yield so that I may make an observation?

Mr. DOUGLAS. Certainly.

Mr. BENNETT. The per-hour rate paid sugar refining employees is probably the highest in the United States. The evidence given in the hearing is that the direct and fringe benefits amount to $3.55 cents an hour; that they have a guaranteed annual wage for 2,000 hours; and that they are guaranteed a wage of $7,000 a year. That is what is being paid to the sugar refinery employees who refine offshore sugar.

This is in contrast with a comparable rate of $3 a day in Cuba. So that if we really wished to get the lowest possible price for the American housewife, we would buy whites abroad.

Mr. DOUGLAS. I suppose it is unwary of me to do this, because one of the first lessons in military tactics is that one should not spread himself over too wide an area. However, is it not true that we cannot import refined sugar, but only raw sugar?

Mr. BENNETT. No. There is an allowance of something like 300,000 tons now to Cuba, which of course has been suspended.

Mr. DOUGLAS. How much are our total imports? Are they about 4½ million tons? Is that, roughly, the amount?

Mr. BENNETT. Yes. The refiners, of course, refine domestic cane also.

Mr. DOUGLAS. So, in practice, about the only sugar that we can bring in is raw sugar.

Mr. BENNETT. If we decided that we wanted to go out on the world market, we could find refineries abroad which would be glad to sell us whites.

Mr. DOUGLAS. I do not doubt that some American refineries are in this business, too.

Mr. BENNETT. The point I am making is that we are in favor of a sugar program which gives some benefits to the American farmer. It also gives a very decided benefit to a segment of American labor. The subsidy applies to both, not to the companies which own the refineries. As I have said, the employees of the refineries are getting about $3.50 an hour on a guaranteed annual wage, which gives them $7,000 a year.

The Senator from Utah does not object to that. He does want the RECORD to show that when the Senator from Illinois is talking about subsidies paid to the American housewife on her sugar, the Senator must also think this spread, which we could eliminate if we went out coldbloodedly and bought sugar at the lowest possible price.

Mr. DOUGLAS. I would say to my good friend from Utah that I could go into the conditions of labor in the beet sugar fields in the Plains States, and the degree to which foreign labor is used, and the conditions of work there. However, I do not want to do it, unless the Senator presses me.

Mr. BENNETT. In other words, the Senator from Illinois is willing to confine himself to the question of the subsidy. He got his point in the RECORD, and now he is willing to let it go at that.

Mr. DOUGLAS. I am ready to go on.

Mr. BENNETT. Having made my point, I am ready to go on. I offer the Senator a truce.

Mr. DOUGLAS. I hope the truce will turn into an alliance.

Mr. BENNETT. The Senator from Illinois has said that he rejects deals. I therefore offer him a truce.

Mr. DOUGLAS. That is fine. It is a truce.

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. ELLENDER. It is not my purpose to engage in a debate with the distinguished Senator from Illinois on the question of subsidy. The very suit he wears is subsidized. The tie he wears is subsidized. The shirt he wears is subsidized. In fact, I do not know of many things which are manufactured in this country which are not subsidized in some manner. But is the Senator aware that there is only one crop produced, sugar, on which an excise tax is levied, where

there is a provision which forces those who participate to agree to certain wage scales?

Mr. DOUGLAS. Yes. That was the price which Senator Costigan, of Colorado, exacted from the sugar interests in return for the original act. In my judgment, Senator Costigan was one of the finest men who ever sat in this body. That provision is unique; that is quite true.

Mr. ELLENDER. For instance, not only does the Sugar Act deal with the wage rate to be paid by producers of sugarcane and sugar beets, but there is also a provision against using child labor.

Mr. DOUGLAS. That is correct.

Mr. ELLENDER. All of that is contained in the act. It is unique.

Mr. DOUGLAS. I am not certain how well the provisions have been enforced, but they are in the law.

Mr. ELLENDER. I am familiar with a few cases in which there were violations of this anti-child-labor provision. The persons who refused to comply with the law were denied payments. I know of a few cases in my own State. However, I can say that I do not know of any violations in recent years.

Mr. DOUGLAS. That is one of the mitigating features of the system.

Mr. President, I had another paragraph which I wanted to read before I turned from this subject. I hope the Senator from Utah [Mr. BENNETT] will not regard it as a breach of the truce if I try to sum up the total amount of subsidies which I think the American consumers have paid since 1934. According to my figures, the total comes to somewhere between $10 billion and $20 billion.

Mr. BENNETT. The Senator from Utah will certainly not regard that statement as a breach of the truce, but he reserves the right, after the debate is over, and when we have this problem solved, perhaps to make some comments about the whole sugar problem.

Mr. DOUGLAS. That will be fine.

Mr. President, now I turn to the problem which has arisen from the Cuban situation. The United States formerly imported approximately 3 million tons of sugar from Cuba, upon which there was a direct quota subsidy of about 2½ cents a pound, or from $52 to $62.50 a ton. On 3 million tons, this came to from $156 million to $187 million a year.

This was a subsidy which had been in existence for a long time. It is undoubtedly true that many of the American sugar companies which owned cane fields in Cuba got a large share of the subsidy, but it is also true that a proportion of that amount trickled down to the Cuban people.

I think Mr. Castro has been extremely unfair in the attacks which he has made upon the United States on the charge that we have been exploiting Cuba. We have been paying to the Cuban sugar interests between $150 million and $200 million a year more than we would have paid had we exercised our right to purchase sugar upon the world market at the world price.

While American sugar producers and grinding mills in Cuba have benefited, the Cuban people also have benefited. I think it has been extremely unfair for Mr. Castro and his followers to condemn the United States as though we had been exploiters. On the matter of the bonus, we have been extraordinarily generous.

When the United States stopped the importation of sugar from Cuba, in response to the confiscation of all American property and the extremely unfair attacks made upon us, Cuba then got Russia to buy some sugar, and Castro praised Russia for its purchase. As I remember, the Russian purchase price was 2.6 cents a pound for the initial amount of sugar. In other words, Castro and his followers said the Russians were doing Cuba a favor by buying sugar at 2.6 cents a pound, but that the United States had exploited Cuba when we paid Cuba 5.6 cents a pound.

This, I think, is a fact which we should have played up to a much greater degree than we have done in our propaganda throughout Latin America. I think it needs to be emphasized that we have been extraordinarily generous to Cuba, even though we grant that a considerable portion of this amount accrued to the benefit of American sugar companies which owned the cane fields and the grinding mills.

Mr. ELLENDER. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. ELLENDER. As I recall, several years ago the sugar industry of Cuba was more or less controlled by American capital. At one time, that control was as much as 54 percent.

Mr. DOUGLAS. I think that is true.

Mr. ELLENDER. Is the Senator aware of the fact that the American interests—that is, those who owned American mills and operated the Cuban farms—were forced by the Cuban Government to pay certain wages, and that those wage scales were not applicable to other producers of sugar in Cuba?

Mr. DOUGLAS. I have heard of that, yes.

Mr. ELLENDER. I am familiar with this situation, and I assure the Senator it is true. The same is true not only of Cuba but of practically every Central and South American country where American interests are trying to develop the natural resources of those countries.

In my judgment, the average Cuban citizen has therefore benefited greatly from the operations of American interests which produced, as I said, in the neighborhood of 54 percent, at one time, of the sugarcane grown in Cuba.

Mr. DOUGLAS. May I ask the distinguished Senator from Louisiana, who is an expert on this subject, if it is not true that the percentage of American holdings in Cuba has diminished in recent years?

Mr. ELLENDER. Oh, yes. It is now about 36 or 38 percent. Since the Hershey interests of Pennsylvania sold their holdings in Cuba about 4 or 5 years ago, American holdings have decreased, as I remember it, to about 38 percent.

Mr. DOUGLAS. But it is true that the American Sugar Refining Co. and United Fruit Co. are still in Cuba.

Mr. ELLENDER. They constitute a part of the 38 percent to which I have referred.

Mr. DOUGLAS. Yes.

Mr. President, last summer the United States stopped importing sugar from Cuba. I think this decision on the part of the Eisenhower administration was correct. There is a limit to the amount of abuse and hostile action which a nation can properly take.

The big problem we have had since then has been in regard to how the 3 million tons which we formerly purchased from Cuba are to be reallocated. In itself, the matter of getting sugar does not present any great technical problem, because world supplies now are plentiful. But the question of who shall sell this nonquota sugar under the presently heavily subsidized—and hence lucrative—American program has created considerable discussion and great pressures.

Under the House version of the bill, the former Cuban share would be prorated among the foreign sources now providing sugar to the United States, at the present heavily subsidized U.S. domestic price.

Mr. President, I ask unanimous consent that the language of the House committee report dealing with this subject be printed at this point in the RECORD.

There being no objection, the excerpt from the report was ordered to be printed in the RECORD, as follows:

Presidential authority to establish the sugar quota for Cuba through December 31, 1962, at such level as the President shall find from time to time to be in the national interest, but in no event in excess of the Cuban quota under the basic quota system of the Sugar Act. If the President sets the Cuban quota at less than its basic quota, the amount of the reductions are to be distributed as follows:

1. An amount equivalent to Cuba's share in any domestic area production deficit may be assigned exclusively to other domestic areas; and then

2. To five nations whose quotas have been between 3,000 and 10,000 tons, a sufficient quantity of sugar to bring each up to 10,000 tons. These nations are Costa Rica, Haiti, Panama, the Netherlands, and Nationalist China; and then

3. To the Republic of the Philippines 15 percent of the remainder;[1] and then

4. To other countries having quotas under the act (except those five nations mentioned in (2) above) the remaining 85 percent in amounts prorated according to the basic quotas established by the act, "except that any amounts which would be purchased from any country with which the United States is not in diplomatic relations need not be purchased"; and then

5. If additional amounts of sugar are needed, purchases may be made from any other foreign nation without regard to allocations, but with consideration given to countries of the Western Hemisphere and to those countries purchasing U.S. agricultural commodities.

Mr. DOUGLAS. Mr. President, the House committee report on page 3 also

[1] Based on the nonquota allocations for the 3-month period ending Mar. 31, 1961, the allocation for the Philippines for the next year would be 490,000 tons. On the same basis the Peruvian share would be 860,000 tons, and the Mexican share would be 764,000 tons.

sets forth, on a quarterly basis, figures on the authorized nonquota purchase allocations in 1961. In order to obtain the figures on a yearly basis, if those were continued, we have to multiply by four the figures we find at that point in the committee report.

The Philippines would be given an increased allocation of 123,000 tons, on a quarterly basis, which would be approximately 490,000 tons on an annual basis.

Let me say that the figures I am stating are to the nearest even amounts.

Peru—a mysterious factor—would be given 215,000 tons, on a quarterly basis, or 860,000 tons on an annual basis.

The Dominican Republic, if it were to have a quota, would be given 223,000 tons on a quarterly basis, or 892,000 tons on an annual basis. But that is to be eliminated. I am thankful for that.

In that connection I should point out, first, that the quota premium was paid on Dominican sugar.

Mr. ELLENDER. They had to pay the regular 2-cent tariff.

Mr. DOUGLAS. Yes.

Mr. ELLENDER. That was imposed on them.

Mr. DOUGLAS. Yes. So that money went into the Treasury of the United States, rather than to the producers.

Mr. ELLENDER. Yes.

Mr. DOUGLAS. The bill as now before the Senate gives the President the power to suspend the importation of sugar from countries with which we do not have diplomatic relations; and, as I understand, it is recognized by all that if this bill is enacted, the importation of sugar from the Dominican Republic will be discontinued. Let me say I heartily approve of that.

Mexico would have 191,000 tons on a quarterly basis, or 764,000 tons on an annual basis.

The British West Indies and British Guiana would have 10,000 tons on a quarterly basis, or 40,000 tons on an annual basis.

Brazil would have 11,000 tons on a quarterly basis, or approximately 44,000 tons on an annual basis, provided the distributions this year were made on the same basis as that made last year. Probably, however, there would be more, in view of the fact that the quota of the Dominican Republic is being eliminated.

Mr. ELLENDER. Mr. President, at this point will the Senator from Illinois yield?

Mr. DOUGLAS. I am glad to yield.

Mr. ELLENDER. Does not the Senator from Illinois feel that it might be better for us to assist by means of trade, rather than direct grants, the countries to which he has been referring? Is it not a fact that we can assist these countries by permitting them to sell their sugar in the market heretofore reserved to Cuba?

Mr. DOUGLAS. That is the argument the State Department advanced at the hearings on Monday of this week.

Mr. ELLENDER. Does not the Senator from Illinois think it is a valid argument?

Mr. DOUGLAS. I think there is very little to it. If I may do so, I should like to state now why I take that position.

Mr. ELLENDER. Very well; I should like to hear the Senator's statement.

Mr. DOUGLAS. In the first place, so far as trade is concerned, we would give trade to these countries by purchasing from them these quantities of sugar at the world price. But when we pay them more than the world price, that is aid, not trade. Furthermore, it is aid to a relatively restricted group of persons; it is not aid to the Peruvian people or to the Mexican people or to the Filipino people, primarily. Instead, it is aid to the sugar producers in those countries; and they tend to be a very limited group. It would be interesting to ascertain what groups have the sugar holdings in those countries.

Mr. ELLENDER. Will not the Senator from Illinois concede that a great deal of labor is required to produce sugar? I am sure that much of the labor supply in Peru, in Brazil, and in the other countries is used in producing the sugar.

Mr. DOUGLAS. This proposal would result in a sudden increase in the quantities of sugar bought in countries which have surpluses of labor, countries where there are large numbers of unemployed persons who seek work. But I do not think there would be any increase in the wage scale, although there would be an increase in the volume of employment. Furthermore, I believe we would find that a relatively small group of persons would receive this windfall of approximately $150 million.

Mr. ELLENDER. Mr. President, will the Senator from Illinois yield further?

Mr. DOUGLAS. Certainly.

Mr. ELLENDER. Will not the Senator from Illinois concede that in the past, before the takeover by Castro, Cuba was one of our best customers? In other words, Cuba then bought from us many automobiles and large quantities of rice, for instance. The reason for that was the purchases of sugar we made from Cuba.

By the same token, I say to my good friend the Senator from Illinois, if we can develop the program in such a way that Brazil and other Latin American countries can share in the U.S. market, we shall create a better climate for reciprocal trade.

Mr. DOUGLAS. That would sweeten relations with the millionaires, but would not help the great body of the people.

The Senator from Louisiana knows the great affection the Senator from Illinois has for him. It is interesting that the Senator from Louisiana should stand here and advocate aid to these countries.

Mr. ELLENDER. Through trade, not grants.

Mr. DOUGLAS. But I believe in aid on the basis of need, not on the basis of who produces sugar. The two do not have much to do with each other.

Mr. ELLENDER. I ask the Senator if he does not know that there is not a country in the entire world where sugar is now being produced that does not in some way protect the producers of the sugar within the country where it is manufactured.

Mr. DOUGLAS. There may be a few sweet drops coming down from the tables into the hungry mouths of the plantation workers below, but a large amount of it stays on the table and does not get down there. I ask the Senator, Who owns the sugar plantations in Peru, in Mexico, in the Philippines?

Mr. ELLENDER. I suppose the same argument could be advanced with respect to the big businesses in Chicago, Ill. Who owns them? The big businesses. But we are not going to argue that question. I point again to the fact that there is not a country in the entire world that does not, somehow, in some way, protect the sugar production of its own producers. The reason for doing so is that it is necessary. The surplus sugar produced, which amounts, as the record shows, to about 10 percent of the entire world production, is that part of the entire world production which floats around in the world and which commands the so-called world price to which the Senator has referred. It is a pittance compared to what the total amount of sugar produced in the world is.

I am sure the Senator from Illinois will concede that fact.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield for a question.

Mr CAPEHART. Is it not a fact that in this instance we are following a policy which we too often follow? We were perfectly willing for years to pay Cuba the price of her sugar without any tax. Now we take the entire quota away from Cuba and divide it among our friends in Central and South America for whom we are spending millions of dollars to help. Now we are about to say to them, "We are going to tax you"—which we have not been doing in the past—"for shipping sugar to the United States." Is not that policy in line with the way we in the Senate get off on tangents, and do more harm than good?

Mr. DOUGLAS. No. Those countries have no right to a premium price. They have not had it in the past. This is a new bonus which we are giving them. There is no right on their part to take $150 million out of the pockets of the American consumer. I know it is easy to play Santa Claus and give away money which belongs to American consumers. I know something about the sugar lobby coming from those countries. But the American consumers and taxpayers have interests, too.

What would we do if we reallocated the Cuban quotas, at the American premium price, and paid out an added subsidy of $150 million as the House bill would do? We would build up vested interests in all those countries which they would not be willing to surrender. We hope that some time Castro will be out of power, or that he will completely change his policy and become our friend. I think the chances of the latter happening are relatively small now. But we hope that sometime in the future there may be a friendly government in Cuba, and we may wish to resume our former relations with Cuba.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DOUGLAS. In just a minute.

If we follow the policy of the House, what we will do will be to create vested interests within Latin America which will want to keep Castro in power. Because if Castro went out of power and Cuba got its 3-million-ton quota back again, those vested interests would be out of pocket. So what we would do would be to create vested interests in Latin America and help keep an anti-American government in Cuba.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. CAPEHART. It seems to me that the Senate has before it a bill to lend and give away $600 million of the American taxpayers' money to Latin America. I am not arguing against the merits of the proposal.

Mr. DOUGLAS. As a matter of fact, I support the bill.

Mr. CAPEHART. But here is a bill under which Latin America can earn $150 million by selling us sugar at the same price we formerly bought sugar for from Cuba. The Senator wants to take that $150 million away from them, and that $150 million will go to the Government in the form of tariffs. It is a tariff that will be imposed on those countries. I am not particularly opposed to it, but I wanted to bring the situation to the attention of the American people and set the record straight, so that it will show how inconsistent we can be in the Senate. On the one hand, we are going to lend Latin America $600 million. On the other hand, we are going to deny them the right to earn $150 million, and we are going to punish countries that are friendly to us, when not too many months ago we were paying Castro a big price for sugar. Now we are unwilling to pay our friends in Latin America the same amount. That is the nub of the whole issue.

Mr. DOUGLAS. Has the Senator from Indiana concluded? The Senator from Indiana confuses the countries with the sugar producers and owners. He thinks the interests of the sugar producers are identical with the interests of the countries and the people who live in them. That is not true. The sugar interests are made up of relatively small groups, a large proportion of them being American interests, who own lands there or have grinding mills there. What the Senator is really saying is, "Help these sugar producers." I am for aid to Latin America. I think the program for Latin America is an excellent one. One of the great advantages of my amendment is that it would put $150 million into the Treasury of the United States, which would therefore help the taxpayers. It would also mean that the $150 million could be used——

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DOUGLAS. No. Let me finish the sentence.

The $150 million could be used to help meet a part of the cost of the program of aid to Latin America instead of placing the full burden on the taxpayers.

What I say is, if we give aid, let us give it on the basis of need to the countries which need it, not merely to the sugar producers in a relatively restricted number of countries. Let us not have a program of foreign aid for millionaires.

Now I am glad to yield.

Mr. CAPEHART. This is another concrete example of what happens over the years, which has made enemies for us in Latin America. We continually push prices down to the point where they cannot earn dollars. Then we tax the American people so that we may send loans to them. Why do we not let them earn money?

Mr. DOUGLAS. I am ready to let them earn at world prices on the added amounts to be purchased. Why does the Senator from Indiana say they have a right to the Cuban quota at the bonus price?

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DOUGLAS. They have never had it before.

Mr. CAPEHART. Primarily it is because we have been perfectly willing to give it to our enemy, to Cuba, and to Mr. Castro.

Mr. DOUGLAS. We did not give it to Cuba when Cuba was known to be an enemy.

Mr. CAPEHART. We did for a long time, after Castro came to power.

Mr. DOUGLAS. That was before it became evident that Castro was an enemy.

Mr. ELLENDER. Mr. President, will the Senator yield to me?

Mr. DOUGLAS. I yield to the Senator from Louisiana.

Mr. ELLENDER. The Senator is aware of the method by which the Cuban quota is distributed under the present law. For example, the first who are served are those countries with quotas of not less than 3,000 tons and not more than 10,000 tons. Those are all to be brought up to 10,000 tons.

Mr. DOUGLAS. The Senator is correct. Am I correct in stating those are Costa Rica, Haiti, Panama, the Netherlands, and Nationalist China?

Mr. ELLENDER. There are five.

Mr. DOUGLAS. Yes.

Mr. ELLENDER. The second category is the Philippines.

Mr. DOUGLAS. They get 15 percent of the remainder.

Mr. ELLENDER. Does the Senator think it is proper to charge the Philippines the extra 2 cents?

Mr. DOUGLAS. The Philippines will still get the bonus on the quota which is already theirs. They will get a bonus on that part. They will get the benefit of an additional quantity at the world price. Who has the sugar in the Philippines?

Mr. ELLENDER. Would not that problem be difficult to solve? We have a fixed quota for the Philippines, under the law, of 974,000 tons. If the Philippines is allotted an additional 200,000 tons, those who produce the additional sugar would have to pay the 2 cents, while those who produced the normal quota would not have to pay anything, but would get the benefit.

Mr. DOUGLAS. They are often the same people. Furthermore, as I understand, there is an allocation system inside the Philippines.

Mr. ELLENDER. I do not believe it would be conducive to better relations between the United States and the Philippines to do what the Senator suggests.

Mr. DOUGLAS. Mr. President, some time back I put into the RECORD the details in regard to the proposal of the House of Representatives. Part of the material has been covered in the colloquies we have had since then.

The House proposal suffers from serious defects.

In the first place, it would build up a vested interest among those who received the additional quotas. In the future it will be almost impossible to take away these additional amounts and return them to Cuba when Cuba once again becomes, as we hope it will, a friendly government.

This is one of the incentives we can then hold out to Cuba. If Cuba will come back into the fold of American friends it can get back its quota of 3 million tons of sugar, and possibly a little bonus in addition. This is a powerful incentive to get the Cubans back on our side. If the Cuban quota is taken by Peru, Mexico, the Philippines, Nicaragua, and the Netherlands, it will be very hard to return the 3 million tons to Cuba. We will not be able to offer this incentive to the Cuban Government and to the Cuban people. Hence, the attempt to make Cuba a friend of ours will suffer. In addition, there will actually be an inducement to the other countries to be pro-Castro, because they will know that if Castro is put out of power, it will be possible, and even probable, that some of the sugar will be taken away from them. There will be an "internationale" of Latin American sugar producers to keep Castro and Castroism in power in Cuba.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield.

Mr. LONG of Louisiana. Is it not true that at present Castro is claiming credit all over Latin America for the $500 million program for the so-called Alliance for Progress, on the basis that until Castro came into power in Cuba the United States never cared to do anything for those countries which would cost any great amount of money? Is it not true that when those people get the benefit of the subsidized price they may say, "That is one more advantage we get from Castro's coming to power." They get a much larger sugar quota, with a price far above the world market.

Mr. DOUGLAS. They will want to keep Castro in power, so that they can continue to have the increased quota at prices of $50 a ton or more above the world market price.

The tragic Cuban situation is clearly against the best interests of the United States, and I think it is against the best interests of Cuba.

The action which the United States has taken with respect to Cuban sugar is fully justified. But I also believe that the forces friendly to the United States

should be encouraged. If the Cuban quota is redistributed among others, and they gain a vested interest in selling these highly subsidized amounts to the United States, it will be very difficult indeed to reverse this situation when the Cubans are again friendly and free.

I repeat a point I have made several times before, which perhaps cannot be emphasized too often: If we build up such vested interests we may very well create a situation in which these nations would be a great deal less concerned about bringing a change in the Cuban Government than they would otherwise be. Surely we do not want to build up economic pressures which would be satisfied with the status quo in Cuba because their interests would be harmed if Cuba again became friendly and free.

In the third place—this is perhaps the most important point of all—the price paid for the nonquota or Cuban share under the House bill would still be the highly subsidized price which offers virtually no protection or consideration to the American housewife and consumer.

I tried for several days to devise a system whereby this $150 million a year could be used to decrease the overall price of sugar in the United States by $15 a ton, or three-fourths cents a pound. The system of import subsidies, excise taxes, tariffs, production payments, and quotas is so built up that in practice, after trying for days, I came to the conclusion that it could not be done. Therefore, the amendment was directed toward what I regarded to be the next best thing; namely, to have the bonus go into the American Treasury, to have the difference between the world price and the American price on the former Cuban amount go into the Treasury so that the taxpayers would gain a benefit.

The taxpayers are also consumers, and probably, roughly, the same as consumers, although not identical.

This is a proposal to save $150 million for the American taxpayers, instead of having it go to a relatively restricted group of producers in foreign countries who would get windfall profits to which they are not entitled in law, in logic, or on the basis of past experience.

As a result, the alternative which we proposed and which was adopted in committee by a unanimous vote was an amendment which would give the United States the right to buy the sugar, first according to the quota arrangements in the House, at the world price, but which also would provide that the "quota premium" of about 2⅓ cents a pound would be paid into the Treasury of the United States instead of into the pockets of producers of the additional 3 million tons.

This would net the American Treasury, and hence the American taxpayer, about $150 million a year.

Let me point out that the proposal would provide some protection to the hard-pressed American consumer.

First, it would provide some protection to the hard-pressed American consumer—if not through lower sugar prices at least through increased revenues to the Treasury and hence lower taxes than otherwise. In this way the basic provision of the act concerning consumer protection would be carried out to this limited extent.

Second, more than adequate supplies are now available for this purpose for there is now a surplus of sugar in the world.

Third, it would avoid building up a vested interest in the highly subsidized American market by those who would receive the right to fill the nonquota or former Cuban quota.

Fourth, it would assist the United States in its balance-of-payments problem. We are worried about deficits in the country. The measure would reduce the deficit by about $150 million.

Furthermore, as I have emphasized, it would give greater reason and hope to the anti-Castro forces in Cuba to throw off their present shackles. They would then know that if their Government became friendly to the United States, the American market would be restored.

Furthermore, this proposal is exactly what the American Government did with respect to the Dominican Republic this last year. Dominican sugar was purchased at the world price, but instead of paying the additional quota premium to the Dominican producers it was paid into the American Treasury. Consequently, there is precedent for this amendment.

Some argue, as my good friend the Senator from Louisiana and the Assistant Secretary for Latin American Affairs did in the hearing, that the distribution of the Cuban quota to others is necessary as a foreign aid measure. I reject this argument. Foreign aid, under this argument, would go to countries not on the basis of demonstrated need but on the basis of their sugar-producing ability. Some non-sugar-producing countries, such as Bolivia, may well have greater needs for technical information, schools, roads, health services, and so forth, which are or can be supplied under foreign aid than do some sugar-producing countries.

I would add Ecuador to this list. This would not be the proper way to distribute foreign aid, namely, on the basis of who can produce sugar.

Furthermore, I wish to emphasize that the aid would not go primarily to the people of those countries, but would go instead to a small group of sugar producers in those countries.

Mr. JOHNSTON. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. JOHNSTON. Am I to understand from the statement of the Senator from Illinois that he is in favor of returning to Cuba its quota when Cuba returns to the people of America properties in Cuba which were taken from them? When those properties are returned, we would then be willing to give them a sugar quota. Is that not the situation?

Mr. DOUGLAS. That is exactly correct. What I am saying is that if we redistribute the Cuban sugar at a bonus to producers, it will be very hard ever to return it to the Cubans; consequently we would lose an economic weapon which we would otherwise have to reach an understanding with the Cuban people and to throw Castro out.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. DOUGLAS. Yes.

Mr. LONG of Louisiana. I have often thought that the Sugar Act offered a considerable opportunity for something like an alliance for progress. It could offer some leverage to persuade foreign producers to improve conditions for workers in the fields. However, no such opportunity is offered in the short period of the present act, because, as the Senator knows, the sugar which we would be buying in the period immediately ahead is sugar that has already been produced. A large portion of the sugar is now in the hands of processors and those who own the mills, so that there is little possibility that a higher price could be reflected any time soon in benefits for the working classes. It would benefit only those who own the sugar. I doubt that we could say that in many instances governments would benefit, because the sugar is not held by the governments, but is held by private producers. Private producers produce the sugar and they now have it on hand.

Mr. DOUGLAS. The Senator from Louisiana has made one of the most significant contributions to this debate. What he has said is that the 3 million tons in question would not immediately increase production in the producing countries, but would be a bonus paid to speculators and the big interests which have the sugar in storage, produced under low cost conditions. It would amount to giving them $150 million.

Mr. LONG of Louisiana. I believe such was the testimony of the expert from the Department of Agriculture. So far as the present record is concerned, there is no way he could anticipate that if we did make the proposed payment, that it would benefit the working people in those countries. Such is the impression that I gained from his testimony. This statement is not on record, but as the Senator knows, we were advised by Mr. Meyers and others as to who would get the benefit of the increased price on the sugar that had been produced. So there is no way by which we could use any leverage here for the benefit of working people who produce the sugar.

Mr. DOUGLAS. I do not believe in dragging individual names into a debate. But I have been checking on the Peruvian situation. There is one company there which has 50 percent of Peruvian production, and therefore presumably at least 50 percent of the sugar in stock. One company has from 10 to 20 percent of the production. Those companies would receive a bonus of tens of millions of dollars unless we accept the amendment which the committee approved by unanimous vote.

Mr. LONG of Louisiana. If the Senator will yield further——

Mr. DOUGLAS. I yield.

Mr. LONG of Louisiana. Based upon the way we are doing business at the present time, we could not use this premium price as leverage upon those countries to induce them to raise living standards, because we would be in no position to assure them in the future that they would be able to obtain the

premium price. Purchases would be made on the basis of urging those countries not to rely on producing for the United States in the future because the international situation might change. So in effect what we would buy is sugar that companies now have on hand, for the most part, which has already been produced.

Mr. DOUGLAS. I believe the Senator from Louisiana is absolutely correct. He has thrown into sharp focus the issues. The basic issue is whether the bonus of about $150 million will go to the American people or whether it will go to a small group of producers who control the sugar supplies in the countries which would have their quotas increased. That is the issue.

The proposal I make is neutral on the question as to how much shall be imported and how much is to be grown at home. We are not proposing to change in any respect the price that domestic producers will receive on either cane or beet sugar.

If the domestic share of sugar production is increased, then obviously the foreign share will be diminished. The proposal which I make applies only to the foreign share of the nonquota, or balance. I have my own opinion on these other subjects, but so far as my amendment is concerned, it is neutral on the question as to how much of the sugar should be produced at home and how much should be imported. That has nothing to do with the case whatsoever. So I hope our beet sugar friends will help us on this measure. I hope our cane sugar friends will help us.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG of Louisiana. As one who represents a State which relies heavily on the production of sugar, I must say I do not think it helps us to have large windfall profits amounting to millions of dollars to be given to some international trading concern. Some of these traders, I agree, would make the profit somewhere else. That kind of procedure tends to place the act in an undesirable light.

It would be much better to face the fact that domestic producers cannot meet the cost of producing cane in some of the tropical countries, but that we can meet the cost of producing sugarbeets. There is also the necessity of having to depend upon a sugar supply this country can count on in case of an emergency.

I say frankly to the Senator that I have not been very much impressed by the State Department argument that these countries cannot understand that we would pay two different prices, because these countries which produce sugar expect to get two prices. They expect to get one price for the quota allotted by the United States, which is an unrealistic price from their point of view, as it is not related to the cost of production, and they expect to get another price on the world market.

Mr. DOUGLAS. Which is a lower price.

Mr. LONG of Louisiana. Which is a lower price, the world price, for the rest of their sugar. Also they can presume that they would get more because the world price would go up. These people did not plant that sugar and they did not harvest it with the thought or assumption that they would sell it at subsidized prices in the U.S. market.

Mr. DOUGLAS. The Senator from Louisiana is so right in what he says, and primarily with regard to his statement respecting the State Department's attitude. I hope that upon mature consideration the State Department will change its mind. I make no charges about their good faith in this matter. However, there is altogether too much of a tendency to try to buy favor for the United States by putting money into the pockets of small selfish groups in these countries, in this case primarily, I think, big American sugar interests.

President Kennedy has been emphasizing the fact that in order to have a thoroughgoing aid program in Latin America, it must be carried out for the people, and that the governments there must agree to do something for the people. There is no such obligation under the proposed act. The Senator from Louisiana has referred to the windfall of $150 million going to a relatively limited group. I would be willing to have an amendment added to the bill which would state that it was the intention of Congress that the $150 million would help finance the program of foreign aid in Latin America, so that it might be used really to help the people there.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG of Louisiana. I discussed this subject matter with a person who has a responsibility in one of these countries which is getting a major benefit. His attitude was that he was happy to see the nation where he was serving being benefited by this increase in the quota. However, he regretted that the United States got nothing in return. He would like to have seen an arrangement under which either the people would be benefited, with the United States getting some credit for it, or else an arrangement whereby the foreign nation would do something in return that would benefit the United States.

So far as he could determine, there was no advantage that the United States had achieved out of the windfall benefit that went to the producers in that country.

I am fearful that that is what we are up against here. The $146-million windfall will be paid to certain producers, without reflecting any significant benefit to the United States.

That is one thing that should be our purpose in the foreign aid program, namely, that when we spend the money for the foreign aid we should try to see to it that it is spent in such a way that it will reflect some advantage to the United States, although it does not always do so.

Mr. DOUGLAS. I thank the Senator from Louisiana, who knows a great deal about this problem. His comments are very much to the point. I would welcome an amendment which would declare it to be the intention of Congress that the amount that is collected be used to help finance the Latin American aid program, so that the benefits could go to the people who need it, and to the countries which need it, and which would allow the aid to be distributed according to demonstrated need rather than subject to the accident of sugar production or sugar storage.

In 1946 the senior Senator from Arkansas [Mr. McCLELLAN] made an investigation of the foreign sugar lobby. It might be appropriate if we had an investigation of the foreign sugar lobby now. What are the groups that will get the $150 million? Who are the groups, and who are the countries? Who are the speculators who hold this sugar in storage? Who is representing them in the United States?

I am very happy to have been joined in the supplemental views by the distinguished junior Senator from Arkansas [Mr. FULBRIGHT], the distinguished chairman of the Committee on Foreign Relations, who has studied this subject for years, and who has always had what I regard as a fine attitude on it. I should like to ask the distinguished Senator from Arkansas whether he would care to make some comments at this point.

Mr. FULBRIGHT. I intend to make a speech on this subject. I have placed my name on the list at the desk. I have asked whether I could follow the Senator from Illinois, but I understand that the Senator from Louisiana [Mr. ELLENDER] will move to strike the provision the Senator is discussing. I expect to speak in support of the amendment offered by the Senator from Illinois.

Mr. DOUGLAS. I thank the Senator.

Mr. FULBRIGHT. I wish to make some comments, too, about the letter which is being passed around. It is addressed to me by the State Department. It is a very brief letter, and does not go into the merits of the issue. I believe it was written on the basis of inadequate information and understanding of the full effect of the amendment. I am not persuaded by the letter when it states that the amendment is not in the interest of our foreign policy and the long-term interests, even, of the sugar people.

Mr. DOUGLAS. As I understand, the distinguished Senator from Arkansas, who is chairman of the Committee on Foreign Relations, says that in his judgment the amendment which was inserted by the Committee on Finance is not damaging to the foreign policy of the Nation. Is that correct?

Mr. FULBRIGHT. I certainly do. On the contrary, I believe the amendment would in the long run be beneficial. I believe it would avoid the creation of additional vested interests with now unknown countries which would be given special premiums which were hitherto given to Cuba. Those benefits were not given to Cuba for economic reasons, but for emotional reasons, connected with the Spanish-American War, and a feeling of responsibility for the welfare of the people of Cuba.

In my judgment there is no justification for transferring those benefits to other countries.

The idea that this would be aid to them is not, in my opinion, valid, because it would be aid on a hit and miss basis. I am in support of the President's program for aid to Latin America. That aid should be given on an orderly basis in accordance with need and in response to actions taken by those countries in their own welfare.

The basic principle of the President's new program in Latin America is that it is a cooperative program, that it is an alliance, and is not a unilateral program; that it is based upon cooperation among the respective countries. That is a sound way to approach the problem. The proposal before us would distribute the largess of approximately 2 cents a pound in the form of a premium to whoever might be given this quota. Furthermore, it would guarantee in these countries the expectation of a continuation, which I doubt would be in the interest of our foreign policy. I do not believe it is sound.

I can only say to the State Department that I disagree with them. I do not believe they have had an opportunity to consider all the aspects of it. It is true that they did not have much time to do so, because the subject came up only a short time ago. I have not spoken to the President about it, but I doubt that he had an opportunity to give any personal attention to this matter before the letter was written. That is only my opinion, of course.

Mr. DOUGLAS. The statement just given, Mr. President, is from the distinguished chairman of the Committee on Foreign Relations, who has devoted a lifetime of study to the whole question of foreign relations, and who is the greatest authority in the Senate on these matters, and who, incidentally, has studied the sugar issue for a good many years.

I am very happy to find myself in close agreement with him as with the senior Senator from Virginia.

Mr. FULBRIGHT. It is true that previously I have opposed the bill, but this amendment has no effect whatever upon the domestic producers of sugar. It does not touch them at all. The question of whether it is a good bill with respect to their interests is not in any way influenced by the amendment.

It also has the incidental effect, if it is kept in the bill, of returning in the neighborhood of $120 million to $150 million to the Federal Treasury. That is something which is of interest to other Members of this body who have no particular interest in sugar, but who are interested in the solvency of the Treasury.

The proposal also has an influence upon the question of the balance of payments. We have talked much about the balance of payments. The amendment would prevent, in effect, the outflow of $125 million to $150 million in gold. The amendment would have a beneficial effect upon the Treasury and our economy.

Mr. DOUGLAS. I thank the Senator from Arkansas. If we were to adopt language indicating that it was the intention of Congress that the sums thus collected by the Treasury would be used to help finance the Latin American aid program, should not that remove any possible objection on the part of the Department of State?

Mr. FULBRIGHT. I myself would not advocate that. I think the aid program stands on its own. We have made an authorization, and I think there will be an appropriation of $500 million in the first stage. I think everyone believes that this is the first stage, assuming that the program is developed properly and in accordance with the principles which have been set forth.

Mr. DOUGLAS. But this proposal would indirectly help to finance the program.

Mr. FULBRIGHT. The money will be in the Treasury, certainly. I thought the Senator was referring to earmarking the money. I do not believe there would be any advantage in earmarking $150 million. If it is in the Treasury, it will be available for this purpose. An individual judgment should be made as to the amount needed for the aid program in Latin America.

Mr. DOUGLAS. But would not the indirect effect be to aid that program?

Mr. FULBRIGHT. Oh, certainly; any amount would. I thought the Senator meant that the money should be earmarked for that program. As the Senator from Illinois has proposed it, it is a sound plan and ought to be adopted.

Mr. DOUGLAS. I thank the Senator from Arkansas. His reinforcement is mighty.

Mr. FULBRIGHT. I do not know about that, but I think the plan is sound.

Mr. DOUGLAS. I am deeply pleased.

Mr. LONG of Louisiana. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. LONG of Louisiana. The Senator from Illinois knows that I withheld my vote in committee when he offered his amendment, because I was somewhat concerned about the effect it would have. I thought it might prejudice the bill. I am still somewhat concerned about the proposal. So far as the merits of the Senator's amendment are concerned, and speaking entirely as to the merits, it seems to me that the people who would be benefited by the $150 million are a very small number, who did not anticipate it.

I would feel entirely differently about the amendment if its effect would be to deny decent living wages and working conditions to the millions of people who work in the cane fields. However, it seems to me that the purpose of the amendment is entirely directed to a small number of wealthy individuals who have many millions of dollars' worth of sugar on hand.

If I might paraphrase a statement by Winston Churchill, unless we adopt the amendment, I think the bill will do the opposite of what Sir Winston said with respect to the Royal Air Force, when he said:

> Never have so many owed so much to so few.

In this case, never have so many done so much for so few.

Mr. DOUGLAS. Or: Never has so much been done for so few, at so little risk.

Mr. LONG of Louisiana. Never have so few got so much for so little. Put it that way.

Mr. MORTON. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. MORTON. I, too, withheld my vote yesterday in the Committee on Finance, as the Senator well knows. I still have apprehension about the amendment. The wage scale in Cuba was tied to the price of sugar, as the Senator knows. One of the difficulties Mr. Castro is having today is that as the price of sugar has gone down, the wage scale has gone down.

I do not speak as a partisan supporter of the President. I think I have made that abundantly clear in the past months.

Mr. DOUGLAS. I believe that is true.

Mr. MORTON. I must say that I wish the President well in his efforts in Latin America, as all of us do, I am certain. I believe we should get a sounder or more thought-out judgment from the administration and from the State Department.

I do not want to see the Senate take hasty action now which will kill any good impact which the conference held at the White House the other day had. I feel certain the Senator from Illinois agrees. The results of the conference were not received with any great degree of enthusiasm, but they were received favorably by most of the governments in this hemisphere. I think that if we deny something, on the one hand, while we promise something else, on the other hand, we can, as a result, affect the effort which the administration is trying to make to solidify, in the free world, the nations and the peoples of this hemisphere.

Mr. DOUGLAS. I thank the Senator from Kentucky. I think I have given evidence of the fact that I am a strong supporter of the President.

Mr. MORTON. That I do not question.

Mr. DOUGLAS. I intend to continue in this course. I agree heartily with the President's Latin American program. I intend to support it. I believe in making available the full $500 million.

In all these programs, we have the problem of financing them and of finding the money to pay for them. I am certain there will be some Senators on the other side of the aisle and some Senators on this side of the aisle who may say that we cannot afford this Latin American program. My amendment will at least provide $150 million, which will make it possible to extend foreign aid on condition that the foreign countries do something to improve their own situation; that they revise their tax systems; that they develop a better system of land holdings; and that they improve the condition of their people.

I think $150 million would provide us with an added lever with which we could work.

As the Senator from Louisiana [Mr. LONG] has pointed out, the people who may gain from this House proposal are really not, preeminently, the common

folks of those countries; perhaps not even those who will produce sugar in the future; but they are the people who hold sugar in storage at the present time and who will receive a tremendous windfall because they will have bought sugar at world prices and will sell at market prices, or over $50 a ton more than they paid for it.

Mr. MORTON. Mr. President, will the Senator from Illinois further yield?

Mr. DOUGLAS. I yield.

Mr. MORTON. Unfortunately, the bill comes to us under a deadline. I know the Senator from Illinois and I both regret that. However, I should like to ascertain the facts about who would be the beneficiaries. Are there other countries which are involved where the wage scale is geared to the price of the product, as it was in Cuba, and as it is today in Cuba? That sort of thing gives me some concern.

Following the observations made by the chairman of the Committee on Foreign Relations, the distinguished junior Senator from Arkansas [Mr. FULBRIGHT], who has backed the so-called Douglas amendment, I imagine that the amendment will remain in the bill. However, I think it is unfortunate that we must take this action in a 48-hour period. I know the Senator from Illinois agrees with me in that statement, because he expressed in committee, as he has often expressed in committee, the view that revenue measures should not be brought up under a deadline. I am sympathetic to his position in that respect. Nevertheless, we cannot close our eyes to the fact that there is another side to the question. I simply wish we could get a more definitive statement from the Secretary of State or the White House itself on this subject.

I do not believe that we are in a position, with the facts now known to us, to legislate in this manner. It could have a very heavy influence on what this administration is trying to do in this hemisphere. I think none of us wishes, in any way, to put hurdles in the road of progress in this hemisphere.

Mr. DOUGLAS. I appreciate the attitude of the distinguished Senator from Kentucky. Certainly it is not partisan in any sense—quite to the contrary. For that, I commend him and invite him to continue in the same course.

But as legislators we have to use our judgment. We are not robots. Frankly, I think some of us are better informed and have a clearer view of this subject than do some in the lower echelons in the Department of State. I know that my friend from Kentucky served in the Department of State. I certainly do not want to join in any denigration of the personnel of the Department of State.

But there is a tendency for every occupational group to try to ingratiate itself with the people with whom it is dealing. That is natural; it is an occupational hazard.

Our diplomats deal with the diplomats of these countries and, primarily, with the well-to-do and the upper class people there. Over glasses of loganberry juice or lemonade they discuss with them the sugar issue and other matters; and it is only inevitable that they will be affected by the views of that relatively small group of wealthy men. However, personally, I am unwilling to abdicate my use of commonsense simply because an Assistant Secretary of State says these bonuses should be paid.

Frequently we find that attempts are made to give the impression that minor officials—whose views may not be very well founded—are speaking for the President of the United States. When President Truman was in office, I objected to that situation. Frequently we would be told what the President desired, but we would find that it really was not at all what the President desired, but was only what some minor official desired. As the Senator knows, I objected to that quite strenuously also during the last administration.

Certainly the Senate must not abdicate the fulfillment of its responsibilities. Senators must do their duty. Of course we should cooperate with the administration, and of course we should put the interests of the Nation first. But we should decide what are the interests of the Nation.

Unfortunately, there is much too great a tendency to pay very little attention to the interests of the taxpayers. Some persons say that the other subsidy of 3⅓ cents a pound will amount to only $12 or $13 a year for a family of four. But, Mr. President, even though $12 a year a person does not seem to be a very great amount, nevertheless, the total amount involved is a very large one; it is $150 million. It may be said that when the $150 million involved in my amendment is prorated for the entire population of our country, it amounts to only 80 cents a person. Nevertheless, the total bill will be $150 million.

Of course, one of the great difficulties in connection with representative government is the fact that the producing groups and interests tend to be concentrated, whereas the consuming groups and interests are diffused. So the public interest is diffused. In such a situation, the public interest tends to be weakened.

Recently I was reading Prescott's description of the conquest of Mexico in the early days, and also his description of the conquest of Peru. As we know, hundreds of thousands of the natives in those countries were conquered by very small groups of Spanish soldiers. The Incas and the Aztecs were conquered because they were diffused; and the result was that a rather small number of Spanish soldiers were able to overpower them.

Today, in our country, the special interests have the benefit of propaganda, ample funds, and much publicity. As a result, they have tremendous power. But the poor housewife or baker or child who pays a subsidy when they drink a soft drink does not know what the issues are, and has no way of understanding this complicated situation, and cannot make his voice heard. But we as Members of Congress should be the representatives and the defenders of all those persons.

Mr. MORTON. Mr. President, will the Senator from Illinois yield?

The PRESIDING OFFICER (Mr. BURDICK in the chair). Does the Senator from Illinois yield to the Senator from Kentucky?

Mr. DOUGLAS. I yield.

Mr. MORTON. I have no quarrel with the Senator from Illinois in connection with his discussion of Peruvian history or anything of the sort.

But I wish to ask whether the Senator from Illinois has received from the White House or from anyone in a high position in the State Department—from any noncareer appointee of this administration—any support for his proposal?

Mr. DOUGLAS. I do not know.

Mr. MORTON. If he has such support for it, I will go along with it.

Mr. DOUGLAS. I am glad to learn that the Senator from Kentucky will support recommendations which come from the White House. We shall call on him for payment of that check when we come to deal with the minimum wage.

Mr. MORTON. Mr. President, when the security of our country is involved, the administration will get my support.

As I have stated, my desire is to be sure that the Senator's proposal has received support from the White House or from a high ranking official in the State Department.

Mr. DOUGLAS. Of course I know that when the security of the country is involved the Senator from Kentucky will throw partisanship to the winds.

Mr. MORTON. On this floor I have consistently taken that position and refrain from using the floor of the Senate as a forum for my statements as chairman of my party's national committee.

Mr. DOUGLAS. Of course that is true. The Senator has done his other work on the outside, as he had every right to do.

Mr. MORTON. But I wish to be sure that the interests of the country are protected. If the administration can convince me—and I think it can, when the chips are down—that a matter involves the security and the best interests of our country, partisanship will not enter into the picture so far as I am concerned.

So far as the pending proposal is concerned, I am deeply interested in knowing whether the State Department takes a position in regard to it. Of course, if such a recommendation is made by someone serving in a low level at the State Department, I shall not go along with it, any more than the Senator from Illinois would.

I believe that in connection with this matter we should get the Secretary of State or the Under Secretary of State or someone at the White House to tell us whether in his opinion this proposal is a desirable one in the national interest. It sounds fine to me; and if it is, I will go along with it.

Mr. ELLENDER. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. ELLENDER. Let me say that I have received such a statement.

Mr. MORTON. Very well; that is fine.

Mr. LONG of Louisiana. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. LONG of Louisiana. At one time I had the honor of sitting in the Foreign Relations Committee alongside the present President of the United States; and I believe that situation existed there when this problem first came up. I refer to the problem of what we are to do with the Cuban sugar quota. As I recall, at that time Mr. Mann was the adviser on that issue.

Mr. DOUGLAS. Yes.

Mr. LONG of Louisiana. I believe he still is; and perhaps he is advising the President.

During the hearings Mr. Mann advised the committee about this matter.

Mr. DOUGLAS. That is correct.

Mr. LONG of Louisiana. But when he first came before the committee to discuss this issue, his position on it was entirely flexible. He recognized entirely that the purchases could be made on a world-market basis, at the world-market price—in which event there would be no large windfalls. He also recognized that the purchases could be made on a quota basis, with the various quotas reassigned and large windfalls to certain producers.

Mr. Mann did not have an opportunity to write this measure in the way he wanted. He went before the House Committee on Agriculture; but that committee then constituted itself a Foreign Relations Committee, for the purposes of this measure. Various outstanding members of that committee had visited the entire area, and had their ideas in regard to what should be done—as the Senator from Illinois will recall. For instance, they had the idea that the Dominican Republic should have a very large percentage of this increase, at the premium price. But that was contrary to the position of the then President of the United States; and I assume it is contrary to the position of the present President of the United States and is contrary to the position of Mr. Mann, who at that time was advising the committee.

Mr. DOUGLAS. And it is contrary to my position.

Mr. LONG of Louisiana. That is right.

So, in effect, what the House committee did was contrary to the attitude of the Senate and was contrary to the attitude of the administration. Nevertheless, because of the deadline, the House committee succeeded in doing it. In that situation the House sent to us a bill which would expire at a certain time. We realized that the bill would create problems; but we could not very well fail to pass the bill, for if we did not pass it, no measure dealing with this subject would have been law at that time.

I doubt that the President of the United States would take a position contrary to the one being urged by the Senator from Illinois. I must say that if the President were particularly concerned about this matter, I would have thought I would have heard more about it than I have from those who represent the executive branch of the Government, because I had to seek from the executive branch the little I know about this matter.

I should like to make one or two points in regard to what the Senator from Illinois has been saying.

There is a great deal of difference between actually aiding the people of a country and aiding only a small group in that country. For example, the Senator from Illinois has pointed out that according to the chart to which we have been referring, Peru would be allowed a quota of 176,426 tons——

Mr. DOUGLAS. On page 4, we find that it would be 215,000 tons on a quarterly basis, or 860,000 tons on an annual basis, under the provisions in effect for this last quarter; and if the premium is $50 a ton, that would amount to $43 million.

Mr. LONG of Louisiana. It is a misleading statement to speak of Peru getting $43 million if there are only a few large producers in Peru getting the money.

Mr. DOUGLAS. Two companies have from 60 to 70 percent of the Peruvian production.

Mr. LONG of Louisiana. I do not particularly know the names of those companies, and do not particularly care which companies they are, or whether they come from one particular section of the country or another. I believe one of those companies is American owned and controlled.

Mr. DOUGLAS. That is correct.

Mr. LONG of Louisiana. So, in effect, an American company would get much of that money. It is said that Peru would get it.

Mr. DOUGLAS. About 20 percent.

Mr. LONG of Louisiana. But it is not a matter of Peru getting the money; it is a matter of a few small companies getting it.

Mr. DOUGLAS. A few big companies.

Mr. LONG of Louisiana. A few big companies holding land in that country will get the money.

Mr. DOUGLAS. That is correct.

Mr. LONG of Louisiana. If we want to do something for the people of Peru, if we want to make this proposal become a part of the foreign aid program, I would suggest that the way to do it is to start out by adopting the Senator's amendment. Some people think we expect to give all this money away immediately, willy-nilly, in order to be sure that it gets there. But the fact is that the money never seems to achieve the desired results if it is given away that way. So far as I can determine, as a member of the Foreign Relations Committee and of the Finance Committee, there is no reason to think that any of the $150 million is to be used for the benefit of the people. So far as I can determine, it would go largely for the benefit of certain large producers, who will be making a large windfall profit.

Mr. DOUGLAS. And some importers might get it.

Mr. LONG of Louisiana. And also some importers who happened to hold sugar. If it is desired to make this aid a part of an alliance or a trade arrangement, the way to start it would be to buy the sugar at the world price. Then if we found that a country could use a premium price to put into effect better working conditions, or better conditions of government, or better social conditions, we could then proceed to give it the money on the basis of a cooperative arrangement, in which the government would do something for the benefit of the people.

Clearly, if the money were given away in this fashion, there is no reason to believe it would achieve the desired result of helping the people, or that they would receive any benefit as a result of our spending the $150 million.

Mr. DOUGLAS. It would be very interesting to learn how much of this money, which would go into the pockets of a relatively few, would be deposited in Swiss banks, and possibly used as a means to have a run on American gold. That is a subject which I think should be probed in the future.

Mr. LONG of Louisiana. If the Senator will yield further, it seems to me that once this particular procedure is started, it will be difficult to shut it off, and that it is better not to get it started in the first place. While it might be desirable eventually to pay this amount, it might be better to start on the basis of paying at the world price, and then see what sort of arrangements could be worked out to assure some benefits to the people of the United States as a result of their paying $150 million extra.

Mr. DOUGLAS. The Senator is correct.

Mr. President, let me conclude my remarks.

SUMMARY

In summary, this amendment would, first of all, greatly benefit the American taxpayer, whose interests have long been ignored in the administration of the Sugar Act.

Second, it would avoid building up vested interests in the nonquota or former Cuban share of the American market at premium prices.

Third, it would provide an incentive for the Cuban people and other countries to seek a change in the present Cuban Government, rather than approve the status quo in Cuba, which would be the case if the quotas were redistributed at premium prices.

Fourth, it would provide additional funds which could be used in programs for aid to Latin America on the basis of need and a well planned program, not on the accident of who grows sugar, and would enable the funds to be freely distributed, instead of concentrated in a relatively few speculators.

Fifth, this amendment would follow a precedent already set by the American Government with the Dominican Government only this last year.

Sixth, it would assist the United States in its balance of payments problems.

It would decrease the claims which foreign governments have on our gold supply by $150 million, and if, as I suspect, some of this money would be deposited in a Swiss bank, would decrease the ability of Zurich to tighten the fiscal knot around the throat of the United States Treasury.

Mr. President, I yield the floor.

Mr. ELLENDER. Mr. President, I move that section 4 of the bill be stricken. That is included on page 3, beginning with line 10, down through line 20.

Mr. CURTIS. Mr. President, will the Senator yield for a question?

Mr. ELLENDER. Yes.

Mr. CURTIS. The proposal of the Senator is to strike out the Douglas amendment. Is that correct?

Mr. ELLENDER. Yes.

Mr. President, much of what I was going to say about the Sugar Act has already been debated. As Senators know, we have had quite a bit of difficulty in the last 2 or 3 years in attempting to have sugar legislation enacted on a long-term basis. It seems that the House has adopted a program of sending the Senate a bill during the closing days of the Congress, with the results that our Finance Committee is unable to go into every aspect of the sugar problem.

I am very sympathetic with the continental producers of sugar beets as well as sugarcane. It strikes me that, if and when we are able to propose a long-range Sugar Act to the Congress, some leeway should be given to the administrator of the Sugar Act to increase production of sugar in the continental United States.

For a long time I have felt that we ought to produce at least one-third of our consumption requirements in the United States, not including Alaska, Hawaii, Puerto Rico, and the Virgin Islands.

Today under the basic act domestic growers of beets are permitted to produce 1.8 million tons, which constitutes 22½ percent of our requirements based on 8 million tons. The mainland cane sugar quota is fixed at 500,000 tons, based on a grand total of 8 million tons.

It can be readily seen that if we use the formula to which I have referred—that is, to produce at least one-third of our consumption requirements—we would still have quite a way to go. With a consumption requirement of 8 million tons of sugar, continental producers are permitted to grow only 28.7 percent of our requirement.

We are all very anxious to pass this bill and send it to the President within a few days, because if we do not, the Sugar Act will expire. The deadline is March 31 at 12 midnight. Unless Congress acts by that time it is entirely possible a lot of unwanted sugar will be dumped into the United States and will thereby affect the market very adversely.

It is my hope the Senate will agree to the amendment I am sponsoring. It is my belief that if the Senate does agree to eliminate the so-called Douglas amendment, which we have been debating almost 3½ hours, the House of Representatives will accept the other change the Senate committee has made. As we all know, the other change made by the Finance Committee reduces the time during which the current act would be effective from 21 to 15 months. In other words, instead of the act expiring on December 31, 1962, it would expire on June 30, 1962.

I have expressed the hope there will be sufficient time remaining in this session for the committees of the Congress, particularly the Committee on Agriculture of the House of Representatives, to draft a bill which would do justice to the continental producers of cane and beet sugar.

Mr. President, one of the other reasons for extending the act is that I do not believe it would be desirable for the Congress to allocate the so-called Cuban quota on a permanent basis. The law as it is now written gives to the President a wide discretion as to who shall get the Cuban quota. The terms upon which the quota is to be allocated to a particular country are not on a permanent basis. Each of the countries which is to receive more sugar than is now allotted is told that the additional quota is not to be on a permanent basis.

I voted against the present law, because I thought the bill should have had a longer life than what was finally agreed to by the Congress. As I recall, action was completed after midnight a year ago. Now that we are confronted again with a situation of either accepting the act, by way of extending it as written, or else having no sugar law whatever after midnight on March 31, I believe it is incumbent on the Senate of the United States to pass the proposed legislation as soon as possible. I feel confident that if the bill is passed as presented by the Finance Committee of the Senate, minus the Douglas amendment, which I now seek to eliminate, there will be no need for a conference, and we can get through with the proposed legislation within hours after the Senate completes its deliberations.

Mr. President, the law as it is now on the statute books provides the methods by which the administrator of the act shall distribute the so-called Cuban quota. The first countries to receive some of the quota are designated in the act under section 408. These are the foreign countries which have quotas of not less than 3,000 tons nor more than 10,000 tons. These quotas are all to be raised up to the 10,000-ton limit. As was brought out in the debate, there are only five countries in that category.

The next country is the Republic of the Philippines, which will receive 15 percent of the remainder of the so-called Cuban quota. As I pointed out previously, it strikes me it would be harmful to the relationship between the United States and the Philippines if this friendly country is permitted to ship only the regular quota to the United States under the preferential agreement and then told that any further allocation we permit would have to be sold at the world price.

Mr. President, the act further provides that the remainder of the quota, including any unfilled portion of allocations already provided, shall be purchased from foreign countries having quotas under section 202(c). These countries will receive allocations in proportion to their present quotas; except, of course, the Dominican Republic. It is not my purpose to spend any time discussing that phase of the act. I have done so in the past. I merely wish to say I think it was shameful for us not to allow to the Dominican Republic its just share of the Cuban sugar quota.

I have made several trips to the Dominican Republic over the years, and I can say that great forward strides have been taken in that country by the present Government. When the present leader of the Dominican Republic took charge back in the early 1930's the country was a shambles. Through hard work, and without financial assistance from our Government, great progress was made. Roads have been built, fine schools have been constructed, and hospitals have been erected. I daresay that there is not a country in either South or Central America in which the people as a whole are better off and have better opportunities than in the Dominican Republic. Those accomplishments were attained by utilizing more effectively the resources of that country.

As I said, I do not care to argue any further the point in respect to the Dominican Republic. I am willing to accept the bill that the House has presented to the Senate, in which there is a refusal to give a quota increase to any country that has no representation with our Government. It is my hope that sometime in the near future we shall be able to renew our friendly relationship with the Dominican Republic so that they can then come within the purview of the act.

Much has been said as to whether or not the State Department favored the committee amendment, and as to whether or not the administration was for or against it. As I understand, the executive department is against the so-called Douglas amendment. I wish to read a short statement indicating that opposition:

A provision that the premium paid foreign producers for sugar imported under reallocation of the Cuban quota should be captured by an import levy is contrary to the national interest.

1. This would be a fundamental change in longstanding policy, which would involve a number of troublesome questions, and therefore should not be acted upon hastily and without opportunity to identify and consider the problems involved.

2. This would becloud and confuse the basis of U.S. policy in transferring procurement from Cuba. It is desirable that the consideration of the U.S. Government in allocating procurement from Cuba should be widely and clearly recognized. Expressed simply it was to avoid dependence on an area which has a hostile government, and accordingly to diversify sources of supply. It would be highly undesirable if these considerations were to be clouded with an impression that the U.S. objective is to reduce the cost of imported sugar and thus to change the basic relationship between domestic and foreign suppliers to the U.S. market.

3. A large part of the sugar needed to replace Cuban supplies would be purchased in Latin America. The nonquota countries in Latin America which are in need of foreign exchange to finance their economic and social development would find it difficult to understand why they receive a price substantially inferior to the price received by the domestic industry, formerly received by Cuba, and currently received by other countries which have basic quotas under the Sugar Act. These countries would regard

such action as inconsistent with the Alliance for Progress recently proposed by the President.

I have been quoting directly from a statement that was made to me by the State Department last night. I do not wish to occupy the attention of the Senate any longer. I believe that the statement speaks for itself. It strikes me that the law that we hope to reenact is sufficient to give the President leeway to distribute this quota effectively and fairly and on a basis that will not indicate any permanancy. I am very hopeful that during the period from March 31 until the expiration of the proposed act the committees in both the House and the Senate will get together and draft a long-range bill that will be acceptable. This should be done as soon as possible. I express the hope that when that time comes, the relationship between our country and Cuba will be better than it now is, and that we shall be able to reallocate to the Cubans a fair share of the quota that has been taken from them.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield.

Mr. DIRKSEN. The distinguished Senator from Louisiana, whom we recognize as the capable chairman of the Committee on Agriculture and Forestry, has referred to a conversation in memorandum form that was disclosed to him last night as to the attitude of the administration on the Douglas amendment. Why is there not some official communication here from the President of the United States or the appropriate official of the State Department? The reason I raise the question is that on the night of September 1, 1960, I belabored the Senate on this very issue to secure for President Eisenhower in the national interest flexibility of action to distribute the Cuban quota where he thought it would do the most good, and I was fortified with official information over the signature of the President on that point. Why should there not be an official communication before the Senate now, if, as the Senator has said, the administration—and that means the President—believes that the amendment is inimicable to our relationships with Latin America and not in the interest of a sound U.S. policy?

Mr. ELLENDER. Mr. President, I have a short answer to that question. I believe my good friend the Senator from Illinois himself was very much surprised when his amendment was agreed to.

All this was done.

Mr. DIRKSEN. I was not surprised.

Mr. ELLENDER. The Senator was not surprised?

Mr. DIRKSEN. No. I thought the persuasiveness of my case was such that the result did not surprise me.

Mr. ELLENDER. The fact is that I did not know about this amendment until late yesterday afternoon. The moment I heard of it I consulted Members of the House. I was informed that they were not going to take it. I then consulted with the State Department and suggested to the State Department that it prepare a statement in regard to the matter, and this was immediately done. I am sure that before the debate is over someone closer to the President than I will indicate that the administration is opposed to the Douglas amendment. I believe that will be forthcoming within the next hour.

Mr. DIRKSEN. There ought to be a summary statement to clarify the situation which now prevails on the floor of the Senate. As everyone knows, here is a situation in which someone gets something by the "grapevine." There is a homely and perhaps somewhat vulgar expression, but certainly it is a very expressive term, that people get something from the "horse's mouth," whatever that means; but that sort of thing can be picked up in different quarters. I would like to be fortified and have nailed down what the official attitude of the administration is on the proposal which is embodied in the Douglas amendment.

Mr. ELLENDER. I assure the Senator from Illinois that the document from which I have read is official. It was handed to me last night by one in authority, and it expresses the views of the administration.

Mr. DIRKSEN. But where is the signature?

Mr. ELLENDER. I hope the Senator will take my word for it. I myself consulted administration representatives when I learned that the bill was to be taken up at 10 o'clock today. We had to do a little rush job. There was really no time for me to contact the President. I would probably have done that last night, but then he might have referred me to the State Department. Instead of going to him, I went directly to the State Department representatives. I knew, in fact, from previous talks with them that they desired some leeway in handling the allocation of these quotas. If the Douglas amendment prevails they will have to buy sugar from anyone they can. The original measure allows them to more or less control the purchases. It is my belief that the Douglas amendment would cause a great deal of hardship. In addition it would cause a great deal of difficulty to those who would administer the act.

It could not be explained to the people of South and Central America. They would say, "You have been giving Cuba these benefits. Why are we not entitled to them?"

The Senator from Illinois can understand that, I am sure. Before we vote on the bill, I am sure there will be forthcoming a statement from the President to verify what I have just read.

Mr. DIRKSEN. In the spirit of the New Frontier, I wish to suggest to my distinguished friend from Louisiana that if he will call up his Chief in the White House I am sure we can get one of the riding pages to get on his horse and dash down there and get the statement. It should not take more than an hour. The distinguished Senator from Ohio [Mr. LAUSCHE] has just said that he would volunteer to go there himself. That is in the spirit of the New Frontier. I would like to see this matter laid out in official fashion. I would like to see the sentiments documented, and then I would like to see the signature at the bottom of the page. There is nothing that gives such stability to a piece of paper as the right kind of signature at the bottom of it.

Mr. ELLENDER. The Senator is not inclined to say that this paper is not authentic, is he?

Mr. DIRKSEN. Oh, indeed not. My friend is the soul of all that is authoritative and authentic. He would never disclose to the Senate any sentiment imputed to someone else unless it were religiously stated as a fact, because his reputation for probity and integrity is absolute and unimpeachable.

Mr. ELLENDER. And beyond reproach, too.

Mr. DIRKSEN. Yes; but I would still like to see the signature. [Laughter.]

Mr. ELLENDER. Very well. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CARROLL. Mr. President, I support the Senate Finance Committee proposal to extend the 1948 Sugar Act through June of 1962.

This is a 15-month extension, and as such is an improvement over the 21-month extension provided in the House bill.

I would prefer to see an extension of the present act for only 9 months, through the end of this year.

However, with the time running out on us and the act about to expire on Friday night of this week, the realities of the situation force us, in this instance, to accept what is possible to get.

I think we can get a 15-month extension, and when our Senate conferees meet with the House I hope they will hold firm for 15 months, bearing in mind the problems of Colorado sugarbeet growers.

The longer the act is extended on a temporary basis the greater the potential trouble for the sugarbeet growers in my State.

What our Colorado beet farmers need is fast congressional action on a new, permanent sugar law; one that will treat the disposition of the Cuban quota in an invariable and stable manner over a long period.

In general terms, the new sugar law ought to provide for increased marketing allotments and increased growing acreage allotments for beet sugar.

These allotments ought to apply over a long enough period of time to permit the farmers and the processors to amortize the investments they will be required to make in putting new beet acreage and new beet factories into production.

The reallocation of the 3 million tons of raw sugar previously reserved for Cuba will mean a substantial change in the farm economy of 27 States and U.S. possessions and 20 foreign nations.

In terms of acreage the 3 million tons could mean in the neighborhood of an

additional 1 million acres of farmland converted to sugarbeet and cane production.

This will have a tremendous economic impact in the areas where the sugar is planted, factories expanded and new processing facilities constructed.

The uncertainty surrounding this growth in sugar production must be removed as swiftly as possible.

This is why I support a short temporary extension of the 1948 act and fast action on a new permanent act.

The unfairness in a long—that is 21 months—temporary extension of the 1948 Sugar Act is this: Our own domestic beet and cane sugar growers and our friends in sugar growing Western Hemisphere countries are going to increase production without a long-term commitment for markets for their products. They are going to hope for long-term markets, but for the next 21 months they will have no assurance.

Not only our domestic producers, but also our foreign friends, need to know over a long period what sugar tonnage they can expect to be able to market at a fair price. Twenty foreign nations, at this time, are temporarily filling the Cuban quota.

The longer we extend the 1948 act on a temporary basis the more uncertain, the more complex, we make conditions for Colorado farmers and farmers in other beet-growing States. At the same time, by extending temporarily reassigned quotas to other sugar producing nations we tend to induce them to build up their farm and processing production to the point where eventual readjustment, or cutback, in, say 1963, could cause severe economic repercussions. Such repercussions would necessarily have unfavorable foreign-policy reactions.

The wisest course for our Government to take would be to extend the 1948 Sugar Act for as brief a temporary period as is practical.

I would favor 9 months, but I will, accepting the political realities facing us, agree to 15 months.

However, I urge a prompt determination of this issue by the Congress.

The chairman of the House Agriculture Committee has stated that he will hold hearings on a new and permanent sugar program in May of this year.

Relying on this promise I will support this temporary extension.

It is my hope that we can still complete action on a new sugar law before adjournment this summer.

It is vital to our domestic growers and to stable foreign relations that we do so.

If we are to eventually reallocate 3 million tons of sugar among domestic and foreign producers this must be done promptly so that costly patterns are not developed whereby inevitable change becomes painful and destructive and foreign friends are lost or parts of our own sugar economy are economically depressed.

This issue means a lot to my State.

Colorado is the second largest sugarbeet-producing State in the United States.

Only two States in the Nation harvest more than 100,000 acres of sugarbeets a year—Colorado and California. Colorado harvested 155,100 acres in 1960; California 208,000 acres.

Colorado has the most beet-producing farms of any State in the Nation producing sugarbeets. We have 4,285 beet farms. The next State is Idaho with 4,047.

Colorado has the most number of persons eligible for payments under the Sugar Act of 1948. We have 8,810. Idaho has 6,371.

Out of 22 sugarbeet States, Colorado is second in tons of beets harvested—2,761,000 in 1960—and second in Sugar Act payments.

Colorado has more sugarbeet factories than any other State in the Union. Colorado has 14 factories. California has 10. The next nearest State has five.

All of this means that my State has a real stake in the actions taken by this Congress on sugar.

What we do here today bears heavily on the economy of my State.

Last year Colorado farmers earned $42,464,069 from sugarbeets.

At the same time another $25 million was paid out to workers in the 14 Colorado sugarbeet processing plants.

Sugar is a $70 million income producer in my State.

The Department of Agriculture told me yesterday that whereas Colorado farmers planted 157,300 acres to beets in 1960 they intended to plant 175,000 acres this year.

This is an 11-percent expansion and it represents the maximum amount our Colorado factories can handle without expending large sums for expansion.

This pattern appears to be true throughout the beet-producing States. The expected national increase is 11.3 percent from 976,800 acres to 1,087,400 acres.

Beyond this, new plants are necessary and new plants take 2 years and $12 million apiece to build.

Before we can ask our growers to step up their acreage—with the related heavy farm machinery and labor costs—and ask our processors to invest millions in new plants, we must give them a long-term commitment on markets for their product under revised quotas.

Related to the problem of long-term commitments, Mr. President, is the problem of development of new sugarbeet-growing areas.

Several regions of the United States have expanded their sugarbeet acreage at a rate better than 25 percent in the past 10 years. One region's acreage has jumped 60 percent.

In my own region—the high plains and intermountain area—growth has been about 15 percent.

Competition for new sugarbeet acreage is growing between the regions.

To the extent that such competition does not destroy certain producing areas it is a welcome economic condition.

But one area of my State is being hurt by the umbridled growth in beet acreage.

The Colorado western slope beet-growing area has insufficient acreage in beets to sustain a healthy beet-processing industry. The area is excellent beet-growing country and the farmers are anxious to expand production.

The beet processing plant has warned the growers that it must close unless production is expanded. It is feared that this plant will move to a new beet-producing region.

Loss of the western slope processing plant would bring economic havoc to the region's farmers and factory workers.

However, because of restricted marketing allotments for beet sugar our growers are not encouraged to expand their acreage to insure a profitable operation ot the sugar company's plant.

The problem has been temporarily solved in this way: The growers this year have been forced to accept contracts at much lower rates for their beets in order to induce the company to keep the plant open.

The Western Colorado Beet Growers Association has wired me "this arrangement is uneconomic and cannot continue."

What the western Colorado farmers fear is that the plant will close down permanently and the sugar company will concentrate on developing new production facilities in other regions.

Once a new permanent sugar act is passed these uncertainties will be resolved and with increased beet sugar allotments the sugar companies and the farmers can work out growing and processing arrangements economically satisfactory to both.

I cite the problems of the western Colorado beet growers as an example of the uncertainties in the whole sugar picture which must be resolved so that the beet sugar industry—growers and processors—can be assured a measure of proper growth.

Because of the great uncertainty of the beet sugar situation in my State, the second ranking beet sugar State in the Nation, I call for as brief a temporary extension as practicable of the 1948 Sugar Act.

At the same time I call for a new permanent sugar act with adjusted increased sugar quotas for our foreign friends and increased quotas for domestic beet growers so that they may improve their economic condition and stabilize it against year-to-year uncertainties.

SUPPORT FOR S. 986, THE EMERGENCY PUBLIC WORKS BILL

Mr. CLARK. Mr. President, a representative group of 60 cities, of all sizes and in all regions of the country, has given strong support to S. 986, a bill which I introduced last month to authorize a program of Federal grants to State and local governments to accelerate public works of all kinds during the current recession.

I believe almost everyone agrees that, in theory at least, public works should be used as a countercyclical device. They should be postponed during periods of full employment and inflationary pressures, and they should be speeded up during periods of recession. Thus, public expenditures can be scheduled to

offset the rise and fall of private investment and spending, and the business cycle leveled out.

The President has announced a series of measures designed to speed up Federal public works activities. But there is no program to bring about a corresponding acceleration of State and local public works. S. 986, which I introduced on February 23 with the cosponsorship of the senior Senator from West Virginia [Mr. RANDOLPH], the junior Senator from Alaska [Mr. GRUENING], and the junior Senator from Rhode Island [Mr. PELL], is designed to remedy that lack.

The program which we propose is patterned after that of the Public Works Administration of the 1930's. As in the case of the PWA, the Federal grant would be 45 percent. The grants would be given only for projects that represent a net increase in the current rate of capital expenditure of the public body concerned, and priority would be given to projects which could be started within 90 days and completed within 1 year thereafter.

The bill authorizes $500 million in grants immediately, with another $500 million made available at the President's discretion.

The first question that arises is whether State and local governments would be in a position to participate in such a program. Do they have projects "on the shelf" ready to be put under construction? And can they raise their share of the cost of the accelerated projects?

To obtain answers to these questions, the American Municipal Association has undertaken a survey of cities of all sizes asking them whether they would take advantage of S. 986, if it were passed, and how much additional public works construction they would be able to place under contract with the bill's assistance.

To date, the AMA has received replies from 60 communities. Of these, 45 said flatly that they would take advantage of the bill. Of the other 15, some were opposed to the idea in principle, and others said that they were doubtful if they could raise any additional money locally in order to participate. A few suggested that their public works programs were proceeding all right without Federal assistance.

However, the vast majority of mayors and other city officials indicated their approval of the bill, and some were enthusiastic. Mayor deLesseps S. Morrison of New Orleans, for example, wrote:

> Senator CLARK's proposal strikes me as being just about the most effective and realistic means of alleviating some of our present economic ills, as has been thus far advanced.

City Manager Wesley McClure of San Leandro, Calif., wrote:

> We feel that the bill would accomplish its objective of stimulating construction and employment.

Mayor Lester E. Collins of Springfield, Ill., said:

> The city of Springfield would be most anxious to embark on a short range program to include substantial amounts of street paving, sidewalk reconstruction, street lighting, and off-street parking lots.

Mayor Leo Berg of Akron, Ohio, wrote:

> In my judgment, such a public works program aimed at increasing the value of municipalities is an excellent approach and proper in consideration for relief of economic pressure we now find in the United States.

The responses to the American Municipal Association survey confirm the testimony received from State and local public officials by the Subcommittee on Employment and Manpower of the Committee on Labor and Public Welfare during recent hearings in Pennsylvania, New Jersey, and Rhode Island. Virtually without exception, these mayors and State officials supported S. 986.

The 45 cities, which indicated they would participate, enumerated projects totaling around $100 million which they could get underway in these cities alone. And it must be remembered that States, counties, special districts, and other public bodies, as well as cities, would be eligible.

I ask unanimous consent that a summary of the 60 replies to the American Municipal Association survey, and the individual replies, be printed at this point in the RECORD. Most of the 60 letters are addressed to Mr. Patrick Healy, Jr., executive director of the association, but a few are addressed either to me or another Member of the Senate.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

Replies to survey concerning public works acceleration bill, S. 986

Reply from—	Would take advantage of bill	Estimated additional amount to be put under contract
Mayor R. B. Searcy, Huntsville, Ala	Yes	$5,000,000.
City Manager C. A. Hostetler, Anchorage, Alaska.	Yes	$1,000,000.
City Manager Bill M. Poland, Kodiak, Alaska.	Yes	$700,000.
Mayor Samuel Mardian, Jr., Phoenix, Ariz	No	
Mayor William M. McCall, Alameda, Calif	Yes	At least $220,000.
Mayor Carroll M. Dunnum, Downey, Calif	Yes	Up to $10,852,000.
Administrative Officer Walter Hahn, Jr., Inglewood, Calif.	Yes	$300,000 to $500,000.
Mayor Arthur H. Cox, Pomona, Calif	Doubtful	
Mayor James B. McKinney, Sacramento, Calif.	Doubtful	
City Manager Wesley McClure, San Leandro, Calif.	Yes	$400,000.
City Council, Santa Ana, Calif	No	
Mayor Milo Dellmann, South Gate, Calif	Yes	$500,000.
City Manager Joe M. Lacy, Grand Junction, Colo.	Yes	
City Manager George K. Armes, St. Petersburg, Fla.	Yes	
City Manager C. C. Burnett, Albany, Ga	Yes	$5,000,000.
Mayor William B. Hartsfield, Atlanta, Ga	?	
City Manager Graham W. Watt, Alton, Ill	Yes	Up to $2 million.
Mayor Lester E. Collins, Springfield, Ill	Yes	
City Manager Carlton W. Laird, Wood River, Ill.	Yes	$1,500,000.
City Manager Gilbert D. Chavenelle, Dubuque, Iowa.	Yes	More than $1,200,000.
City Manager Gordon Bennett, Ottumwa, Iowa.	Unlikely	
Mayor Ed Jochumsen, Waterloo, Iowa	Yes	
Mayor Paul F. Mitchum, Kansas City, Kans.	Yes	Up to $8 million.
Mayor J. F. Mitchell, Leavenworth, Kans	Unlikely	
City Manager Leland M. Srack, Salina, Kans.	Yes	$1,015,000.
Mayor Charles J. Cassidy, Bogalusa, La	Yes	
Mayor DeLesseps S. Morrison, New Orleans, La.	Yes	$4,050,000.
City Manager Joseph R. Coupal, Jr., Bangor, Maine.	Yes	$3,000,000.
Mayor Boyd E. McLernon, Salisbury, Md	No	
Mayor Stanley J. Davis, Grand Rapids, Mich.	Yes	
Commissioner Glenn C. Richards, Detroit, Mich.	Yes	
City Manager Robert A. Carter, Flint, Mich	Yes	$2,777,250.
Mayor Rex H. Hill, Mankato, Minn	No	
Mayor Irving R. Keldsen, Richfield, Minn	Unlikely	
Mayor Thomas E. Mealey, St. Cloud, Minn	Yes	$1,000,000.
Mayor David C. Scott, Springfield, Mo	Yes	$1,000,000.
Mayor George E. Svoboda, Fremont, Nebr	No	
City Engineer Donald G. Hyde, Norfolk, Nebr.	Yes	$100,000.
City Manager Joe H. Latimore, Reno, Nev	Yes	$1,000,000.
Mayor James W. Kelly, Jr., East Orange, N.J.	No	
City Manager Edmund L. Engel, Albuquerque, N. Mex.	Yes	Up to $13,340,525.
Mayor Malcolm E. Ellis, Schenectady, N.Y.	Yes	
City Manager H. B. Hines, Jr., Rocky Mount, N.C.	Yes	$1,000,000.
City Auditor Tom Baker, Bismarck, N. Dak.	Yes	$200,000.
Mayor Leo Berg, Akron, Ohio	Yes	$3,500,000.
Mayor Frank P. Celeste, Lakewood, Ohio	Yes	$4,700,000.
Mayor Michael J. Danas, Toledo, Ohio	Yes	
City Manager Hugh McKinley, Eugene, Oreg.	Yes	$300,000.
Mayor Joseph L. Eyre, Chester, Pa	Yes	$829,000.
Executive Secretary Aldo Colautti, Pittsburgh, Pa.	Yes	$500,000.
Mayor S. Clyde Fair, Orangeburg, S.C	Yes	$1,450,000.
Mayor Neville Holcombe, Spartanburg, S.C	No	
Mayor R. L. Thornton, Dallas, Tex	Yes	$3,000,000.
Mayor T. A. McCann, Fort Worth, Tex	Yes	$5,000,000.
City Manager E. L. Carlsen, Ogden, Utah	Yes	Up to $9,275,000.
City Manager J. C. Biggins, Newport News, Va.	?	
City Manager, Thomas F. Maxwell, Norfolk, Va.	Yes	$6,000,000.
City Manager Elmer W. Prince, Morgantown, W.Va.	Yes	
Mayor Lawrence M. Hagen, Superior, Wis	Yes	
Mayor Willa Wales Corbitt, Riverton, Wyo	No	

CITY OF HUNTSVILLE, ALA.,
March 14, 1961.

Hon. JOHN SPARKMAN,
U.S. Senate Building,
Washington, D.C.

DEAR JOHN: It has been brought to my attention that Senator CLARK, of Pennsylvania, has introduced legislation in the Senate authorizing 45-percent public works grants by the Federal Government as an incentive to State and local governments to accelerate their capital expenditure programs. As I understand it, this grant would be based on the amount of additional public works undertaken by the local government over and above the amount it would have normally put underway in the course of the year.

Although our city has done an enormous job toward taking care of our needed public improvements, as you well know, we have

been unable to keep them abreast of our phenomenal growth. This bill appears to be part of the answer to a very difficult problem of our municipal government. Undoubtedly, if this legislation were enacted we would be in a position to take advantage of its provisions. Over the period of a year we could easily put under contracts additional public works above what we had planned in excess of $5 million.

I, personally, would appreciate any help that you can give toward the enactment of this legislation for the benefit of our city. In so doing, I feel that I am expressing the will of our entire municipal government.

With kindest personal regards, I am,

Yours truly,

R. B. (SPECK) SEARCY,
Mayor.

CITY OF ANCHORAGE, ALASKA,
February 27, 1961.

AMERICAN MUNICIPAL ASSOCIATION,
Washington, D.C.

GENTLEMEN: We have your bulletin of February 23, reference public works acceleration.

Our city would be in a position to take advantage of this legislation. We would estimate $1 million of additional construction this year, if the law were enacted in time to do the work during the 1961 construction period.

The factor of additional employment is difficult to state. We would guess that 100 people would be employed for 6 months on a direct basis, and perhaps 50 indirectly.

Very truly yours,

C. A. HOSTETLER,
City Manager.

CITY OF KODIAK, ALASKA,
February 27, 1961.

GENTLEMEN: S. 986 introduced by Senator JOSEPH S. CLARK, of Pennsylvania, has considerable merit from the viewpoint of the small Alaskan city. Since the demise of the Alaska Public Works Act, such cities have been forced to either abandon or withhold needed planned public works projects due to the high cost of construction in Alaska. With Federal aid of 45 percent of the cost, such projects could be reactivated on very short notice.

The city of Kodiak has the following projects planned for future construction which are needed today, rather than a few years hence:

Water system extension	$300,000
Sewer system extension	200,000
Street improvement	200,000

All of the above projects have had preliminary enginering studies and could have final engineering completed within a few months. Employment benefits would accrue to possibly 5 percent of our working people.

Almost 10 percent of the local population is living in homes not presently serviced by sanitary sewage systems. The cost of construction of a sewage system for this area on a special assessment basis amounts to over $800 per lot, which is almost prohibitive.

It seems criminal that our own nationals can be living under such conditions while so much Federal money is being spent on foreign aid.

The Public Works Acceleration Act, known as S. 986, would be a big step to counteract this situation.

Very truly yours,

BILL M. POLAND, *City Manager.*

CITY OF PHOENIX, ARIZ.,
March 16, 1961.

DEAR MR. HEALY: This will acknowledge receipt of your letter of March 10 referring to S. 986, introduced by Senator JOSEPH S. CLARK of Pennsylvania.

This is to advise that we are not in favor of this legislation.

Sincerely yours,

SAMUEL MARDIAN, Jr., *Mayor.*

CITY OF ALAMEDA, CALIF.,
March 16, 1961.

DEAR MR. HEALY: Thanks for your letter of March 21, 1961, regarding the merits of Senator CLARK's S. 986.

While we have no major projects for which final plans are now on file, there are several which are well past the preliminary stage and could, I think, be brought to bid within perhaps 2 months. The unfortunate aspect of having to provide this kind of information is that we do not know how much time we are talking about. Certainly if construction in fiscal 1961–62 is contemplated, as your bulletin seems to imply, we could ready additional projects, but in terms of the next few months our opportunities would be limited.

We are very nearly ready to go, for example, on two swimming pools at a cost of roughly $220,000; these would normally not be built for at least a year and probably two. With more planning time, we could undertake the construction of at least one, and perhaps as many as three fire stations, the replacement of a bridge across the Estuary, and the development of roughly 15 acres of parks. The bridge alone would run to something like $3,500,000, although I would guess that design and working plans might take too long to qualify. The other projects would aggregate in the range of $500,000. With the prospect of a Federal grant, I think we could make local funds available to the extent of nearly $2 million. Any expenditures so made would be in addition to what would normally contemplate in fiscal 1961–62, and would obviously stimulate local employment.

Sincerely,

WILLIAM M. MCCALL,
Mayor.

CITY OF DOWNEY, CALIF.,
March 23, 1961.

Senator JOSEPH S. CLARK,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CLARK: The city of Downey wishes to urge support of Senate bill 986 to provide increased employment opportunities through the authorization of additional public works grants to State and local governments. The following needs are submitted for your consideration in presenting this bill. Currently, street and bridge deficiencies within the city are comprised of the following:

1. Major highways (100-foot rights-of-way) (example: Imperial Highway, Paramount Blvd., Woodruff Ave., Telegraph Rd., etc.)	$1,851,000
2. Collector streets (80-foot rights-of-way) (example: Downey Ave., Brookshire Ave., Stewart and Gray Rds., Gardendale St., Bellflower Blvd., Clark Ave., etc.)	6,581,000
3. Local streets (60-foot rights-of-way and less) (streets which do not normally qualify for gas tax funds)	2,420,000
Total	10,852,000

The above cost estimates include acquisition of needed rights-of-way by purchase as opposed to gratis dedication.

If additional funds can be allocated to the city directly or to the city through the State, we will be in a position to engineer and put these moneys into beneficial use in the construction of streets and the employment of additional people.

We congratulate you upon your enthusiastic initiation and support of this bill to accelerate employment throughout the United States.

Very truly yours,

CARROLL M. DUNNUM,
Mayor.

CITY OF INGLEWOOD, CALIF.,
March 22, 1961.

DEAR MR. HEALY: Your letter of March 10, addressed to the Honorable George C. England, mayor of Inglewood, was presented at the city council meeting on March 21.

Council instructed the administrative officer to indicate their support of Senator CLARK's bill, S. 986.

We believe our community would be able to take advantage of this bill and could increase public works expenditures between $300,000 and $500,000 over and above the amount planned for next year. We believe this would provide a minimum of 7,000 mandays of additional manpower. This amount, of course, would vary depending upon the type of public works construction undertaken.

With best regards, I am,

Sincerely,

WALTER HAHN, Jr.,
Administrative Officer.

CITY OF WOOD RIVER, ILL.,
March 23, 1961.

GENTLEMEN: The Illinois Municipal League has asked us to advise your office on Senator CLARK's bill to increase public works. I believe this is S. 986. In regard to this proposed municipal work our community would definitely be in a position to take advantage of increased public works grants. On street and storm drainage improvements we have needed improvements over and beyond the amount we are able to finance from current revenues in the neighborhood of $500,000. If this public works included improvements and replacements of existing utilities, such as a water plant, our community would spend approximately $1 million in this particular category. Engineering studies have been made and it would only require the completion of construction plans.

It is difficult to estimate the additional employment that would result from these construction contracts, however, I believe it would be safe to estimate that one-half of the construction costs would be for labor and the balance for material and equipment.

We would be very much in support of Senator CLARK's proposal. I am sure that the cost involved to the taxpayer will be considerably less than is now being spent for the cold war and will make a far greater impression and concrete demonstration of democracy in action. In relation to the rest of the world I think that there is a quotation that is appropriate and fitting to the American example to the world. It is, "What you are speaks so loudly I can not hear a word you say." It is time that we set some economic examples to the world.

Very truly yours,

CARLTON W. LAIRD,
City Manager.

POMONA, CALIF.,
March 21, 1961.

DEAR MR. HEALY: After reviewing Senator CLARK's bill, S. 986, it is my opinion that the city of Pomona would not, with one possible exception, be in a position to take advantage of the legislation if enacted. There is a remote possibility that we might be able to start construction of a new city hall by making use of the proposed 45 percent public works grants.

Although we would like to take advantage of Senator CLARK's proposal the main problem is that during periods of unemployment

our sales tax revenues tend to fall off and therefore we are less in a position to initiate large public works projects than during more prosperous times. Thus while public works projects may have a countercyclical effect, the ability to finance them appears to be tied directly to the swings of the economy.

Thank you for giving us the opportunity to comment on this proposed legislation.

Sincerely,

ARTHUR H. COX,
Mayor.

CITY OF SACRAMENTO, CALIF.,
March 23, 1961.

DEAR MR. HEALY: This will acknowledge with thanks receipt of your letter of March 10 relative to Senator CLARK's bill S. 986.

There is one condition in the bill that might reduce its value to us. Section 4(b)(1) provides:

"No grant shall be made with respect to any project unless such project results in a net increase in the current annual level of capital expenditures of the applicant."

This would mean that a city like Sacramento, which has been maintaining a high level of current capital expenditures—a level at the maximum possible to carry on within practical ad valorem taxing limits, would be unable to find other moneys to qualify. The original PWA programs did not have this "increase in current level of expenditure" requirement. Thus, in the thirties, we were able to use available funds, supplement these funds with the 45-percent grant, and thus accomplish more public works and provide more employment.

Sincerely yours,

JAMES B. MCKINNEY,
Mayor.

CITY OF SAN LEANDRO, CALIF.,
March 17, 1961.

DEAR MR. HEALY: Regarding your letter of March 10, 1961, concerning S. 986, we feel that the bill would accomplish its objective of stimulating construction and employment.

If this bill passes I would expect us to use reserve funds which, coupled with the grant, would total approximately $400,000 for sewage works improvements and new street alinements—projects on which we've done preliminary engineering, but because of money and priority problems are presently scheduled for 2 years hence.

Yours very truly,

WESLEY MCCLURE,
City Manager.

CITY OF SANTA ANA, CALIF.,
March 23, 1961.

DEAR MR. HEALY: In reply to your letter of March 10, your communication was referred to our council at our informal work session.

We are unable to take advantage of the provisions provided in Senator CLARK's bill.

Very truly yours,

A. E. HALL,
Mayor.

CITY OF SOUTH GATE, CALIF.,
March 22, 1961.

DEAR MR. HEALY: Reference your letter of March 10 on Senator CLARK's bill S. 986. I have made a study of what benefits our own city might possibly achieve and find that we have projects to the extent of possibly one-half million dollars in improvement and widening of main thoroughfares which could alleviate our traffic conditions quite considerably. Thus, we feel that Senator CLARK's bill would, in our opinion, be an excellent bill and give it our most hearty endorsement.

Cordially yours,

MILO DELLMANN,
Mayor.

CITY OF GRAND JUNCTION, COLO.,
March 2, 1961.

DEAR SENATOR CLARK: The American Municipal Association has requested that its members comment as to the bill you propose allowing for 45 percent participation of the Federal Government in local projects. This would be a great help to our community.

As I read the CONGRESSIONAL RECORD of your introduction of the Senate bill 986 I note that the type of project is not so important as is the fact that it is a part of a community development. I assume from this that communities will have a bit more leeway in selecting the projects and their scopes than they have had under Federal participation programs in the past.

I think this is very important since our present cities and urban communities are more flexible than they used to be and are requiring different types of projects of a capital nature than simple sewer, water, streets, and city hall construction. You may count on much support from our area of the Nation and from our community in particular.

Sincerely,

JOE M. LACY,
City Manager.

CITY OF ST. PETERSBURG, FLA.,
March 23, 1961.

DEAR MR. HEALY: Attached please find copy of recommendation presented to city council by City Manager George K. Armes on Tuesday, March 21.

I have been informed by Mr. Frank McDevitt of our legal department that a resolution to this effect will shortly be prepared and sent to our legislative delegation in Washington. A copy of this resolution will also be sent to your office.

Sincerely,

BURL MCCARTY,
Public Relations Director.

MARCH 21, 1961.

To: Honorable Mayor and Members of City Council.

From: City Manager.

Re: Excerpts from the CONGRESSIONAL RECORD of 87th Congress and national legislative bulletin from the American Municipal Association.

In order to accelerate public works activities, it is recommended that the proposed bill, S. 986, be promoted by council.

This bill provides a program that would greatly assist us in our storm drainage problem. Matching funds of approximately 45 percent as proposed by the bill would be a great aid to us because, as has so often been discussed, major trunklines in our storm drainage system cannot very well be assessed against individual property owners.

This bill also applies to public streets, sidewalks, highways, parkways, bridges, parking lots, airports, and other public transportation facilities, public parks, public recreational facilities, hospitals, rehabilitation health centers, public refuse and garbage disposal facilities, water, sewerage, and sanitary facilities, and other public utilities, civil defense facilities, police and fire protection facilities, public libraries, museums, etc.

It is recommended, since the above items are included in the bill, that council take favorable action to support this program through the American Municipal Association.

Respectfully submitted.

GEORGE K. ARMES.

CITY OF ALBANY, GA.,
March 14, 1961.

DEAR MR. HEALY: Mayor Kelley has referred your letter of March 10 concerning Senator CLARK's bill, S. 986, to me for reply.

In answer to the three specific questions:

1. Albany is in a position to take immediate advantage of any public works grants.

2. We could put as much as $5 million under contract very shortly by the construction of our master plan for storm drainage.

3. The construction forces necessary to perform this work would result in the employment of at least 50 workers directly and would give added employment to many more through the impetus of construction payrolls.

Yours truly,

C. C. BURNETT,
City Manager.

CITY OF ATLANTA, GA.,
March 13, 1961.

DEAR MR. HEALY: I have yours of March 10 with reference to S. 986, the public works acceleration bill.

In the first place, bear in mind that your letter and this bill come out of a gigantic pile of mail about all sorts of things, and therefore cannot have the mature consideration which the subject deserves.

I have the highest respect for Senator CLARK and his good intentions. However, I get the impression that most of these emergency bills seem to envision certain Pennsylvania towns and places like Detroit as indicative of the whole Nation.

As to Atlanta, we are growing by leaps and bounds. We are spending local bond funds and revenue certificates and expect to issue more in the near future. In addition, the Federal express highway program is moving forward in all sections of our town. To be frank about it, the whole town is torn up now with public works going on, in addition to many private buildings and facilities.

In reading the bill, with its conflicting formulas, I get the general impression that it will give chief employment to thousands of bureaucrats, clerks, stenographers, statisticians, and other gobbledygookers.

With reference to the advanced planning for all sorts of public works, we are not adversed to intelligent planning ahead—indeed, we do just that very thing. However, we notice there is a tendency of professional planners to rush in and propose planning for all sorts of impossible and impractical things, merely because Federal funds are available. In other words, we are beginning to feel there is too much planning for planning's sake, instead of confining planning to those things which are possible for present or reasonable future achievement.

Very truly yours,

W. B. HARTSFIELD,
Mayor.

CITY OF ALTON, ILL.,
March 23, 1961.

GENTLEMEN: As requested by the Illinois Municipal League, we have given preliminary review to the "plans for public works" bill introduced by Senator JOSEPH S. CLARK.

Based upon this review, it is our feeling that Alton will be in a position to take advantage of this legislation if it is enacted. We estimate that within the next 1 to 4 years Alton might be able to place $2 million of additional public works under contract, this being in excess of what is now planned. Approximately 150 to 200 man-years additional employment would result.

Very truly yours,

GRAHAM W. WATT,
City Manager.

CITY OF SPRINGFIELD, ILL.,
March 16, 1961.

DEAR MR. HEALY: Replying to your letter of March 10 concerning Senator CLARK's bill, S. 986.

The city of Springfield would be most anxious to embark on a short range program to include substantial amounts of street

paving, sidewalk reconstruction, street lighting and offstreet parking lots.

It would be very difficult to give you an actual dollar amount, but we could speed up our program for our community to accomplish within the next 5 years what we hope to accomplish on our own within the next 10 to 15 years.

With kindest regards,

LESTER E. COLLINS,
Mayor.

CITY OF DUBUQUE, IOWA,
March 7, 1961.

GENTLEMEN: We in the city of Dubuque have Senator CLARK'S bill, S. 986, which would authorize grants for stimulating State and local government public works programs, and we should like the Senator to know:

First, that our community would be in a position to take advantage of the legislation if it is enacted.

Second, if we consider only a single project in the city of Dubuque, we have available plans and specifications on the shelf for an important railroad overpass which is estimated to cost $1,200,000. This and many other projects could be accomplished.

Third, we believe that on the single overpass project, an additional 30 to 50 skilled and semiskilled laborers could be put to work.

We greatly appreciate your help in presenting our Dubuque position on the bill to Senator CLARK.

Sincerely,

GILBERT D. CHAVENELLE,
City Manager.

CITY OF OTTUMWA, IOWA,
March 15, 1961.

DEAR MR. HEALY: The Ottumwa City Council has reviewed the proposed Senate bill 986 as proposed by Senator CLARK, and I regret to advise that inasmuch as prior public works planning has obligated the city to the legal limit of our bonded indebtedness, it appears unlikely that our city could take advantage of the proposed legislation.

Sincerely,

GORDON BENNETT,
City Manager.

CITY OF WATERLOO, IOWA,
March 13, 1961.

DEAR MR. HEALY: In answer to your letter of March 10 regarding Senator CLARK'S proposal of the crash program for public works, I would like to cast our vote for this proposal because we believe that President Kennedy is on the right track in helping with unemployment problems.

The city of Waterloo is the largest industrial center in Iowa and we are faced with an additional industrial layoff in the next 2 or 3 months which would create a very serious situation in our community. We need help now, not next year and, therefore, believe there are better ways to accomplish the program than Senator CLARK'S proposal.

For 3 years, we have been working on a multitude of requirements, information, ordinances, council actions, surveys, both physical and sociological, for an urban renewal program. This program has been completely approved at the regional level and only awaits Washington's final signature. We get telegrams and letters from President Kennedy urging us to go ahead but nothing happens.

We have a sanitary sewer program which was certified by our State board of health to the Water Pollution Control Act, but was not in the first 10 projects in Iowa approved for Federal grant and, therefore, we are left out. These certified plans and specifications of this project are filed in Washington but nothing happens. The above application was filed last fall.

We have a 5-year program for public works for the city of Waterloo, including several projects. Any of these could be used in Senator CLARK'S proposal. Instead of a new program, wouldn't it be much better for Senator CLARK to put his efforts behind all the programs that have been approved and are ready to go and only lack the final Washington decision? Our unemployment problem is now.

Very truly yours,

ED JOCHUMSEN, *Mayor.*

KANSAS CITY, KANS.,
March 21, 1961.

DEAR MR. HEALY: With reference to your letter of March 10 regarding Senator CLARK'S bill S. 986, we are happy to make a few comments regarding this bill and its merits.

Under normal circumstances I believe that we would be opposed to Senator CLARK'S bill S. 986 because we firmly believe if we continue to call upon the officials in Washington to help us out with our finances that eventually we will be drifting into a socialistic trend. However, due to the fact that this bill seems to be for the purpose of helping our unemployment situation, which we have to agree is not too good in Kansas City, Kans., we would favor such a bill at this time.

We are now working on a public works project as to pollution abatement in which the taxpayers of Kansas City, Kans., have just recently voted a $15 million bond program. Within the next 3 years we intend to spend this money on a complete separation of our storm and sanitary sewers, plus the building of a treatment plant. The overall sewera pollution abatement program for Kansas City, Kans., will amount to about $40 million, but this is contemplated over about an 8-year period. I am sure if Senator CLARK'S bill was put into law, that our city could definitely take advantage and would be in a position to take advantage of the legislation if it was enacted.

At the present time it looks as though we will spend approximately $7 or $8 million dollars in the next year. If we could obtain 45 percent assistance on this matter, I am sure it would be of great help to us. I personally feel it would step up the employment situation in Kansas City, Kans.

Kindest personal regards,

Sincerely yours,

PAUL F. MITCHUM,
Mayor.

CITY OF LEAVENWORTH, KANS.,
March 22, 1961.

DEAR MR. HEALY: In reply to your March 10 letter regarding Senator CLARK'S bill S. 986 (public works) we have the following comments:

1. It does not appear that we could take advantage of this public works legislation if enacted—unless it would be possible under our new "home rule."

2. I doubt if any additional public works could be initiated, over and above the work planned for the next year.

I trust this information is not too late for your use.

Sincerely,

J. F. MITCHELL,
Mayor of Leavenworth.

CITY OF SALINA, KANS.,
March 16, 1961.

GENTLEMEN: We have reviewed Senator JOSEPH S. CLARK'S proposed bill S. 986 which would provide grants to State and local agencies to defray the cost of capital improvements.

In your letter of March 10, 1961, you asked: (1) Whether our city could take advantage of the legislation, and (2) the additional amount of public works which could be put under construction over and above the amount planned for the next year.

The city of Salina does have a backlog of capital improvements that have been studied and defined with Public Law 702 funds. Other projects have been studied with our own funds. These projects include water, sewerage, and sewage treatment. The proposed 45-percent grants are naturally a decided incentive to increased construction by our city and as such if this bill were to become a law, we would reanalyze our capital improvement program and financial obligations to determine the feasibility of increasing our planned construction program.

To give you an indication of improvements that could be rather quickly planned and put under construction if 45-percent grants-in-aid were available, we list the following:

Improvement:	*Estimated cost*
Water mains (transmission)	$180,000
Elevated storage reservoir (water)	115,000
Water treatment plant improvements	180,000
Storm sewer improvements	540,000
Total	1,015,000

I trust that this is the information that you desire.

Sincerely,

LELAND M. SRACK,
City Manager.

CITY OF BOGALUSA, LA.,
March 16, 1961.

DEAR MR. HEALY: I have your letter of March 10 with respect to Senator CLARK'S bill, S. 986 aimed at helping local governments with public works to minimize the current recessions.

You asked specifically, (1) could our community take advantage of the legislation and (2) what additional amount of public works could be put under construction over and above the amount planned for the next year.

Within recent months we have let two contracts totaling $2,060,000 for additions and improvements to our city's sewerage system. The contract provides we can add to or delete therefrom up to 25 percent of the work.

We have on hand and commitments for approximately $1,670,000. Thus you can see Senator CLARK'S legislation would enable us to accomplish all the work needed with respect to this particular improvement, provided the manner in which our contract was entered into would not bar it from eligibility. This, of course, would depend on the manner in which the bill is drawn or amended.

With the hopes that we would be able to qualify, I would say that Senator CLARK'S legislation would be helpful both to our local governments and the economy of the United States as a whole and I will greatly appreciate it if you will keep me advised.

Sincerely yours,

CHARLES J. CASSIDY, *Mayor.*

CITY OF NEW ORLEANS, LA.,
March 14, 1961.

DEAR MR. HEALY: I have carefully read with great interest your letter of March 10, 1961, as well as the accompanying material regarding S. 986 introduced by Senator JOSEPH S. CLARK, of Pennsylvania.

As I understand it, this bill seeks to assist States and their political subdivisions, through Federal grants to accelerate their capital expenditure programs and thereby give impetus to President Kennedy's program of combating the existing unemployment problem.

In your letter of March 10 you pose two questions: (1) Whether our community could take advantage of the legislation and

(2) the additional amount of public works which could be put under construction over and above the amount planned for the next year.

Replying to No. 1 our answer is definitely yes. In fact, not only would the proposed 45 percent Federal grants provide a substantial boost in our local economy, but it would enable us to advance the undertaking of many needed public works projects which have been planned for the immediate future, but deferred because of the insufficiency of our available capital funds.

Senator CLARK's proposal strikes me as being just about the most effective and realistic means of alleviating some of our present economic ills as has been thus far advanced. And not only that but it also impresses me as being part of the answer to the situation in which many communities find themselves as a result of preemption of the best tax sources by the Federal and State governments. This bill would provide a means for local communities to receive the kind of financial aid so sorely needed if they are going to catch up with expanding needs.

There simply must be some means provided for meeting these important requirements without increase in the local tax burden. And it seems to me that this bill is a step in that direction.

As a preface to our answer to question No. 2, I should first explain that since 1955 we have been administering a 5-year capital improvement program. Each year we appropriate for expenditure in the ensuing year capital funds estimated to become available during that year, and we include for the remaining 4 years of the capital program those projects which need to be undertaken, but for which funds are not foreseen during the first year.

We propose to initiate within the remainder of 1961 capital improvement projects estimated to cost approximately $9 million for which funds are available. These include police and fire stations, an incinerator, parks and playground improvements, street lighting, and street paving and subsurface drainage projects. This figure does not include projects being undertaken with Federal aid such as airport development and those receiving Hill-Burton assistance.

By simple arithmetic, Senator CLARK's bill would enable us to undertake an additional $4,050,000 of projects during this period. And these would be projects for which need has already been demonstrated and which have been included in our capital program for 1961–65. For example, in addition to the $9 million figure cited above, our city council has approved the undertaking of capital projects estimated to cost approximately $25 million during the next 5 years. This figure includes only those projects for which we could foresee the possibility of available funds during the 5-year period. By comparison, our needs for capital improvements during the same period were estimated at $52 million, but more than 50 percent had to be deferred beyond the scope of our current 5-year program simply because we could not foresee funds becoming available during the period.

I strongly endorse Senator CLARK's proposal and I am sending copies of this letter to our Members of Congress, urging their support of this realistic legislation.

In doing so, however, I hasten to add that for such legislation to have the effect for which it is intended, the administration should place an emergency identification upon it and strip any resulting program of much of the redtape which bogs down so many federally aided projects.

Thank you sincerely for bringing this subject to my attention.

Sincerely,

DELESSEPS S. MORRISON,
Mayor.

CITY OF AKRON, OHIO,
March 27, 1961.

DEAR MR. HEALY: I have reviewed the general comments by the Senator and that portion of the bill you enclosed. I find the intent and his comments most interesting and appropriate to the current unemployment and needs situation, particularly in our city. As the Senator commented, we have available on our public works shelf projects ready for commitment. For your information I will enumerate them and follow with an inset series of comments:

PLANS AVAILABLE FOR IMMEDIATE CONSTRUCTION

Two million dollars in sanitary and storm sewers: These projects are of the trunk and local nature—in specific instances, a $1,600,000 project would make available area for development wherein approximately 2,500 homes could be built and approximately 100 acres of commercial and industrial land could be used.

One million five hundred thousand dollars in highway construction: These highways are arterial in nature. This includes new local highways and/or improving, widening, resurfacing of existing highways. This is necessary to facilitate and meet the urban growth need.

One million dollars in normal highway upgrading by resurfacing and rebuilding. We could, within a 60-day period, have ready for commitment public buildings for police, health, and recreation.

The above listing is only partial for I believe you are interested in brevity and knowing that this city stands ready to assist in accomplishing those things that President Kennedy and Senator CLARK jointly proposed. In my judgment such a public works program aimed at increasing the value of municipalities is an excellent approach and proper in consideration for relief of economic pressure we now find in the United States.

Yours very truly,

LEO BERG,
Mayor.

CITY OF BANGOR, MAINE,
February 28, 1961.

DEAR MR. HEALY: With reference to your national legislative bulletin dated February 23 on public works acceleration, I have discussed briefly this morning with my staff the possible public works construction programs that the city might be in a position to undertake should this legislation be enacted.

Our planning and engineering departments indicate that we might be in a position to begin construction on about $2½ million in sewer interceptor lines and sewage treatment plants and about half a million dollars worth of incinerator and highway construction, if this legislation were enacted.

It is very difficult to estimate the additional employment which might result but I think a conservative guess might be about 100 men, assuming these projects were carried out concurrently.

I hope this is the information you desire.

Sincerely,

JOE COUPAL,
City Manager.

CITY OF SALISBURY, MD.,
March 14, 1961.

DEAR MR. HEALY: In answer to your letter of March 10, regarding Senator CLARK's bill, S. 986, the city of Salisbury would not be in a position to take advantage of this legislation.

The proposed public works program for 1962 is more than we can handle because we are only $400,000 from our maximum debt limit.

Sincerely yours,

BOYD E. MCLERNON,
Mayor.

CITY OF GRAND RAPIDS, MICH.,
March 23, 1961.

DEAR MR. HEALY: As stated in our letter to you of March 13, we are enclosing a listing of our public facilities project sheet now that it has been completed.

We hope this information will be of help to you in consideration of Senator CLARK's bill, S. 986.

Sincerely,

STANLEY J. DAVIS,
Mayor.

PUBLIC FACILITIES PROJECT SHEET

(NOTE.—Do not list facilities now under construction nor major highway or street projects. List all other public works projects planned for, contemplated, or desirable in the near future. Include cost of land where it must be purchased. Code: Please use the following code to help facilitate our processing: (A) Plans drawn, (B) in planning stage, (C) needed—but no plans for.)

Kind of project:	*Preliminary cost estimate*
Improvement to sewage treatment plant (B)	$1,955,000
Water main from Lake Michigan to city (B)	8,000,000
Flood protection walls along Grand River (C)	1,700,000
Rebuilding of existing combined sewers and relief sewers (B)	850,000
Storm water drainage sewers, existing system (C)	2,100,000
Storm water sewers in newly annexed areas (B)	7,160,000
Refuse disposal incinerator (C)	2,000,000
District maintenance garages and facilities (C)	300,000
Bridges and grade separations (C)	9,500,000
Main library extension (A)	2,000,000
Branch library construction (C)	300,000
Museum extension (A)	150,000
Civic auditorium extension (A)	2,000,000
Music hall and theater (B)	4,500,000
New fire station construction (A)	270,000
New fire station construction (B)	240,000
Public redevelopment—civic center (B)	11,000,000
Industrial redevelopment (C)	4,500,000
Industrial redevelopment (C)	2,300,000
Commercial redevelopment (C)	6,000,000
Residential rehabilitation (C)	16,000,000
Land acquisition for park area within city limits (300 acres)	600,000
Stadium (B)	5,000,000
Municipal golf course (B)	375,000
Lighted sports arena, including indoor swimming pool (A)	370,000
Park-schools (A) and (B)	1,750,000
Riverfront development (A)	250,000
Development of park areas (A) and (B)	300,000
Day camp (C)	225,000
Intown land acquisition for parks	600,000
Expressway beautification in town	1,200,000
Sign shop (C)	75,000
Armory (B)	1,000,000
Two parking ramps (B)	1,800,000
Surface parking program (B)	1,000,000
Street-marking device (B)	12,000
Signal improvements (B)	100,000

CITY OF DETROIT, MICH.,
March 20, 1961.

DEAR MR. HEALY: Detroit, like every other large city, not only is in great need of re-

building its public works in many areas but has need for new streets, alleys, sewer facilities, water facilities, etc. We are wholeheartedly in favor of the public works bill as proposed by Senator JOSEPH S. CLARK, in which the Federal Government would provide 45 percent of the funds as grants. This is similar to the old PWA program which was so successful and for which many cities made use of in providing many of their needed facilities.

We have a big backlog here in Detroit of public works projects which could be started immediately if funds were made available. I am sure that we would have a much better chance of raising 55 percent of the funds locally than we would be of raising the full cost. Enclosed is a summary of the projects that the city of Detroit is ready to move ahead on.

Very truly yours,

GLENN C. RICHARDS,
Commissioner,
Department of Public Works.

Summary, public works projects, February 1961

	Projects for immediate or near future start		Projects in long-range public works program		Projects for immediate or near future start		Projects in long-range public works program
	Estimated cost	Estimated man-hours of labor			Estimated cost	Estimated man-hours of labor	
Airport	$1,045,000	105,000		Public building	$7,904,200	956,000	$22,228,000
Civic center			$3,162,000	Public transportation system	3,100,000	310,000	
Firefighting facilities	40,000	4,000	291,000	Rapid transit	133,369,460	20,000,000	
Flood control	10,000,000	613,000		Sanitation	5,614,000	429,000	
Hospital improvements	814,000	94,000	281,000	Sewage treatment system	1,970,000	200,000	10,281,658
House of correction improvements	165,000	18,000	565,000	Sewers	15,612,000	1,664,200	60,279,000
Highway, street, and alley improvements	43,449,000	7,324,000	421,149,000	Water supply system	8,846,539	915,000	
Lighting system improvements and extension	9,940,000	1,520,000	15,023,000	Zoo	383,047	40,200	846,000
Parking facilities			4,900,000	Grand total	250,275,246	35,052,700	592,258,658
Parks and recreation	7,933,000	860,300	53,253,000				

CITY OF FLINT, MICH.,
March 17, 1961.

GENTLEMEN: The city of Flint enthusiastically endorses Senator JOSEPH CLARK'S proposed legislation for public works acceleration, titled S. 986.

At the April 3 spring biennial election, the voters of this city will be asked to approve $6,165,000 worth of bonds to finance various public improvement projects. Therefore, in answer to your specific questions concerning the Federal aid proposal:

1. We would be in a position to take advantage of the legislation immediately upon sale of the proposed bond issue. Our estimate would be early or mid-summer.

2. The listed schedule of Federal aid would add $2,777,250 to our improvement program. This is important in view of the fact that the current local program was cut from a potential $16,000,000 program to $6,165,000 through lack of sufficient local funds.

3. Flint currently is seriously hit with unemployment problems since the great bulk of its labor force is employed in the auto industry. We have a provision calling for 90 percent local labor to be employed on all our public works projects. The additional employment which could be provided through Federal grants would be of substantial assistance in carrying this community through its present unemployment troubles. We estimate between 350 to 375 additional jobs would be made available with the Federal funds alone.

We hope the American Municipal Association will join in support of Senator CLARK'S proposal.

Yours very truly,

ROBERT A. CARTER,
City Manager.

MANKATO, MINN.,
March 20, 1961.

DEAR MR. HEALY: I personally do not feel that Minnesota is in any dire or immediate need of securing Federal aid for public works, or for that matter in any of the other fields mentioned. It is possible that the area of our iron range might be an exception. Here in Mankato, 24,000, we have built a sewage disposal plant costing more than $1,800,000 without benefit of Federal aid. We purchased and paid for a fine municipal office building. We have built 30 miles of new streets and we just completed two new fire stations, cost $438,000 all without benefit of Federal aid. Therefore, the answers to the questions asked are as follows:

1. No.
2. None.

I am sorry I cannot support this bill but I feel, and have felt, for many years, that too much emphasis is placed on Federal aid.

Yours sincerely,

REX H. HILL,
Mayor.

VILLAGE OF RICHFIELD, MINN.,
March 13, 1961.

DEAR MR. HEALY: In reference to your request for information in regard to Senator JOSEPH'S S. CLARK'S bill S. 986, I would advise that this would have very little bearing on the community of Richfield.

We have already initiated a program for a $7 million water system and at the present time would not probably take on any major public improvement program, and as the essence of this bill seems to indicate it would have to be work above and beyond normal work.

Yours very truly,

I. R. KELDSEN, *Mayor.*

CITY OF ST. CLOUD, MINN.,
March 13, 1961.

DEAR SIR: After discussing the grant for public works bill with people here in St. Cloud, it is the consensus that our city would be in a position to take advantage of the legislation if enacted. Our city engineer has estimated that at least $1 million additional public works could be put under contract for the next year and that direct employment would result for at least 100 people.

Sincerely yours,

THOMAS E. MEALEY,
Mayor.

CITY OF SPRINGFIELD, MO.,
March 20, 1961.

DEAR MR. HEALY: This is in reply to your letter of March 10, requesting comment on Senate bill 986, known as the Emergency Employment Acceleration Act of 1961.

We have reviewed this bill, and with respect to your questions will advise that:

1. Springfield could take advantage of this legislation.

2. It is possible that in the neighborhood of $1 million of public works could be put under contract in the next 12-month period over and above the normal amount of construction work planned for the same period.

Sincerely,

DAVID C. SCOTT,
Mayor.

CITY OF FREMONT, NEBR.,
March 14, 1961.

DEAR SIR: I have your letter of the 10th of March, for which I thank you. We do not believe that our community at the present time would be favorable to a form of PWA legislation as proposed by Senator JOSEPH S. CLARK, Senate bill 986. Despite some press to the contrary, it is still the feeling at this time in this area that capital expenditures should be financed as much as possible at State and local level.

We further realize there is a tremendous amount of thinking that the purpose of Government is to redistribute wealth and income from one area of the country to another. We are still of the opinion that governmental financing of economically distressed areas doesn't of itself solve the economic problems of a particularly distressed area. As heartless as it may seem, nevertheless, we still feel specifically when a mining area gives out, where a product is no longer generally required, that it isn't necessarily the Government's job to first provide for such areas or people. We read in the press where other areas of the United States are seeking people to work and are unable to get them because people in depressed areas expect the Government to finance or take care of them where they are. Thank you for asking for our position. We remain,

Yours very truly,

GEORGE E. SVOBODA,
Mayor.

CITY OF NORFOLK, NEBR.,
March 13, 1961.

DEAR MR. HEALY: The city of Norfolk, Nebr., would be willing and able to take advantage of this legislation, if it were enacted. We have several projects that we have been delaying because of lack of enough funds. These projects involve improvement of major thoroughfares and include two bridges. The total expenditures would be approximately $100,000. These projects would create construction season jobs for about 30 local employees.

Sincerely,

DONALD G. HYDE,
City Engineer.

CITY OF RENO, NEV.,
March 21, 1961.

DEAR MR. HEALY: Mayor Bud Baker handed me your letter of March 10, requesting that I give you a reply. It is extremely difficult for us to come up with any accurate figures regarding this legislation on such short notice, however, the following is an extremely

rough estimate as to what the answer might be to your questions. I hope these may be of assistance to you in making your summary of this question.

1. The community of Reno would undoubtedly take advantage of this legislation if enacted. There are many public works projects that should be completed, however, due to limited financing and limited bonding powers of the city it is impossible for us to complete them at this time. If 45 percent of the cost were to be a Federal grant it would most certainly stimulate some of these very much needed projects in the particular line of bridges, sewer improvements, sewage treatment facilities, streets, and so forth.

2. It is extremely difficult to estimate the amount of such additional work, however, with the present bonding limits and availability of funds it is possible that the city of Reno could anticipate approximately $1 million additional public works per year if this bill were passed.

3. The additional employment would be approximately 500 employees during the term of such a project.

Let me again say that the estimates are extremely rough and if the legislation passes we would certainly like more time to study the legislation and the public works projects so that we might give it more detailed accurate accounting for the answers to these questions. However, in the meantime, I hope these rough estimates will be of value to you in making a determination for Senator CLARK.

Very truly yours,

JOE H. LATIMORE,
City Manager.

CITY OF EAST ORANGE, N.J.,
March 22, 1961.

DEAR MR. HEALY: In answer to your letter of March 10 relative to Senate bill 986, I regret to inform you that because of our present workload our engineering department cannot undertake any additional construction programs within the foreseeable future. I certainly wholeheartedly endorse Senator CLARK's bill S. 986 and wish it were possible for East Orange to take advantage of the 45 percent public work grants that it provides.

At the present time, we have considerable construction work in progress, and we are presently in the throes of providing engineering data and services in connection with the proposed east-west freeway known as Federal Highway Route I-280. This Federal highway will bisect the entire length of our city, and it is now proposed, and a bill is pending in our State legislature, to have this Federal highway interchange at East Orange with the present Garden State Parkway which runs north and south through our entire State. This proposed legislation, which undoubtedly will be passed in the very near future, has taxed and will continue to tax the facilities of our engineering department for the next 2 or 3 years.

Under the circumstances, I do not believe it would be advisable to participate in this public program at this time.

Very truly yours,

JAMES W. KELLY, Jr.,
Mayor.

CITY OF ALBUQUERQUE, N. MEX.,
March 23, 1961.

DEAR MR. HEALY: On March 10, 1961, you requested our reaction regarding Senate bill 986 introduced by Senator JOSEPH CLARK, which would authorize 45 percent matching Federal grants as an incentive to State and local governments to accelerate capital improvement public works programs. You asked specifically (1) whether the city of Albuquerque is in a position to take advantage of such legislation and (2) what additional amount of public works could be put under construction if S. 986 were adopted.

In answer to your first question, the city of Albuquerque would be able to take advantage of such Federal matching grants. We have a backlog of needed public works improvements which considerably exceeds the amount of funds available for construction.

In answer to your second question, I am listing below a table indicating the amount of funds the city of Albuquerque now has available for public works improvements and the amount of Federal matching funds applicable on the basis of a matching 45 percent ratio. We would be able to use the entire $6,003,236 of Federal money for needed public works improvements immediately.

Category	City of Albuquerque funds available	45-percent Federal matching grant
Arterial streets	$1,060,000	$477,000
Storm sewer	2,400,000	1,080,000
Sanitary sewer	3,082,525	1,387,136
Water facilities	5,934,000	2,670,300
Firefighting	316,000	142,200
Parks	548,000	246,600
Total	13,340,525	6,003,236

Very truly yours,

EDMUND L. ENGEL,
City Manager.

CITY OF SCHENECTADY, N.Y.,
March 16, 1961.

DEAR MR. HEALY: In reference to your letter of March 10, which brings attention to Senator CLARK's bill calling for an acceleration of public works, I am forwarding copies of your correspondence to Mr. John W. Eddy, chairman of the city planning commission and other interested department heads of the city of Schenectady.

Please be assured that the city of Schenectady is particularly interested in availing itself, if possible, of certain provisions of the proposed legislation.

I will keep you informed of our action and when a definite plan is devised, will forward it to you.

Sincerely yours,

MALCOLM E. ELLIS,
Mayor.

CITY OF ROCKY MOUNT, N.C.,
March 1, 1961.

DEAR MR. HEALY: In reply to the inquiry of your February 23d National Legislative Bulletin, I believe this city would be in a position to take advantage of the legislation to accelerate public works if such legislation is enacted. An estimate as to how much additional public works activity can be started, of course, depends upon many things. I believe this city could put up to $1 million worth of public works under contract within 1 year. This would be public works not planned for as it stands within this or the next fiscal year.

This work would be storm drainage and street improvement, as well as building construction. It would be hard to estimate the number of people who would be put to work on these proposed projects. It would seem to me that somewhere between two and four hundred could find employment.

I am afraid this information is rather sketchy. Our planning department is relatively new; therefore, we have not developed a capital program. It is far enough developed, however, that we can make effective use of such legislation.

With best wishes,

Yours sincerely,

H. B. HINES, Jr.,
City Manager.

CITY OF BISMARCK, N. DAK.,
March 14, 1961.

DEAR MR. HEALY: Thank you for your letter of March 10, 1961.

From the national economy standpoint, I sometimes question the pump priming measures taken to lift the economy. There seems to be much confusion between economists as to those measures necessary to bring about recovery or accelerate it on behalf of providing stability to the national economy.

However, from the local standpoint of our own community there are many projects that not only could be, but would be accelerated if such 45 percent grants were available such as street widening, construction of public buildings, and many other worthwhile ventures. I can assure you that this community could utilize and constructively use funds as are intended as stated in the purposes of S. 986.

This community could program an additional $200,000 of construction capital improvement projects if such Federal funds were available above the amount planned for next year.

Thank you again for your letter.

Sincerely yours,

TOM BAKER,
City Auditor.

CITY OF LAKEWOOD, OHIO,
March 24, 1961.

DEAR MR. HEALY: In response to your letter of March 10, 1961, may I state that Senator CLARK's bill, S. 986, would be of great value to Lakewood.

The availability of Federal funds at 45 percent of the total project cost could, in Lakewood, speed the building of a new sewage disposal plant presently estimated to cost $4 million. Another area of possible activity is the extension of a breakwater to provide a greater area for the dumping of unburnable refuse. This project would probably cost some $700,000 and provide a long-range improvement for our community.

These two programs are especially needed and could be put into effect in a short time and provide expanded employment in this area.

I am sure that other communities can make use of this bill similarly. The need for such a program is indeed apparent and would help solve problems other than employment. The bill should be supported and carried through with all possible speed.

Sincerely yours,

FRANK P. CELESTE,
Mayor.

CITY OF TOLEDO, OHIO,
March 17, 1961.

DEAR MR. HEALY: In reply to your letter of March 10, we plan to take advantage of the bill introduced by Senator CLARK and will do everything in our power to make use of the grants for public improvements which are so sorely needed in our community.

Sincerely yours,

MICHAEL J. DAMAS,
Mayor.

CITY OF EUGENE, OREG.,
March 3, 1961.

GENTLEMEN: This letter is in reply to your legislative bulletin dated February 23, 1961, requesting comment on Senator CLARK's bill for public works acceleration programs to combat unemployment.

Please be advised that should such a measure become law, the city of Eugene, Oreg., is in a position where it could almost immediately accelerate its public works program to the extent of the funds available for which it could qualify. An offhand estimate would indicate a possible addition of public works in the neighborhood of $300,000 could be accomplished in the fiscal year

starting July 1, 1961. This would be almost equally divided between street improvement and sewer improvement projects. This expenditure would, of course, create additional employment; however, we are in no position to predict what this amount of employment would be.

Very truly yours,

HUGH MCKINLEY,
City Manager.

CITY OF CHESTER, PA.,
March 17, 1961.

DEAR SENATOR CLARK: In accordance with your request at the public hearing in the city of Chester on March 2, we have prepared the following list of public works projects which could be started in the very near future if money is made available.

Streets and highways:	
Street paving	$75,000
Alley paving	45,000
Realinement of 2d St. (for heavy industrial traffic)—acquisition	100,000
Bridge at 6th St. (central bus district) (plus $105,000 of county funds)	105,000
Total	325,000
Sewers:	
Sanitary trunk for industrial area	250,000
Rebuilding combined sewer	100,000
23d St. sanitary	12,000
Highland Ave. sanitary	11,000
Hays St. sanitary	15,000
Total	388,000
Parks and playgrounds:	
Memorial Park:	
Culvert	18,000
Tennis courts	18,000
Chester Park—renovation of barn	30,000
William Penn Memorial Park development	30,000
Enlarge existing playgrounds, develop added playgrounds	20,000
Total	116,000
Grand total	829,000

We appreciate your deep concern with the problem of employment and local finance, and we will be pleased to cooperate with you in supporting adoption of urgently needed legislation.

Sincerely yours,

JOSEPH LARKIN EYRE,
Mayor.

CITY OF PITTSBURGH, PA.,
March 6, 1961.

DEAR MR. HEALY: In regard to your inquiries about Senator CLARK's public works bill authorizing 45-percent grants to State and local governments, Mayor Barr testified in wholehearted favor of this proposal.

In answer to your specific questions:

1. Pittsburgh would be in a position to take advantage of legislation, if enacted.

2. We would probably add about $\frac{1}{2}$ million to our annual capital expenditure program.

Obviously, we have no way of telling how much additional employment would result from this additional expenditure.

Very truly yours,

ALDO COLAUTTI,
Executive Secretary.

CITY OF ORANGEBURG, S.C.,
March 15, 1961.

DEAR MR. HEALY: I have reviewed Senator CLARK's bill, S. 986, and am heartily in favor of its passage. If this legislation is passed I feel reasonably sure that in Orangeburg we can accomplish the following additional public works construction over and above that planned for the next year:

1. Waterworks: Extend and enlarge facilities to the extent of approximately $1 million.

2. Increase sewage treatment plant capacity and extend trunklines at an estimated cost of $350,000.

3. Construct substation for fire protection at an estimated cost of $50,000.

4. Construct an airport administration building costing about $50,000.

Thus you will see that with the grants proposed by the bill an acceleration in public works facility construction of about $1\frac{1}{2}$ million might reasonably be expected in this community.

Preliminary planning for a public works program in Orangeburg indicates that the above facilities are needed. Without grant assistance it appears that such a program must be deferred. So you can readily see that we are in favor of the passage of Senator CLARK's bill and the acceleration in public works facility construction that will ensue.

Yours very truly,

S. CLYDE FAIR, *Mayor.*

CITY OF SPARTANBURG, S.C.,
March 14, 1961.

DEAR MR. HEALY: I have your letter of March 10, 1961, asking for my reaction to Senator CLARK's bill, S. 986.

I am opposed to it. Our community would not be in a position to take advantage of this legislation if enacted, we could not contract for any additional public works beyond what is already planned, and no additional employment would result. Moreover, if our officials in Washington would concern themselves more with the solvency of our country, rather than with new ways of spending money, we would all be better off.

Cordially yours,

NEVILLE HOLCOMBE,
Mayor.

CITY OF DALLAS, TEX.,
March 20, 1961.

DEAR MR. HEALY: I have your letter of March 10 re Senator CLARK's bill and beg to advise as follows:

In answer to question 1, our city has no legal prohibition against participating in such a program and we would be financially able to participate.

In answer to question 2, we are just completing a $50 million capital improvements program and will prepare a new one for the year beginning approximately January 1, 1962, and if grants-in-aid were authorized, we probably would add to the schedule approximately $3 million above our normal amount. I do not believe I would know how to estimate how much this would increase local employment, but, of course, somewhat substantially.

Hoping this serves your purpose, I am,

Very sincerely,

R. L. THORNTON,
Mayor.

CITY OF FORT WORTH, TEX.,
March 24, 1961.

DEAR MR. HEALY: In reply to your letter of March 10, which requested review of Senator CLARK's bill, S. 986, the following information is supplied.

Whether the city of Fort Worth could take advantage of the legislation: Yes, the city of Fort Worth could legally take advantage of the grants proposed in the legislation on the same basis as grants which were made available during the 1930's. It is doubtful, however, that the city of Fort Worth would take advantage of grants for purposes other than highways, sewers, public housing, and airport construction.

The additional amount of public works which could be put under construction over and above the amount planned for the next year: Given local approval of Federal participation in scheduled projects for next year, the city of Fort Worth could probably increase spending on capital improvements from $10 to $15 million, or a $5 million increase for streets, highways, freeways, storm sewers, sanitary sewers, libraries, street lighting and signalization, and water facility improvements.

I hope that this supplies you with the information you require. Please let me know if I can be of further assistance.

Very truly yours,

T. A. MCCANN,
Mayor.

CITY OF OGDEN, UTAH,
March 24, 1961.

DEAR MR. HEALY: It is my opinion that not only does Senator CLARK's bill S. 986 have merit but it is most needed. Aid to local governments has been neglected too long.

Ogden City is in need of the following public works that it is not able to finance alone.

Public safety buildings	$1,500,000
Public streets	500,000
Bridges	225,000
Parks	700,000
Water (covering reservoirs, etc.)	2,350,000
Garbage incinerator	1,250,000
Fire stations (four)	500,000
Library addition and new branch	150,000
Storm sewer	1,500,000
3 swimming pools	600,000
Total	9,275,000

The above list is by no means a complete list of our needs. Our total needs in improvements, without any extravagant expenditures for such buildings as a civic center and civic auditorium, could run $15 million.

If there is additional information needed, kindly advise.

Sincerely,

E. L. CARLSEN,
City Manager.

CITY OF NEWPORT NEWS, VA.,
March 14, 1961.

DEAR MR. HEALY: Mayor Brittingham has handed me your letter with attachment of March 10, 1961, for reply.

Senator CLARK's bill S. 986 relative to authorizing 45 percent public works grants as an incentive to State and local governments to accelerate their capital expenditure programs is somewhat similar to numerous other legislative bills designed to encourage the construction of public works.

If the bill were passed, I feel certain this city would do its utmost to take advantage of its provisions.

We do not believe, however, that the bill proposed by Senator CLARK is justified at this time, certainly within our area of Virginia in which the city of Newport News is located.

Very truly yours,

J. C. BIGGINS,
City Manager.

CITY OF NORFOLK, VA.,
February 27, 1961.

GENTLEMEN: With reference to your bulletin of February 23 concerning S. 986, my answers to the questions which you ask would depend upon the interpretation of item 1 of section 4 of the proposed legislation. Assuming that the interpretation would be liberal, the answers are as follows:

1. Yes, we would be in position to take advantage of the legislation, if enacted.

2. Approximately $6 million.

3. I am reliably informed that the type of capital improvement that we would undertake under an accelerated program would run about 60 percent labor and 40 percent material in the contractors' costs. Of course,

there must be added to this the labor involved in producing and preparing the material, so I would estimate that the total additional employment would be in the neighborhood of $4 million.

Sincerely yours,

T. F. MAXWELL,
City Manager.

MORGANTOWN, W. VA.,
February 28, 1961.

Hon. JENNINGS RANDOLPH,
U.S. Senator,
Washington, D.C.

DEAR JENNINGS: I have just completed the reading and study of Senate bill 986 introduced by Senator CLARK for himself, you, and Senator PELL. The bill is captioned the "Emergency Employment Acceleration Act of 1961." I want to commend most heartily you and your Senate colleagues for this splendid legislative measure, to assist those areas of the United States which are in dire need of help to provide employment and capital improvements which are badly required and beyond the ability of the local governments to provide. My congratulations to you and Senators CLARK and PELL for your initiative and willingness to present and urge adoption of a legislative act to assist so many unfortunate unemployed by providing methods for them to obtain employment and a livelihood for their families.

As you are aware, this area has been listed as a distress area for several years. This condition was brought about by the mechanization of the coal mines, loss of orders for coal, the closing of the Morgantown Ordnance Plant, discontinuance of small businesses, and layoffs in the industrial and commercial firms remaining in business. The unemployment in this area, as determined from very reliable sources, is in excess of 19 percent of the working population. Under conditions such as this, it is impossible for the community to provide sufficient revenue from taxes to assist in reducing the unemployment. It is also impossible for the community to maintain its present governmental standard and entirely unthinkable to consider construction of those facilities which are required for the improvement of the city.

Legislation such as Senate bill 986 will not correct entirely the existing condition. It will go a long way in preventing further unrest than is now apparent. It will assist some of those who have been unemployed for many months to obtain employment, regain their self-respect, and provide for their families.

The conditions and thoughts of individuals today are reminiscent of the early 1930's. The unemployment of that period had advanced to a high percentage. People were having their homes and personal property taken from them due to the lack of income and inability to meet mortgage or loan payments. The local governments were unable to cope with the conditions and so many of those incidents which are happening today prevailed—stealing, robberies, suicides, and so many types of unlawful acts by all age groups. The Federal Government attempted to assist in solving the problems with CWA, FERA, and other make-work programs; these programs turned out to be more like payroll programs than work programs with the result of men leaning on shovels or doing work of no consequence while discontent with unrest continued to increase.

Senate bill 986 reminds me very much of the PWA program, which with WPA did so much to start conditions to stabilize. The work programs gave local communities capital improvements, provided an impetus to industries which in turn placed orders with coal mines and other suppliers of raw materials, and eventually brought order out of a chaotic economic condition in the United States.

The city of Morgantown participated in the PWA and WPA programs to the benefit of the city and its citizens. During the PWA program the city constructed a modern 100-ton garbage incinerator plant, a city garage, and purchased new trucks for the collection and disposal of garbage and rubbish. During the WPA program the city accomplished many types of construction projects which had a direct bearing on the progressive attitude and improvement of Morgantown and the surrounding areas. Among these projects were:

1. An airport with three paved and lighted landing strips—3,600-foot, 3,100-foot, and 3,000-foot lengths—with 692,180 cubic yards of excavation and 156,855 square yards of asphaltic concrete surface on rock base.

2. Paving of the 2-mile length of Richwood and Sabraton Avenues with tremendous retaining walls which extended as much as 62 feet below the roadway level; these streets now provide the main entrance to the center of the city from Maryland by way of West Virginia 7.

3. A total of 7.01 miles of additional street paving (a) 1.84 miles of reinforced concrete: (b) 5.17 miles of asphaltic concrete on rock base.

4. A total of 18.38 miles of main sewer lines ranging in size from 8-inch to 30-inch diameter with manholes, storm inlets, and other accessories,

5. The Deckers Creek floodwall.

6. Miles of retaining walls to support the street paving.

7. Many miles of sidewalks.

8. Improvement of 134 acres of park area with recreational facilities, and

9. Numerous other construction items.

As city manager and city engineer of Morgantown at the time of the PWA and WPA programs, it was my feeling that only worthwhile and long-life projects should be undertaken by the city. It was also the thoughts of city councilmen and myself that the projects should be capital improvements for the city, and the city should participate to its maximum ability in financing the programs. At the conclusion of the city-WPA program, it was determined that the city had participated in the program to the extent of approximately 30 percent of the total costs of the various projects. The results and value of the programs are quite obvious today to all of the residents of and visitors to this area. It may be added that the city sponsored no projects where labor was not used to its utmost efficiency.

From the above information there is sufficient evidence that both the PWA and WPA programs were advantageous to the entire Nation, the city of Morgantown, and so many persons in destitute circumstances. With the critical condition of unemployment in this area, the entire State of West Virginia, western Pennsylvania, and other areas of the United States a postive position should be taken immediately by the Federal Government to assist local governmental bodies to alleviate the unemployment problem.

There is little doubt but that a local capital improvement program will go as far as any other type of program in the abatement and correction of the unemployment problem. This type of program will also go a long way to aid those governmental units to correct local conditions which have resulted from the lack of proper financial support.

The city of Morgantown will be very pleased to take part in a capital improvement program to supplement its street, sidewalk, sewer, airport, recreational, and other fundamental requirements to improve the public welfare and health of the community and to assist in the curtailment of its unemployment problems.

It is trusted you will continue to give your utmost support toward the passage of this constructive legislation.

Respectfully,

ELMER W. PRINCE, *City Manager.*

CITY OF SUPERIOR, WIS.,
March 14, 1961.

DEAR MR. HEALY: Your legislative bulletin of February 23, 1961, with respect to public works acceleration and grants for public works is undoubtedly of urgent nature. Without reservations, we can say at the outset that the economic conditions in our area are such that grants as proposed in the bill would be of valuable and lasting nature.

The city of Superior is in the need of a great number of improved public facilities such as separating the sanitary and storm sewer system, improvement of public streets (especially in the residential areas where there are no curb and gutter to say nothing of concrete or blacktop paving). Sidewalk repairs have been carried on in a modest manner, but could be doubled and tripled in the next 2 or 3 years to bring them up to a safe and suitable condition. Additional public parks could be developed, a municipal swimming pool could be established, and there is a definite need for a new city hall, centrally located, with both police and fire protection facilities combined in a structure. State legislation enacted in recent years is going to make it necessary for the city of Superior to build a new central high school to provide educational opportunities on the high school level for students residing in the rural areas of the city of Superior. Such a school with proper facilities has been estimated to require from $4½ to $6 million of financing. Insofar as the total cost for these additional public works, it would be difficult to estimate at this time, but I trust that you can see from the foregoing that it would be completely prohibitive for a city the size of Superior (34,000) to accomplish them through its own resources. If bill S. 986 should be enacted into law, the city administration of Superior would undoubtedly program work within its means to accomplish and accelerate much needed facilities.

Thanking you for bringing this to our attention, we beg to remain,

Very truly yours,

LAWRENCE M. HAGEN,
Mayor.

CITY OF RIVERTON, WYO.,
March 20, 1961.

DEAR MR. HEALY: In reply to your letter of March 10 regarding Senator CLARK's bill, S. 986, in which you request my reaction to the bill's merits and ask whether this community could take advantage of the legislation, I regret that at this time there is no demand for other public works. We have exhausted all local available funds which might be used to match either State or Federal aid.

Within the past week we have filed on water rights at Brooks Lake in the Wind River Mountains, proposing to build a dam at that location to impound approximately 10,000 acre-feet of water. This project is a precautionary measure to guard our domestic water resources and construction of the dam is not contemplated this season. Just how this project will be financed has yet to be determined.

Other than this, there is no immediate prospect of any other municipal construction of public works.

Sincerely,

WILLA WALES CORBITT,
Mayor.

Mr. GRUENING. Mr. President, will the Senator from Pennsylvania yield?

Mr. CLARK. I yield.

Mr. GRUENING. I am a cosponsor of the bill to which the Senator from Pennsylvania has referred. The proposed legislation is needed in many parts of the Union, particularly in Alaska, where there is steadily mounting unemployment, and where many public projects

are sorely needed. I hope the bill will be acted on favorably by this great body.

Mr. CLARK. I thank the Senator for his comments and welcome his support.

UNCONSTITUTIONALITY OF FEDERAL TAX AID TO PAROCHIAL SCHOOLS

Mr. ERVIN. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a statement I have prepared in respect to the proposal to extend the Federal tax aid to parochial schools. In addition, I ask unanimous consent to have printed following my statement an editorial entitled "Courage," published in the Asheville, N.C., Citizen-Times; an editorial entitled "Rome and Public Schools," published in the Asheville Citizen-Times; an editorial entitled "Religious Debate Imperils Kennedy's School Bill," published in the Charlotte, N.C., Observer of March 11, 1961; an editorial entitled "Democracy and Public Schools," published in the Charlotte Observer of March 26, 1961; an editorial entitled "Kennedy and Private Schools," published in the Greensboro, N.C., Daily News; an editorial entitled "No Aid to Parochial Schools," published in the Christian Science Monitor; and an editorial entitled "Church, State, and Schools," published in the Washington Post of March 13, 1961.

There being no objection, the statement and editorials were ordered to be printed in the RECORD, as follows:

FEDERAL TAX AID TO PAROCHIAL SCHOOLS IS BOTH UNCONSTITUTIONAL AND UNWISE

(By Senator ERVIN)

If we are to appraise aright the current demands for Federal tax aid to parochial schools, we must begin with a study of history. This is true because we can understand the institutions and laws of today only if we know the historical events out of which they arise.

MAN'S STRUGGLE FOR RELIGIOUS FREEDOM

The most heart-rending story of history is that of man's struggle against civil and ecclesiastical tyranny for the simple right to bow his own knees before his own God in his own way.

As one of America's wisest jurists of all time, the late Chief Justice Walter P. Stacy, of the Supreme Court of North Carolina, declared in the opinion he wrote in *State* v. *Beal* (199 N.C. 278):

"For some reason, too deep to fathom, men contend more furiously over the road to heaven, which they cannot see, than over their visible walks on earth," and "It would be almost unbelievable, if history did not record the tragic fact, that men have gone to war and cut each other's throats because they could not agree as to what was to become of them after their throats were cut."

The Founding Fathers who wrote the Constitution of the United States were acutely aware of these truths.

They saw with the eyes of history the cruelties of the Spanish Inquisition, the massacre of the Huguenots of France, the slaughter of the Waldensians in the Alpine Valleys of Italy, the hanging and jailing of English and Irish Catholics by Protestant England, the hunting down of the Covenantors upon the crags and moors of Scotland, the branding, hanging, and whipping of Quakers and the banishing of Baptists by Puritan Massachusetts, and the hundreds of other atrocities committed in the name of religion.

The Founding Fathers knew, moreover, that even during their own lifetimes those who did not conform to the doctrines and practices of the churches established by law in the places they lived, such as Scotch-Irish Presbyterians in Ulster, Catholics in England and Ireland, and dissenters in various American colonies, had been barred from civil and military offices because of their faiths, had been compelled to pay tithes for the propagation of religious opinions they disbelieved, and had had their marriages annulled and their children adjudged illegitimate for daring to speak their marriage vows before ministers of their own faiths, rather than before clergymen of the established churches.

THE DETERMINATION OF THE FOUNDING FATHERS TO SECURE RELIGIOUS LIBERTY BY SEPARATING CHURCH AND STATE

The Founding Fathers were determined that none of these tragic historical events should be repeated in the nation they were creating.

To this end, they inserted two provisions in the Constitution of the United States.

The first of these provisions appears in article 6, and declares that "no religious test shall ever be required as a qualification to any office or public trust in the United States."

The second appears in the first amendment, and states that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof."

These provisions embody in the Constitution the abiding conviction of the Founding Fathers that the complete and permanent separation of the spheres of religious activity and civil authority is best for religion and best for the state.

I cherish the constitutional principle of the separation of church and state as the most precious part of our heritage as Americans. It must be preserved if liberty of any kind is to endure. This is true because political liberty cannot exist where any church dictates to the state and religious liberty cannot exist where the state interferes with religion.

The author of the "establishment of religion" clause of the first amendment was James Madison, who had previously piloted through the Virginia Legislature Thomas Jefferson's Virginia Statute for Religious Freedom, which declared that "to compel a man to furnish contributions of money for the propagation of opinions which he disbelieves is sinful and tyrannical."

THE CONSTITUTION PROHIBITS FEDERAL TAX AID TO ANY AND ALL CHURCHES

The first amendment is designed to prevent every form and degree of official relation between religion and civil authority. To this end, it secures the right of every person to worship God according to the dictates of his own conscience and prohibits every kind of public aid or support, financial or other, for religion.

Its purpose to outlaw all use of public moneys for religious purposes is stated with unmistakable clarity by the Supreme Court of the United States in the comparatively recent case of *Everson* v. *Board of Education* (330 U.S. 1).

I quote from the opinion in that case:

"The 'establishment of religion' clause of the first amendment means at least this: Neither a State nor the Federal Government can set up a church. Neither can pass laws which aid one religion, aid all religions, or prefer one religion over another. No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion. In the words of Jefferson, the clause against establishment of religion by law was intended to erect a wall of separation between church and state."

There can be no doubt of the fact that the parochial schools constitute an essential part of the Catholic church. Indeed, they are established and operated by the Catholic Church for the purpose of teaching the children of Catholic parents the tenets of the Catholic faith. This is made clear by the canon law of the Catholic Church which specifies that "Catholic children are to be educated in schools where not only nothing contrary to Catholic faith and morals is taught, but rather in schools where religious and moral training occupy the first place" and that "the religious teaching of youth in any schools is subject to the authority and inspection of the church."

Despite assertions to the contrary, the first amendment makes no distinction whatever between outright grants of Federal moneys to parochial schools and long-term loans of Federal moneys to parochial schools. It forbids both grants and loans. The decision in the Everson case makes this crystal clear by stating, in substance, that Congress cannot pass laws which "aid one religion" or "aid all religions," and that "no tax in any amount * * * can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion."

THE CATHOLIC DEBT TO THE CONSTITUTION

All Americans of all faiths have the absolute legal right to send their children to the public schools of the States in which they reside. Many Catholic parents forgo the exercise of this legal right and send their children to parochial schools because they want their children to receive something which the first amendment forbids the public schools to give them; i.e., instruction in the tenets of their religion. In sending their children to parochial schools, Catholic parents are exercising a right secured to them by the same Constitution which forbids the use of tax-supported institutions for the teaching of any religion. This observation finds illustration in the decision of the Supreme Court of the United States in *Pierce* v. *Society of Sisters of Holy Names* (268 U.S. 510), where the Court decided that the parents of Catholic children have a constitutional right to send their children to parochial schools, and adjudged unconstitutional an Oregon statute which required parents of all children, including Catholic parents, residing in Oregon, to send their children to the public schools of that State.

USE OF FEDERAL TAXES FOR PAROCHIAL SCHOOLS UNWISE

Even if there were no constitutional prohibition on such action, Congress should not grant or loan Federal tax moneys to parochial schools or any other schools teaching the tenets of any religion.

The ringing declaration of Thomas Jefferson's Statute of Virginia for Religious Freedom that "to compel a man to furnish contributions of money for the propagation of opinions which he disbelieves is sinful and tyrannical" is just as true today as it was when Jefferson wrote these immortal words. It would be "sinful and tyrannical" to tax Catholics and Jews to aid the teaching of Protestantism, or to tax Catholics and Protestants to aid the teaching of Judaism. It would likewise be "sinful and tyrannical" to tax Protestants and Jews to aid the teaching of Catholicism.

A great American, the late Justice Rutledge, had this to say on this subject:

"The great condition of religious liberty is that it be maintained free from sustenance, as also from other interferences, by the State. For when it comes to rest upon that secular foundation it vanishes with the resting. Public money devoted to payment of religious costs, educational or other, brings the quest for more. It brings too the struggle of sect against sect for the larger share or for any. Here one by numbers alone will

benefit most, there another. That is precisely the history of societies which have had an established religion and dissident groups. It is the very thing Jefferson and Madison experienced and sought to guard against, whether in its blunt or in its more screened forms. The end of such strife cannot be other than to destroy the cherished liberty. The dominating group will achieve the dominant benefit; or all will embroil the state in their dissensions."

If we are to preserve religious liberty, or, indeed, any kind of liberty, we must keep the state's hands out of religion and religion's hands off the state.

[From the Asheville (N.C.) Citizen-Times]

COURAGE

Many scoffed when Candidate Kennedy insisted from time to time throughout the campaign that he was opposed to Federal aid to private and parochial schools on constitutional grounds.

But it must be quite obvious by now that the scoffers did not know the measure of the man.

President Kennedy is still opposed to these grants, despite widespread criticism of his stand by the leaders of his own church.

It is quite apparent from recent statements by the President that he is far more concerned with the possible defeat of his program to aid public schools than he is by the voices raised against him by Cardinal Spellman et al.

Mr. Kennedy is urging Congress to pass the business at hand before getting enmeshed in the private and parochial controversy because it is obvious that unless the two issues are divorced the American educational system will wind up with nothing.

John F. Kennedy is the author of a Pulitzer Prize-winning book called "Profiles in Courage."

It deals with some earlier American statesmen who battled for what they thought was right even when they knew it meant almost certain political doom.

It might be well for someone to write an epilog for the book based on the forthrightness of the author.

[From the Asheville (N.C.) Citizen-Times]

ROME AND PUBLIC SCHOOLS

While campaigning in Texas last year, Senator Kennedy met with a group of Protestant ministers who questioned him at length on his views about a possible conflict of interests in the political actions of a Roman Catholic President.

One clergyman asked the Senator if, in some hypothetical case, he would have to ask for advice and consent from the heads of his church before he could act.

Mr. Kennedy replied: "I would not ask anybody's permission to act."

His answer now has absolute confirmation in the criticism in the Roman Catholic press (with a few exceptions) of the President's stand on Federal loans to private and parochial schools.

In a well organized campaign, some half dozen papers controlled by the Catholic hierarchy question even the right or the propriety of a President's expressing an opinion on the constitutionality of a proposed law.

In America, the Jesuit weekly, an article by Father Charles M. Whelan says:

"We could and did expect a silence respectful of the problem. As President of the United States * * * he should avoid unnecessary pronouncements on delicate constitutional issues."

This is a new doctrine of Presidential rights and privileges. The President has opposed direct aid, even in loans, to any private or parochial schools.

So far one Catholic paper, the Commonweal, has supported the administration's education bill. That newspaper says: "If for any reason the bill should be defeated, the general welfare of the country would suffer."

It is of more than minor significance that the Commonweal is edited by Catholic laymen, and not by the priests and bishops of the church.

Not only is the hierarchy using press artillery in the battle, but a far-reaching lobby, by person and by letters and cards, is well underway.

These facts amply justify the statement made in the New York Times by John D. Morris in a special Washington dispatch:

"American leaders of the Roman Catholic Church have reached a decision which is testing the church's strength as a political force in this country."

It can be added that this is the first time, in recent times, that the church has publicly and determinedly put forth its power in American politics.

The Roman priesthood waged a similar political contest last year in Puerto Rico. It was defeated, largely by the votes of the Roman Catholic laymen.

The present signs are that the hierarchy will meet defeat in its extraordinary excursion into politics. For, regardless of the Constitution, direct Government aid to private and church schools would still more weaken the American public school system.

[From the Charlotte Observer, Mar. 11, 1961]

RELIGIOUS DEBATE IMPERILS KENNEDY'S SCHOOL AID BILL

Eleven months ago, while still a U.S. Senator, John F. Kennedy delivered a speech to the American Society of Newspaper Editors in Washington.

Much of that speech was given to a discussion of his religion and his presidential candidacy, and it contained this statement:

"Federal assistance to parochial schools, for example, is a very legitimate issue actually before the Congress. I am opposed to it. I believe it is clearly unconstitutional. I voted against it on the Senate floor this year."

This week, speaking as the President, Mr. Kennedy restated his agreement with the U.S. Supreme Court that grants of public funds to nonpublic schools are clearly unconstitutional. He also stated his belief that even long-term loans of public funds to such schools are probably unconstitutional.

In doing so he disagreed with the hierarchy of his church.

The cardinals, bishops, and archbishops of the Roman Catholic Church in the United States are demanding low-interest Federal loans for work on their church schools. Furthermore, they have promised to fight any school aid bill that does not help pupils in private and parochial schools, and they probably have the power to kill such legislation.

Their position is one that even a Catholic President (and a lawyer) doubts in constitutional terms. And it is one that, in our opinion, amounts to unwise public policy for the country.

We are aware that many parents are taxed for support of public schools when their own children are enrolled in private or church institutions. Some of them must feel that this is unjust, and that it is only fair that public funds be used for the support of their own schools.

We are also aware that the entire country is harmed when the quality of education in any sector—public or private—suffers from lack of support.

But it is dangerous business that the Roman hierarchy pursues.

Public funds in this country go for the support of public schools, and those schools are open to all children from all religious denominations.

There are denominations that choose to operate their own schools because they want religious instruction for the young. They are perfectly free to establish such schools, and parents are perfectly free to send their children to them.

But it is one thing to operate such schools as a matter of choice and quite another thing to expect Government to support them because they exist. Tax funds are collected from all the people, and Government should resist pressures to channel money into private areas.

The concept of a separate church and state is imbedded deeply in the American Constitution, and for the very best of historical reasons. That concept holds that all the churches will prosper, and so will the state, if they keep their affairs from becoming too mixed. The state guarantees to every church the right to operate, but it bestows no favors upon any and takes part in the operation of none. It has no pets: it grants no special privileges.

It is important that this concept not be diluted year after year, as is slowly happening. And for that reason the Catholic position must not prevail in the school aid legislation, not even where loans are concerned.

The President is consistent in his position. We hope this valuable program is not sacrificed because of the religious argument it has unfortunately attracted.

[From the Charlotte Observer, Mar. 26, 1961]

DEMOCRACY AND PUBLIC SCHOOLS

One reason why Congress should avoid public aid to nonpublic schools has very little to do with religion. It has a great deal to do, however, with education and the democracy that only education can sustain.

Public schools are one of the larger reasons why the American people, so diverse in their origins, have been able to come together into a society so united in purpose and attitude.

There is as much democracy in our schools as in any of our institutions. There the barriers can be knocked down and the differences leveled. There immigrant children have ceased to be Irish, or Greek, or Puerto Rican and have become American, and their parents in their pride have become more American too.

The public schools have been the cement that has joined peoples of different lineage, different thought—even different pigmentation—in common cause. A private school may divide for the simple reason that it is private and caters to the "select." A church school may divide because it is established to serve a particular creed, a particular need. The public school bridges. It unites.

This is not to say that private or church schools lack a place in American society. There is the full right to establish them and to attend them, and it must always be so.

But a pluralistic society must be careful in supporting such schools lest it fragmentize education and, in doing so, fragmentize society itself. This is not a matter of constitutionality; it is a matter of reason. It is just as important as law in the context of the present debate over the President's school program.

The Denver Post puts it succinctly:

"If this Nation ever reaches the stage when the children of each of the 256 separate demoninations attend 256 separate school systems financed by the Government, the danger to our national unity will be very great indeed."

True, only a few of the many religious groups now operate their own schools. But who can say what might happen if government steps in to subsidize religious schools as it supports public schools now? Would not splinted schools be encouraged then as they are, in effect, discouraged now?

Admittedly, this is only one phase of a big subject. But it is a phase that Washington cannot well ignore.

[From the Greensboro (N.C.) Daily News]

KENNEDY AND PRIVATE SCHOOLS

President Kennedy has staked himself out unequivocally on the issue of Federal aid to private or parochial schools: He is against it because the U.S. Constitution, as interpreted by the U.S. Supreme Court, prohibits it.

The President also hopes that the issue will not be stirred further by members of his own church because such stirring would only help defeat the Federal-aid-to-public-schools bill now pending before Congress.

In this respect, as a Washington wag noted, Mr. Kennedy, a Catholic, qualifies as the most satisfactory President the Baptists and the Seventh-day Adventists have ever had. These groups have been most persistent in applying the principle of separation of church and state, even to the point of refusing Government handouts for schools, hospitals, or other phases of church-supported activities.

The President, of course, is right in his interpretation of the law. The Federal Government cannot under the Constitution become a party to such appropriations. Many sincere Catholics believe this is rank discrimination. While they are entitled to their opinion, we still believe they are wrong.

The distinction between public and private schools must be maintained. Public schools, theoretically and increasingly in practice, are open to all qualified children. Those parents who choose to use private schools, for whatever reasons good or bad, are not denied the use of public schools for their children. They simply make the decision not to use them because they want something they feel is not provided in such schools.

There is no logic in arguing that the Government should therefore undertake to support private or parochial schools as such.

[From the Christian Science Monitor]

NO AID TO PAROCHIAL SCHOOLS

President Kennedy put it succinctly: "The Constitution clearly prohibits aid to parochial schools. I don't think there is any doubt of that."

Legally there should be no question. A major element of the democratic freedom which is so basic to the United States is the concept that the state—the servant of all the people—shall have no ties with any religious body.

That is the constitutional issue involved in the current dispute between the American prelates of the Roman Catholic Church and the President over his plans for Federal aid to education.

But there is far more than a matter of time-honored legal stricture at stake in this matter. Commonsense and an open-minded review of what the American dream is all about should convince citizens of all faiths and pocketbooks that the constitutional bar as applied to education is not an 18th-century intrusion but a living necessity.

The prelates say that aid to the public school system is discriminatory against children in parochial schools. But the public school system is free to these children as to all others. Its classrooms are open to them and to children in Protestant and nonsectarian private schools. Their parents have chosen an alternative, as is their right. But this free choice certainly does not mean they are being discriminated against.

The prelates indicate they would accept long-term, low-interest loans to the Roman Catholic Church for its schools, instead of the grants proposed for public school use. If one form of aid is unconstitutional, so is the other. For the only difference would be in the size of the subsidy paid to a church by the state.

We trust this issue will always be discussed calmly, not heatedly. It should be kept from becoming a source of bitter contention between Americans. And it should be kept so for the same reason that the system of universal free education represented in the public schools was itself originally created. American children of all backgrounds—of rich and poor, of city and country, of immigrant and pioneer, of devout and doubters—should have available to them the best possible education.

To support with the money of all the people schools for separate groups would be to further a fragmented class society in America.

[From the Washington Post, Mar. 13, 1961]

CHURCH, STATE, AND SCHOOLS

Are President Kennedy and the sponsors of the aid-to-education bill trying to penalize parents who think their children should be taught in church schools? This view was bound to arise as the controversy over aid to parochial schools has waxed hotter. It ought to be carefully examined in the light of the fundamental principles which determine the relations between the churches and the state in this country.

It is easy to understand this feeling that public policy acts unfairly to discriminate against the parochial schools. The Roman Catholic Church and many other churches have made enormous contributions to education in this country. Everyone acknowledges that if their efforts should be withdrawn or substantially lessened, heavy new burdens would fall upon the public schools. Taxes for education would have to be increased. Why, then, when Congress is considering a new program of Federal aid to education should the church schools be excluded from it?

The question goes to the roots of our constitutional system and political philosophy. Underlying both is the principle that all men are free and equal, and a vital part of this freedom is the right to worship in accord with the dictates of conscience without any interference on the part of government. In pursuit of this principle church schools are allowed to operate free of taxation and governmental control. Every church may decide for itself whether general education for its young adherents should be linked to religious instruction.

It became apparent many years ago, however, that religious and other private institutions could not supply the entire educational needs of the people. Public schools supported by tax funds grew in numbers and became the mighty force they are today because there was no other way of supplying modern education to all children. Today public education has become a bulwark of the American way of life. It can no more be abandoned or impaired than can our Federal system or the Bill of Rights. On the contrary, an irresistible demand has arisen for improvement and expansion of public school plants and facilities and teaching staffs.

However deeply concerned they may be about their own problems, critics of the President's program should be able to see that an extension of aid to church and public schools alike would critically undercut the latter. The major educational burden has fallen upon governmental agencies because they have the taxing power. As soon as public funds were made available to church and private groups, every religious organization would try to set up and expand schools of its own. The public schools would inevitably suffer an eclipse.

Beyond this unhappy prospect is the impossibility of separating the general public interest in education and the sectarian interest in proselyting within a church school. Many advocates of Federal funds for parochial schools point to the great advantages of what is called a "God-centered education." But each church has a different concept of God and His teachings so that it is utterly impossible for the Government to sponsor that kind of education without becoming involved in sectarian controversies. This is, of course, precisely what the first amendment's prohibition on the establishment of a state church was designed to prevent.

Congress must therefore face the hard fact that no aid can be given to church schools without putting the Government in the forbidden business of fostering the churches that operate the schools. This should be clear to critics as well as supporters of the President's program. There are many ways in which religious instruction can be given to supplement public education, and if the pressure on church schools continues to increase many of them may have to modify their operations. This would be a far more satisfactory solution, in our view, than an attempt to bend public education and the principle of separation between church and state to the interests of the parochial schools.

In any event, the Government must not, and cannot under the Constitution, intrude upon the teaching of religion. It is all very well to say that the Government would not need to interfere with the curriculums of church schools; but if the Government should finance Methodist, Episcopalian, and Catholic schools, for example, it would by reason of that fact be teaching methodism, episcopalianism, and catholicism. Surely debate on the vital question of Federal aid to education ought to begin with general recognition of the fact that this is forbidden territory.

EXTENSION OF SUGAR ACT OF 1948

Mr. KUCHEL obtained the floor.

The Senate resumed the consideration of the bill (H.R. 5463) to amend and extend the Sugar Act of 1948, as amended.

Mr. MANSFIELD. Mr. President, after consultation with the acting minority leader [Mr. KUCHEL] and interested members of the Finance Committee, I wish to make a unanimous-consent request.

I ask unanimous consent that a vote be taken at 4 o'clock on the Douglas amendment, and that the time, after the conclusion of the remarks of the distinguished Senator from California [Mr. KUCHEL] is about to make, be equally divided between the proponent of the amendment, the Senator from Illinois [Mr. DOUGLAS], and the minority leader.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that on the Anderson amendment we vote at 5 o'clock, and the time be divided between the Senator from New Mexico [Mr. ANDERSON] and the minority leader, half to each side.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

DEFENSE CONTRACTS ARE NOT SOCIAL PLANNING TOOLS

Mr. KUCHEL. Mr. President, the time seems to have come when certain misconceptions about my State of California and its role in defense production should

be refuted. Indeed, simple justice demands that they be eradicated. I also feel it is vital in this connection to remove outworn shibboleths from the lexicon of the Senate.

Periodically, complaint is registered that an undue or unfair or unwise concentration of procurement contracts placed by or for the armed services is awarded industries in the State of California. Unfortunately, there is a tendency to link this complaint with unrelated pieces of legislation and to make it a part of irrelevant discussions. I am compelled to speak out because of a regrettable disposition to suggest that one means of improving the economy of our Nation or of specific portions of it is to cut down on the placement of orders for defense hardware with concerns located or headquartered in California.

The matter of defense procurement is at the very heart of all programs and efforts to assure our national security and to provide adequate forces for deterrence of aggression and, if circumstances beyond our control should require such action, for instant and devastating retaliation.

Let me acknowledge at the outset, Mr. President, that California's industrial economy comprises a substantial number and variety of companies, both large and small, which specialize in fabricating, assembling, and developing items for our armed services. This is a fact of life of which all Californians are proud. It also seems to be a reason for envy and jealousy on the part of other areas of our country.

While I have no desire to impute to my colleagues unworthy motives, I am impelled to conclude that certain legislative proposals relating to the placement of defense procurement contracts are inspired in large part by obvious covetousness, by selfish envy, and by greater concern over local welfare than for national security.

My remarks today are prompted, Mr. President, by the submission of legislation which would add another and highly improper factor to those which are considered in the placing of orders for military hardware.

I submit, Mr. President, that when the Congress votes immense sums for the purchase of goods and services to maintain a strong American defense, the Congress does not desire to have those moneys spent for social or other purposes.

In a word, Mr. President, I firmly maintain that our national welfare can not tolerate having defense procurement made a political football. I strongly condemn the idea that the placing of contracts for missiles, for rockets, for aircraft, for electronic equipment, and for scientific research and development should be conditioned or influenced by the possibility of achieving economic reforms or by a desire to alter the economic pattern of our Nation. Our defense programs must not be operated as a 1961-style WPA.

It is shameful in my view that California and her industries should be singled out for attack on the grounds that they receive too large a slice of the defense procurement dollar without taking into account the many and potent reasons why my State has a substantial defense production industry.

Recently, my colleagues from New York, proposed in this body, for the second time in 2 years, that provisions of the United States Code relative to procurement of defense materials be amended ostensibly for the laudable purpose of assuring greater competition in the expenditure of public moneys.

At about the same time, the President of the United States announced that in the equally desirable interest of relieving unemployment, he had directed the Defense Department, among other agencies of the executive branch, to take prompt steps to improve the machinery by which Federal contracts can be channeled to firms located in labor surplus areas.

The March 3, 1961, ruling—only some 3 weeks ago—of the Comptroller General of the United States clearly demonstrates that the intent of Congress and the law of this land precludes:

> The expenditude by the Defense Establishment of appropriated funds under any contract awarded on the basis of a labor surplus area situation at a price in excess of the lowest obtainable on an unrestricted solicitation of bids or proposals.

The Comptroller General finds:

> The intent of the Congress was that the practice of negotiating contracts with labor surplus area firms which would meet the lowest price offered by any other bidder on a designated procurement might be continued, but that no such contract could be awarded at a price in excess of the lowest available.

Can any Senator, or can any citizen of this country quarrel with that accurate interpretation of the intent of Congress in enacting all of the defense appropriation statutes? I do not believe so. At any rate, that is the law. The Secretary of Defense cannot, and should not, take any steps to channel defense contracts into labor-surplus areas.

In this connection, I am delighted to report a statement on this subject made to me just a few days ago by President Kennedy.

He assured me that under present law California would receive fair and equal consideration, along with all other parts of the country, in connection with the award of defense procurement contracts. That is all I can honorably ask for the State from which I come. That is all any Senator can ask for his State.

I have no alternative but to take violent issue with the legislative proposal to alter the defense procurement procedures, which was introduced by both my colleagues from the great State of New York. New York happens to lead in population—for the present—and is the site of the internal revenue district perennially reporting the greatest individual and corporate tax collections in the Nation.

The whole concept of Senate bill 1178, introduced by the Senators from New York, and a bill identical in form was introduced by, I believe, every Member of the New York delegation in the other body—has been analyzed closely, and considered carefully, and discarded completely, once before. I recall that in 1959, a number of days of hearings by the Senate Armed Services Committees were devoted to consideration of the predecessor proposal, Senate bill 1875, of the 86th Congress.

As I have noted, Mr. President, the ostensible objective of this proposed legislation—to quote from the section headed "Declaration of Policy"—is to require the armed services to employ procurement methods which will "assure maximum competition consistent with national security, the needs of the agency, and the character of the products and services being procured." There are other declared purposes, all of them laudable. Among them are the promotion of small business, standardization in purchasing, and the maintenance of a strong economy. But they do not represent, at all, the basis of the bill.

The vicious portion of Senate bill 1178 is to be found near the end of the lengthy declaration of policy. It would require the Department of Defense, every time it wishes to order an airplane or to begin perfecting a weapons system, to use a new and decidedly unsatisfactory yardstick. That would involve—and again I quote from the bill—the placing of a fair proportion of purchases for the armed services with concerns located in areas of substantial labor surplus. Incidentally, nowhere in this proposal is there any attempt to set forth what would be a fair proportion—in itself a weakness which could result only in an administrative nightmare and be productive of disagreement and controversy.

On several occasions I have challenged the sponsors, my good friends and industrious colleagues from New York, about the reasons why they felt this new yardstick, this additional factor, should be employed in determining what bid to accept and where a contract should go. I specifically inquired whether either of my colleagues from New York alleged that California's share of defense procurement—which they persist in condemning as excessive—was due to favoritism or unethical procedures on the part of the purchasing agents of the Defense Department. They disclaim any such thought.

I wish to cite their statements on this point. The senior Senator from New York said, in reply to my question, it appears on page 3098 of the CONGRESSIONAL RECORD for March 2, 1961—that he was not making any complaint on these grounds. His precise words were:

> I have not made and do not make any such contention [of favoritism]. I can say now that there is no evidence to support any such charge, so I have not made it.

During a discussion of the purposes of the predecessor bill, on June 12, 1959, the junior Senator from New York, in a colloquy about procurement methods and procedures, said—as appears in the CONGRESSIONAL RECORD, volume 105, part 9, page 11570—

> I make no attack upon the justice or fairness of the defense procurement policy under the guidelines now laid down by legislation.

The time has come, Mr. President, in discussing this question to deal with

facts, with cold statistics, and with realities.

There is no denial that substantial sums of money are spent by the Federal Government carrying out contracts placed with companies situated in California. However, there is no question that tabulations showing this fact do not disclose the full picture or do not reveal the complete significance of the figures listed.

I desire to place before the Senate—and simultaneously before the House of Representatives, the executive branch, and the Nation—several meaningful pieces of information about the effect of this controverted defense procurement.

To my mind, of great importance is the fact that the proportion of defense spending apparently—and I use that word deliberately—going to California has declined in recent years. This is shown plainly by a report headed "Military Prime Contract Awards by States," issued by the Office of the Secretary of Defense. That document discloses that for the fiscal year 1959 California concerns received 24 percent of the total contract amounts. For the most recent fiscal year, 1960, the California share had declined to 23.7. In the same period—1959 and 1960—the share of military prime contracts increased in 17 States, with the percentage increase for that group ranging from 500 percent, Idaho, to 1 percent, Utah and Wyoming.

Further evidence that California's participation in defense spending has fallen is seen in employment figures. Official reports disclose that employment in our aircraft industry—which by 1947 had become the greatest manufacturing industry in our State—dropped from 294,000 in April 1957 to 199,000 in January of this year. That is a decline of 32 percent.

What this means to California is not widely understood nor appreciated. Put in proper perspective, California's population during the past 4 years increased nearly 16 percent and its labor force more than 13 percent. At the same time, total defense employment has shown little change. Between 1950 and 1957, employment rose rapidly, both in California's aircraft industry and in its other defense-oriented industries. But, a fact of great significance in my mind, since 1957, the employment in aircraft production has declined even more than that in missile, electronic, and space industries has risen. The overall picture shows that for combined defense-oriented industries California had a net reduction of 1,000 jobs in the past 4 years. The phasing out of certain aircraft has forced huge layoffs in Long Beach, San Diego, and other communities.

Much has been made of dollar totals which indicate huge amounts of defense expenditures flow to California. It is important, in looking at this data, to keep in mind a footnote appended by the Secretary of Defense to the report on military prime contract awards. This points out that data on prime contracts by State do not provide any direct indication as to the State in which the actual production work is done.

It further adds:

More important is the fact that the reports refer to prime contracts only and cannot in any way reflect the distribution of the very substantial amount of material and component fabrication and other subcontract work that may be done outside the State where final assembly or delivery takes place.

Those conditional notes were precisely what I had in mind when I commented earlier that I deliberately used the word "apparently" in discussing the amount of defense spending charged—or credited—to California.

The nature of defense production and the trend to develop integrated weapons systems cause seemingly large orders to go to individual firms. Furthermore, because of the methods followed in keeping abreast of technological and military advancement, there are large and necessary "follow-on" contracts. But not every dollar involved in each of these contracts winds up in California. Many of our defense contractors maintain multiple operations, with plants outside California and subcontractors scattered virtually over the Nation.

Let me give you some specific illustrations. For example, company X, a large defense contractor in the Los Angeles area, purchased and subcontracted with 43 States and the District of Columbia and placed only 38 percent of its total purchasing and subcontracting in California. For company Y, another large contractor also in the Los Angeles area, purchases were made from 47 States and the District of Columbia and operations of the prime contractor were carried on in its complex in 4 other States.

On this point, I wish to recall that, 2 years ago, I brought to the attention of the Armed Services Committee a statement by a veteran in defense production, J. H. "Dutch" Kindelberger, chairman of the board of North American Aviation. I am confident what he said then is equally true today, although the figures undoubtedly would be different in each case. Discussing the misconception that all defense dollars involved in a contract with a California concern go entirely to that State, Mr. Kindelberger wrote me as follows:

One point that seems to have been overlooked is that award of a contract to a California company by no means implies that all work on the project will be performed by that company or in that State. For example, we estimate that 70 percent of the work on the B–70 and F–108 projects will be performed by companies other than North American and we have already awarded major system contracts to companies in 11 States outside of California, including two in New York. We estimate that about 20,000 firms, both large and small, will ultimately be engaged in these two projects.

These aspects of the matter thus open to challenge the premise as well as the proposal of my colleagues from New York, who have conceded there is no favoritism involved in placing contracts with California industry, but who still maintain California receives too much in the way of defense procurement business.

There is good reason why a large amount of defense procurement involves California. It is well known that the aircraft industry, in the years before World War II, centered in southern California for a variety of reasons. There are equally strong reasons why it expanded and branched into related fields. Among these are climate, closeness to areas over ocean and desert needed for testing and development, the proximity of technical and scientific institutions and agencies which are essential handmaidens of designers and manufacturers, the dependable supply of experienced and skilled labor, the presence of inventors and engineers who chose California as their residence, and the existence of specializing firms producing integral parts, supplies, components, and equipment.

This interrelation of facilities should not be ignored in attempting to revise policies and procedures governing defense purchasing. I submit that having research and test auxiliaries in areas adjacent to fabricating plants has a direct bearing upon the performance of defense contractors. It also is a factor which should not be overlooked in getting the most for our dollars.

Would it be economical to award by arbitrary mandate and for socioeconomic reasons defense contracts to concerns in areas lacking scientific institutions which could help solve technical design or production problems? Would we get the best return for our dollars by a form of hothouse procedure to aid fabricating plants in locations remote from great expanses of space or in sections often adversely affected by inclement weather? Could we expect contractors working under such handicaps to keep up with rigid production schedules? Would not valuable time be lost and additional expense incurred if trials, tests, and experiments had to be transferred to distant places or deferred because of unfavorable meteorological and atmospheric conditions?

I submit there is much, much more to be taken into account than the existence of unemployment. I contend that the Defense Department must have full latitude to award contracts in a fashion to bring the greatest return for every penny expended. It is impracticable and, to my mind, inconceivable—to think that the armed services can encourage creation of such interrelated agencies of production in other areas on the slim chance that a manufacturer normally producing other goods might qualify to perform a defense production contract merely on the ground that certain numbers of workers are looking for jobs.

The basic problem presented by the proposal of my colleagues from New York is the way their proposed legislation would affect the Defense Department and the armed services. What do the people charged with selecting and ordering weapons, supplies, instruments of defense, and the multitude of items for the Armed Forces think about using such a yardstick as existence of labor surplus areas?

The official comment of the Department was outspoken and unequivocal on this point. The General Counsel, in a formal report to the Senate Armed Services Committee—I listened to this, Mr. President—discussed at length the

declaration of policy in the bill of my colleagues from New York. The meat of the departmental comment is the following excerpts from that lengthy document:

> The cumulative policies of the bill to place a fair proportion of defense procurement with small business and additionally to place a fair proportion of defense procurement in areas of substantial labor surplus would put undue emphasis on general social or economic considerations over the needs of national defense.
>
> The Department of Defense cannot properly discharge its responsibilities with respect to procurement of weapons and other property essential to national defense and at the same time maintain "the economy of each section of the country" by "allocating purchases to different geographic areas of the Nation." The legislation of any such policy could reduce the awarding of defense contracts to a power struggle among contending regional and economic groups with great harm to national defense and to the public interest.

These objections were spelled out in considerable detail in the General Counsel's formal report and were amplified by responsible officials who discussed procurement methods and practices at great length.

For instance, Perkins McGuire, then Assistant Secretary of Defense for Supply and Logistics, told the Armed Services Committee:

> I am afraid that legislation of this type could reduce the awarding of defense contracts to a struggle among regional or economic groups, with great harm to the national defense and to the public interest. A supplier's technical capability to produce a complex weapon must not be subordinated to his geographical location. Allocations of contracts based either on geography or "to eligible suppliers from whom relatively smaller proportions of procurement have been purchased" are, to my way of thinking, completely inconsistent with the concept that our defense contracts should be competitively awarded, to the maximum practical extent, to competent suppliers, at the least possible cost to the taxpayer.

Mr. McGuire, summing up his reactions, warned that the particular requirements in the New York bill would unquestionably increase the costs of and delay procurement.

There is an additional phase of the problem presented by the geographical yardstick, to which I previously referred. This relates to the so-called "follow-on" contracts, which often are responsible for the feeling that California's share of defense contracts is excessive. The difficulty which would be encountered in trying to distribute orders with a view to maintaining the economy of particular areas of the Nation was described by one of Assistant Secretary McGuire's staff, Comdr. J. M. Malloy. He noted that many complex defense items are supplied by one or a few producers. Then he gave this warning:

> The problem here is that once these sources have been selected for a major weapon the Government may have such an investment in facilities and the contractor in engineering and production experience that the cost, both in dollars and time, would be prohibitive to duplicate.

What about the practicality of applying the labor-surplus test in placing the contract? I have remarked about the questionable wisdom of encouraging hothouse plants or industries. I have noted the need for interrelated and auxiliary facilities. Let me quote how a procurement officer feels on that score. In his appearance before the Armed Services Committee Maj. Gen. W. T. Thurman, from the Office of the Deputy Chief of Staff for Materiel, U.S. Air Force, mentioned this phase of the problem. He said:

> Where you have a prime (contractor) who wants to get into an area where he does not already have a capability, that almost invariably involves extensive additional facilities. Those facilities have got to come either from his own resources or from the Government's resources and as figures on the extent of Government facilities will indicate they frequently must come from Government resources.

I submit, Mr. President, that this is no inconsiderable objection to the formula my New York colleagues would have the armed services follow. And I ask whether this is compatible with our universal wish to get the most for our money and to make our dollars go as far as possible.

The basic question of the desirability of imposing such a policy upon the armed services already has been answered. The Congress over a period of years has made it plain that defense requirements and considerations of security shall be uppermost in the placing of orders for defense material. We in this Congress and prior Congresses have found it in the public interest to specify, and in no loose or vague terms, that we do not want defense appropriations utilized for nondefense purposes. The current Defense Department appropriations act, as I suggested earlier, like many before it, carries a clear-cut limitation against paying premium prices for items needed by the armed services. We saw fit to write into the present law the following language incorporated in section 523 and taken verbatim from the law for the prior and for several earlier years:

> *Provided further,* That no funds herein appropriated shall be used for the payment of a price differential on contracts hereafter made for the purpose of relieving economic dislocations.

The feeling which motivated this limitation also has been reflected by the Member of Congress probably universally regarded as the most informed about and highest respected for his acquaintance with our Defense Establishment. I am sure that every Member of this body has the utmost regard for the chairman of the House Armed Services Committee, Representative CARL VINSON. His feelings about getting the maximum value for our defense dollars was made plain only a few weeks ago. When suggestions were made that armories for reserve units might be built in some locations to relieve unemployment, Chairman VINSON said firmly:

> There should never be one built to relieve unemployment or distressed conditions. They must only be built on the basis on which they are warranted strictly from a national defense standpoint.

I submit, Mr. President, that precisely the same test applies to the placement of procurement contracts.

I concur completely in the principle that defense purchasing should be done to the maximum practicable extent on a basis of competition. Whether contracts are awarded following open bidding or after negotiation, I believe that the public interest demands competition. I do not see how this objective can be reached if the Defense Department is directed to take into account such factors as unemployment and labor surpluses in different areas of the country.

California's defense industry ought not to ask any special treatment. It does not. Neither do we in the California delegation. All we ask—and what we have a right to expect—is fair play and an equal opportunity with all rivals to participate in producing the hardware and other items which our Armed Forces require to discharge their responsibility of safeguarding and protecting the people of the United States of America.

We have developed in California a resource—factories, laboratories, talent, skill, and know-how—which is indigenous to our area and should not be subjected to discrimination. The existence of a defense industry in California is a natural phenomenon similar to the concentration of automobile plants in Michigan, to the complex of steel mills and related operations in Pennsylvania and adjoining States, and to the development of machine tool production in Connecticut. Certainly Senators and Members of the House from those States expect and demand equal treatment for their industries. California is not alone in maintaining that its defense industry should not be impeded or injured by extension of privileged status to competitors in any other section of the country.

From every point of view, I contend and I maintain, Mr. President, that sound public policy and the safety of our Nation dictate that defense programs must not be conceived or carried out on any economic-geographic or any socio-economic basis to prop up depressed areas or to give one section of our country special advantage over another.

If work is to be taken from California, let it be done only because it can be performed cheaper or more speedily or because a better product can be turned out elsewhere for the defense of the American people.

I ask unanimous consent that a copy of the Comptroller General's decision be printed in the RECORD at this point in my remarks.

There being no objection, the decision was ordered to be printed in the RECORD, as follows:

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C., March 3, 1961.

B-145136.

The Honorable the SECRETARY OF DEFENSE.

DEAR MR. SECRETARY: We have a letter dated February 25, 1961, from the Assistant Secretary (Installations and Logistics), asking to be advised whether our Office would object to the use of total set-asides of certain procurements for award to firms in

labor surplus areas, in the light of the prohibition contained in section 523 of the Defense Appropriation Act of 1961 against the payment of price differentials on contracts made for the purpose of relieving economic dislocations.

The letter refers to a Presidential request to you, the Secretary of Labor, and the Administrator, General Services Administration, for recommendations as to improved means for channeling contracts to areas of labor surplus. It is stated to be the consensus of all agencies concerned that to increase measurably the volume of contract awards to such firms total set-asides of appropriate procurements for award exclusively to such firms should be made. In your Department, such set-asides would be made under criteria similar to those currently applicable to small business firms.

Both the small business and labor surplus area preferences in award of Government contracts had their origin in the policies declared in the Defense Production Act of 1950, 64 Stat. 798, and amendments thereto, and in various executive orders and supplementary directives issued to implement those policies. At an early stage in the development of these programs this Office had occasion to consider certain legal questions presented as to the propriety of payment of appropriated funds under contracts awarded thereunder. The position taken was that when advertising of public contracts was required by law awards should be made only to responsible bidders whose bids, conforming to the invitations, would be most advantageous to the Government, price and other factors considered, and that awards to other than the low bidders could not properly be made solely on the basis of small business status or surplus labor area location. (See 28 Comp. Gen. 662; 31 id. 279; 31 id. 347.) However, in view of the authority to enter into contracts by negotiation during the period of a national emergency proclaimed by the President, contained in section 2(c)(1) of the Armed Services Procurement Act of 1947 (now 10 U.S.C. 2304(a)(1)), and in the corresponding section of the Federal Property and Administrative Services Act of 1949, it was stated that this Office would not object to payments under contracts negotiated pursuant to that authority with small business firms or bidders in labor surplus areas upon administrative determination that such awards were necessary in the public interest.

The small business preference was thereafter given more express legislative sanction by the enactment of the Small Business Act of 1953, 67 Stat. 232. The procedures adopted with respect to awards to labor surplus area firms, however, became the subject of controversy in Congress, which resulted in the enactment, in section 644 of the Defense Appropriations Act of 1954, 67 Stat. 357, of the limitation, identical to that appearing as section 523 of the 1961 Appropriation Act, prohibiting the expenditure of appropriated funds for the payment of price differentials on contracts made for the purpose of relieving economic dislocations.

The language of the proviso leaves little room for doubt, and examination of the legislative history confirms, that the intent of the Congress was that the practice of negotiating contracts with labor surplus area firms which would meet the lowest price offered by any other bidder on a designated procurement might be continued, but that no such contract could be awarded at a price in excess of the lowest available. The prohibition originated as a Senate committee amendment to the House bill (see S. Rept. No. 601, 83d Cong., 1st sess., p. 11), and in the form proposed by that committee was apparently intended to prohibit the payment of appropriated funds on any contract negotiated for the purpose of correcting or preventing economic dislocations. On the floor of the Senate a strenuous effort was made to eliminate the proviso, but it was adopted in the form proposed by the committee. (See CONGRESSIONAL RECORD, vol. 99, pt. 7, pp. 9809–9817.) The House rejected the Senate amendment, and in conference the proviso as finally enacted was substituted. (See H. Rept. No. 1015, 83d Cong., 1st sess.). The intent of the provision is further clarified by debate which occurred in both Houses upon adoption of the conference report. (See CONGRESSIONAL RECORD, vol. 99, pt. 8, pp. 10514–10519; 10557–10565.)

On the record we must construe the limitation in question as precluding the expenditure by the Defense Establishment of appropriated funds under any contract awarded on the basis of a labor surplus area situation at a price in excess of the lowest obtainable on an unrestricted solicitation of bids or proposals.

In the referenced letter it is suggested that if total set-asides were made only where there was a reasonable expectation that bids or proposals would be obtained from a sufficient number of responsible labor surplus area concerns to insure fair and reasonable prices, no question of a price differential would be involved.

The fallacy of that suggestion is that it would substitute fair and reasonable prices for the lowest price obtainable.

In the light of the clearly expressed intent of the Congress, which has been repeated without change in each annual appropriation act since 1954, we do not feel that we could, with proper regard for our obligations to the Congress, accept any showing or determination of a fair and reasonable price as establishing that such price was the lowest obtainable, in the absence of free and unrestricted competition.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. KUCHEL. I yield.

Mr. LAUSCHE. What percentage of defense contracts is California now getting, according to the information the Senator has?

Mr. KUCHEL. I believe the latest available figures are printed in the Congressional Quarterly for the week ending March 24. They show that for the fiscal year 1960 California secured 23.7 percent.

Mr. LAUSCHE. What does 23.7 percent represent from the standpoint of dollars in the total expenditures on defense contracts?

Mr. KUCHEL. Again using the Congressional Quarterly as the source of my information, the amount is $4,839,252,000.

Mr. LAUSCHE. What is the highest percentage of such contracts that California has had?

Mr. KUCHEL. The percentage that I stated in my address is down from 24 percent in 1959.

Mr. LAUSCHE. The Senator has stated the percentage in 1959, but that statement would not indicate whether prior to 1959 California was getting more than 24 percent.

Mr. KUCHEL. The statement speaks for itself, and indicates what the percentage was in 1959. If the Senator is interested in prior figures, I shall obtain them for him. I merely make the point that as of today the percentage of expenditures under present law, with no allegation by anybody of favoritism to the people of my State, has declined.

Mr. LAUSCHE. California, with one-twelfth of the population, and being one-fiftieth of the States, is receiving 25 percent of the defense contracts. On the basis of that statement does the percentage look peculiar or unreasonable?

Mr. KUCHEL. I want to be sure that I understand the Senator. Does the Senator stand in the U.S. Senate and contend that the defense of the American people against the continuing potential danger posed by international communism ought to be based on the manufactured defense material for such defenses being parceled out equally to every State in the Union? Is that what my able friend believes?

Mr. LAUSCHE. No; the Senator from Ohio is not arguing that point. My question is whether the fact that California is receiving practically 25 percent of the defense contracts does not on its face appear to be unreasonable, when we consider that the State has one-twelfth of the population of the Nation and is only 1 of the 50 States.

Mr. KUCHEL. I deny it. If over the years the Government of the United States placed the entire burden of manufacturing our defensive arsenal anyplace, in Delaware, for example, I would not draw from that fact any conclusion that it was unreasonable, because the one single, sole responsibility of the Defense Department in spending billions upon billions of dollars is, as it should be, to give to the people of this country the strongest possible posture of defense. No one in this Chamber has ever accused the Defense Department of favoritism. When the proposed legislation was introduced by my able friends from New York, I asked that question, and both Senators answered and said that under no circumstances did they contend that any favoritism was ever indulged in by the Defense Department in the award of contracts to provide for the defensive arsenal of the American people.

Mr. LAUSCHE. I did not mention the word "favoritism," but the Senator from California has discussed the term rather widely and repeatedly in his statement. Are there any circumstances from which one might infer that California was being given preferential treatment?

Mr. KUCHEL. There are not. My friends the Senators from New York, have taken the same position that I have on such a regrettable and erroneous charge.

What does my friend, the Senator from Ohio, mean when he uses the word "unreasonable"? How does he define the term?

Mr. LAUSCHE. My interpretation is that giving California 25 percent of the defense contracts and all other States only 75 percent is unreasonable. But the Senator from California claims that 25 percent to California is reasonable and, I regret to say, I cannot see it.

Mr. KUCHEL. If those who are responsible for our defense, making their decisions simply and solely on the basis of what they believe is necessary for the defensive armament of the American people, and in the absence of favoritism

of any kind, were to award 100 percent of the defense contract to any one area in this country, I would not be heard to criticize. Likewise I do not believe my friend should criticize.

Mr. KEATING. Mr. President, will my distinguished friend, the Senator from California, yield?

Mr. KUCHEL. I yield to one of the ablest Senators who, along with his distinguished colleague, does for his State all that the good people of the State of New York could ask for.

Mr. KEATING. I thank the Senator for those more than gracious remarks. I am also grateful to him for notifying me of this attack which he intended to make today upon the proposed legislation sponsored by the Senators from New York.

I also thank him for not indulging in anything like character assassination in connection with his remarks, because his friendship with the Senators from New York has been of long standing and we have nothing, as we have stated before, but admiration for a representative of his State such as the distinguished Senator from California, who, day after day, is looking out for the interests of his State, as he should be.

I wish to ask my dear friend from California whether it is his intention to include with his remarks the news article published in the Los Angeles Daily Times the other day which reported that the congressional delegation from California must launch an all-out attack upon the two Senators from New York, and whether this occasion has any connection with that statement? If the Senator does not have access to the article, I shall be glad to supply it for him.

Mr. KUCHEL. I have great respect for the great Los Angeles Times. It is a great newspaper.

Mr. KEATING. As do I.

Mr. KUCHEL. I am sure my friend shares that respect. I sometimes feel that my friends the Senators from New York, in introducing the proposed legislation, have created the possibility in the minds of many of the hazard of changing the present law, and there is a natural reaction from anyone who knows that the present law ought not to be changed. To answer the Senator's question, I would be happy to include the Los Angeles Times article in the RECORD at this point in my remarks.

COAST CHAMBERS FIGHT FOR DEFENSE CONTRACTS—BATTLE STRATEGY FOR CALIFORNIA LAWMAKERS AGAINST EASTERN INROADS MAPPED AT PARLEY

(By John H. Averill)

WASHINGTON.—Within the next few days California Congress members will be supplied with battle strategy to deal with the mounting and well-organized eastern campaign to pirate away west cost defense business.

Plans on how to cope with the eastern pirating maneuvers were discussed Tuesday at a closed-door meeting of west coast chamber of commerce executives and the California congressional delegation.

H. C. (Chad) McClellan, president of the Los Angeles Chamber and host at the luncheon meeting said afterward the session was called to discuss the economic impact of present and future defense procurement matters.

VOICE FEAR OF LOSSES

However, it was learned that the session went considerably beyond this and that several speakers indicated considerable apprehension that defense business might be diverted from the west coast to help economically depressed regions in the East. Also attending the meeting were chamber of commerce representatives from San Francisco and Oregon and Washington, along with observers from the California State Chamber.

To meet the eastern threat, it was learned, west coast interests are preparing statistical material which they contend will give California Congress members the ammunition to justify the State's major role as a defense producer.

Meanwhile, Senators KEATING and JAVITS, both New York Republicans, kept up their almost daily verbal drumfire against what they call an overconcentration of defense contracts in California.

KEATING, in a Senate speech, asked Secretary of the Air Force Zuckert "to keep a close watch" to assure that subcontracts under the new $1 billion contract to Lockheed for jet cargo transports "are spread over a fair geographical area and not concentrated in any one spot."

"New York has many fine firms," KEATING said, "it has excellent facilities. New Yorkers have all the know-how. What they need is a little consideration from the Department of Defense which seems to have taken quite literally Horace Greeley's remark about going west."

JAVITS, in a similar vein, said prime defense contracts to what he termed high unemployment areas in New York State dropped by 60 percent during the last quarter of 1960.

West coast interests fear that the constant attacks from New York and other States, typified by the Keating and Javits remarks Tuesday, might eventually result in the Pacific coast losing additional defense business. It is at this prospect that the current retorts are aimed.

Mr. KEATING. The diligence of the congressional delegation from California gave rise to the thought that the New York delegation should perhaps display some diligence themselves on behalf of their State.

The united efforts of the congressional delegation from California to assist their State are perfectly proper and legitimate efforts and are legendary in Washington. They have been going on for years.

The Senator has referred to the fact that the Senators from New York have in no way charged favoritism in the making of contracts which have resulted in nearly a quarter of the defense business of the entire Nation being centered in one State. We have not charged favoritism. We still do not charge favoritism. But we do say that to some degree the preponderance of contracts for California is due to the very diligent efforts of the distinguished Senator now addressing us, and to the diligent efforts of the congressional delegation in the other body. They have aroused in the minds of defense officials a constant awareness of the abilities of the State of California, which are great. Some of us from other States feel that we also have the know-how, the facilities, the trained labor force, the scientific institutions to which the Senator from California has referred, and all the other elements that go to make up a vigorous industrial complex. We too should be able to alert the Defense Department to the abilities of our own States to perform in some of the fields of defense procurement.

It will be my intention, again expressing my gratitude to my friend from California, to deal at some length with the proposed legislation to which he has been referring. At the moment, I am being importuned by those who are interested in sugar legislation to make these remarks brief. I will therefore refrain from further remarks. I assure my friend from California that when I attack his position—not him as an individual—I shall be happy to inform him of what I intend to say, and to give him every opportunity to be here on the floor, because this open debate on the merits of our respective States and their ability to do the job for national defense is all to the good.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. KUCHEL. I yield to the senior Senator from New York, and I thank my friend the junior Senator from New York.

Mr. JAVITS. I shall be very brief. However, I wish to participate in this colloquy, because I have had a great deal to do with the proposed legislation which has been referred to.

I should like to tell my friend from California that with $23 billion in procurement, and the amount increasing, according to the President's new defense requests, and with only about $3 billion of the $23 billion actually in competitive bids, it is almost inconceivable to me that any American, whether of California or of New York, or any group of Americans in either State, all of them taxpayers—and I call attention to the fact that California, after New York, pays the largest amount of Federal taxes into the Federal Treasury—would object to the idea of having more competition.

I have been among those who said that California anticipated the missile emphasis, prepared for it, and did a vast amount of research to get the benefit of it.

I want my State to do precisely what California has done. I do not want the door closed to this opportunity to benefit. That is all that is implied by the proposed legislation which has been introduced by the whole New York delegation. We want an open-door policy, not a closed-door policy, with respect to Federal procurement, including negotiated contracts.

So what we say to our own people—and we say this to both labor and management—is, "Sharpen your pencils, widen your research, and do what the people in California did, so that you will be in a better position to compete."

As my colleague from New York has said, we are not heaping abuse on California. We do not charge favoritism. We are asking our State to emulate what we consider to be a proper example of enterprise. I hope very much—and I know that the Senator from California feels this way, too, and I know he is indefatigable in his efforts on behalf of his State—that in uttering these words to the people of his State there is no reason on their part to fear when we ask the people of our own State to get on the

ball, so to speak. That is all we intend to do with our proposed legislation.

Mr. KUCHEL. I thank the distinguished Senator.

Mr. DIRKSEN. Mr. President, I yield 1 minute to the Senator from Ohio.

Mr. LAUSCHE. The Congressional Quarterly Report, March 24, 1961, shows that in 1960 the total wage paid by the Federal Government, to active duty military personnel, was $6,064,781,380. Of this total national amount the expenditure in California was $781,380,000. Dealing with Federal employees, the total expenditure of the Federal Government was $5,318 million, of which $788,659,000 was spent in California. The figure of 23 percent mentioned before applies only to procurement contracts, and not at all to other expenditures.

EXTENSION OF SUGAR ACT OF 1948

The Senate resumed the consideration of the bill (H.R. 5463) to amend and extend the Sugar Act of 1948, as amended.

Mr. DIRKSEN. Mr. President, I understand that the time from this point until 4 o'clock is controlled and equally divided for debate on the Douglas amendment; that is to say, on the Ellender proposal to strike the so-called Douglas amendment from the bill.

The PRESIDING OFFICER. The Senator is correct.

RATIFICATION OF THE 23D AMENDMENT TO THE CONSTITUTION GRANTING NATIONAL SUFFRAGE TO THE DISTRICT OF COLUMBIA

Mr. DIRKSEN. Mr. President, I yield 1 minute to the distinguished Senator from South Dakota.

Mr. CASE of South Dakota. Mr. President, I take this minute to make the statement for the RECORD that the 23d amendment to the Constitution is now the law of the land, the States of New Hampshire and Kansas having ratified the constitutional amendment which gives to the voters of the District of Columbia the right to vote for President and Vice President.

The soundness of that approach is evidenced by the speed with which the amendment was ratified, setting almost a time record for the ratification of an amendment to the Constitution. The colloquy which we have listened to on the floor of the Senate in the last few minutes, between the Senators from the States of New York and California, is evidence of the high value which we place upon representative government. For too long the District of Columbia has not had the opportunity to express itself, and now, at last, it has an opportunity to vote for electors for President and Vice President.

Mr. DIRKSEN. Mr. President, I yield 2 minutes to the distinguished Senator from Nevada.

Mr. BIBLE. Mr. President, this is a great day for democracy right here at home. It is significant that after 161 years the disenfranchised people of the District, consisting of nearly 1 million citizens, will be entitled to vote, because of the action of the States of New Hampshire and Kansas on this very day in bringing about ratification of the 23d amendment to the Constitution. In doing so, these 2 States have joined the 36 other States which preceded them in bringing about ratification of the 23d amendment.

Certainly this is a great day for democracy at home, in what many of us look upon as the world capital of democracy, Washington, D.C., U.S.A.

As the chairman of the Committee on the District of Columbia, I pledge every effort to expedite enabling legislation to permit orderly voting procedures. As a matter of fact, the District of Columbia officials at this moment are considering proposed legislation to be forwarded to Congress within the very near future. I see no reason why such proposals should not move along in an orderly, vigorous manner during the coming year.

I think it should be commented that we who believe in a full measure of citizenship for the residents of the District of Columbia do not feel that this is accomplished fully and completely; but it is a step in the right direction. There should be no confusion between the question of national suffrage and the question of local self-government, because both, in my humble opinion, are very important in a democracy such as ours.

I am especially proud of the fact that my own State of Nevada was the 12th State to join the honor roll in ratifying the amendment.

I pay particular tribute to the distinguished Senator from South Dakota [Mr. CASE] and to the distinguished Senator from New York [Mr. KEATING], one of the leaders in the Committee on the Judiciary in the effort to secure ratification of the amendment. I am very happy to join with them in this endeavor. I am glad it has been accomplished today. The Committee on the District of Columbia will within the near future implement the ratification of the amendment, within the framework of our committee.

Mr. DIRKSEN. Mr. President, I yield one minute to the distinguished Senator from New York.

Mr. KEATING. Mr. President, I am happy to join in expressing my gratification at the action taken today by the last two States to ratify the amendment which gives to the residents of the District of Columbia full citizenship, at least so far as voting for President and Vice President of the United States is concerned.

I myself favor home rule for the District of Columbia, but I recognize the fact that this is a much more controversial measure.

Mr. President, Ratification has now been completed. The next step is implementation, which will require the passage of a District of Columbia election law by the Congress. I hope immediate attention will be given to the implementing legislation while the momentum generated by the process of ratification is still upon us.

I want to pay tribute the distinguished Senator from South Dakota [Mr. CASE] and the distinguished Senator from Maryland [Mr. BEALL] for their fine efforts in which I was happy to join in pushing for the enactment of the District of Columbia vote constitutional amendment. I am also grateful to the distinguished Senator from Nevada [Mr. BIBLE] for the fine cooperation which he has demonstrated at all stages of this work.

Finally, Mr. President, I salute the people of the District of Columbia, I welcome them to the ranks of voting Americans, and I trust them to exercise their new privilege wisely and diligently. And I salute the people of our Nation for making possible this restoration of democracy to the Capital of the greatest democracy in the world.

Today is a great day for the Nation.

Mr. CASE of South Dakota. Mr. President, I express my appreciation for the kind remarks made about me. I appreciate and applaud the statement of the distinguished Senator from Nevada [Mr. BIBLE] that the Committee on the District of Columbia will now take prompt action to implement the amendment.

Mr. KEATING. I am very happy that that will be done.

VISIT TO THE SENATE BY MEMBERS OF THE CONGRESS OF BRAZIL

Mr. DIRKSEN. Mr. President, I yield to the distinguished Senator from Oregon such time as he may desire.

Mr. MORSE. Mr. President, this noon the Committee on Foreign Relations had the privilege of honoring and serving as hosts, at a luncheon, to six visiting parliamentarians from our sister republic to the south, Brazil.

We have the pleasure of having six members of the Chamber of Deputies of the Brazilian Parliament as our guests on the floor of the Senate at the present time. I have been given the honor of formally presenting them to the Senate.

I introduce, first, the chairman of the Foreign Relations Committe of the Chamber of Deputies of Brazil, the Honorable Raymundo Padilha. [Applause, Senators rising.]

I present next the Honorable Helio Machado, who also is a member of the Foreign Relations Committee of the Chamber of Deputies of Brazil. [Applause, Senators rising.]

Next I present the Honorable Ocelio de Medeiros, who also is a member of the Foreign Relations Committee of the Chamber of Deputies of Brazil. [Applause, Senators rising.]

Next I present the Honorable Menotti del Picchia, a member of the Chamber of Deputies of Brazil. [Applause, Senators rising.]

I present next the Honorable Jose Henrique Turner, a member of the Foreign Relations Committee of the Chamber of Deputies of Brazil. [Applause, Senators rising.]

Next I present the Honorable Moreira da Rocha, a member of the Chamber of Deputies of Brazil. [Applause, Senators rising.]

On behalf of the Senate of the United States, I extend to our visiting parliamentarians a very sincere, warm, hearty welcome. We want them to know that the facilities and services of the Committee on Foreign Relations and the Senate are at their disposal.

Mr. DIRKSEN. Mr. President, I yield as much time to the distinguished Senator from Vermont as he may desire.

Mr. AIKEN. Mr. President, I wish to add to the welcome extended to our friends from Brazil by the chairman of the Subcommittee on Latin American Affairs of the Committee on Foreign Relations. We are very highly honored today to have our friends from our great sister republic as our guests in the Capitol of the United States.

Brazil is the country, of the whole world, which most nearly corresponds with our form of government in the constitutional and legislative process, and in other ways.

I might also add that Brazil is the country of the world whose views on international affairs most closely coincide with those of the United States. We are seldom found on opposite sides of any question which arises in the United Nations.

I could continue at length to extol the virtues and the wonders of our great sister republic to the south, but I realize that time is limited. I shall simply say that we are indeed pleased that so many members of the Brazilian Chamber of Deputies could visit us in Washington. They will see much more of the United States, but we are particularly pleased that they can meet with us in our Capital City.

The PRESIDING OFFICER (Mr. PELL in the chair). On behalf of the Senate, the Chair welcomes our distinguished visitors.

EXTENSION OF SUGAR ACT OF 1948

The Senate resumed the consideration of the bill (H.R. 5463) to amend and extend the Sugar Act of 1948, as amended.

Mr. DIRKSEN. Mr. President, I yield 15 minutes to the distinguished Senator from Idaho.

Mr. CHURCH. Mr. President, the greatest single problem involved in developing long-range sugar legislation this year is the problem of the new grower—the question of how much and how fast domestic sugar production should be permitted to expand in both old and new producing areas during the years ahead. I say it is the greatest single problem because it touches on so many other phases of the complicated sugar program, and because it has ramifications that extend not only to all parts of our own country, but also deeply into the field of our delicate relations with the nations in Latin America and elsewhere in the world. While the question of new growers is primarily a question to be resolved in long-range sugar legislation, which we are not considering today, it has been injected into the discussion of the short-range bill now before us. And so, Mr. President, a thorough discussion of this question and its ramifications is essential to our arrival at a wise judgment on the bill we are considering.

In my own State of Idaho, the problem of the new grower and its ramifications is dramatically exemplified. In Idaho we have an old and well-established beet-sugar-producing industry, and we also have many farmers on newly developed agricultural land who do not now grow sugar beets but who are eager and anxious to do so. Within the borders of Idaho we have in microcosm the conflicts which complicate this problem on a national scale.

For nearly 60 years the growing of sugar beets has been an integral part of the agriculture of Idaho, and the successful operation of beet sugar processing plants has been an important part of the industrial pattern of my State. The first beet sugar factory in Idaho was built at Idaho Falls in 1903. Over the years, that factory has been modernized and enlarged until it is virtually a completely different factory, but it is still in operation at Idaho Falls. There are five other factories in operation in my State—at Preston, Paul, Twin Falls, Lincoln, and Nampa. The last new beet sugar factory in Idaho was built in 1942, nearly 20 years ago.

Idaho ranks third among all the 22 producing States in volume of sugar beets and beet sugar produced. Last year, 1,776,000 tons of sugar beets and 434,907,300 pounds of refined beet sugar were produced in Idaho. The sugar beet crop is among the most important field crops in my State, from an income standpoint, and annually accounts for between $20 million and $25 million of cash income for the farmers of Idaho.

By any definition, Idaho is an old-established sugar-beet-production area.

Mr. CASE of South Dakota. Mr. President, will the Senator from Idaho yield for a question?

Mr. CHURCH. I prefer to finish my speech, since I am speaking on limited time. If I have any time left when I have finished, I shall be happy to yield to the Senator from South Dakota for a question.

Yet within my State there are many farmers who would like to become new sugar beet growers. My mail daily attests to this fact.

One area, in particular, is worthy of special mention because it has a parallel in many another State. Some 70,000 acres of land have come under irrigation in recent years in the Minidoka reclamation project—known locally as the North Side project. It extends into three counties in south-central Idaho.

On this land are many war veterans, who now are striving to pay for small parcels of the land for whose freedom they so valiantly fought and bled. Most of them are young people, who are struggling to establish a future for themselves and their children. They came to this land, many of them, in trailers, and have built their small homes with their own hands, board by board, shingle by shingle, nail by nail, during the hours when they were not laboring in their fields. They came to the land when farm operating costs were high and going higher, and when general farm income was going down. Their capital is limited. They are desperately in need of a dependable cash crop—a crop around which they can build a balanced and sensible farm operation, a crop which will fit well into a rotation plan which will help build the fertility of their land, a crop which will not contribute to building up farm surpluses. The sugar beet ideally fits all their requirements. But under the present law, precious few of these veterans and other farmers on the Minidoka project are permitted to grow this one crop, which would do more than any other to give substance to their dreams of a secure future for themselves and their children.

Yet, just a few miles away, even in the same counties, they see the "old growers" produce sugar beets, year after year. Each fall, the veterans see the steam rise from the processing plants, white plumes contrasting against the deep blue Idaho sky, banners signalling the harvest of another crop of sugar beets, which they, the veterans, are denied the privilege of growing.

So, Mr. President, it is understandable why my files bulge with pleas for changes in the Sugar Act—changes which would give greater consideration to new growers. Yet the pleas of my Idaho constituents are tempered by the knowledge and understanding that the sugar program is essentially a system of balances, and that when any material changes in the system are proposed, due recognition should be given to the system as a whole and to the various parts which maintain the balance. Most of the Idaho veterans who now are asking for an opportunity to produce sugar beets have grown up in sugar-beet country. Many of them grew up on farms that had sugar-beet allotments. This has given the veterans an appreciation of the importance of maintaining the sugar program and the established industry. They would not destroy others, in order to gain a dubious advantage.

It is obvious that in order to provide for additional acres to be available for allocation to new domestic producers of sugar beets and sugar cane, it is necessary to provide a quota for marketing the sugar produced from the new acres. The quota for new producers can come from only three sources: First, existing quotas of other parts of the domestic sugar industry, including the established beet-sugar industry; second, the annual growth of the U.S. sugar market; or third, foreign quotas, including the quota which under normal circumstances would be allocated to Cuba, but which under today's circumstances rightly is forbidden to Cuba.

It would be unsound, unfair, and unjust to take away from the domestic producing industry any significant portion of its quota, in order to provide for the entry of new growers. The ones who now are producing sugar beets are the ones who have built the industry. Thousands of them have stayed by the industry through thick and thin. They have produced sugar beets and have kept the industry going when other farm crops were much more attractive and much more profitable to produce. Sugar beet prices have been relatively stable over the years. True, they have not

dropped as sharply or as fast as have the prices of some other major crops. But neither have they risen to the heights to which the prices of other farm crops have risen during some of the years in the 1940's. Yet thousands of farmers continued to produce sugar beets, when they could have made a great deal more money by shifting to the production of other crops. Advocates of expanding the beet sugar industry into new areas have expressly stated they would not want to cut back the existing industry and penalize the farmers who have built the industry—if that were the only way for new growers to get into the business.

The second alternative for getting quotas for new growers is to reserve for them some of the added acreage required to produce sugar to fill the annual increase in our market needs.

One year ago—in March of 1960—I proposed to a sugar bill then pending in the Senate—S. 3210—an amendment which would have provided in exactly that way some acreage for new producers. My amendment would have required that each year, Cuba's former share of the annual growth in our sugar market would have been allocated to domestic areas, and 40 percent of that amount would have been allocated to the domestic beet sugar area. In the allocation of increased acreage to fill that part of the quota, under my amendment, the Secretary of Agriculture would have been required to give preference to new and small growers. Thus, on a progressive basis, each year some additional acreage out of the natural growth in our sugar market would be available to help these new and small growers.

Because of the situation in regard to sugar legislation which prevailed during the last session, neither the Senate bill, S. 3120, nor any proposed amendments to that bill had an opportunity to reach the floor.

I realize that today my proposal of last year would appear modest indeed. The situation today is entirely changed. Because of the continued anti-American acts of the Castro government, Cuba has been denied her entire quota.

The mood of the Nation—and therefore of the Congress—has changed. A genuine recognition of the importance of the domestic sugar-producing industry and its need to expand into new areas is much more widespread than it was in March a year ago.

So in the present situation the only realistic alternative is to transfer some of the foreign quota to domestic areas; and the logical place to get it is from the quota that would have gone to Cuba if the Cuban Government had not embraced the Communists. Cuba's quota today, on an annual basis, would have been 3⅓ million tons, at the present level of consumption. I would not attempt to say, here and now, how much of that quota should be transferred to domestic areas. The details of a long-range sugar program cannot be written on the floor of the Congress. But the amount of the former Cuban quota that should be transferred to domestic areas ought to be substantial.

The experiences we have had with respect to Cuba during the past 2¼ years, since Castro came to power, have demonstrated that it is incontrovertibly in our national interest never again to rely on only one foreign nation for so large a portion of our sugar supplies—just as it would be in Cuba's interest not to rely on a single crop to support her economy. Similarly, in my view, we should not continue for long to rely on foreign nations generally for so large a portion of our sugar supplies as we do under the present law. There is nothing sacred about the 55–45 figure—the division of the market with 55 percent to domestic producers and 45 percent to foreign suppliers. In the interests of our national security, as well as in the interests of our Nation's farm economy, under any future long-range sugar legislation, domestic producers should be permitted to fill a larger percentage of our total sugar needs.

American sugar consumers are fortunate that the domestic areas most capable of the largest expansion are on this continent—where the flow of supplies is not endangered, in this era of world unrest and turbulence, by the ever-present threat to our sealanes. In anticipation of what is inevitably ahead, the raw cane-sugar producing industry of the South, particularly in Florida, is now building for greater production. New land is being drained for the planting of cane. No less than four new raw cane sugar mills are now under construction in Florida, and a new cane sugar refinery is underway in that State.

Tremendous scientific advancements in the production of sugar beets and in the processing of beet sugar have significantly increased the production capacity of the beet sugar industry over the past several years, and the technological advancements are still going on. Analysts of the Department of Agriculture have determined that during recent years the yield of refined sugar has increased an average of 100 pounds per acre per year. More than 2½ tons of sugar are now produced from each harvested acre of sugar beets, compared with less than two tons per acre when the Sugar Act of 1948 became effective. The developments now in the greenhouses of the plant scientists and on the drawing boards of the engineers promise that increased production, through technological advancements alone, will continue at a rapid rate in the future. Without adding 1 acre to the acreage to which the industry was restricted in 1960, and without building one new factory, there is every indication that the beet sugar industry will continue to increase its sugar production by 50,000 tons a year, every year.

What do these technological advancements mean in relation to pressure for increased beet-sugar quotas?

During the last 3 years, sharp and drastic acreage reductions in the sugar-beet States would have been necessary, in order to keep production in line with basic quotas, except for the misfortunes which occurred in our domestic offshore producing areas. A combination of adverse weather and lowering sugar content of the cane in Puerto Rico and the Virgin Islands reduced sugar production in those areas below their established quotas. A prolonged strike in the canefields of our 50th State, Hawaii, has had lasting effects on the sugar production there—so that Hawaii, also, has failed to meet its established quota.

Substantial amounts of these quota deficits have been added to the basic quota of the beet-sugar industry, and have forestalled the acreage reductions which otherwise would have been required. About 10 percent of the restricted sugar-beet acreage last year was used to fill the "deficits" in the Hawaiian, Puerto Rican, and Virgin Islands quotas. To prevent penalizing the beet-sugar industry for its own efficiency, any long-range legislation must write those deficits into the basic beet-sugar quota—for we must expect that the misfortunes which have plagued the offshore domestic areas will disappear, and that some day in the near future those areas again will produce their full allotments of sugar.

With production restricted by an acreage ceiling last year, the beet-sugar industry produced some 2,450,000 tons of sugar, an alltime record. This year, with some 100,000 additional acres being planted, beet-sugar production is expected to reach a level of between 2,600,000 tons and 2,700,000 tons. There is no question about the beet-sugar industry's great ability to produce. This ability will be increased still further, of course, by the addition of new producers and new areas.

If production ability were the only factor to be considered, Mr. President, the problem of providing elbow room for new producers would be materially simplified. But larger production raises serious marketing problems, in addition to the question of how large the beet-sugar quota should be, in a new long-range law.

Part of the complication is a matter of geography. Sugar beets are produced now in 22 States—from the Great Lakes region, on the east, through the Great Plains and the high plateaus of the Rocky Mountain States, on to the States on the Pacific coast. Most of the beet sugar produced in those States is marketed in those States. But a sizable quantity of cane sugar is also refined in some of this area. More sugar is produced and refined in these States than can currently be consumed there. So the market is pushed outward into certain fringe areas. Still, most of the beet sugar is marketed in 25 States of the West, Middle West, and Southwest. When the beet-sugar industry reaches for markets much beyond this broad areas, the cost of shipping soon eats up the profits. The hard economics of freight rates tend to keep the great bulk of beet-sugar sales in and close to this 25 State area.

That is not to say that sugar beets are the only source of the sugar sold in this area. On the contrary, only about half the sugar consumed in this area, as a whole, is cane sugar. The distribution varies among the individual States, of course. In some of the States, beet-sugar sales account for 80 to 90 percent, or more, of the total sugar

sold. In others, the percentage is much lower. The cane sugar sold in this area comes not only from the cane refineries located within it, but also from cane refineries located on the east coast and on the gulf coast.

The marketing picture is further complicated by the dispersion and decentralization of the beet-sugar industry. The beet-sugar industry is not a single entity. It is a complex that includes many thousands of individual farmers who contract to sell their sugar beets to more than a dozen separate processing companies. Each company competes vigorously in the selling of its sugar production, vieing for markets with the other beet-sugar companies, as well as with the cane-sugar refiners who sell in this area.

This highly competitive situation with respect to the beet-sugar companies is in contrast, for example, with the manner in which the 27 large plantations in Hawaii market their sugar. Most of Hawaii's million-ton production of cane sugar is marketed in refined form by a single seller, a huge refining cooperative on San Francisco Bay, which is owned entirely by the 27 large plantations—all but 1 are corporate plantations—which produce Hawaiian sugarcane.

Another large cane-sugar seller within the 25 State primary beet-sugar market is a cane-sugar refining company which has refineries on the east coast and on the gulf, and which alone sells about 2 million tons of sugar annually on the U.S. market—a volume which is about equivalent to the total marketings of the entire beet-sugar industry.

In addition to these dominant cane-sugar refiners, a number of smaller cane-sugar refiners sell in some of the same markets in which beet-sugar companies compete for the business.

Now, the present law has an interesting provision regarding the marketing of sugar. Whenever it appears to the Secretary of Agriculture that orderly marketing will be facilitated by doing so, he imposes marketing allotments on the individual beet sugar processing companies. Any company that sells a single pound of sugar more than its marketing allotment is subject to severe penalties. Such marketing allotments have been imposed in 5 of the last 6 years. In 1959, the allotments were finally lifted late in December, and in 1960 preliminary allotments were made but no final allotments were made. But no marketing allotments were imposed on any of the cane sugar refiners in any of the years.

In this year, the beet sugar industry will produce about a half million tons more sugar than it has ever marketed in a single calendar year. It remains to be seen whether, under the present marketing situation, anything like that production will be sold under conditions which can be described as orderly.

When long-range sugar legislation is written, I think the Congress should carefully consider whether the administrators of the Sugar Act have used the full power of the law with respect to the marketing of sugar. I think the Congress should discuss the language of the law with the administrators. It may be that the language should be strengthened so the Secretary of Agriculture may more easily limit the marketings of individual cane sugar refiners, as he now limits the marketing of individual beet sugar processors, or so that he may more easily channel raw sugar supplies to specific ports to provide for the most equitable distribution of available supplies.

The PRESIDING OFFICER (Mr. PELL in the chair). The time of the Senator has expired.

Mr. CURTIS. I yield 3 additional minutes to the Senator from Idaho.

Mr. CHURCH. I believe I can finish in 3 minutes.

I do not know the answers, Mr. President, but I do know that the marketing picture will be influenced markedly by the entrance of new growers in new producing areas. I mention the marketing situation and some of the marketing complexities that are involved for the same reason that I have discussed some of the other factors involved in this new grower problem. And that is to demonstrate that this is a complex problem, with many ramifications. It cannot be settled on the floor today, nor can it be settled quickly off the floor. It must be the subject of intense and extended study—with due attention paid to maintaining the equitable balances which have made the sugar program operate so well in the national interest.

Mr. President, as I have indicated earlier in this discussion, I am extremely interested in long-range sugar legislation in this session of Congress that will permit new producers to produce sugar for the American market, not only in Idaho but in other States where a benevolent nature has provided the climate and the soil, the sunshine and the water, to make production of sugar crops practical.

But I am extremely interested in long-range sugar legislation which will also preserve for our country the dependability of supply, the assurance of reasonable prices, the equity of treatment of all the diverse groups involved—which the sugar program has provided for more than a quarter of a century.

And so, Mr. President, faced as we are with the expiration of the sugar program at midnight tomorrow, I urge adoption of the 15-month bill which is now before us. That will give us the extra assurance that if the complexities of a comprehensive new sugar act cannot be solved before adjournment—although I am confident they can be—if events of the unforeseen and unforeseeable future prevent their solution before Congress adjourns this fall, we will still maintain the sugar program until the next session of Congress can complete the work on a new long-term sugar bill.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. CASE of South Dakota. Mr. President, will the Senator from Nebraska yield an additional minute?

Mr. CURTIS. I yield 1 additional minute.

Mr. CASE of South Dakota. I merely wish to identify my interest with that of the Senator from Idaho. I think he has made a splendid appraisal of the situation. We have an identity of interests since the Utah-Idaho Sugar Co. is the company which operates a sugar plant in South Dakota. It has facilities which will provide for the outlet of more sugar. It has this year been signing up additional acreage in eastern South Dakota.

As I understand, the extension of the Sugar Act will not affect one way or the other these new growers this year.

I see that the Senator is confirming my observations by nodding.

I hope the long-range solution to which the Senator has referred will be arrived at so that the new growers who are ideally situated and have the water to produce sugar beets can avail themselves of the opportunity and will have some assurance that they can continue to grow sugar beets in the future, rather than go back to corn or some other surplus production.

Mr. CHURCH. I thank the Senator.

Mr. CURTIS. Mr. President, I yield 5 minutes to the Senator from Oregon [Mr. MORSE].

Mr. MORSE. Mr. President, whenever I find myself on the other side of an issue from the Senator from Illinois [Mr. DOUGLAS], I am not sure I am right. On this occasion I wish to say there is a great deal of merit in the position taken by the Senator from Illinois, but I have concluded that the weight of the argument is against the proposal for which he has been so ably and valiantly standing in the debate.

My objections to it are as follows: First, as a member of the Foreign Relations Committee, and as chairman of the Subcommittee on Latin American Affairs, I am very much moved, and I am frank to say so, by the position taken by the State Department on this matter. I was in consultation with some of the State Department officials this morning, and they advised me that, in their opinion, the proposal of the Senator from Illinois would have detrimental effects on the United States-Latin America relations because of what they consider to be a discriminatory provision.

The provision that in reallocating Cuba's former quota on the basis that sugar would be obtained at world prices instead of the U.S. price paid for on foreign quota sugars might seriously damage our foreign relations with our Latin American neighbors.

The world price for sugar has been long recognized by the sugar trade throughout the world as a "dumping" or residual price. Since 1934 the U.S. market has been a premium market and, in fact, it was the intent of the legislation that suppliers to the U.S. market were included as beneficiaries of the legislation.

It would be unwise to take such a step at this time to reduce many of our foreign suppliers to a group of discriminatory suppliers, as would be the case where those foreign countries having basic quotas would receive full U.S. price, and then other suppliers making

up the deficit from Cuba would be reduced to second-class suppliers.

I recently introduced to the Senate a delegation from the Brazil Chamber of Deputies. There is not any doubt of the fact that a part of the allotment will go to Brazil, but it will be discriminatory against Brazil on the basis that she will be forced to sell to us at the world price, because Brazil is not the beneficiary of a quota.

We have, as we all know, a very delicate situation in trying to work out a program with Brazil in regard to helping that country develop its economic productive power.

I have heard also this morning from producers of our agricultural products which are in surplus, such as wheat, that there has been a movement for some time to seek to work out a trade arrangement with Brazil in regard to wheat exchanges for sugar. But if we adopt a program which means a reduced price for sugar to Brazil, it is going to produce that kind of complication in the economical field.

The State Department believes that such a discriminatory policy would injure our relations with South America. Over the past quarter of a century of sugar legislation, the act has worked reasonably well, primarily because the United States was considered a preferred market and in times of stress such as World War II, the Korean emergency, and the Suez crisis, the United States had no trouble obtaining sugar, even though world values were above U.S. prices. World production today is at high level. However, since Cuba has entered the Communist orbit, much of the world's surplus of sugar, which has been referred to, is under Communist control. Cuban production, at a 6-million-ton level, together with an increase in production in Communist areas, makes up a very sizable portion of the world's sugar supplies.

This is a most inopportune time to institute such an amendment, which could easily disrupt the movement of sugar to the U.S. market to supply the 10-million-ton quota for 1961. It is not an action to take hastily with no opportunity to be heard. The savings to the United States are based on an effort to obtain sugar at below cost of production, or at a "dumping" price. We are trying to do this under conditions which are sure to harm our foreign policy. This action would jeopardize an assured supply of sugar for the U.S. citizens. The action does not contemplate any change in price of sugar to consumers. In fact, I fear it is more likely to result in increased prices.

I close by saying, Mr. President, I, too, believe there is a need for a complete review of the whole sugar policy of the United States in connection with hearings on the new Sugar Act, but I do not feel we should take a course of action at this time which is bound to result in some negative reactions in Latin America.

The PRESIDING OFFICER. The time of the Senator from Oregon has expired.

Mr. MORSE. Will the Senator yield me 1 more minute?

Mr. DIRKSEN. I yield 1 more minute to the Senator from Oregon.

Mr. MORSE. I do not think we should take a course of action at this time which is bound to result in some negative reactions in Latin America, when what we are trying to do is to work out a foreign aid program with those countries.

Let us be frank. In a sense, if we maintain the price for those to whom we assign the Cuban quota, by not assigning them a quota at this time, we are participating in a form of foreign aid. I wonder if we would not get a better return from that kind of foreign aid, rather than to first arouse some irritations and antagonisms and then seek to supplement by entering into other foreign aid programs.

Because there is much merit in the Senator's argument, I reluctantly shall vote against the Douglas proposal.

The PRESIDING OFFICER. The time of the Senator from Oregon has expired.

The senior Senator from Illinois has 37 minutes remaining.

Mr. DOUGLAS. Mr. President, the facts are relatively simple. We formerly paid to Cuban producers and owners a subsidy of around 2½ cents a pound, about $60 a ton, for 3 million tons, or about $180 million a year. I think we did this in part because of the Spanish-American War, because of the fact that we had intervened twice under the Platt amendment, and were anxious to treat Cuba as well as we could.

When we were compelled to break relations with Castro and to shut off the importation of Cuban sugar, we created a problem as to who should get the big bonus which had previously been going to the producers and owners of Cuban sugar.

As we all know, the domestic producers of beet sugar would like to receive an allotment of approximately a million additional tons of high-cost sugar.

The State Department proposed to reallocate the 3 million tons to other countries, primarily to the Philippines, Mexico, the Dominican Republic, Peru, and certain other countries. Since then they have eliminated—I think wisely—the Dominican Republic.

The Senator from Louisiana [Mr. LONG] put his finger on one of the special features of this proposal this morning when he pointed out that the 3 million tons, in all probability, were already in storage from past crops which had been purchased at world prices of about 3 cents a pound, and that with passage of the House bill the owners of the sugar would get more than 5 cents a pound, an increase of two and a third cents per pound, $46 a ton for 3 million tons, or $138 million.

The permanent officials in the State Department can talk all they wish to about wanting to help the people of Latin America. The proposal which is before us is not a proposal to help the people of Latin America, it is a proposal to help the speculators in sugar and to help the large plantation interests which stand to benefit. It is foreign aid for millionaires, pure and simple.

The proposal which the Senate committee adopted unanimously and which the State Department is now trying to reverse is that the two and a third cents per pound, $46 per ton, or $138 million should go into the Treasury of the United States. It can then be used to help finance a genuine program of real foreign aid to Latin America, not for a small group of sugar speculators but for the people of Latin America, so that the aid program will really get to the people and not be confined to a wealthy few.

Furthermore, I wish to point out that the longer we continue this system the deeper the difficulties are in which we become involved.

The bill seeks to extend the act for 15 months. Do Senators expect that the big sugar producers and owners in Mexico, in the Philippines, in Peru and in other countries are going to let go when the 15 months have gone by? Those producers will try to hold on to what they have, because they will be netting $150 million or more a year so long as it is continued. They will buy sugar at the world prices and sell to us at the American prices.

Incidentally, it is going to be very difficult for us to give back to Cuba the quota of 3 million tons if and when Cuba once again becomes a democratic country friendly to the United States.

I do not pretend to be an expert on foreign policy. I can only say that the gentlemen in question in the State Department are in fact carryovers from the previous administration, permanent officials, and they have an entirely wrong idea of the way to build friendship. Their belief is that if we help the wealthy we help the people. I thought we had turned over a new leaf in that respect.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield.

Mr. LONG of Louisiana. The Senator knows, does he not, why the majority of the committee voted against letting all the Western States get quotas? Once those States got quotas, it would be difficult to take the quotas away from them.

Mr. DOUGLAS. The Senator is correct.

Mr. LONG of Louisiana. Let us consider the problem with respect to Mexico. Mexico has been getting a bonus of about $1 million a year as a premium price for selling sugar to the United States. Now, with the shift of the Cuban quota, Mexico will get a premium of $11 million. When we seek to take away the $11 million, in the event Cuba becomes friendly with the United States in the future, the same logic which causes us to keep the Western States out should cause us to consider the matter carefully before we assign the Cuban sugar to Mexico. If we try to take away $11 million from Mexico we are going to have a hard time taking it away.

I would be the first to say it is not the people who are getting the benefits, but certain businesses which are getting the benefit.

But other countries will have their Ambassadors here fighting for a quota, just as other countries are getting one. By the time they get through with their efforts, we will find it difficult to take the quota away from a country once we assign it to one at a premium price. They would take the attitude that we were being unfriendly and that they were entitled to the quota and everything under the sun. If we are not to give the quota to them, we had better think about it before assigning quotas.

Mr. DOUGLAS. I quite agree with the Senator from Louisiana, who has stated the point better than I. In addition, curiously enough, we would give to all countries the vested interest of maintaining Castro in power, so that Cuba would not get its quota back, and so that other countries could obtain the Cuban quota.

I am glad to yield 20 minutes to the junior Senator from Arkansas [Mr. FULBRIGHT], chairman of the Committee on Foreign Relations, who I believe knows more about Latin America than do some of the permanent officials in the State Department.

Mr. FULBRIGHT. Mr. President, I appreciate that compliment of the Senator from Illinois, though I think it is quite undeserved. But there are some facts in this case that I wish to present to the Senate.

Mr. BIBLE. Mr. President, will the Senator yield to me to suggest the absence of a quorum?

Mr. FULBRIGHT. I yield to the Senator from Nevada [Mr. BIBLE] for the purpose of a quorum call.

Mr. BIBLE. Mr. President, I suggest the absence of a quorum.

Mr. DOUGLAS. May I ask the Senator from Nevada that he request that the time required for the quorum call not be charged to either side?

Mr. BIBLE. I would be happy to do so, but the Senate is operating against a time limitation of 4 o'clock. I am making the suggestion in order to alert Senators, and I do not believe the call will require more than 30 seconds.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. FULBRIGHT. Mr. President, I realize that the distinguished Senator from Illinois and others have presented most of the arguments, but I wish to have a few of the facts very clearly in mind.

Mr. President, when newspapers and commentators condemn agricultural subsidies and controls, they seldom mention the Sugar Act. Yet, the combination of quotas on imports, Government payments to growers, excise taxes, tariffs, and quota premiums cost the American taxpayer and consumer in the neighborhood of $600 to $700 million a year.

This huge figure is the cost to protect a domestic sugar industry which provides employment for only about 300,000 workers, a substantial number of whom are seasonally employed on the farm. Investments in the industry total $1,650 million, of which $750 million represents the farm investment utilized for sugar crops, and the remainder, investment in sugar factories and refineries. See page 7, "Special Study on Sugar," House Committee on Agriculture, February 14, 1961.

The annual cost of the sugar program, to taxpayers and consumers, is almost equal to the entire investment in sugar farming and is 36.36 percent of the total investment in the sugar industry. That is the annual cost of the subsidy.

While not precisely comparable, we can contrast this $600 to $700 million cost of the Sugar Act with the realized losses of the Commodity Credit Corporation for price support programs in fiscal 1960 for all so-called basic commodities. These realized losses in fiscal 1960 for corn, cotton—including the export differential—peanuts, rice, tobacco, and wheat, amounted to $545 million. For all price support programs, the realized losses were $795.5 million, so that sugar alone approximates all the basic crops in cost to the Treasury.

In order to emphasize the comparative treatment of sugar producers with other farmers, testimony in the hearings indicated that acreage devoted to sugar production had been allowed to increase from about 850,000 acres to 1,100,000 acres in 5 years. It would be interesting to know if any other commodity has had an increase in acreage in this period. In fact, most of them have been forced to decrease. While we spent $341 million in soil bank rental payments in calendar 1960, to retire farmlands from production, we were allowing increases in acreage to the most heavily subsidized of all commodities.

The "Special Study on Sugar," page 10, indicates the amount of the subsidy in a different way:

> If the 1959 return per unit to domestic growers were to be maintained while at the same time prices were to move toward the world level, a direct payment of about 3½ cents on each pound produced in the United State would be required in the absence of other protective devices.

The direct payment is now seven-tenths cent per pound, or about $70 million a year to domestic producers. I emphasize that that is only the direct payment.

Because of the decision to cut off imports of Cuban sugar last year, some domestic beet sugar producers and foreign countries are clamoring for an increase in their quotas. The domestic producers are anxious to strike while the iron is hot to obtain a greater share of a market which permits them to sell at prices which include about a 25-percent subsidy on sugar bought by the housewife, and about a 30- to 35-percent subsidy on sugar bought at wholesale.

Foreign producers are also anxious to fill the former Cuban quota at a quota premium which in November 1960, amounted to 2.37 cents per pound, or about 70 percent of the world market price, plus freight.

In spite of the Cuban situation, there are ample supplies of sugar on the world markets. The carryover at the end of 1958–59 was more than 4.7 million tons, and according to the "Special Study on Sugar" prepared for the House Committee on Agriculture:

> Indications are that total world stocks increased during the 1959–60 season * * *. The large 1960–61 world sugar production now forecast will result in a further accumulation of world stocks even though consumption will increase.

Also, according to the same report:

> It seems clear that from a supply viewpoint the U.S. economy could reasonably expect to fulfill its sugar requirements at significantly lower prices than have prevailed in the recent past.

In short, there is ample sugar available at prices considerably below those we need pay under the Sugar Act. There is even less necessity to buy more sugar from domestic producers at vastly higher prices.

The usual justification for the Sugar Act—if there is one—and the one that is emphasized, is that our national security requires the act; that is, there is danger of a short supply. This circumstance has occurred in wartime only in the last 50 years. There is no present danger of any short supply in the world.

For example, India, with which we have agreements providing for large quantities of agricultural commodities under Public Law 480, has a surplus of 960,000 tons of sugar. India has no preferential markets, and parts of the Russian and Chinese purchases of Cuban sugar are said to be finding their way into what would otherwise be India's market. This sugar could be provided to the United States as return cargoes in ships carrying our surplus agricultural commodities to that country. Twenty million Indians are said to be dependent on sugar production. That country is desperate for foreign exchange and her development activities are a subject of great interest to us for many reasons.

It is important to maintain, unimpaired by future commitments or the establishment of vested interests in it, the so-called Cuban quota.

When and if that unhappy country removes the shackles of Castro, it will be desperately in need of export markets. It will be to our interests, as well as to Cuba's, to resume a trade with Cuba which before Castro was an important market for the United States, particularly for its agricultural commodities.

In 1958 our exports to Cuba amounted to over half a billion dollars, and our imports from Cuba were slightly less. Cuba was dependent upon us to the extent of almost 70 percent of her exports.

Sugar, in 1958, accounted for 83 percent of Cuba's exports, virtually determining the extent of her export trade and, to a great extent, her economic well-being. In 1957, for example, exports accounted for over 30 percent of Cuba's gross national product.

In 1957, 1958, and 1959, Cuba ranked seventh or eighth in order of importance as a market for U.S. exports.

In these years, she imported from the United States between $36 and $40 million worth of rice, $7 to $10 million worth

of wheat, $6 to $9 million worth of wheat flour. In textile fibers and manufactured textiles, she imported between $40 and $50 million worth of these products. She imported from $20 to $25 million worth of lard.

She was a very important purchaser of U.S. machinery, importing in 1957, $126 million worth. In the same year, she imported $62.9 million worth of vehicles, $56.8 million worth of metals and manufactures, $53 million worth of mechanical and related products.

These are all U.S. exports to a market that is, for the most part, now lost to us.

More important, of course, in terms of our national security is the friendship of the Cuban people and their economic well-being. It is for these reasons that it is of great importance to the United States that the so-called Cuban quota remain as free as possible from the danger of domestic and foreign producers acquiring permanent interests in it.

The Finance Committee accepted an amendment introduced by the Senator from Illinois for himself and me, which gives the United States the right to buy the Cuban quota under such arrangements as the President deems proper but which would provide that the quota premium of approximately 2.3 cents per pound be paid into the Treasury of the United States instead of to the foreign producers. It is estimated that this would net the U.S. Treasury approximately $140 million a year, on the basis of imports of 3 million tons.

As I have indicated, there are ample sugar supplies on the world market.

There is precedent for this arrangement. An order issued in September 1960 for the importation of sugar from the Dominican Republic, as its share of purchases made to replace Cuban sugar, included a special provision for a fee of 2 cents a pound, the differential between the U.S. price and the world price.

The object was to insure that Dominican producers did not benefit from the higher U.S. price, but sold to the United States at the world price. This 2-cent fee is collected from the U.S. importer by the Department of Agriculture at the time the certification for the import is issued. The U.S. importer was thus rendered unable, or unwilling, to pay the Dominican exporter more than the world price.

The effect of this fee was to transfer the differential between the world price and the U.S. price from the Dominican sugar producers to the U.S. Treasury. The Dominican entitlement of purchases to replace Cuban sugar amounted to 322,000 tons. Two cents a pound times 322,000 tons equals $12,880,000.

I think the quota premium is wholly unjustified. According to the Senator from New Mexico [Mr. Anderson], who was Secretary of Agriculture at the time of the 1948 Sugar Act, the quota premium arose out of special circumstances following the war and the reasons were applicable to Cuba who supplied practically all our imports of sugar at that time. There appears to have been no good reason why the quota premium should have been extended to other countries who later began to supply some sugar to the U.S. market.

In my own opinion, in addition to our experience during the war, when Cuba supplied our needs, there is the further sentimental attachment to Cuba growing out of the Spanish-American War and a feeling of responsibility for that community, which does not apply to any of the other countries which are now clamoring for the same special treatment that we gave Cuba.

When witnesses for the Department of State were interrogated at the Finance Committee hearings on the Douglas proposal, they objected largely on the grounds that it would result in paying different prices for sugar within different countries and between different countries. This does not seem particularly convincing to me. The countries having quotas at the premium price do so for historical reasons. There is no good reason why, because of the Cuban situation, they should profit. Furthermore, it seems to me that it is not at all in accord with our hopes for the Cuban future that these countries acquire a premium interest in Castro's remaining in control of Cuba. This is the result of their continuing ability to sell sugar to the United States at premium prices. It occurs to me there will be much less concern about bringing about the change in the Cuban Government as long as this situation continues. As I have indicated, they acquire by this means a vested interest in Castro's continued control of Cuba.

It is true that one of the results of the amendment will be that some poor underdeveloped countries will receive fewer dollars than they would if the United States bought their sugar at the quota premium. It is not at all clear, however, that the quota premium goes entirely to those countries. Some of it may go to the importer, or speculator, depending upon how much he paid for the sugar. Some of it may go to third parties who have purchased the sugar at world market prices. Some of it may go to absentee landlords who own sugar plantations. From my general knowledge of the sugar industry in producing countries, I think it is highly doubtful that much of it trickles down to the sugar workers.

Since I have been a Senator I have had a reputation of favoring foreign aid. But I am not in favor of unplanned, trickle-down, give-away, foreign-aid programs, which this would be.

As the President indicated in his foreign-aid message, it is essential that foreign-aid programs be put on the basis of long-term planning and financing, the only way to make meaningful and economical commitments.

As he also said, we should give special attention to those nations most willing and able to mobilize their own resources, make necessary social and economic reforms, engage in long-range planning, and make the other efforts necessary if these are to reach the stage of self-sustaining growth.

Foreign aid in the guise of premiums for sugar production is not conducive to this result; nor relevant to the principles enunciated by the President with regard to our foreign aid program in Latin America.

One of the essential reforms, particularly necessary in South America, and probably in almost all sugar-producing countries, is land reform. If any activity inhibits this highly essential development, it is sugar production. To encourage the continuation of expansion of sugar production on its present basis would not be consistent with the long-term objectives of the President's Latin American program.

Yet, if we continue to provide premium prices for the purchase of sugar, especially at a time when it is in oversupply, we provide incentives to the maintenance of this very system.

I do not contend that the amendment solves all these problems about which I have spoken. However, it is a step in the right direction and eliminates some of the incentives and some of the dangers of vested interests in continuation of the present situation.

The whole Sugar Act needs to be reexamined afresh. The systems built into it of disguised subsidies to domestic and foreign sources, of controls and artificial incentives, ought to be torn down and replaced by a more rational system.

For example, I am not at all certain that sugar need be given such special extraordinary protection as the act provides. I should like to examine the possibility of treating domestic sugar production in the same general way as other farm commodities are treated. Certainly, I see no reason why such uneconomic production must, for the very reason that it is uneconomic, be allowed to expand while other farmers are being required to cut back.

I hope the House Agriculture Committee and the Senate Finance Committee will carefully consider all these questions and I also sincerely hope that the State Department will reexamine the effect of our sugar legislation on the economies of sugar-producing countries throughout the world.

As has been announced, the Committee on Finance voted for the amendment unanimously.

I have received a letter from the Acting Secretary of State in opposition to the amendment, which I ask unanimous consent to insert in the RECORD at this point.

I find this letter quite unimpressive in its arguments against the amendment, for reasons which I have stated previously. The arguments are directed entirely at the short-term and wholly ignore the long-term consequences of the sugar-producing countries acquiring a vested interest in the Cuban quota.

The letter states that these countries would regard such action as inconsistent with the Alliance for Progress recently proposed by the President.

On the contrary, I think that if these countries take seriously the obligations which they would be required to undertake under the Alliance for Progress, they would not find the amendment inconsistent. They would agree that their obligations to undertake internal reforms is inconsistent with subsidies and incentives to increase sugar production.

The letter also argues that the nonquota countries will find it difficult to understand why they receive a price

lower than others, including domestic producers. I believe this can be explained. There is no good reason, in my opinion, why these countries should profit by virtue of the tragic Cuban situation. And it is neither to their interests, nor ours, that this be continued any longer than necessary.

This amendment does not hurt anyone. No one is worse off because he doesn't get something he only hoped to get, and had no right to.

As to the foreign exchange which, it is claimed, the sugar-producing countries receive under the quota premium, it would be interesting really to find out how much actually goes into these countries. How much, for example, would go to the big operators and speculators who keep their profits in Swiss bank accounts or in New York banks, for that matter, where gold and dollar earnings are often held?

I greatly doubt that much of the quota premium ever reaches the country where the sugar originates. The chronic shortage of capital in the sugar-producing countries would indicate this is to be the case.

I ask unanimous consent to have printed in the RECORD at this point a copy of the letter I received from the Acting Secretary of State.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 29, 1961.

The Honorable J. W. FULBRIGHT,
U.S. Senate.

DEAR SENATOR FULBRIGHT: A legislative requirement that the United States pay the world, rather than the higher United States, price for sugar acquired under a reallocation of the Cuban quota would, in my opinion, be harmful to the national interest.

A large part of the sugar needed to replace Cuban supplies would be purchased in Latin America. I am confident that nonquota countries in Latin America which are in need of foreign exchange to finance their economic and social development would find it difficult to understand why they receive a price substantially inferior to the price received by the domestic industry, formerly received by Cuba and currently received by other countries which have basic quotas under the Sugar Act. These countries would regard such action as inconsistent with the Alliance for Progress recently proposed by the President.

I hope that this change in the long-term sugar policy will not be made at this time, but considered when the Congress takes up long-range revisions of the Sugar Act.

With my warmest regards,

Sincerely,

———,
Acting Secretary.

Mr. FULBRIGHT. Senators might ask why I take this position with regard to the State Department. I believe it can be explained briefly in this way: The amendment was voted on in committee only yesterday, although we have had the executive action last year with respect to the Dominican Republic, which did the same thing and resulted in $12 million-plus being paid into the Treasury. If the amendment is adopted, it will develop about $140 million for the Treasury. I believe the State Department did not have adequate time to consider the full implications of the amendment. We all know that not only bureaucrats but also Senators are inclined to follow the approved practice. It is easier to follow a practice which will avoid complaints from the prospective beneficiaries in connection with the distribution of the quota. In the letter, the State Department does not make any valid substantive argument against the merits of the amendment. I believe the committee had before it the arguments of the Senator from Illinois and the background of the sugar issue as it has developed from year to year. I believe this is a superficial judgment on the part of the Secretary of State on the merits of the amendment. I hope the Senate will adopt the amendment.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. MORSE. I wish to ask some questions of the Senator from Arkansas or the Senator from Illinois, because I have been greatly impressed by what they have said this afternoon, as I have also been impressed by the statement of the Senator from Idaho [Mr. CHURCH].

As I understand, the quantity of sugar involved, so far as the application of the amendment is concerned, is sugar which is already in storage and is owned, for the most part, by sugar speculators or sugar houses who have bought it up, and is not really owned by the original producers. Is that correct?

Mr. FULBRIGHT. It is estimated that there is a carryover of 4½ million tons of sugar, and that there are 10 million tons available as of this year, above normal requirements.

Mr. MORSE. So that, contemplating consideration of a new Sugar Act within 15 months, we are actually dealing now not with a quantity of sugar in futuro, but sugar now in storage. Is that correct?

Mr. FULBRIGHT. That is correct.

Mr. MORSE. Then I will engage in a luxury in which a politician is not supposed to engage, namely, the luxury of changing his mind when convincing arguments have been submitted against his position. On the basis of the argument I have heard this afternoon, I shall vote in favor of the Douglas amendment.

Mr. FULBRIGHT. I am happy indeed to have the support of the Senator from Oregon.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. CARROLL. I have been impressed with the statement by the able Senator from Arkansas. Some of us voted against the Sugar Act which we passed last year because we felt it did not give the President enough flexible authority. It is my understanding that under the act we passed last year the President has authority to determine whether or not a premium price or, a world price, will be paid to foreign countries on the reallocated Cuban quota. Furthermore it is my understanding that insofar as the Dominican Republic was concerned the President fixed the price at world price level.

Mr. FULBRIGHT. That is correct.

Mr. CARROLL. The other quotas which were allocated were based on the premium price.

Mr. FULBRIGHT. That is correct.

Mr. CARROLL. Is there anything in the bill which would prevent the present President, if he sought to do so, to use this amendment to obtain the same flexibility that he had when he fixed the price to the Dominican Republic at the world price level?

Mr. FULBRIGHT. I do not believe it imposes upon him any further restrictions, other than the amendment of the Senator from Illinois. This merely provides that he shall apply to all those taking a part of the Cuban quota the same principles which apply to the Dominican quota. In other words, it will result in about $145 million being paid into the Federal Treasury which otherwise might not have been gotten under the quota.

Mr. CARROLL. If we adopt the Douglas amendment, are we not really setting a policy which tells the President that he shall only pay the world price, not the premium price?

Mr. FULBRIGHT. To those who acquire a share of the Cuban quota; that is correct.

Mr. CARROLL. It would then be different from the bill we passed last year?

Mr. FULBRIGHT. That is correct.

Mr. President, all of us are interested in agriculture—certainly most of us who are here today. I still do not understand, in view of the way this particular industry is treated, compared with all the basic crops—wheat and corn, which interest so many persons, cotton, peanuts, and down the line—I am unable to justify the highly discriminatory action in favor of the sugar industry. I simply think we ought to ponder that question a little.

We take criticism, in connection with the basic crops, for what is called—I do not say so, but what is referred to in the urban areas as—a wasteful program. Yet the total cost of those programs is only about as much as the sugar program alone costs.

I do not understand why all of us from the agricultural-producing States do not take the trouble to inquire into this and see why sugar should not be placed on the same basis as all other crops comprised in the support program.

Mr. DOUGLAS. Mr. President, I yield 2 minutes to the distinguished Senator from Louisiana.

Mr. LONG of Louisiana. Mr. President, I regret to have a difference of opinion with my senior colleague (Mr. ELLENDER) about this matter. However, I have heard it said that if two people in business always agree, one of them is not needed. I was one of several Senators who withheld his vote on the amendment when it came to a vote in the Committee on Finance, because I was somewhat fearful that there was a possibility that the bill would be tied up in conference, and I knew there was a need to extend the Sugar Act. However, it was the unanimous view of those who voted that the amendment should be added to the act.

I believe the amendment contains merit. If it shall be agreed to, and it

goes to conference, if I were one of the conferees I would certainly feel that if the President is firmly committed to give the foreign countries the advantages which are in the act which passed the House, and if commitments had been made to those foreign countries, we would be more or less required to accede to the President's position.

On the other hand, if this is simply the judgment of a lesser functionary in the State Department—an Under Secretary of State or someone of that rank—strongly supported by some of the ablest lobbies in Washington, representing countries and producers who wish to have these large increases in quotas, and perhaps some American companies which might profit very greatly from the large increases in quotas to certain countries at premium prices, then I feel the conferees should exercise their own opinions.

This is a 15-month bill. We are talking about $150 million in premium prices to be paid to people who have $300 million worth of sugar. In other words, we are talking about buying from these countries $300 million worth of sugar for $150 million extra. Much of this sugar has already been produced and is now in the hands of private sugar operators who produce the sugar in those countries. That which has not been produced is already in the ground and will come up this year. It has been planted on the assumption that those people would get 3 cents; instead, they would get about 5 cents. It will mean that in the case of a great number of countries, the sales to this country will be increased tenfold over that which they sold in years gone by at a great profit.

Mr. President, this would not be the kind of foreign aid which would benefit most of the people in those countries. Once again it would be the kind of foreign aid about which I have complained, because it would be an unexpected windfall into the hands of a very small number of people, but would provide no great benefit to the majority of the people.

I would be willing to vote $500 million for Latin America and an additional $150 million on top of that, if that were a part of a well-organized plan; but I do not see that it would do any good in this particular fashion.

Mr. MANSFIELD. Mr. President, will the distinguished Senator from Illinois yield me time?

Mr. DOUGLAS. I yield the remaining time to the distinguished majority leader.

Mr. MANSFIELD. Mr. President, I am advised by White House representatives that the President regards as most important that there be no sudden break in the established sugar policies, as would be the case if the proposed extension were not to become law by March 31. In other words, the present Sugar Act has until midnight Friday in which to live. If it is not continued by that time, the act will expire automatically.

There is every reason to believe that the extension will not become law by that date unless this amendment is deleted in the Senate.

I realize that what we do in the Senate is our business, and that whatever the House wants to do is its business. However, I think a fact of this nature ought to be brought before the Senate for its consideration.

I do not wish to argue the merits of the amendment offered and accepted in committee by the distinguished Senator from Illinois. There may be much merit in what he suggests, and I suspect that there is, but I would hope that his proposal would be more carefully considered than it has been up to this time, when the entire policy is reviewed later in the spring.

It is my understanding that the chairman of the House Committee on Agriculture, Representative COOLEY, has made a definite commitment that hearings will be held in May on a long-range sugar program. It is my further understanding that the Committee on Finance, under the chairmanship of the distinguished Senator from Virginia [Mr. BYRD], will, as soon thereafter as the House completes its hearings, undertake to hold hearings in the Senate committee. It is my further understanding that one of the subjects to be discussed in both hearings will be the proposal made by the Senator from Illinois which was adopted in the Committee on Finance yesterday.

But I must question the timeliness and abruptness of this amendment, in view of its implications for inter-American relations, and in view of the President's desire to have no sharp break in sugar policy on March 31, a break which will be conducive to chaos and grave difficulties in our relations with many Latin American nations.

Once again, I emphasize my hope that the principle embodied in the Douglas amendment will receive every consideration in the impending general review of sugar policy and in subsequent legislation. But at this time, and in the present circumstances, I most respectfully urge that the Senate drop the amendment from the pending bill.

Not only must we keep in mind the question of the expiration of the present act; not only must we keep in mind the question of damage which may be done to our foreign policy; but we must also consider the adamant position of the House against this proposal.

The fact is that the administration wants to have the act extended at the conclusion of the present act on midnight, Friday, March 31.

We have assurances that hearings in both the House and Senate committees will be held to consider this and other pertinent subjects. Certainly, in view of the definite statement enunciated, I most strongly urge Senators to vote against the Douglas proposal and in favor of the proposal by the distinguished senior Senator from Louisiana.

Mr. PASTORE. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. PASTORE. The senior Senator from Rhode Island came to the Chamber determined to vote for the Douglas amendment, because he believes in its merits. But do I correctly understand categorically from the majority leader at this time that it is the desire of the President of the United States that the Douglas amendment not be enacted?

Mr. MANSFIELD. It is the desire of the administration, which I assume includes the President, that the Douglas proposal not be enacted at this time. It is the understanding—I wish to repeat—that in the hearings which will be held in May by the House Committee on Agriculture, and later by the Senate Committee on Finance, this matter and other matters related thereto will be considered.

Mr. ANDERSON. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. ANDERSON. Does the majority leader, in making his recommendation, realize that he is making it completely contrary to the unanimous vote of the Finance Committee?

Mr. MANSFIELD. Yes, I am aware of that fact.

Mr. ANDERSON. On what basis does the Senator do it?

Mr. MANSFIELD. But when there is talk about the unanimous vote of the Finance Committee, I should like to point out that there are 17 members of that committee; 11 were present; 2 abstained; and 9 voted in favor of the Douglas proposal.

Mr. FULBRIGHT. Mr. President, will the Senator from Montana yield to me?

Mr. MANSFIELD. I yield.

Mr. FULBRIGHT. With regard to the administration, the Senator from Rhode Island asked whether the President took the position he has mentioned. Let me say that the letter from Chester Bowles was sent to me. The amendment was adopted yesterday. The letter was not signed by the President. Of course, I cannot speak for what went on in the Department; but we know that last year similar action was taken with regard to the Dominican Republic, and resulted in having about $12 million go into the Treasury; 2 cents a pound on the quota. In that sense, this action is not a complete break with the past.

I, myself, doubt that the President has been able to give any consideration to this amendment.

Mr. ANDERSON. That is why I wondered about this proposal. The White House did the same thing that the Senator from Illinois suggests. So how does the Senator know that the White House has changed its position or that President Kennedy does not believe in doing the same thing President Eisenhower did?

This testimony by the majority leader is astonishing. President Eisenhower did exactly this in regard to the price paid to the Dominican Republic.

The PRESIDING OFFICER. The hour of 4 o'clock has arrived; and, under the order which has been entered, further debate is not in order.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the time available for debate be extended 1 minute.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. DIRKSEN. I wish to correct the record: On the night of September 1,

at midnight, I handled the sugar bill on this side of the aisle. This question of a fee never arose, and no such provision was included in the bill. In that connection, it is only necessary to examine the RECORD, from which it will be found that we never discussed that aspect of the matter.

The only question involved at that time was the giving to the President of flexible authority, in the national interest, to bypass the Dominican Republic, to be able to dispose of the excess sugar we lopped off the Cuban quota. And that is the record.

Mr. ANDERSON. Mr. President, let us keep this record a little straight.

The PRESIDING OFFICER. The additional time available for debate has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the time available for debate be extended—for the last time, I hope—for 3 additional minutes.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. MANSFIELD. I yield now to the Senator from New Mexico.

Mr. ANDERSON. Let me say that the Senator from Illinois, the Senator from Louisiana, and other Senators were present when Larry Myers, the head of the sugar branch, said the Dominican Republic sugar was handled in exactly this fashion.

Does the Senator from Illinois agree?

Mr. DOUGLAS. That is correct.

Mr. ANDERSON. So the fact is that we handled the Dominican Republic sugar by cutting off this premium.

Now the Senator proposes it; but no one proposed it in the Finance Committee. It took a long time to take action to remedy what obviously is an injustice to the American people—a loss to the Treasury of $150 million, for the benefit of the sugar lobby.

Mr. MANSFIELD. Mr. President, I must interrupt. I do not like to be associated with the sugar lobby, because I am not associated with a sugar lobby. I am trying to do the best I can for what I think is the administration's point of view; and if there are sugar lobbyists or if there are sugar speculators, they should be identified, for all to see.

But let me say, in regard to my position and that of other Senators who are associated with me on this particular matter, that we are not associated with any sugar lobby or with any group of speculators; and I want that fact stated for the RECORD.

Mr. ANDERSON. Who made the money from this transaction? Did the Federal Government make it? The Senator from Illinois, the Senator from Louisiana, and all the rest of us know that it did not go to the Dominican Republic. It went into the Treasury of the United States.

Mr. HUMPHREY. Mr. President, will the Senator from Montana yield to me?

Mr. MANSFIELD. I yield.

Mr. HUMPHREY. Let us set the record straight. In the administration there was a division on this proposition. But now that division has been reconciled. I know that, because I was in on the discussions.

The White House wants this committee amendment defeated; and I wish to say that I am sympathetic with the view of the White House in that connection.

The White House wants this committee amendment defeated because we are in a critical situation with our Latin American neighbors, and the foreign policy requirements overcome the Treasury's requirements.

Certainly it is time for us to put the foreign policy requirements ahead of the requirements of the Treasury.

That is not to say that we shall not have an opportunity to review this situation. But there was no official testimony from the administration on this matter. The Department of Agriculture has one point of view, but the State Department has another point of view. However, that division has now been reconciled at the White House. Mr. Kennedy is in charge of the White House; for a change, we have someone who is running the White House. And this is the administration's point of view.

Mr. DIRKSEN. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. FULBRIGHT. Mr. President, I demand the regular order.

The PRESIDING OFFICER. All time available for debate has expired, and the regular order is demanded.

Mr. FULBRIGHT. Let us proceed to vote.

Mr. DOUGLAS. Mr. President, I rise to a parliamentary inquiry.

Mr. MANSFIELD. Mr. President, I believe we should request the ordering of the yeas and nays on this question.

Mr. DIRKSEN. Yes, Mr. President; and I ask for the yeas and nays.

The PRESIDING OFFICER. On this question, the yeas and nays are requested. Is there a sufficient second?

The yeas and nays were ordered.

Mr. DIRKSEN. Mr. President, will the Chair state the pending question?

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Louisiana to strike out section 4.

Mr. DIRKSEN. As I understand, the motion or the amendment at the desk has been offered by the distinguished Senator from Louisiana [Mr. ELLENDER]; and his amendment would strike the Douglas amendment from the bill.

The PRESIDING OFFICER. That is correct.

On this question the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MONRONEY (when his name was called). On this vote I have a live pair with the Senator from New Mexico [Mr. CHAVEZ], who is unavoidably absent. If he were present and voting, he would vote "yea." If I were permitted to vote, I would vote "nay." Therefore, I withhold my vote.

Mr. KERR (when his name was called). On this vote I have a pair with the Senator from Oregon [Mrs. NEUBERGER]. If she were present, she would vote "yea." If I were permitted to vote, I would vote "nay." Therefore, I withhold my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Tennessee [Mr. GORE], the Senator from Indiana [Mr. HARTKE], and the Senator from Oregon [Mrs. NEUBERGER] are absent on official business.

I also announce that the Senator from Minnesota [Mr. MCCARTHY] is absent because of illness.

I further announce that the Senator from Texas [Mr. BLAKLEY] is necessarily absent.

I further announce that, if present and voting, the Senator from Texas [Mr. BLAKLEY] would vote "nay."

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER], the Senator from New Jersey [Mr. CASE], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The result was announced—yeas 55, nays 34, as follows:

[No. 25]

YEAS—55

Aiken	Gruening	Metcalf
Allott	Hart	Miller
Beall	Hayden	Morton
Bennett	Hickenlooper	Pastore
Burdick	Hickey	Pell
Bush	Hill	Prouty
Byrd, W. Va.	Holland	Randolph
Cannon	Hruska	Robertson
Capehart	Humphrey	Saltonstall
Carroll	Jackson	Smathers
Cooper	Jordan	Smith, Mass.
Dirksen	Kefauver	Smith, Maine
Dodd	Kuchel	Sparkman
Dworshak	Long, Hawaii	Stennis
Eastland	Magnuson	Wiley
Ellender	Mansfield	Williams, N.J.
Engle	McClellan	Young, N. Dak.
Ervin	McGee	
Fong	McNamara	

NAYS—34

Anderson	Douglas	Proxmire
Bartlett	Fulbright	Russell
Bible	Javits	Schoeppel
Boggs	Johnston	Scott
Bridges	Keating	Symington
Byrd, Va.	Lausche	Talmadge
Carlson	Long, Mo.	Thurmond
Case, S. Dak.	Long, La.	Williams, Del.
Church	Morse	Yarborough
Clark	Moss	Young, Ohio
Cotton	Mundt	
Curtis	Muskie	

NOT VOTING—11

Blakley	Goldwater	McCarthy
Butler	Gore	Monroney
Case, N.J.	Hartke	Neuberger
Chavez	Kerr	

So Mr. ELLENDER's motion to strike was agreed to.

Mr. ELLENDER. Mr. President, I move to reconsider the vote by which the motion to strike was agreed to.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Minnesota to lay on the table the motion of the Senator from Louisiana.

The motion to lay on the table was agreed to.

Mr. ANDERSON. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

Mr. PASTORE. Mr. President, may we have order in the Chamber?

The PRESIDING OFFICER. The Senate will be in order. The Senator from New Mexico is recognized.

Mr. ANDERSON. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

Mr. MANSFIELD. Mr. President, will the Senator yield before he offers his amendment?

Mr. ANDERSON. I yield.

Mr. MANSFIELD. Under the unanimous-consent agreement entered into, it was thought we would finish consideration of the Ellender motion by 4 o'clock. It is now 4:25 p.m. It has been previously agreed that there will be a vote on the Anderson amendment at 5 o'clock If the Senator desires, I think we should have at least 1 hour on his amendment, the time to be divided equally.

Mr. ANDERSON. I thank the distinguished majority leader, but I shall be very happy to have the schedule of time adhered to, and to vote at 5 o'clock.

Mr. DIRKSEN. Some Senators on this side of the aisle desire time. I ask the Senator from Nebraska whether he would like some time.

Mr. CURTIS. Yes.

Mr. ALLOTT. Mr. President, I should like to have some time.

Mr. DIRKSEN. I hope the Senator will entertain a request that there be 1 hour on the amendment, with the time to be equally divided. We probably will not use all the time.

Mr. President, I ask unanimous consent that on the Anderson amendment the time be limited to 1 hour, under the usual conditions of germaneness of other amendments and so forth, with the time to be equally divided, one-half the time to be controlled by the mover of the amendment and one-half the time to be controlled by the minority leader.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois? The Chair hears none, and it is so ordered.

The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. At the end of the bill it is proposed to insert the following new section:

SEC. —. (a) The proviso preceding subparagraph (1) of section 408(b)(2) of the Sugar Act of 1948, as amended, is amended to read as follows: "*Provided, however,* That such quantity shall first be allocated to domestic areas and any part of such allocation that domestic areas are unable to fill shall be apportioned in raw sugar as follows:"

(b) Section 302(b) of the Sugar Act of 1948 is amended by inserting immediately after the first sentence thereof the following: "Whenever the Secretary establishes restrictive proportionate shares for farms pursuant to this section, he shall, insofar as practicable, protect the interests of new and potential producers of sugar beets in states, counties or parts thereof that have no acreage allotments, as well as new growers in old areas, under this Act."

Mr. ANDERSON. Mr. President, the amendment was offered for myself and Senators HAYDEN, CHAVEZ, KERR, YARBOROUGH, BIBLE, BLAKLEY, and CURTIS. Other Senators who have asked to be named as cosponsors are Senators JACKSON, MAGNUSON, RANDOLPH, CANNON, BURDICK, and MONRONEY.

Mr. CASE of South Dakota. Mr. President, will the Senator yield for a question?

Mr. ANDERSON. I yield to the Senator from South Dakota for a question.

Mr. CASE of South Dakota. I raise the question so that the Senator's amendment will not be misinterpreted. The impression might be that the Senator's amendment would extend whatever protection there is for new growers to certain States, including the States of New Mexico, Arizona, and perhaps Texas.

Mr. ANDERSON. That is not a correct interpretation. I have discussed this situation many times with the able Senator from Nebraska [Mr. CURTIS]. The Senator and I discussed it in the committee the other day. It was our desire to see that some areas in some old States and in some new States might be recognized. The language is not restricted to any small group of States.

Mr. CASE of South Dakota. I thank the Senator for his comment. I think it would not be good legislation to say we would do something for only two or three States. It should be general legislation, and whatever States can qualify under the general principle should have an opportunity to do so.

Mr. ANDERSON. I thank my longtime friend from South Dakota. I say to the Senator, there was a story in the newspapers which stated or implied that the amendment I presented would apply to only five States. It would apply to every State. We specifically singled out certain States because we were talking about a sugar mill in an area which did not have a sugar mill. This amendment has been worked out with Senators who wished to make sure that the quota might be made available to all States.

Mr. President, I propose an amendment to H.R. 5463, which would, in effect, first allocate the Cuban sugar quota to domestic areas and which would provide that any part of such allocation the domestic areas are unable to fill shall be apportioned in accordance with section 408(b)(2)(i)(ii)(iii) of the present act.

The intent of the amendment is to make certain that the domestic growers in the continental United States shall be permitted to grow at least a part of the sugar which was formerly supplied by Cuba.

Section (b) of my amendment is intended to assure fair treatment to the beet sugar growers both old and new, in both the old and the new areas, should acreage restrictions be reimposed.

I realize that there are no acreage restrictions in effect now and that domestic growers may plant any amount of sugarcane or sugarbeets they desire to plant. Under these circumstances, it is difficult to legislate in regard to distribution of sugar quotas and acreage allotments among domestic growing areas should restrictions be reimposed. The proposal before us would extend the present law over two planting seasons. In view of the Cuban situation, it does not seem likely that, within the time of this extension, quotas would be restored to Cuba, nor is it likely that acreage restrictions would be reimposed on domestic growers.

If it should become necessary to reimpose acreage restrictions, section (b) of my amendment would show some congressional intent in regrd to acreage allotments. I would hope the Secretary of Agriculture would seek some guidance from Congress or in some way make sure that new growers in new and old areas are given the same treatment as old growers and old areas.

This problem received a great deal of attention in the Finance Committee. I realize that it is impossible in a temporary bill to answer all questions anyone might have. This measure was merely an attempt to say that when we reallocate the Cuban acreage, we shall take into consideration the needs of those parts of the United States which have long been seeking additional acreage.

The able Senator from North Dakota [Mr. YOUNG], whose views on agricultural policies have been before the Congress many times, and whose fidelity to the farmers of his section have never been questioned by anyone, because he stands up and fights for them unceasingly, came before the committee and pointed out that the farmers in the Red River Valley could use three times the acreage they now have.

The way the law is now operating, the Cuban sugar quota must be allocated under an allotment to certain nations first, and if there is any allotment remaining after all other areas that are not traditionally sugar producers, in large extent, are taken care of, then an acre or two might be allotted to the farmers of North Dakota. I do not think that is right.

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. YOUNG of North Dakota. I deeply appreciate the comments of the distinguished Senator from New Mexico, who formerly was Secretary of Agriculture and worked hard and effectively for the farmers of this Nation. I join in support of his amendment. It seems to me that this amendment would provide the only means producers of this Nation could receive recognition. Our producers are entitled to additional acreage. We can and do produce sugar at a reasonable price.

Mr. ANDERSON. A short time ago we were discussing the possibility of substantially increasing the sugar acreage, and some who are connected with the sugar industry pointed out that the Red River Valley, both in Minnesota and in North Dakota, was one of the most likely spots for such production.

There is an area in Kansas which could be—and likely will be very shortly—a very interesting area for the production of sugar. There is an available area in the State of Texas where there is no sugar mill. It is true that anyone can plant sugarcane or sugarbeets, but not everyone can sell sugar.

I wish to point out that the way the law is operating is not the way it was originally designed. In large degree, the Sugar Act of 1948 was not designed on

the floor of either House of Congress. It was drafted in the Office of the then Secretary of Agriculture, and those who were producing sugar were brought into that Office.

We brought in representatives from Hawaii, the Philippines, and cane and beet sugar producers. We brought representatives from Cuba. We allotted a great portion of all the sugar that would be available to the U.S. market, which then was approximately 8,300,000 tons. It was decided that there were certain fringe areas that might want only a few thousand tons of sugar. Therefore the bill named places for a quota—such as Panama, Costa Rica, and such areas.

When Cuba dropped out of the market, those areas then became the most favored nations. Whether anyone liked it or not, those nations received very large quotas of sugar. It also resulted that longtime friendly nations, such as Brazil, which had had large production of sugar and no possibility of a market, were cut off and told that they could not supply sugar at all. Brazil has about a million tons of sugar surplus. Last year it sold 100,000 of those tons to the United States.

We said to this friendly nation to the south, "Go out and find your own market somewhere outside the United States, while we receive great quantities from Mexico, Peru, and the Dominican Republic."

It is true that the report which was filed on March 14, of this year, by the chairman of the Senate Committee on Agriculture and Forestry shows clearly that the Dominican Republic should have had a quota of 130,000 tons of sugar, and it sold that quantity under its quota. But it sold 271,000 tons in addition to its quota because of freak provisions of the law.

Such was not the original intent. The original intent was that Cuba should be the great producer. Cuba had been our most substantial supplier of sugar, and when Cuba dropped from the market it so completely disorganized things that we could not apply the machinery of that law to some other plan.

Someone might say, "Why worry now? It will be only a short time before we write permanent legislation on this subject."

We have been trying to write permanent legislation for the past 4 or 5 years, and it has never been written. A joint resolution or a bill is received from the House of Representatives in the last 24 or 48 hours before expiration of the act, as this bill has been presented, and the Senate is told to take it. We are told, "You cannot possibly tinker with the quota system in 48 hours."

As one who tinkered with the quota system and established it in 1948, in large measure, I say that it is not an insurmountable problem.

All that we have tried to say in the bill is that when we get to the problem of distribution of quotas, we shall not overlook domestic areas which have the right and the desire to produce sugar and can produce sugar for the American market.

I see in the Chamber the able Senator from Nevada [Mr. BIBLE]. Nevada has not been a great sugar-producing State because, it is said, the growing areas are so far from a mill that no producer would be interested. Yet farmers in that State are saying to the Senators from Nevada [Mr. BIBLE and Mr. CANNON], "Why do you not give us some markets so that we can grow sugarbeets?" Those farmers have good soil. They have rights under the Colorado River project. They must show they have a good crop. They cannot show it at the present time because they have had no opportunity of growing 1 pound of sugarbeets.

Mr. BIBLE. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. BIBLE. I wish to associate myself with the remarks of the distinguished Senator from New Mexico, and wish to be a cosponsor of his amendment.

The history of sugarbeet production in Nevada goes back to 1912, when the Newlands project, the first reclamation project in the entire United States, was located in Churchill County, of which Fallon, the old town, is the county seat. There was a sugar industry there as early as 1912, 1913, and 1914. It ran into some problems and died out.

I am happy to say that in the last 4 years producers managed to secure a small allotment. First, they had an allotment of 500 acres, which was increased to 584 acres. The farmers are delighted with their new crop, which shows great promise in strengthening the agricultural economy of our State. An allotment of 584 acres is certainly a modest, if not a meager, one. Farmers inform me that it is insufficient as an economic unit inasmuch as they are required to ship the sugarbeet some 200 miles. I am told that the least amount that they need is an acreage in the neighborhood of 1,500 acres.

This area is the site of the first reclamation project in the United States. What the Senator from New Mexico has said about our firm allotment of water from the Colorado River is equally relevant. We have a valley which is ideally situated—soilwise, waterwise, and climatewise—to be a thriving sugarbeet-producing area.

I believe the amendment of the Senator from New Mexico is worthy and worthwhile. I heartily support it. I thank the Senator for directing attention to the need of the State of Nevada.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. HOLLAND. As I read the amendment offered by the distinguished Senator from New Mexico, it seems to provide for new growers who do not have a record of production, and wish to grow beets for sugar production. I wonder why the amendment does not apply equally to those who wish to go into the production of sugarcane? We have thousands of acres in our State whose owners are looking for an opportunity to produce sugar. As the distinguished Senator knows, large investments are now being made in the building of new mills and the like. Why are not the sugarcane producers given equal treatment along with the sugarbeet producers?

Mr. ANDERSON. I can only say to the Senator from Florida, in strict honesty, that the reason they were not included in the amendment was that the amendment was hastily drawn, and I overlooked the cane sugar that certain producers wanted to produce.

I modify my amendment in the second line from the bottom by adding the words "and sugarcane" after the word "beets."

What the Senator from Florida has said is absolutely correct. The people in Florida have an ideal place for growing sugarcane. They are fine producers of sugarcane. If I am correctly informed, right now there is a large development going on in Florida. I welcome it. As the Senator from Florida knows, when we had hearings in committee I said that people who produce sugarcane—and this is largely in Louisiana and Florida—have never used their quotas in the last few years. They have not been breaking any regulations. During wartime the people of those States patriotically surrendered their cane crops and planted crops which were considered to be necessary to further the war effort. They would do the same thing tomorrow. I have no doubt about that. They have a fine location for growing sugarcane. They ought to be allowed to grow it. They should not be put in the position where countries outside the United States take away from them a market that ought to be normally the market of the United States. I am happy that the Senator from Florida has called my attention to this inadvertence, and I am very happy to be able to correct it.

Mr. HOLLAND. I thank the Senator.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. CARROLL. The Senator knows of my interest in the sugar problem, and the interest of my State, which is the second largest sugarbeet producing State in the country. Would the Senator's amendment in any way diminish the acreage which is allotted now?

Mr. ANDERSON. No; it would not.

Mr. CARROLL. With respect to old growers, I mean.

Mr. ANDERSON. The old growers would have the same rights as they have now. The amendment would not disturb the growth factor. The amendment merely provides that if we close down on Cuban sugar and deal out Cuba, or if Cuba decides to move out of the market, the first time we start allotting this acreage on a permanent basis we should take into consideration these new areas.

Mr. CARROLL. Does the Senator know of any new areas in Colorado that would be affected?

Mr. ANDERSON. I believe that the entire southeastern corner of Colorado would be affected.

Mr. CARROLL. Would the amendment in any way prevent an enlargement of the allotments which the old growers have in some of these areas?

Mr. ANDERSON. No. I specifically pointed out that this would affect old and new growers. As a matter of fact, I will say to the Senator from Colorado that in the year 1956 there were 837,000 acres

of beet sugar in the United States. In this year of 1961, there will be 1,100,000 acres. There has been, in effect, a factor of growth. We want that factor of growth to continue. I would like to see it grow constantly. I only say that along with that there are certain new areas that may need new production.

Mr. CARROLL. Over on the western slope of Colorado our sugarbeet growers have a special problem. They need more beet acreage. They have an economic problem involving the Delta processing plant. The plant is not an economic operation because of insufficient beet production. Would the Senator's amendment strengthen the position of the western slope beet farmers?

Mr. ANDERSON. Unquestionably they would be helped, if a new allotment were made. The amendment merely says to the Secretary of Agriculture, "You do not have to go out and hunt for areas in Mexico or in Peru or in Costa Rica, or anywhere else. You can see that sugar can advantageously be produced within the United States."

I believe that to be a wise provision. In other words, when the question comes up with respect to Cuban acreage, that can be taken into consideration. Some years ago an attempt was made to cut down on the Cuban acreage. I said that Cuba had supplied us with sugar during the war years, and during that period had perhaps supplied us more than we had a right to ask it to supply us. I therefore fought against the attempt to cut down the Cuban allotment. The Senate supported my view and voted against the proposal.

I am not hostile to Cuba. However, when there is a possibility that Cuban sugar will be sold behind the Iron Curtain, or if Cuba should go out of the market, I say the next logical place to turn for the supply of sugar we need is to the farmers of the United States. That is all I want to do.

Mr. CARROLL. Mr. President, if the Senator will yield, I should like to ask unanimous consent to have printed in the RECORD at this point a telegram which I received from Mr. Kenneth Matchell, secretary of the Western Colorado Beet Growers Association, expressing the concern of western Colorado farmers over their future unless steps are taken to provide them some help.

Mr. ANDERSON. I do not object.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

GRAND JUNCTION, COLO.,
March 20, 1961.

Senator JOHN CARROLL,
Senate Office Building,
Washington, D.C.:

On matter of investigation of Holly Sugar Co. best purchasing policies at Delta factory understand you intend to evaluate matter soon. We growers accepted lower 1961 contract offered by company, with understanding that plant would close if rejected. Arrangement uneconomic, and can't continue. Growers would welcome any action that could strengthen the sugarbeet industry in western Colorado-eastern Utah. Loss of industry would be serious to entire area.

WESTERN COLORADO BEET GROWERS ASSOCIATION,
KENNETH MATCHELL, *Secretary.*

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. ELLENDER. I am trying to understand what the amendment of the Senator would do. Does it deal with the Cuban quota only?

Mr. ANDERSON. It deals with the Cuban quota only.

Mr. ELLENDER. Does it allocate quotas to new production areas on a permanent basis?

Mr. ANDERSON. No; it does not.

Mr. ELLENDER. Under the law as it now stands, producers may plant as much as they wish.

Mr. ANDERSON. They cannot have any assurance, however, of the market, because they do not know what the procedure will be. The amendment provides that and when the Cuban sugar stays out of the market, the Secretary of Agriculture will try to find ways to take care of the American producers.

Mr. ELLENDER. If we write a long-range sugar program in 4 or 5 months, how will any future quota allocation be affected if nothing is mentioned about permanency of those quotas in the Senator's amendment. The Senator has said his amendment does not provide for quotas on a permanent basis.

Mr. ANDERSON. I say to the able chairman of the Committee on Agriculture and Forestry that if the Committee on Finance of the Senate and the Committee on Agriculture and Forestry of the House write a new bill incorporating permanent legislation in 4 or 5 months, the provisions of that bill will be applicable, not the provisions of the pending amendment. The amendment merely suggests that if we do not succeed in writing a new bill, but continue to extend the old law round after round, as we have been doing, with all its inadequacies—and I am sure the Senator admits it is inadequate—we will try to take care of the domestic growers.

Mr. ELLENDER. The Senator knows that I said I was sympathetic with the situation in the beet areas, and that in the future some quotas should be allowed these areas on a permanent basis. But I still feel that this action ought to be done when a long-range law is enacted.

Mr. ANDERSON. The Senator from Louisiana is completely correct in that respect. All I say is that this is a declaration of intent which I believe should be taken into consideration. The great defect in the present Sugar Act is that it was written in one kind of world, and that kind of world has changed. If any Senator had said on the floor of the Senate in 1948 that he would vote against the sugar bill because Cuba would be our enemy, under the influence of our most pronounced enemy, he would have been laughed off the floor of the Senate. Cuba was our great friend. Therefore, when the Secretary of Agriculture proposed that Cuba be given preferential treatment, and an apportunity to produce vast crops of sugar and to sell them to the United States, no one objected.

I have tried to point out that one of the reasons why, in 1946 and 1947, I purchased Cuban sugar crops in behalf of the U.S. Government, was that the total purchases ran to about $961 million, probably the largest sugar bill in the history of the world. It was no great problem, because we were going to sell back to Cuba considerable supplies of American agricultural products.

Mr. President, we are no longer in that kind of world. That world is over. There are people in this country who would like to produce sugarbeets, to relieve some of the pressures of the surplus crops, and they feel they should have a new claim on the sugar market. The world has changed. Anyone who would have predicted that the situation we knew years ago would disappear would not have been taken seriously. It has disappeared. The world has changed, and the American producers of sugar want to move into the market. I have no criticism of the cane sugar producers of this country. I pointed out that they did their patriotic duty in reducing cane sugar acreage and planting crops that were regarded as war crops during the last war.

I have no quarrel with the beet sugar producers of this country. They have come through in magnificent fashion. We have a fine beet sugar industry in this country, and I shall do all I can to protect it. I dislike to see the Cuban quota begin to go to other countries which, in subsequent years, will say, "We now have a right to your market, because we have been growing sugar for you, year after year, and you never gave us notice that you intended to change the quotas."

My amendment will give notice that some day we will act to allot some of the beet sugar crop to the producers of the United States. That is all I intended by my amendment.

Mr. DIRKSEN. Mr. President, I yield 10 minutes to the distinguished Senator from Nebraska.

Mr. CURTIS. Mr. President, I favor the Anderson amendment, but I wish to make it abundantly clear that I believe we must extend the Sugar Act, and not let it expire. To do otherwise would be to invite chaos in many respects, and I need not elaborate on that point.

Also, Congress should soon write a long-range Sugar Act, one having a duration of 5, 6, or 10 years; one upon which businessmen, farmers, consumers, processors, and our foreign friends can rely.

I favor the Anderson amendment because it is based on the principle of a greater domestic production of our sugar needs. When we consider all the agricultural problems in our country today, we cannot defend the position of buying 45 percent of our sugar from foreign countries.

In that connection, I wish to say something about the alleged subsidy. There never was a more misunderstood topic than the alleged subsidy on sugar. The users of sugar paid the total cost. Regardless of where the product is produced, the users buy it at a fair and reasonable price. As a matter of fact, we have the testimony of Mr. Myers, of the Department of Agriculture, that by reason of the operation of the Sugar Act, the Treasury gains in general revenues about $20 million each and every year. When we think of a subsidy—and we can

write any kind of definition we wish—usually it is when the consumer does not pay the full price. For example, if an article costs $1.50, and the Government pays 50 cents while the consumer pays $1, the 50 cents is clearly a subsidy. But in this instance, the consumers pay the full cost of the program. They buy sugar at a fair price, and the Treasury gains about $20 million every year.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a colloquy which took place between the junior Senator from Nebraska and Mr. Myers, of the Department of Agriculture, which appears at pages 64 and 65 of the hearings.

There being no objection, the colloquy was ordered to be printed in the RECORD, as follows:

Senator CURTIS. Now, I do not want to drag along in something too academic, but coming back to what is a world price, I believe I understood you to say to Senator BENNETT that only about 12 percent of the sugar moved in the world price.

Mr. MYERS. That is correct.

Senator CURTIS. So, in other words, 88 percent of the sugar moves in a sugar program of some sort or another?

Mr. MYERS. Under some form of protection.

Senator CURTIS. Yes.

Now, does that follow that the consumers of the 88 percent of that sugar obtained more than they should pay?

Mr. MYERS. No; I do not personally attach morals to prices. It is two different categories.

They are paid above the world price. I do know what the world price would be if we did away with all forms of protection. We would obviously shift production about tremendously in the world.

Senator CURTIS. What is a subsidized price? First let me ask you this: In general, do the consumers of sugar and, of course, in proportion to the amount of sugar they use, pay the cost of our sugar program and the cost of the sugar, with all the related costs in connection therewith?

Mr. MYERS. I think that inevitably is so; yes.

Senator CURTIS. Now, we get into a question of definition and semantics, do we not, when we talk about a subsidized price?

Mr. MYERS. Absolutely, and there will be as many definitions as you will have people defining the term.

Senator CURTIS. Yes. If we take a definition of a subsidized price, if it really costs a dollar and a half an article, and the Treasury pays 50 cents of it and sells it to the consumer for $1, that would be very clearly a subsidized price, would it not?

Mr. MYERS. Yes; I think every dictionary would agree that would be a subsidy.

Senator CURTIS. But definitely the operation of the Sugar Act is not that kind of subsidy, is it?

Mr. MYERS. No. There is a question, of course, when you get into the Sugar Act payments whether they would be defined as a subsidy under all definitions of the terms.

Frankly, I think this whole discussion of the semantics of subsidy a rather futile one because I see no difference in one technique versus another.

Why is it any different; you have a protective tariff that gives you a half percent than to have a tax and a payment that gives you a half cent? It is both a half cent. I do not see any difference.

Senator CURTIS. I understand that. But the point I am getting at is that the General Federal Treasury is not paying any part of the sugar that the housewife buys or the sugar that the manufacturer buys; isn't that correct?

Mr. MYERS. They are not getting into the problem today whereas we did during the war, and as many foreign countries do, of buying the sugar and selling it to their consumers, either at a higher price or at a lower price; that is correct.

Senator CURTIS. Yes; and in the main, has the Sugar Act been self-sustaining so far as general revenues of the Treasury are concerned?

Mr. MYERS. It has been decidedly better than self-sustaining.

Senator CURTIS. What do you mean by that?

Mr. MYERS. The tax, the processing tax, which the Sugar Act establishes is for one-half cent per pound or 10 cents per ton on the total quantities that we consume in this country, which is roughly $90 million a year and Sugar Act payments amount to something in the neighborhood of $70 million a year, so there is a gain there in the Treasury of about $20 million a year.

Senator CURTIS. It has been through the years——

Mr. MYERS. It has been through the years from $15 million to $20 million a year.

Senator CURTIS. Yes. So laying aside what has been accomplished or has not been accomplished insofar as order within the sugar industry is concerned, the fact remains that our General Treasury is about $20 million better off by reason of the act.

Mr. MYERS. Each year.

Senator CURTIS. Each year?

Mr. MYERS. Correct.

Senator CURTIS. And there are many things that governments do which are designed to raise prices to a fair level for producers or to raise wages to a fair level for workers that are not in the category of subsidies when we use the definition of paying part of the price out of the General Treasury; isn't that true?

Mr. MYERS. There are a great many that have subsidies, that is correct; yes.

Senator CURTIS. Yes. In other words, this is an act that has the same objective of all farm legislation, is it not?

Mr. MYERS. Yes, indeed.

Senator CURTIS. To raise to a fair price, and I do not think I will take any further time on that question of subsidies because, as we say, we can go on and get as many definitions as the English language could put together. But I am pleased at your statement to make it clear because there is a great misunderstanding in the country on the question.

I think the people who buy and use sugar should be the ones who pay for the sugar, and that is what happens in this program, is it not?

Mr. MYERS. That is correct.

Mr. CURTIS. Mr. President, there are many ways in which, when we write a long-range act, we can increase the domestic production of sugar. There is a growth factor by reason of the increasing population. There is a growth factor by reason of the use of more sugar. There are also deficits from other countries.

Also, we must realize that when the Communist government of Cuba is ousted, Cuba's quota need not be restored, and should not be restored, to the highest peak, because in the years just before the Castro regime Cuba had some abnormal circumstances which added to their share of our market.

Certainly the ratio of 45 percent produced abroad and only 55 percent produced in America cannot be defended at a time when we are paying billions of dollars to support agriculture in this country. I contend that if a foreign country were faced with grave agricultural problems, and a heavy load on the Treasury, and it failed to produce all of its own needs, so far as it could, we would not respect that country. Foreign countries will not respect us if we do not go as far as practicable in providing our own sugar needs. The first prerequisite of friendship in the world is not to be Santa Claus; it is to win the respect of the nations with whom we deal.

I shall not take the time to discuss in detail the needs of my own State.

Mr. CARLSON. Mr. President, will the Senator from Nebraska yield?

Mr. CURTIS. I would prefer to yield a little later.

The State of Nebraska produces about 72,000 or 73,000 acres of sugarbeets. We would like to increase that production substantially. We realize, however, that our main objective must be reached through long-range legislation which will provide for a gradual and orderly increase, both for the protecttion of the farmers and so that the sugar can be handled by the processors.

Many problems are involved, including the problem of transportation, but they are not problems which cannot be solved.

Mr. President, I ask unanimous consent to have printed at this point in my remarks my statement before the committee as it appears on pages 13 and 14 of the hearings.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR CARL T. CURTIS ON EXTENSION OF THE SUGAR ACT

For several years we have temporized by extending the Sugar Act for short periods of time to meet expiration deadlines. In so doing, we have failed to go to the root of many problems facing the domestic sugar industry.

We are in a period of time in which offshore production is no longer paramount in furnishing sugar needed for domestic consumption. At the same time we must take note of the fact that the domestic capacity can and should be increased to meet our ever-growing consumption of sugar. We know well that increase in sugar consumption is in direct proportion to increase in population.

A year ago I made a survey in Nebraska and determined that many farmers who now produce sugarbeets would like to increase their acreage. Also, many counties which have either surface or pump irrigation can well raise sugarbeets and should be afforded acreage allotments. Some of these counties have, through appropriate channels, petitioned for an allotment of sugarbeet acreage.

It does not seem prudent to me that we should deny domestic producers opportunity to share in this ever-expanding market. We must increase production and refining capacity gradually so that farmers can benefit from this orderly development. It is my understanding that refining capacity in the beet area can now process between 10 and 15 percent more beets than were processed last year. It is my hope that, in Nebraska, we can increase sugarbeet acreage by 50 percent over the next 5 or 6 years and increase refining capacity in like manner. Again, there is no supportable reason for relying on offshore production for 50 percent of our domestic requirements. The total farm problem today requires that we make

every effort to seek solutions wherever they are afforded. Increase in the production of sugarbeets will not, of course, solve the total problem, but it will provide economic benefits for farmers and any acreage planted to sugarbeets will surely avoid the growing of any crops which are now in surplus.

Mr. Chairman, in order that your committee might have a picture of the situation as it exists in Nebraska, I want to recite some facts that I found after making a survey of my own. I contacted the most authoritative source in a few counties right around my home area in Nebraska. I give you these figures not representing the total picture for Nebraska, but rather as samples.

I live in south-central Nebraska in the county of Kearney. That county has approximately 80,000 acres of land under irrigation, 45,000 of which is pump irrigation and the balance under the tricounty district. Kearney County had only 1,100 acres of beets last year. This 1,100 acres was divided between 27 growers. My survey indicates that a great number of farmers have asked for an allocation and that the county could handle several hundred more acres of beets.

Buffalo County, which neighbors my county on the north, has 1,800 acres of beets. In this country, also, sugarbeets are a very desirable crop. Each year farmers who have never grown sugarbeets are asking for an allotment and the present growers want an increase in acreage. Buffalo County has 115,000 acres of irrigated land, most of which is pump irrigation. The need for increased sugarbeet acreage is great.

Phelps County is now growing about 810 acres of sugarbeets. Beets are well adapted to that area. I have received a report that the county could well use an allotment anywhere from 2,500 to 4,000 acres. Phelps County has 100,000 acres of irrigated land provided by the tricounty and 470 irrigation wells.

Furnas County reports to me that they have only 230 acres of sugarbeets; it is a desirable crop and they could well use an allotment of about six times that amount. They have 30,000 acres under irrigation, approximately one-half of which is pump irrigation provided by 290 deep wells.

Franklin County produces no sugarbeets at the present time. Reports indicate that it would be a desirable crop. The county has 28,000 acres under irrigation and it would like a sugarbeet allotment up to 3,000 acres at the present time.

Webster County is another county without sugarbeet acreage allotment. They have about 15,000 acres under irrigation. A great many farmers in Webster County would like to raise sugarbeets. More than 20 made application for allotments for 1960, but none was available. The area is suited to the production of sugarbeets and they would like to start with an acreage of at least 2,000 acres.

Nuckolls County has shown a great interest in a sugarbeet program. The Republican Valley is irrigated from the Bostwick district, and sugarbeet acreage is greatly needed to round out their economy. I have received a great deal of supporting material from Nuckolls County.

Last year Hamilton County only had 13 farmers with a sugarbeet acreage who grew over 700 acres of beets. Local people report to me that sugarbeets are a desirable crop for the county. The county has 123,000 acres under irrigation, all of it being pump irrigation. At least one-third of this irrigated land could be used for the production of beets. Two years ago, 18 farmers asked for sugarbeet allotments, but only 13 requests were granted.

In Thayer County there are 34,000 acres under irrigation. Farmers are becoming interested in sugarbeet production and some have asked for an allotment but there has been none. There is no sugarbeet production in that county. At this time it is estimated they could profitably use an allocation of 800 acres.

Dawson County has approximately 300,000 acres of land under irrigation. This is provided by 2,800 irrigation wells and 70 miles of main canal bringing water from the Platte. Their sugarbeet allocation for 1960 was only 2,200 acres. It was reported to me that more farmers are asking for acreage and that those who have a sugarbeet acreage are seeking an increase. Dawson County could well use a sugarbeet acreage allotment between 10,000 and 20,000 acres.

Considerable interest exists in Red Willow County for increased sugarbeet acreage. The allotment for 1960 was a little over 150 acres. Sugarbeets are regarded as a desirable crop for the area. Red Willow County has 21,000 acres under irrigation and at the conclusion of reclamation projects underway in the area they will have an additional 22,000 acres. They could use an increase in sugarbeet production up to 2,000 acres instead of the 150 acres they now have.

I have been informed that Adams County produces about 100 acres of sugarbeets. This production is carried on by two farmers. An estimate was received that indicated that Adams County could use a sugarbeet allocation of 3,000 acres. They have almost 58,000 acres under irrigation, 56,000 of which is from pump irrigation. Farmers are asking for an acreage allotment.

These facts have been gathered from a limited number of counties. There are many more counties in the State where sugarbeet acreage is needed and being requested.

At the present time the U.S. annual consumption of sugar is about 9.5 million tons. Only 55 percent of this is produced within the United States, including Hawaii, Puerto Rico, and the Virgin Islands. Many foreign countries who share in our sugar market are seeking an increase. Other foreign countries are lobbying for a sugar quota from the United States.

Nebraska should have more sugarbeet acreage. It will add to the income of our farmers and to our economy generally. It will lessen the production of crops of which we have an oversupply. It just does not make sense when we are beset with low farm income and many agricultural problems for this country not to produce a greater portion of our sugar needs. Allocations to domestic producers of sugar should be increased. The foreign allocations should not be increased either in volume or by adding new countries as suppliers.

A long-range Sugar Act providing for an increase in domestic production should be passed by this Congress.

Mr. CURTIS. Mr. President, I now yield to the distinguished Senator from Kansas.

Mr. CARLSON. Mr. President, I associate myself with the remarks of the distinguished Senator from Nebraska. I support the Anderson amendment. The Senate today has the opportunity to cast a vote which will permit domestic growers to receive the benefit of an allocation of sugar. If we pass the bill without the amendment, we shall allocate quotas to countries where full quotas are permanently authorized. Therefore, I think it is important to protect our own interests, and not to permit countries which get quotas to think they are getting permanent quotas.

Mr. CURTIS. The Senator from Kansas has touched on an important point. That is, as the foreign suppliers of sugar share in our market this year, and they continue to share next year and the year after, in spite of anything in the law, they will insist that they have a vested right in our market. That is why a disservice will be done if we are unable to pass a long-range Sugar Act at least by next year.

Twice in 1960 we had short-term bills, but the Senate did not have a chance to consider them. I wish to read a paragraph of a statement by Mr. Myers, of the Department of Agriculture, about the danger of a claimed vested interest by foreign countries in this market. I read from page 64 of the hearings:

> The fact remains, however, that when price premiums amount to as much as $150 million a year, vested interests are claimed automatically. All the arguments in the book will be put forth by producers desiring to sell at such premium prices. Regardless of the wishes of either Congress or of the administrative agencies, the vested interest arguments of new suppliers will become stronger as the period of time they supply our market increases.

Mr. President, that was a quotation from a speech which Mr. Myers made before the Sugar Club in New York. I asked him if it was correct, and he said:

> That is correct.

I asked him if he was speaking of the foreign suppliers, and he answered:

> That is correct.

Mr. President, this measure without the Anderson amendment contains no notice that there is any intent on the part of Congress to increase the domestic production of sugar. I do not know how long it will be until Congress can pass a permanent law. It may be that the Anderson amendment will become academic in a matter of a few months. I hope we can reach it then.

I hope we can write such a program. But if we cannot, at least we should provide that our domestic producers shall have a right to increase the domestic production to the extent of the former Cuban quota, now canceled, or to the extent of that deficit, if the domestic producers can do so, before additional sugar is obtained from other countries.

The language under consideration would empower the Secretary to extend to additional U.S. farmers the right to grow sugarcane and sugarbeets; but in that provision we find the words "where practicable"—because we know that problems are involved. We know the pending amendment is offered to a measure which, if enacted, will expire within a few months. Nevertheless, a most important principle is involved; namely, whether the Congress agrees that the United States should continue to import 45 percent of its sugar requirements from foreign countries, not counting our offshore possessions and islands; or whether the Congress agrees that more U.S. farmers shall be allowed to share in supplying sugar for our domestic market, under a program that has worked successfully and has brought profits to the Treasury—a program by means of which the consumers of the food pay a fair price, but no more, for it.

To fail to do this would be but to add encouragement to all the nations which

are seeking to sell sugar to us and which will sell sugar to us; it would encourage them to believe that we are giving them something of permanent value.

Mr. President, I urge adoption of the Anderson amendment.

Mr. YOUNG of North Dakota. Mr. President, will the Senator from Nebraska yield, so that I may place a statement in the RECORD?

Mr. CURTIS. I yield for that purpose.

Mr. YOUNG of North Dakota. Mr. President, I ask unanimous consent to have printed at this point in the RECORD my statement and a colloquy in connection therewith which appear on pages 5 through 13, inclusive, of the hearings.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. MILTON R. YOUNG, U.S. SENATOR FROM THE STATE OF NORTH DAKOTA

Senator YOUNG. Thank you, Mr. Chairman, and members of the committee.

I appreciate appearing before this committee, and especially taking me out of order.

Mr. Chairman, in order to conserve time, I will ask that a telegram from the Red River Valley Beet Producers Association be placed in the record, as well as letters from Mr. E. N. Dornacker, president of the North Dakota Tri-County Sugar Beet Association and Mr. C. J. Campbell, secretary of the Minnesota-Dakota Sugar Beet Development Association.

(The telegram and letters referred to follow:)

GRAND FORKS, N. DAK.,
March 23, 1961.

Senator MILTON YOUNG,
New Senate Office Building,
Washington, D.C.:

Red River Valley Beet Growers Association of North Dakota and Minnesota want 21-month extension of Sugar Act passed as soon as possible. We are opposed to idea that any State or area be given special consideration of any kind. However, if any should be given, we think we are entitled to consideration as we have requests for 180,000 to 190,000 acres from farmers who have land proved to be adapted to growing sugarbeets. Please present this to Finance Committee for their consideration.

R. T. ADAMS,
H. M. TROWBRIDGE.

NORTH DAKOTA TRI-COUNTY SUGAR BEET ASSOCIATION,
Mayville, N. Dak., March 23, 1961.

SENATE FINANCE COMMITTEE,
Washington, D.C.

GENTLEMEN: In regard to the extension of the Sugar Act it is the feeling of our members that if there is to be any special allotments given to any group or area, under the short-term Sugar Act, we request that equal consideration be given our North Dakota farmers.

The Tri-County Sugar Beet Association is composed of 529 farmers, who would like to grow 58,305 acres of sugarbeets. Our farms are located in the heart of the Red River of the north on the North Dakota side. Our farmer members are farming about 400,000 acres of land. If we could get beet acres we would divert 58,000 acres to summer fallow and 58,000 acres to sugarbeets each year.

In the case of barley of which North Dakota ranks first in bushels produced, this would reduce our acreage of barley by 116,000 acres. The valley farmer in our area averages 35 to 50 bushels per acre in yield.

As you can see, should our members become beet growers, in our case it would reduce the production of barley by over 4 million bushels each year.

Sincerely yours,

E. N. DORNACKER,
President.

MINNESOTA-DAKOTA SUGAR BEET DEVELOPMENT ASSOCIATION,
March 24, 1961.

SENATE FINANCE COMMITTEE,
Care of E. W. Rising,
Washington, D.C.

GENTLEMEN: I am secretary of the Minnesota-Dakota Sugar Beet Development Association, which represents eight sugarbeet development groups, located in the Red River Valley of Minnesota and North Dakota. These eight groups have a current dues paying membership of 1,501 and have requested 130,819 acres of sugarbeets.

Speaking for and on behalf of the membership of the Minnesota-Dakota Sugar Beet Development Association, I request that if any new area is to receive special consideration regarding the growing of sugarbeets under the present extension of the Sugar Act, that this area represented by the Minnesota-Dakota Sugar Beet Development Association be given equal consideration.

Yours very truly,

C. J. CAMPBELL,
Secretary.

Senator YOUNG. Mr. Chairman and members of the committee, in this telegram our producers are asking for an additional acreage from 180,000 to 190,000 acres.

If the committee sees fit to make additional acreage available, I respectfully request that the Red River Valley of North Dakota and Minnesota receive its proportionate share of any such increase.

At the present time, over 98 percent of those farmers not having sugarbeet allotments have organized sugarbeet development associations to promote the production of sugarbeets in their respective areas.

The Red River Valley of North Dakota and Minnesota is ideally suited for sugarbeet production. It has large farms of fertile, level land, facilitating large-scale mechanized production.

It has adequate natural rainfall to provide the necessary moisture for sugarbeets.

The major crops of Red River Valley, other than sugarbeets, are primarily crops which are in surplus.

This is an area which, I daresay in the past 5 years, has produced an average wheat crop of 30 bushels to the acre. It is also the principal barley-producing area of the United States, and another crop which is in surplus.

I would like to point this out: In producing sugarbeets in this area, land must be summer fallowed, prepared a year before, so when you have a hundred acres of sugarbeets, you are actually taking 200 acres out of production of another crop.

Sugarbeet production in this area is, therefore, most desirable.

At the present time Red River Valley has approximately 1,200 growers of sugarbeets, producing 103,500 acres. From the standpoint of availability of suitable land this acreage could be tripled in the next 10 years, and farmers could increase their sugarbeet acreage as rapidly as processing facilities are made available.

Mr. Chairman, there is very little time left for reenactment of the Sugar Act before the expiration date.

I would be glad to support a committee recommendation for a simple 21-month extension.

I hope, however, that the time will not be far off when greater sugar allocations can be given to our domestic producers.

I think the Red River Valley Beet Producers Association of North Dakota, and other similar organizations in this area, as well as other areas, have made a good case for increased production.

Senator ANDERSON. Could I make a comment on what Senator YOUNG said?

Senator YOUNG. Yes.

Senator ANDERSON. Senator, you are suggesting, are you not, that the Red River area in your State has 103,000 acres now?

Senator YOUNG. Yes, 103,500 acres.

Senator ANDERSON. And you think that could be tripled?

Senator YOUNG. Yes, many times more than that.

Senator ANDERSON. Do you believe, then, we should freeze it for 21 months to put it through two new seasons so that they could not possibly increase it while it is being increased in Mexico and in Peru, the Dominican Republic? Don't you believe that farmers in North Dakota and Minnesota have some rights, too?

Senator YOUNG. Yes, Senator, I would like to see our domestic producers given a better allocation.

Senator ANDERSON. Good.

Senator YOUNG. If that is not possible, then I would support the 21-month extension. But I think we should start working in this direction.

Senator ANDERSON. I know how carefully and militantly and constantly you have supported the farmers of your State.

Senator YOUNG. Thank you.

Senator ANDERSON. Particularly on Durum wheat, where I did not always agree with you, but you have done a fine job, Senator YOUNG, and I would be the very first one to admit it.

Now, the situation of the very able Senator from Louisiana is a little different. The cane producers are not using all their acreage right now or were not the last time I noticed, so 21 months to them does not mean a thing. But it means quite a little to you and to your farmers.

Senator BENNETT. May I ask a question: Do you think between now and Thursday night, considering the rules of the Senate, we can rewrite the Sugar Act and get a bill through the House and take all these very complex problems and solve them? Don't you think we need—is not the real purpose of the extension, regardless of the number of months involved, to give us time to handle this complex problem?

Senator YOUNG. I am not nearly as familiar with the handling of the program as you and other members of this committee are. But I wanted to point out that I do believe that we should work as fast as we can toward giving domestic producers greater allocation, and if it is not possible to do that now, I hope the time would not be far off. I would therefore support an extension of the present act.

Senator ANDERSON. I would just like to remind Senator YOUNG, when we had this matter up in July of 1960, the House committee put in a conference report this language:

"As part of the understanding by the conferees, it was agreed that the conference on the part of the House would undertake to pass a sugar bill and transmit such to the Senate on the earliest possible date after the reconvening of the House in August."

That was August of 1960.

We would not have had a conference report. It was close in the Senate, and we had to wrestle with it until early in the morning. There were only three Senators from the Finance Committee present, Senator LONG of Louisiana, Senator BENNETT, and myself, and the only way we reached agreement was as the result of an absolute ironclad promise that something would be done by August of 1960.

Does the Senator recall anything being done? We get this same thing, I will say to the Senator, every time, 24 hours, 36 hours, at the most, "You have got to do it now. It is too late now to fool with it."

This is exactly what is being said here.

"Do you think you can write a whole new bill in 24 hours?" Every time it is the same story, because the House refuses to upset the situation.

The only way the Senate will ever get any good done for its people is to fool the House on it one time.

Senator CURTIS. Senator Young, you, with your longtime experience on the Committee on Agriculture, are you of the opinion that a substantial increase in domestic sugar production would be a good thing?

Senator YOUNG. Yes. I can think of nothing that would help agriculture more in this country, and it would go a long way toward solving the surplus problem.

As I pointed out in my State in order to grow 1 acre of sugarbeets, you summer fallow the land a year before, so the land is idle for a whole year. This means it takes 2 acres for 1 to produce sugarbeets.

Senator CURTIS. And you would also agree that to do that would be in the best interests of the total economy of the United States, considering our overall agricultural problems?

Senator YOUNG. Yes. I am alarmed, sometimes, at the uncertainty of our supply of sugar from foreign countries.

Supposing we had trouble with Latin American and South American countries like we had trouble with Cuba, our supply of sugar would be in a precarious situation.

Senator CURTIS. Well, entirely independent of that from the dollars and cents standpoint, when we consider the low cost of the sugar to consumer over a period of years, as compared with other prices, and when we consider the burden on the Treasury for our overall agricultural program, to have a just and fair increase of domestic production of sugar would be in the interest of the general economy, do you not believe?

Senator YOUNG. Certainly. I think one of the big problems contributing to our surplus trouble is our imports of agricultural commodities which we can easily produce in this country.

I realize that you have to import in order to export, but I do not think we should be importing commodities which for various reasons, it is better to produce in this country. I certainly think we should be producing a higher percentage of our sugar needs in this country now than we are.

Senator CURTIS. We are importing roughly 45 percent of our sugar consumption, and that is exclusive of what we get from our offshore possessions and territories; is that not true?

Senator YOUNG. Yes; that is right; and sugar is made available to the consumers of the United States at a reasonable price.

Senator CURTIS. Now, my next question does not call for an involvement in what is the best procedure, and conflict with the House, or anything of that sort. I do not want to minimize those problems, but I am not trying to discuss them at this time.

Do you feel that a long-range program of orderly and gradual increase of our domestic production should be undertaken as soon as possible before additional foreign producers feel they have a vested interest in our consumptive market here? Do you believe that?

Senator YOUNG. Yes; I do, and this is the danger: If you give a greater allocation to foreign countries, which you cannot maintain in the future, we are causing ourselves some trouble, and probably some enemies.

Senator CURTIS. Yes. If they are given something temporarily, if that temporary period is extended too long, and then it is changed at a later time, it may be regarded as an unfriendly act.

Senator YOUNG. Yes; that is right.

Senator CURTIS. Yes. I think also that the first step—I see the distinguished chairman of the Foreign Relations Committee here; I do not want to solve all his problems—but I think one of the first things necessary in dealing among nations is that you win the respect of other people, and certainly if there was any other nation in the world that had the agricultural problems that we have involving all of the billions of dollars, the billions it does annually, and that other nation happened to be importing 45 percent of a product that they could produce more of, I am afraid that we would question them a little bit, and we would not quite respect them as much as if they solved their problems a little better.

Senator YOUNG. Well, I have followed this situation quite closely for years, and I do not know of a single foreign country when they find themselves with surplus farm products that do not impose some kind of restrictions on imports, particularly from the United States, and that includes our good neighbor to the North, Canada, as good a neighbor as we have.

Senator CURTIS. Mr. Chairman, I do not wish to take further time, but I ask unanimous consent at the close of Senator Young's statement that I may insert a statement in the RECORD.

(The statement referred to will be found at the end of Senator Young's statement.)

Senator YOUNG. Thank you, Mr. Chairman.

Senator FULBRIGHT. Mr. Chairman, may I ask him a question?

The CHAIRMAN. Senator Fulbright.

Senator FULBRIGHT. The Senator from Nebraska raised the question. As the Senator from North Dakota knows, I am very new on this committee, and I know very little about this subject.

Senator YOUNG. You are far better than a green hand. If I may use the expression?

Senator FULBRIGHT. And he was asking about its effect on our overall economy, and whether this would be a good thing.

Can you tell us how much have the sugar producers received in direct subsidy since the Sugar Act has been in effect?

Senator YOUNG. Are you asking me that question?

Senator FULBRIGHT. Well, yes. You are an expert on this subject, are you not?

Senator YOUNG. I do not have the figures on hand. I suppose it has run into a sizable amount, but there would be no need for any subsidy whatever if American producers were given the same import protection that the producers of other countries are given for their farm commodities.

This is a crop which needs no subsidy whatever if we would just regulate the imports a bit.

Senator FULBRIGHT. You mean you could change the subsidy to a high tariff? If you would put a high enough tariff on it, it would enable you to sell it without a subsidy; is that what you mean?

Senator YOUNG. This is what other countries are doing. When the price of flax or rye in Canada is up, and the price is down in the United States, we can start shipping up there. After a while they impose an embargo on our grains.

Senator FULBRIGHT. Senator, I do not know enough about it to argue with you. I am trying to learn about our own situation here.

Is it a fact that we have paid a large amount of direct subsidy to the producers of beet sugar in this country?

Senator YOUNG. Well, almost every segment of our agriculture is now being subsidized in one form or another. This is so because we permit these imports.

Senator FULBRIGHT. Senator, I am only asking you about sugar. I am familiar with cotton. I know about that. I do not know about sugar because we do not grow any in my State, but do the sugar producers receive a direct subsidy?

Senator YOUNG. That is correct.

Senator FULBRIGHT. Do you know about how much?

Senator YOUNG. No; I do not have the figures.

Senator FULBRIGHT. Is it in the neighborhood of $1 billion, $1.5 billion in the last 15, 20 years?

Senator YOUNG. I have not gone into it. I am not a member of this committee that deals with the financial——

Senator FULBRIGHT. Does it run about $60 million, $75 million a year?

Senator YOUNG. That is about right.

Senator FULBRIGHT. How does it improve our overall economy, as the Senator from Nebraska says, if this is the kind of crop we have to subsidize to the tune of $60 million or $70 million a year?

Senator YOUNG. If we did not have this production here in the United States, and you ran into a world shortage, we would be paying through the nose to the tune of a much higher price, but because we have at least some production in this country, it tends to make us a little bit more independent of foreign imports.

Senator FULBRIGHT. That is not true in coffee, is it? We do not produce any coffee. Do you think on the same basis we ought to start coffee production in this country?

Senator YOUNG. It is not feasible.

Senator FULBRIGHT. Why isn't it? If you pay them enough it would be.

Senator YOUNG. No, I do not think you could, no matter what price you had.

Senator FULBRIGHT. You could grow bananas, could you not?

Senator YOUNG. No.

Senator FULBRIGHT. I do not understand the argument that this is good for the overall economy. There may be other reasons for it. If this is not an economic crop that can be produced competitively, then why is it good for the overall economy to subsidize it?

Senator YOUNG. Going back to your argument there——

Senator FULBRIGHT. I am not arguing: I am trying to find out what are the facts.

Senator YOUNG. If we only wanted cheap commodities, they can produce cotton cheaper in Mexico and in many countries in the world than we can in the United States.

We could import all of our cotton supply. We could get all of our sugar supply from other countries; we could get all of our wheat supply from other countries which have greatly expanded their production many of them with our help.

We have to maintain some semblance of a stable agriculture in this Nation. Sugar is one of the best crops to produce.

Senator FULBRIGHT. Why does not sugar have the same protection that cotton and rice and tobacco have? Why does it have a special act and come under that act and not under the act governing the same programs as other crops?

Senator YOUNG. Because sugar and wool are import crops. We import a sizable amount of our needs and, at times, they can be produced cheaper in foreign countries. I suppose both sugar and wool could be produced cheaper in other countries, and we could get all the supplies we wanted. We could just wipe out this industry entirely if we only wanted cheaper production.

Senator FULBRIGHT. You have that great a variation in prices of sugar even under this act. Didn't it go up very high during the middle forties to about 150 percent of parity?

Senator YOUNG. Whenever we have to depend on a foreign market, then the price goes up. During wartime in the past we paid a pretty high price for our sugar requirements.

Senator FULBRIGHT. We do in everything. But I mean the Sugar Act does not stabilize the price. They go up and down anyway, don't they?

Senator YOUNG. No. Sugar, the price of sugar, has been maintained at a very stable level for years.

Senator ANDERSON. Would you permit me just a minute?

He speaks of the high prices in the 1940's. That is when we were not under the Sugar Act.

Senator FULBRIGHT. There was no Sugar Act?

Senator ANDERSON. There was no Sugar Act in operation. It was written in 1948.

Senator FULBRIGHT. It was rewritten, but I thought there was an act——

Senator ANDERSON. Not in operation.

Senator FULBRIGHT. Not suspended?

Senator ANDERSON. Don't give up on the coffee, either, because we have some coffee in the Hawaiian Islands, and they are part of the United States.

Senator FULBRIGHT. If there is such a good thing here, do you think we might grow it in Arkansas if we go high enough?

Senator YOUNG. Pardon me?

Senator FULBRIGHT. Do you think we could grow sugar in Arkansas if the subsidy was high enough?

Senator YOUNG. I suppose we could, if it was high enough. But we would not want to produce it if it was in areas uneconomical.

Senator FULBRIGHT. What is your concept of being economical?

Senator YOUNG. If we produce at a reasonable price, and I think we are producing sugar at a reasonable price in the present areas of the United States where it is being produced.

Senator FULBRIGHT. You believe that?

Senator YOUNG. Yes.

Senator FULBRIGHT. What is the price of sugar now in North Dakota?

Senator YOUNG. There has been some variation, but for 10 years—I do not have the figures.

Senator FULBRIGHT. Will this add to employment, do you think, if you increase the production?

Senator YOUNG. It would greatly increase it, and not only because it requires a considerable amount of labor and expensive machinery—a beet topper and loader costs about $15,000, and they only last 2 or 3 years.

Senator FULBRIGHT. That is all.

The CHAIRMAN. Any further questions?

Senator YOUNG. Thank you, Mr. Chairman.

The CHAIRMAN. Thank you very much, Senator Young.

Mr. BENNETT. Mr. President, will the minority leader yield 5 minutes to me?

Mr. DIRKSEN. I yield 5 minutes to the Senator from Utah.

The PRESIDING OFFICER. The Senator from Utah is recognized for 5 minutes.

Mr. BENNETT. Mr. President, I can associate myself with everything the Senator from Nebraska has said about the various problems involved in the situation now confronting us as regards the Sugar Act. However, I have arrived at a conclusion different from the one at which he has arrived, because I believe there are in this situation one or two factors which he did not mention.

I find myself in the position of being about to cast a vote exactly the opposite of the vote I cast in the committee when the Douglas amendment was acted on there. I believe that at that time none of us in the committee realized the possible foreign-relations implications of the votes we cast at that time. On that basis, and in supporting the President in connection with this problem, today I reversed my previous position, and voted on the opposite side. In the committee, I voted for the amendments the Senator from New Mexico offered there, although they were slightly different from the ones he has offered here.

Mr. President, we are now approaching the deadline for the extension of this act. I agree with the Senator from Nebraska that it is most important that the beet-sugar producers and the cane-sugar producers in the United States have a permanent program cast on a new pattern. Certainly that is most necessary.

There is a great deal of justice to the claims that the would-be growers in new sugar-producing areas make for a share in this program. But we are about to enact a measure which will have 15 months' duration. That is not a sufficiently long time to justify the erection by investors of new sugar mills.

I very much fear that if the Anderson amendment becomes a part of this bill, one of two things will happen: Either the House will reject it—in which case we shall be back here, possibly at midnight, to report to the Senate the difficulties we have had in conference; or the House might accept it.

What worries me about its possible acceptance by the House is that the House has given us trouble every time we have faced the problem of trying to recast the pattern for the domestic production of sugar.

If the House were to accept this proposal, the House then could say to us, "Do not bother us again by asking for permanent legislation. We agreed with you in connection with the bill you passed just before the Easter recess."

Mr. President, what do we find in this amendment? There are two parts. I agree with the first part, and I certainly can support it. It is to the effect that before any allocation of Cuban deficits or other deficits is made to other offshore countries, the U.S. domestic industry shall be given an opportunity to supply that need, if it can do so.

But I could not support the second part of the amendment, because I believe it holds out a shadow, not a substance. I believe this situation could be used against us if the House should accept the bill. I believe this might prevent us from obtaining a permanent correction of this situation.

We need time to study it; we need opportunity to study it. But that has been rather effectively denied us for some 2 years.

The Senator from New Mexico told us that when he was Secretary of Agriculture, the Sugar Act was rewritten.

The PRESIDING OFFICER. The time yielded to the Senator from Utah has expired.

Mr. BENNETT. I should like to have 2 more minutes, if I may.

Mr. DIRKSEN. Mr. President, I yield 2 additional minutes to the Senator from Utah.

The PRESIDING OFFICER. The Senator from Utah is recognized for 2 additional minutes.

Mr. BENNETT. I thank the minority leader.

Mr. President, as I was saying, the Senator from New Mexico told us that when he was the Secretary of Agriculture, the Sugar Act was rewritten in his office. But I am sure it took weeks and weeks of consultation and negotiation before that language was agreed to. I do not think it was done between Tuesday noon and 4 p.m. on Wednesday.

If the pending amendment were in two pieces, I could support the first part—namely, that giving our domestic area the first chance to make up the Cuban deficit.

But although I still hope that we shall develop workable, permanent legislation on such a basis that the U.S. investors will proceed to construct new sugar mills, so it will be possible for new areas in the United States to have an opportunity to share in the sugar market, I am afraid this amendment would make that impossible.

Therefore, Mr. President, although I shall do so reluctantly, I must vote against the Anderson amendment.

Mr. ALLOTT. Mr. President, will the minority leader yield to me?

Mr. DIRKSEN. Mr. President, I yield 5 minutes to the Senator from Colorado.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 5 minutes.

Mr. ALLOTT. Mr. President, all of us have a great interest in this sugar legislation.

I hope that I may now have the attention of the Senator from New Mexico, because most of my remarks will be addressed to him.

Many factors must be considered when we provide either for new sugarbeet acreage in the United States or for new sugarcane acreage in the United States. I happen to be one of those who believe that the sugar producer in this Nation—whether he produces cane sugar or beet sugar—has long received less than he is entitled to, less than he should have received under the laws of the United States. In this respect, I agree completely with the Senator from New Mexico.

I also believe there are in this country areas which are not now producing any sugarbeets or any sugarcane—I speak now especially in reference to the production of sugarbeets, because my knowledge relates especially to that production—although they could produce those crops. There are also in this Nation areas now under production which could certainly increase that production greatly.

As a matter of fact, these are in our country areas in which sugarbeets are now produced where the farmers are operating on a marginal basis because they cannot produce enough sugarbeets year in and year out to make that operation really pay.

When we consider allowing new areas in our country to participate in the production of sugarbeets, we must consider also the types and kinds of sugarbeets to be raised.

I hold in my hand a clipping from a Texas newspaper. The article states that one of the western companies—The Great Western Sugar Co.—is at this time actually working with people in Texas to help them ascertain what type of sugarbeets is best for produc-

tion there. They now are working out a plan, so that when the time comes, they can actually produce those sugarbeets.

I have received a letter from Kenneth Matchett, Secretary of the Colorado Beet Growers Association, in which a desire is expressed for more beet production. I ask unanimous consent to have the letter printed in the RECORD at this point as a part of my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 27, 1961.

Senator GORDON ALLOTT,
Senate Office Building,
Washington, D.C.

DEAR SENATOR ALLOTT: We have recently had called to our attention certain publicity which purports to represent our position. We are forced to admit that under present economic circumstances and the existing cost-price squeeze the situation in the delta sugar factory district is far from satisfactory. This situation is not confined to this one area, as we understand farmers in many communities as well as in our new State of Hawaii and in Puerto Rico are in a depressed condition.

However, the directors of the Western Colorado Beet Growers Association are cooperating with the Holly Sugar Co. to the end that volume may be increased and the plant improved and preserved.

Ninety-nine percent of the beetgrowers of our community are dues-paying members of the organization which we represent.

We hope you will use your best efforts to see that the Senate follows the House action in extending the Sugar Act for a 21-month period.

Yours very truly,
WESTERN COLORADO BEET GROWERS ASSOCIATION,
KENNETH MATCHETT, *Secretary.*

Mr. ALLOTT. The Senator from New Mexico has said that all his proposal states is that consideration shall be given to allocation to domestic areas. Perhaps that is the Senator's intention, but the proposal in fact reads that such quantity shall first be allocated to domestic areas and that any part of such allocation which domestic areas are not able to fill shall be apportioned in raw sugar and so forth.

There are great areas with no production facilities, and where no beets have been grown before, and the proposal says this production shall be allocated to them. It says, "It shall be." The amendment could be amended to state that consideration shall first be given to allocation to domestic areas. I believe this would express more completely the idea espoused by the Senator from New Mexico when he was speaking a few moments ago.

I would point out what I think is another inconsistency in the amendment. That is in the second portion where it reads:

Whenever the Secretary establishes restrictive proportionate shares for farms pursuant to this section, he shall, insofar as practicable, protect the interests of new and potential producers of sugar beets—

And I understand the word "cane" was inserted in that language. Is that correct?

Mr. ANDERSON. That is correct. The word "cane" was added.

Mr. ALLOTT. I continue to read:

in States, counties or parts thereof that have no acreage allotments, as well as new growers in old areas, under this act.

While I may not know what this means in its entirety, I am pretty well able to determine that it means one thing, namely, that the only people who are going to get any real consideration and protection in this respect will be the new and potential producers of sugarbeets. There is no protection of the interests of those who already have a great investment in machinery devoted to the production of sugarbeets, and who could easily handle far greater amounts of beets than they do.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. ALLOTT. Mr. President, I ask for 3 additional minutes.

Mr. DIRKSEN. Mr. President, I yield 3 additional minutes to the Senator.

Mr. ALLOTT. I think the only conclusion that can be drawn is that the proposal would be a very great blow to those now growing sugarbeets.

Let me summarize my position in this way. I say to the Senator from New Mexico that if the amendment is adopted we will have a conference, and we do not know how we shall end up. Passage of the bill before the Friday deadline is of utmost importance. I am completely in sympathy with his position that there should be new sugarbeet areas in this country. I am in complete sympathy with the position that we in this country should not lose the windfall, if it may be called that, of the former allocation to Cuba, and part of it, at least, should be used in other areas of this country. It is about time for Americans to receive the benefit of that opportunity. But the proposal needs more study; and I will be standing alongside the Senator in any effort to put new areas into sugarbeet production. It seems to me, however, that the position taken by the amendment as written is one which the State Department and the country could not justify. All we would be doing, really, is chopping ourselves off from a chance to go forward.

The Senator from New Mexico has made his point. I think all of us are very much in sympathy with it, but I do not think this is the right type of amendment. It is my hope that the amendment will not be adopted, but that hearings can be held on the proposals contained in it.

Mr. ANDERSON. Mr. President, I yield 5 minutes to the Senator from Oklahoma [Mr. MONRONEY].

Mr. MONRONEY. Mr. President, I am glad to be a cosponsor, along with other Senators, of this amendment. Having observed the activities of Congress for 22 years, I have never known of any Government policy that would automatically inhibit the growing potential of American industry or agriculture. There has always been some provision for an opportunity for new growers or producers of various commodities or products when Government controls have gone into effect.

It seems to me that, if nature has been kind enough to various agricultural areas to enable them to produce an abundance of corn, wheat, or other crops, which means there have to be extreme curtailments of acreage allotments, then there must be some crack left in the door so farmers can hope to engage in some kind of production which their soil, climate, and availability of irrigation permit, and give them some hope of participation.

Certainly, we do not approve of the closed shop in agriculture; and the way the Sugar Act has operated has denied to a farmer, no matter how competent, or a farm, no matter how fertile, or with water resources, whether natural or irrigating water, the opportunity to participate.

Consequently, the act denies farmers the right of beet production. In my State we have developed a considerable amount of irrigated land. We have a climate which is suitable for sugarbeet growing. We have a cattle industry which works hand in glove with the sugar industry in the use of wastage of sugar mills and beet pulp, which is excellent cattle feed, and also for the use of sugarbeet tops, which are better than any other product for that purpose.

Certainly, this very carefully worded amendment merely asks for consideration in opening the door a little bit, so far as practicable, for the use of this very valuable crop to replace what has been denied us as a result of our relationships with Cuba.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. ALLOTT. The Senator has used the same words that have been used before, namely, "that just consideration be given."

I loaned my copy of the amendment to someone, but the opening words of the proviso are that they shall be allocated. That is not a provision for consideration. I think that would be fine, but the opening words of the amendment are, "they shall be allocated." Is the Senator aware of that fact?

Mr. MONRONEY. I am aware of it, and I am also aware that those who have had quotas and have been in business for years are given absolute freedom against marketing quotas and ability to split up the additional production. All we are asking is an opportunity for new producers to do something about it.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. ANDERSON. There is in the sugar legislation already ample opportunity for the growth factor. We do not want to change that at all. We want that opportunity. Under the growth factor there has been an increase from 837,000 acres in 1956 to 1,100,000 acres today. That is growth enough.

Mr. MONRONEY. That is correct. The population is continuing to grow at a very rapid rate. As the population increases, consumption of sugar increases. Are we to freeze production and put a "No Admittance" sign on the

doors of this very exclusive fraternity? Or are we going to say, in strong language, that it is not an exclusive fraternity, and give other States that have a hope of growing sugar an opportunity to do so?

The Senator from Colorado is well aware that States far away from sugar refineries are not to be given quotas unless there is some assurance that the sugarbeets grown there can be processed. We have an uphill pull trying to get into the fraternity. For that reason we would like to have a hope of interesting investors in such establishments.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DIRKSEN. Mr. President, I yield 3 minutes to the distinguished Senator from Florida [Mr. SMATHERS].

The PRESIDING OFFICER. The Senator from Florida is recognized for 3 minutes.

Mr. SMATHERS. Mr. President, I wish to associate myself with the aims, the ambitions, and the purposes of the amendment offered by the able Senator from New Mexico.

Like every other Senator who comes from a State which can produce sugar, whether it be beet sugar or cane sugar, I am of the opinion that the States should be permitted somehow to bring into being more acreage for the growing of sugar. I believe we all feel we are well qualified to do so.

Certainly the State of Florida has ample acreage and ample land available. There are many new producers who come to Florida who are most anxious to get under the umbrella, as we shall call it, and to start producing sugar.

I hope, in supporting the amendment, we do not have a sort of exercise in futility. As a practical matter, all of us recognize that we shall have to go to conference on the bill. There will be some problems with the other body.

We recognize that this is not the best way to consider such highly complicated sugar legislation. It is so complicated there is not even a full text of the Sugar Act in the Chamber anywhere.

Actually, in point of fact, we hardly know what we are doing. I hope, as a result of the discussion we are having today, we can get a commitment that there will be hearings held not only in the House of Representatives but also in the Senate.

The able Senator from New Mexico [Mr. ANDERSON] does have a copy of the law, but I do not know of any other Senator who has read it.

Mr. ELLENDER. The pertinent portion is in the report.

Mr. SMATHERS. The full text of the Sugar Act is not in the report.

The House has already agreed to hold hearings on the act in May. I hope the Finance Committee of the Senate, the members of which have been long anxious to thoroughly inquire into the problems of sugar, will hold hearings.

I can see no reason why the Senate should not hold hearings contemporaneously with the House. We can develop all aspects of this very complicated problem, so that we will know what we are doing with respect to new acreage, old acreage, foreign shore imports, refineries, and all the rest.

This is entirely too complicated a law to legislate on the floor of the Senate.

I wish to aline myself—and I am sure I speak for my colleague—with the aims, the purposes, and the hopes of the Senator from New Mexico. I think we are mostly going through a demonstration of the fact that we wish to accomplish something, even though we recognize it might not, as a practical matter, be accomplished in respect to the particular bill before us at this particular time.

The PRESIDING OFFICER. The time of the Senator from Florida has expired.

Mr. ANDERSON. Mr. President, I yield further to the Senator.

Mr. MANSFIELD. Mr. President, will the Senator yield to me?

Mr. SMATHERS. I am happy to yield to the majority leader.

Mr. MANSFIELD. There is a great deal of merit in the amendment, especially in the section (b), which reads as follows:

> Section 302(b) of the Sugar Act of 1948 is amended by inserting immediately after the first sentence thereof the following: "Whenever the Secretary establishes restrictive proportionate shares for farms pursuant to this section, he shall, insofar as practicable, protect the interests of new and potential producers of sugar beets and sugar cane in States, counties or parts thereof that have no acreage allotments, as well as new growers in old areas, under this Act."

The amendment would give some protection to those who have taken a chance on the unlimited acreage which was approved by the Department in the past year.

Mr. SMATHERS. The Senator is correct.

Mr. MANSFIELD. I agree that a great deal of study is needed on the proposed legislation. I hope, also, on the basis of representations which have been made, that there will be hearings. Representative COOLEY, the chairman of the House Committee on Agriculture, intends to start hearings in May. As soon thereafter as practicable, I hope the Senate Finance Committee will hold hearings to consider not only proposals of this kind, which are important, but also proposals such as the Douglas amendment.

The Douglas amendment was agreed to in the Committee on Finance yesterday, and considered by the Senate today. I hope proper consideration will be given to the amendment and to the most difficult legislative process, and that we shall have plenty of time to do so, instead of following a procedure, as has been done this time and was done the last time, of considering a bill at the last minute, when we do not have sufficient time to really understand and to discuss what is before the Senate.

Mr. SMATHERS. I thank the majority leader. I think we must support the particular amendment before us, because it is an expression of what all of us think ought to be done in the permanent legislation.

It is almost undignified to see the Senate operate in such a manner that it has to capitulate to the late hours and to the tactics of certain other Members of Congress, to get this type of law enacted. I believed we can start hearings. The other body has agreed to start hearings in May. We can hold hearings contemporaneously.

The committee can report an intelligent bill, a well drafted bill which will take into consideration all of the problems. I hope that can be done before the end of the session this year.

Mr. ANDERSON. Mr. President, I yield to the able Senator from South Carolina [Mr. JOHNSTON].

Mr. JOHNSTON. Mr. President, I wish to associate myself with those who are in favor of the amendment. There are many reasons why I am in favor of the amendment. One is that I do not think we ought to let the sugar allotment be tied up by other countries. We should keep it from becoming tied up by other countries, by using it at home, if possible and if the people wish to do so.

We must remember that with respect to the feed grains bill, which we passed a few days ago, we discussed the problems of the farmers who might wish to go into such an activity. We did that to help the soil bank.

I should be glad to see the farmers go into something. We might save a lot of money for the Government, also, in addition to providing some allotments which would go to growers in our country.

We must remember that when we give the quota to other countries we have to pay 2 cents a pound extra on every pound of sugar we get from those countries. We should take all those things into consideration when we try to legislate.

This proposal would tie up the quota for only a short while, until we can look into the law thoroughly.

Mr. ANDERSON. Mr. President, I yield 2 minutes to the senior Senator from Oklahoma.

Mr. KERR. Mr. President, I am happy to hear so many words of commendation for the purpose of the amendment. I hope it will be agreed to.

We shall have a conference with the House. I am of the opinion we can work something out with the House in this regard. Certainly we at least should go on record to demonstrate our purpose to achieve the objective of the amendment.

I hope the conferees will have a chance to see if they can prevail on the House conferees to accept the amendment.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that a statement I have prepared in support of the Anderson amendment may be printed in the RECORD at this point, together with supporting tables.

There being no objection, the statement and tables were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR YARBOROUGH URGING INCREASES FOR AMERICAN SUGAR GROWERS

As a matter of national safety, and for our own defense, we ought to produce more sugar at home.

The American people, and the people of Texas, are forced to buy 1 out of every 2

pounds of sugar they use from foreign sources.

Under the Sugar Act "quota system," areas within the jurisdiction of the United States are permitted to produce only 49 percent of the sugar used in the United States.

Sugarbeets form the best paying crop, not only in the high plains of Texas, but in many high plains regions of the central western part of the United States.

In my own State of Texas, the total State acreage allocations for sugarbeet production is 1,800 acres, out of a total acreage of over 1 million acres.

The thousands of American taxpaying citizens in the farm areas of wheat, cotton, and other controlled crops, who have been forced from drought to develop, at their own financial risk and cost, underground irrigation water, need and desire to produce a portion of the sugar that they and other American people consume—which, under present law and the proposed 15-month extension, must be purchased from foreign countries.

These citizens believe that this 21-month extension may very likely result in no permanent legislation that would give them the right to produce, even at the end of that period, and that we may well find ourselves in the same place on June 30, 1961, as we were in 1960, when, early in 1960, as well as following the conventions, they were promised that permanent legislation would be passed by the 1960, and again by the 1961, Congress before the deadline of March 31, 1961.

This extension of 15 months will delay, by another 2 years, new producing areas from starting the construction of refineries, the building of which will take 2 years—thus, they would be 4 years further away from production.

A permanent law needs to be enacted during this Congress. The full hearings should be held in the House. Arguments to the contrary will have the effect of postponing consideration of increasing the domestic production of sugar.

Logical reasons exist in favor of our country producing sugar. From the standpoint of independence from foreign sources, we need production, not only in the event of international conflict or war, but, as has been established by the Cuban example, in time of peace as well. Certainly, it is a good step in the right direction: it would aid in solving the unemployment situation; it would strengthen the farm economy considerably. Thus, the national economy would be helped, and the solution would help balance our crude reserve.

The State Department and the Department of Agriculture, representing the administration, both testified on March 27 that we need a permanent Sugar Act at the earliest possible moment, and that, if it could be written in a short time, they were in favor of doing so. The industry has likewise indicated the necessity of a permanent Sugar Act, as contrasted to mere extensions. It is of most importance to the new growing areas, which should have the right to participate in the production of sugar, that this be accomplished without delay.

Failure to write a domestic sugarbeet-producing section into the law now will kill the chances of the American farmer for immediate participation in this program. The domestic associations, representing 10,000 or more farmers and producers from Texas and other States, plead for action now—that is, before March 31—and they have every confidence in the ability of the Congress to produce an equitable bill for the taxpayer and farmer of the United States.

They believe that American growers should have priority rights in seeking an equitable solution.

Delays in facing up to the proposition of the American farmer producing sugar, cane and beet, complicate the consideration of all matters pertaining to the U.S. sugar law. When all foreign countries are heard, those who are favored may temporarily feel good, but we have not made friends with those whom we may deny the right to import sugar. No foreign country on the face of the globe will be critical of the United States for saying to them and to the world that this Government will, by this act, give increased sugar quotas to its own citizens who desire to produce, grow, and manufacture sugar consumed by them and their fellow Americans.

Mr. ANDERSON. Mr. President, I yield to the Senator from Nevada [Mr. BIBLE].

Mr. BIBLE. I thank the Senator.

Mr. President, earlier I joined in the colloquy with the Senator from New Mexico concerning his amendment, of which I am a cosponsor. I ask unanimous consent that a statement I have prepared on the amendment be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BIBLE

The 15 months' extension of the Sugar Act as amended by the Senate Finance Committee will unquestionably give ample time for permanent legislation to come before the Congress.

It was my desire that the extension period would be of shorter duration and that permanent legislation would be enacted with needed equitable changes written into the law without awaiting even the 15-month period.

For the past 4 years, farmers in the State of Nevada have sought increased sugarbeet acreage allotments. Nevada's farm economy was broadened in 1956 when 500 acres were planted to sugarbeets. Actually, this was a rebirth of the sugar industry for Nevada. Farmers in the State as early 1912 had planted fields to sugarbeets and had erected a mill in one Nevada county. Early experiments with sugarbeets were doomed to failure due to the leaf hopper disease. With the development of seed resistant to this disease, the industry was reborn in the same county where earlier experience with the beet crop had met with failure.

Sugarbeet plantings the past 4 years, while on a minor scale compared with the

other 22 beet-raising States, have proved successful.

Nevada farmers received a 1960 beet acreage allotment of only 584 acres. Needless to say, the size of this allocation when shared by some 15 growers is of such import as to make little change in our farm economy.

The Nevada sugarbeet acreage allotment is less than one-half of 1 percent of the total sugarbeet acreage planted in the 22 beet-raising States.

Regardless of the size of this small industry, farmers in Nevada have appealed to me and requested that I assist them in securing additional acreage allotments. They have found the beet crop a profitable one which can be successfully grown and one which will supplement and round out their farm economy.

This year, my State is experiencing one of the worst droughts in its history. Ranchers and farmers are indeed concerned. There is some question that water for irrigation will be available for any type of row crop plantings. Nevertheless, the agriculture industry of Nevada will survive and it will survive on the hope and the faith that the future will be better—and that sufficient rain and snow, as in past years, will again provide the precious water they need.

They do, however, look to Congress to give them some assistance: legislation which they need to improve their economy and to make possible the planting of crops which will permit them to increase their farm incomes.

Historically, Nevada has an alfalfa and small grain agriculture economy. In normal years, a surplus of hay is produced and this surplus is marketed in the neighboring State of California. I am advised the average gross on a good alfalfa hay crop is about $100 per acre. Similar or less returns can be expected from small grains.

A new sugarbeet grower in Nevada has reported to me his gross return per acre on sugarbeets in his second year of beet planting experience was slightly over $300 per acre and that he believed with an equitable acreage allotment that he could net in the neighborhood of $100 per acre.

The State allocation is now so small that it is difficult to form an economical planting unit. I am afraid unless Nevada receives a larger acreage allotment, that farmers in my State will find it extremely difficult to continue with sugar plantings. On good authority, I am advised that an economical unit is approximately 1,500 acres, considering the shipping distance to beet processing plants some 200 miles away.

It is for this reason that I am hopeful new growers will be given consideration within the States and that permanent legislation can be enacted into law which will give our farm segment of this Nation a more equitable share of our own domestic sugar market.

Mr. ANDERSON. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The Senator from Illinois has 2 minutes remaining.

Mr. DIRKSEN. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from New Mexico [Mr. ANDERSON] and other Senators. [Putting the question.]

The Chair is in doubt.

On a division, the amendment was agreed to.

Mr. CARLSON. Mr. President, I offer an amendment which I ask to have stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 3, line 7, it is proposed to strike out the word "consideration" and to insert in lieu thereof the word "preference."

Mr. CARLSON. Mr. President, I offer this amendment because the word "preference" has been contained in the bills which were reported and before the Senate and before the House of Representatives in the last session of Congress. The word "preference" was in the original bill as introduced by the distinguished chairman of the House Committee on Agriculture this year.

I offer the amendment because it complies with the original Sugar Act. The original Sugar Act, which was approved in 1948, states, among other things, that it is "an act to promote the export trade of the United States."

I say in all fairness that this evening we are going to allocate sugar quotas to foreign countries. In my opinion, these countries should be somewhat obligated to trade, particularly on agricultural commodities, and while the language of the House bill that is before us at the present time reads:

> Except that consideration shall be given to countries of the Western Hemisphere and to those countries purchasing United States agricultural commodities;

I say that we should strengthen that language and substitute the words "give preference," because such has been the intention of the committees that have handled this proposed legislation for many years. The measure passed the Senate Finance Committee last year with the word "preference" in it, and only on the concluding night in August of last year, when the bill was before the Senate, in much confusion was the wording of this language limited.

It seems to me that there is present an opportunity to render a service to the Nation, to the Treasury, to the taxpayers, and to the farmers of this country to see that the word "preference" is substituted in the bill for the word "consideration."

When the bill was being considered by the Senate last year, I had printed in the RECORD a letter which was written to the Secretary of State on August 26 outlining the reasons why I think we have a right to expect Brazil, for example, which is in the market for hundreds of millions of bushels of wheat, and Peru, which is in the market for a substantial amount of wheat, to comply with this particular section, and urging that preference be given to countries to which quotas are allotted. I ask unanimous consent that that letter be printed in the RECORD at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 26, 1960.

Hon. CHRISTIAN A. HERTER,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: Congress is again considering changes in our Sugar Act, which would further extend the powers of the President in regard to the allocation of sugar quotas.

The proposed changes, together with the curb on imports of sugar from Cuba, offer an opportunity for the United States to shift its trade to traditionally friendly countries in South America.

During your appearance before the Senate Foreign Relations Committee last week, I stressed the importance of keeping in mind the need for export of agricultural products, and particularly wheat, to Latin American countries that are deficient in their supply of wheat.

Wheat represents one of the greater outlets for U.S. production in South America, and I believe that we, as wheat producers, are highly justified in protecting our interests by actively representing our position in the renewal of the U.S. Sugar Act.

My proposal is Brazilian-Peruvian sugar for U.S. wheat. In considering how this could be achieved there are two approaches, both of which necessitate a U.S. sugar quota.

1. Set aside a portion of the U.S. quota for exchange of sugar for U.S. wheat. The transaction to be consummated through commercial channels with sugar at the U.S. preferential price and wheat at U.S. export prices. (Discussions indicate that sugar exporters would accept world prices if a means could be found to market it without disrupting U.S. sugar marketing procedures.)

2. Set aside the U.S. quota gains from increased U.S. sugar consumption: Currently the gain is allocated to the signatory countries which in effect increases their quota. This amount if set aside would not decrease existing quotas, but would give other countries opportunity to slowly build up their exports to the United States. Again it could be stipulated that the exchange generated would be used for importation of U.S. surplus agricultural commodities. You will note I am suggesting surplus agricultural commodities, for it should have greater appeal and the primary needs in Brazil and Peru are for wheat so we would be assured of the majority of sales.

These suggestions should have considerable appeal to many, for it offers opportunity for increased wheat sales based on dollar marketing, with less dependence on Public Law 480. Although resembling a barter program, it differs in that it could be handled through commercial channels without involving governments in the financing and disposal.

If it develops that additional sugar allocations should be made to Brazil and Peru, I would make the following recommendations:

1. Relate the additional allocations to an exchange for wheat.

2. Brazil needs 150,000 tons additional sugar allocation to relate to the exchange value of 300,000 M.T. of wheat (sugar $120 per ton—wheat $60 per ton) for the immediate future, if we are to supply her wheat needs for the balance of 1960.

3. Peru can supply and is eligible under the law for an additional 50,000 tons of allocations, representing 100,000 M.T. of wheat exchange, an amount which it is doubtful we will supply otherwise.

4. It should be emphasized that such a proposal can be handled through private trade channels and support of U.S. trade should be solicited.

Your personal interest in this matter will be greatly appreciated and if I can secure additional information for you, I will be most pleased to do so.

Sincerely yours,

FRANK CARLSON.

Mr. CARLSON. I think it is only fair that this consideration be given, and I sincerely hope the amendment will be agreed to.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. CARLSON. I yield.

Mr. CURTIS. The Senator has offered a good amendment, and I shall support it.

Mr. CARLSON. I thank the distinguished Senator from Nebraska.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. CARLSON. I yield.

Mr. AIKEN. May I add that I think it is a good amendment and I shall support it.

Mr. CARLSON. I appreciate the comment of the ranking minority member of the Committee on Agriculture. It is an amendment that should be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Kansas.

The amendment was agreed to.

Mr. HRUSKA subsequently said: Mr. President, I have a question to ask on H.R. 5463, which the Senate approved earlier this afternoon. I should like to propound the question to the Senator from Utah [Mr. BENNETT].

In the report on H.R. 5463 of the Committee on Agriculture of the House of Representatives, there is a paragraph entitled "Transshipment of Cuban Sugar" which indicates that this country should not continue to import refined sugar made from Cuban raw sugar. The report further indicates that this determination is to be made on an overall basis, depending upon the quantity of Cuban sugar the respective country imports and refines.

Does the Senator understand that this limitation would be retroactive, or should it apply only to reallocations made after the first quarter of 1961?

Mr. BENNETT. Since we are writing a new bill, any clarification that changes the interpretation of the legislature should apply only to future reallotments, and not to reallotments for the first quarter of 1961.

I am not, of course, the chairman of the committee that handled the bill, but I discussed the question with the chairman before it was necessary for him to leave, and he assured me that that is his interpretation, as it is mine.

Mr. LONG of Hawaii. Mr. President, I hope that the conferees will agree upon a sound sugar bill and that it will be passed. I believe everyone agrees that it is absolutely imperative to pass sugar legislation this week, simply because chaos would prevail in the entire sugar industry if we do not. I speak with considerable feeling, since Hawaii has a bigger stake in the outcome than any other State. Our allotment is 1,100,000 tons.

Failure to act would threaten the well-being of a great and vital domestic industry that has served our country well and that is the foundation of the economy of my own State of Hawaii. Failure to act would nullify a major element of our foreign policy, specifically with respect to Cuba and generally with respect to the Philippine Republic and many other nations that we count among our best friends. Failure to act would jeopardize our domestic supply of sugar and would defeat all the gains we have made in 25 years of insuring a steady and adequate sugar supply for our people.

So, Mr. President, we must have a bill. I am ready to agree that, in the long run, we should have a bill which differs in some particulars from the one that has been before us today. But between now and midnight Friday is not the long run. All the testimony presented by Senators and representatives of the administration before the Finance Committee was unanimous in the view that there is simply no possibility of developing a satisfactory permanent bill now.

Not only that, but there is a serious question as to whether this can be done in less than two sessions of the Congress. As Mr. Myers, of the Department of Agriculture, stated, it took two sessions to pass the last major revision in 1955–56; and compared to the problems of today, that was child's play.

Therefore, I am persuaded that we need a significant extension of the present Sugar Act, as is contemplated by the bill before us. I would have preferred the 21-month extension as voted by the House; but it seems to me that the 15-month extension recommended by the Finance Committee is a reasonable length of time, and I can support it.

I could not support, however, major changes in the substance of the Sugar Act, nor could I support an undue shortening of the extension period. The Sugar Act has been a good act over the years, and major changes must be carefully thought out and given consideration from many domestic and foreign policy points of view.

It is essential that the next permanent Sugar Act be one that will contribute to all the objectives that the Congress finds desirable. This, I feel, we simply cannot accomplish by any amended bill now, and I doubt that we could do it in less than the 15 months provided by the Senate version of the bill.

The PRESIDING OFFICER (Mr. METCALF in the chair). The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 5463) was read the third time and passed.

Mr. KERR. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. MANSFIELD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. KERR. Mr. President, I move that the Senate insist on its amendments and request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. METCALF in the chair) appointed Mr. BYRD of Virginia, Mr. KERR, Mr. LONG of Louisiana, Mr. SMATHERS, Mr. CARLSON, and Mr. BENNETT conferees on the part of the Senate.

TRADE WITH CUBA

Mr. KEATING. Mr. President, we have been discussing, and will continue to discuss pending legislation to maintain the bars against Cuban sugar imported into the country. It is, of course, right that we should not continue this subsidy, in the form of a price above the world market, for a country which has shown itself completely hostile to the principles of freedom and justice which we in America revere.

But it is not enough to maintain an embargo on sugar alone. Cuba under Castro has shown her true colors. She is virtually a Communist satellite. We must not, because of our sympathy for the Cuban people, give the government which is oppressing them any additional support.

I think the United States and the other member states of the Organization of American States should establish a complete embargo against Cuban goods of all sort. I think that we should waste no time in moving forward to make clear to Castro and his cohorts that the United States and other American nations do not want goods produced under conditions approximating forced, slave labor. The Communists are used to buying and using such goods, but the free world is not.

In view of the stand I have taken on this matter, I was most interested to receive a letter from the Department of State, answering a query I had put to it earlier. The Department of State, I am told, shares my concern that a hostile Cuban regime, which has confiscated American properties valued at over $1 billion without compensation to the rightful owners, continues to derive dollar earnings from exports to this country.

I can assure you—

Assistant Secretary Brooks Hays writes—

that the Department is studying the Cuban trade question with the view of determining whether there are further actions in this area which might be taken in a manner consistent with our international obligations.

It is my hope that the study will be rapidly completed and will lead to stronger U.S. measures against the Castro regime, before it is even more firmly riveted onto that unhappy land with the aid of Communist equipment and infiltrators. The State Department may be moving in the right direction, but frankly, it is moving about as fast as molasses in January. If we wait too long, it may be too late.

Mr. President, I ask unanimous consent to have printed the text of the letter from the Department of State in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF STATE,
Washington, D.C., March 23, 1961.

The Honorable KENNETH B. KEATING,
U.S. Senate.

DEAR SENATOR KEATING: Your communication of March 13, 1961, expressing concern that Cuban tobacco, fruits, and vegetables

are still imported into the United States has been received.

As you know, action has already been taken to reduce the Cuban sugar quota to zero, thereby depriving the Castro regime of over 70 percent of its dollar earnings from the U.S. market. The Department nevertheless shares your concern that a hostile Cuban regime, which has confiscated American properties valued at over $1 billion without compensation to the rightful owners, continues to derive dollar earnings from exports to this country.

We are pleased to receive your views on this matter and I can assure you that the Department is studying the Cuban trade question with the view of determining whether there are further actions in this area which might be taken in a manner consistent with our international obligations.

Please do not hesitate to call on us if we can be of any further assistance.

Sincerely yours,

BROOKS HAYS,
Assistant Secretary.

Mr. KEATING. I should also like to have printed in the RECORD a fine and perceptive column by Roscoe Drummond in which he points very clearly to the need for action, not only in Laos, but closer to home, in Cuba. He describes that state as a fully formed Cuban Soviet Socialist Republic and urges united OAS action to prevent further Communist penetration.

I ask unanimous consent to have printed in the RECORD at this point in my remarks the column to which I referred.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAOS AND CUBA—THE NEARER DANGER IGNORED

(By Roscoe Drummond)

I do not minimize the danger of a Communist takeover in Laos. But isn't it about time that the Government and the people of the United States—and the other American Republics—adjusted their thinking to the fact that there is already a Communist takeover in our very midst? And decide that it is as important and as possible to do something about it in Cuba as well as in southeast Asia?

Of course we must not back away from the crisis in Laos. But what I want to know is when are we—all of us in the Western Hemisphere—going to stop backing away from the crisis in Cuba?

The Communist takeover is now nearly complete in Cuba and still the United States and the whole Organization of American States are self-hypnotized into inaction by an intellectual theory—the theory of nonintervention—which has no relationship to reality.

Here on our borders is a fully formed CSSR (Cuban Soviet Socialist Republic), militarily and economically supported by the two most interventionist powers in the world—Russia and Red China—and led by a dictator, Fidel Castro, who openly proclaims his intention to intervene everywhere he can to export Castroism to the whole continent.

Have we all got to stand impotent and immobile, paralyzed by the theory of "nonintervention," until Castro has intervened so widely that it is too late?

Before we can answer that question, we have to know whether Castro has now gone nearly the whole way into the Communist camp. Is it true? What are the facts? To get them I would not want to rely on either pro-Castro or anti-Castro sources. But I would turn to the reports of a trustworthy, knowledgeable and objective newspaper correspondent, Joseph Newman of the New York Herald Tribune, who, after many trips to Cuba, has just spent another month there looking at the evidence. He says yes, it is true, and in his latest series of articles he assembles conclusive evidence to support these conclusions:

"The evidence clearly shows that Cuba is rapidly evolving into a Socialist Soviet Republic, firmly anchored in the Communist bloc of Russia and Red China.

"And it points to something even more astounding in its boldness. Having established the first Socialist-Communist state in the Western Hemisphere, Castro proposes to use it as a base for achieving a grandiose dream of a United States of Latin America. It would take the form of a Latin American Union of Socialist Soviet Republics.

"As the father and head of a united Latin America, Castro would become one of the principal rulers of a Communist world, over which he would preside as an equal with Nikita Khrushchev, director of the European division, and Mao Tse-tung, director of the Asiatic division."

Mr. Newman supports these judgments with the fullest documentation. One evidence of where Castro has arrived—not just where he is headed—is the fact that he spurned all appeals of his leading democratic supporters, like Dr. Alabau-Trelles, a former member of the Cuban Supreme Court, to create a political party out of the 26th of July movement as the base for a parliamentary government. Instead, Castro permits only the Communist Party, and it alone is allowed and encouraged to develop and gain strength.

A Communist takeover is threatened in Laos—and we are doing something about it. The Communist takeover is nearly complete in Cuba—and the Organization of American States is doing nothing about it.

One reason is that we and the OAS have made ourselves the prisoners of an inapplicable political theory and have stood transfixed as Castro has established his Cuban Soviet Socialist Republic.

I am not proposing unilateral U.S. action. I am not proposing that the OAS send a military force into Cuba. But I do suggest that the uncritical acceptance of the theory of "nonintervention" covers up the Cuban problem, keeps us from facing it clearly.

The first step is to free ourselves from this hypnotic state of mind. The second step is for the OAS to take collective defensive measures, economically and militarily.

How long does this have to go on before the United States and the OAS realize that what we most need to avert is upon us—not 7,000 miles away, but in our very midst—the spread of Soviet and Chinese Communist power in the Western Hemisphere?

Mr. SMATHERS. Mr. President, I should like to associate myself with the remarks of the junior Senator from New York with respect to purchases of Cuban sugar. I believe under no conditions should we do so. I do not think we should even go into the world market to purchase Cuban sugar at the world market price, because thereby we spend dollars which are used against us for the further expansion of communism in Central and South America.

EXTENSION OF LOAN GUARANTY AUTHORITY OF THE INTERSTATE COMMERCE COMMISSION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 114, H.R. 1163, and that it be made the pending business.

The PRESIDING OFFICER. The clerk will state the bill by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 1163) to amend section 510 of the Interstate Commerce Act so as to extend for 15 months the loan guaranty authority of the Interstate Commerce Commission.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Interstate and Foreign Commerce, with an amendment, to strike out all after the enacting clause and insert:

That section 501 of the Interstate Commerce Act is amended to read as follows:

"SEC. 501. It is the purpose of this part to provide for assistance to common carriers by railroad and express companies subject to this Act to aid them in acquiring, constructing, or maintaining facilities and equipment for such purposes, and in such a manner, as to encourage the employment of labor and to foster the preservation and development of a national transportation system adequate to meet the needs of the commerce of the United States, of the postal service, and of the national defense."

SEC. 2. Section 503 of the Interstate Commerce Act is amended to read as follows:

"SEC. 503. In order to carry out the purpose declared in section 501, the Commission, upon terms and conditions prescribed by it and consistent with the provisions of this part, may guarantee in whole or in part any public or private financing institution, or trustee under a trust indenture or agreement for the benefit of the holders of any securities issued thereunder, by commitment to purchase, agreement to share losses, or otherwise, against loss of principal or interest on any loan, discount, or advance, or on any commitment in connection therewith, which may be made, or which have been made, for the purpose of aiding any common carrier by railroad or express company subject to this Act in the financing or refinancing (1) of additions and betterments or other capital expenditures, made after January 1, 1957, or to reimburse the carrier for expenditures, made from its own funds for such additions and betterments or other capital expenditures, (2) of expenditures for the maintenance of property, or for the purpose of aiding any State, municipality, or other agency which may be organized for the purpose, in financing or refinancing the acquisition or construction of property to be used in transportation service of such a common carrier by railroad and which if acquired by the railroad would be chargeable to its road, property, or equipment investment accounts under the Uniform System of Accounts prescribed by the Commission: *Provided*, That in no event shall the aggregate principal amount of all loans guaranteed by the Commission exceed $500,000,000."

SEC. 3. Section 504(a) of the Interstate Commerce Act is amended to read as follows:

"(1) unless the Commission finds that without such guaranty, in the amount thereof, the applicant would be unable to obtain necessary funds, on reasonable terms, for the purposes for which the loan is sought;"

"(3) if the terms of such loan permit full repayment more than twenty-five years after the date thereof; or"

"(4) unless the Commission finds that the prospective earning power of the applicant, together with the character and value of the

security pledged, if any, furnish reasonable assurance of the applicant's ability to repay the loan within the time fixed therefor and reasonable protection to the United States."

SEC. 4. Section 504(b) of the Interstate Commerce Act is amended to read as follows:

"(b) It shall be unlawful for any common carrier by railroad or express company subject to this Act to declare any dividend on its preferred or common stock while there is any principal or interest remaining unpaid on any loan to such carrier or express company made for the purpose of financing or refinancing expenditures for maintenance of property of such carrier or express company, and guaranteed under this part."

SEC. 5. Section 510 of the Interstate Commerce Act is amended to read as follows:

"SEC. 510. Except with respect to such applications as may then be pending, the authority granted by this part shall terminate at the close of March 31, 1964: *Provided*, That its provisions shall remain in effect thereafter for the purposes of guaranties made by the Commission."

Mr. MONRONEY. Mr. President, I did not object to taking up the bill, H.R. 1163, although, along with the Senator from Texas [Mr. YARBOROUGH] and the Senator from California [Mr. ENGLE], I filed minority views on the consideration of the bill.

I have been in discussion with the distinguished chairman of the Surface Transportation Subcommittee, and he reminds us that the act will expire on March 31, and would thus end the authority for the making of loans to railroads.

Since this is a very important act, and inasmuch as many loans have been made to railroads which find themselves in distressed financial condition, it is not our purpose to block the legislation as it has existed.

However, in examining the committee report, we find that by the extension of the railroad loans to the financing of loans for the REA express company we will be embarking on an entirely new lending authority. The railroads are peculiarly a part of the physical assets of the United States, and the most vital part of our transportation system. We do not like to bring in the REA express company which, in fact, will become the world's largest trucking line, and favor them with Government guaranteed loans. This would open up a new avenue and set a precedent for Government guaranteed loans to all truck lines and to the trucking industry in general.

After setting this precedent, I do not see how we could deny guarantee loans to interstate truck lines which in themselves are certified by the Interstate Commerce Commission.

For that reason, the Senator from California [Mr. ENGLE], the Senator from Texas [Mr. YARBOROUGH], and I objected most strongly and filed minority views.

I wonder if the distinguished Senator from Florida [Mr. SMATHERS], the chairman of the Subcommittee on Transportation, would agree to strike from the bill the reference to the REA express company or express companies, so that the bill would be limited to its original purpose, and not extend to the financing of the trucking industry.

Mr. SMATHERS. Mr. President, I shall be glad to do that; but first I wish to say that the subcommittee listened to the testimony on this point. It is a little disturbing, after having sat in the lonely confines of a committee room and heard the testimony about the provisions of the act being extended to the REA express company, which is an integral part of the railroad network, to be asked to disregard the views there expressed. The REA express company has no other place to which to go to borrow money. It has lost a large amount of money in the last 12 years. Obviously, it is not a good credit risk for banks. Consequently, it must go elsewhere to seek assistance. Since it is still an integral part of the railroad business, it was the feeling of the subcommittee—and I believe it was the feeling of the majority of the committee—that the provisions of the act might be extended to permit the Interstate Commerce Commission to determine whether the REA express company should be permitted to obtain these Government-guaranteed loans. We felt the Interstate Commerce Commission would act wisely and prudently, as it has done in the case of other guarantees which we have authorized the Commission to make.

Now we are faced with a time schedule because the entire act will expire on March 31. We shall have to go to a conference with the House only on the question of the extension of this particular section of the act. Therefore, there is nothing for us to do, under the circumstances, but to agree to the recommendation of the Senator from Oklahoma, in the light of the time conditions, and that is what I am willing to do, if the ranking member of the subcommittee, the distinguished Senator from Kansas, is willing to agree to the proposal.

Mr. SCHOEPPEL. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I am happy to yield.

Mr. SCHOEPPEL. Mr. President, after we had listened to the testimony in connection with the bill, I myself felt that the REA express company was an integral part of the railroad transportation picture. I am very reluctant to strike this provision from the bill entirely, since to do so would remove it from the consideration of the conferees. However, I am well aware of the seriousness of the expiration of the act. I believe that that part of the bill which is before the Senate tonight, which includes the REA express company in the act, raises a question for the committee and Congress to consider.

I shall not stand here tonight and say to the distinguished Senator from Florida, who is chairman of the subcommittee, that I would want to have the act expire. I do not want that responsibility to rest on my shoulders.

If it is likely to be held up, and if by this action the act would expire, I am reluctantly willing to admit that we should exclude the provision at this time, with the distinct understanding that the subject will be considered later to make certain that some type of relief shall be given to the REA express company, since it is an integral part of the transportation industry and the railroad system. If to eliminate the agency completely would mean the federalization of this type of industry, then I think we would rue the day and would all be disappointed if that step had to be taken.

As was brought out in our committee, proposed legislation is ready for consideration by the Senate to have the Government take over this express company unless something is done to protect it and keep it as an integral part of the railroad system.

I have confidence that the Interstate Commerce Commission, which would have the jurisdiction of such loans, as the constituted authority over the trucking industry, will make certain that that industry is protected against undue encroachment beyond the confines of the service which is expected legitimately to be performed by the REA express company.

I hope an opportunity may be afforded later to consider this question before this session of Congress ends. That is the condition under which I would be willing to agree to the proposal. I do not want the act to expire, because I realize what dire circumstances might develop.

These are my candid views.

Mr. SMATHERS. I thank the distinguished Senator from Kansas.

Mr. President, in the light of the situation, I move to strike from the bill any reference to the REA express company.

Mr. MONRONEY. The term as expressed in the bill is "or express company." It appears not as "REA express company." The language is "or express company."

Therefore, the bill should eliminate all reference to "express company." That will confine the bill to the original purpose of the proposed legislation which we are extending, namely, to assist the operating railroads in their activities to continue their public service function.

Mr. SMATHERS. Mr. President, I move to strike from the bill the words "express company" and the "REA railway express company," wherever they may appear in the bill.

The PRESIDING OFFICER. The Chair will advise the Senator that a motion is not in order; the request will have to be in the nature of unanimous consent.

Mr. SMATHERS. Mr. President, I ask unanimous consent that the words "express company," "express companies," and "REA express company" wherever they appear in the bill, be stricken.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The question is on agreeing to the committee amendment, as amended.

The amendment, as amended, was agreed to.

The PRESIDING OFFICER The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 1163) was read the third time and passed.

The title was amended, so as to read: "An act to amend part V of the Interstate Commerce Act so as to extend for 36 months the loan guarantee authority of the Interstate Commerce Commission, and for other purposes."

Mr. SMATHERS. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. HICKEY in the chair) appointed Mr. SMATHERS, Mr. LAUSCHE, Mr. MONRONEY, Mr. SCHOEPPEL, and Mr. BUTLER conferees on the part of the Senate.

VOTES OF SENATOR McCARTHY, OF MINNESOTA, AND SENATOR MUSKIE, OF MAINE, WITH RELATION TO H.R. 4806, TEMPORARY EXTENDED UNEMPLOYMENT COMPENSATION ACT OF 1961

Mr. MANSFIELD. Mr. President, in an article in the Tuesday, March 28, edition of the Washington Daily News, Columnist John Herling made disparaging comments about two of our distinguished colleagues and their support of President Kennedy and his administration. I think the record should be set straight on this matter.

Referring to the March 16 vote on the Byrd amendment to H.R. 4806, the Temporary Extended Unemployment Compensation Act of 1961, Mr. Herling wrote:

> But the spectacular news about this vote was the strange failure of Senators EUGENE MCCARTHY, of Minnesota and EDMUND MUSKIE, of Maine—two esteemed Democratic liberals—who came in too late to vote. They had been dining.

Mr. Herling further implied that Senator MCCARTHY and Senator MUSKIE were not interested enough to get to the floor of the Senate to support the President in this vote. Such an implication could not be further from the truth.

On Wednesday, March 22, the distinguished assistant majority leader [Mr. HUMPHREY] set forth the facts on this vote. I refer Mr. Herling to page 4532 of the CONGRESSIONAL RECORD of that date.

As the Senator from Minnesota [Mr. HUMPHREY] pointed out, because of unexpected developments on the floor, and because of circumstances beyond their control, Senators MCCARTHY and MUSKIE were not notified to return to the Senate until the vote was in progress. Within 2 minutes of having received the call, they reached the floor, only to find that voting had been halted, under the regular order, and the vote was being announced.

There are no two Members of this body who are more devoted to the support of our President than Senators MCCARTHY and MUSKIE, and I think it most unfortunate that unforeseen circumstances, beyond their control, have been twisted to imply a lack of energy in their devotion to the success of this administration.

Mr. MUSKIE. I thank the distinguished majority leader for correcting the record.

Mr. MANSFIELD. It was a pleasure. I did not know the Senator from Maine was present on the floor.

Mr. CLARK obtained the floor.

Mr. METCALF. Mr. President, will the Senator yield?

Mr. CLARK. I yield to the Senator from Montana, without losing my right to the floor.

CHARLES L. TEBBE, REGIONAL FORESTER

Mr. METCALF. Mr. President, I rise today to call attention to the retirement of Charles L. Tebbe, regional forester, region 1, U.S. Forest Service. Last year Mr. Tebbe was stricken by a heart attack. He recovered but the taxing demands of his position place a burden upon his future health. For this reason he has elected to retire and he well deserves to do so.

Charles Tebbe has won the hearts and admiration of Montana people. He has had a long, colorful, rich, and rewarding career. He can retire with pride

Charlie was born in Weed, Calif., in 1908, and was graduated from the University of California in forestry in 1930. He worked in private industry, both in the United States and the Philippines. He has served in the Forest Service since 1934, in California, Oregon, Washington, Idaho, the 14 Northeastern States, and in Washington, D.C. He has worked in research, the State and private forestry divisions, and national forest administration.

Charles Tebbe is a leader. He proved this in preparing Senate Document 9 in the 86th Congress, "Full Use and Development of Montana Timber Resources."

He is a humanitarian. He demonstrated this by his work in 1959 to alleviate the distress caused by the Madison River earthquake. The Secretary of Agriculture awarded region 1 of the Forest Service a superior service award for its effective work.

Charles Tebbe has served this Nation well and the imprint of his efforts for conservation can be found in a score or more of our States. His accomplishments are legion.

He has served the public interest—never a special interest. He has placed his Nation's welfare before any other.

I look forward in the years ahead, to having his advice and counsel on such matters as his health will permit. I appreciate the help he has given to us in Montana in our quest to advance the cause of conservation.

Charles Tebbe can retire with pride in a job well done.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. CLARK. I yield to the Senator from Montana.

Mr. MANSFIELD. Mr. President, I am in complete accord with the remarks of my colleague [Mr. METCALF] concerning the retirement of Regional Forester Charles L. Tebbe.

It is not possible to measure or to fully evaluate the many fine accomplishments of a great number of our dedicated public officials. Charles Tebbe is truly a dedicated public servant, one who has inspired in those with whom he worked the dedication to service that he possessed.

Charles Tebbe is to be commended for his service to the conservation of our natural and human resources. He has had an impact upon people and their conservation thinking of considerable influence. With tireless energy, deep and unusual understanding, keen perception of his fellow man's aspirations and needs, and a warm regard for the views of others, Charles Tebbe has forged those fine human bonds so important to enlarging the scope of mankind's accomplishments.

It is with deep personal regret that I heard that Charles Tebbe will retire. I am pleased to know that he will remain in Missoula and it is my hope he will enjoy a long and pleasant stay in the Treasure State.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed, without amendment, the bill (S. 153) to further amend the Reorganization Act of 1949, as amended, so that such act will apply to reorganization plans transmitted to the Congress at any time before June 1, 1963.

The message also announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 5188) making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes, that the House receded from its disagreement to the amendments of the Senate numbered 23, 25, 53, 60, 61, 66, 67, and 91 to the bill, and concurred therein: and that the House receded from its disagreement to the amendments of the Senate numbered 27, 36, 38, and 50 to the bill, and concurred therein severally with an amendment, in which it requested the concurrence of the Senate.

The message further announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 5463) to amend and extend the Sugar Act of 1948, as amended; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. COOLEY, Mr. THOMPSON of Texas, Mr. JONES of Mis-

souri, Mr. HOEVEN, and Mr. DAGUE were appointed managers on the part of the House at the conference.

FEDERAL LOANS TO PRIVATE SCHOOLS

Mr. CLARK. Mr. President, on behalf of the senior Senator from Oregon [Mr. MORSE] and myself I introduce, for appropriate reference, a bill to authorize loans to private nonprofit schools for the construction of elementary and secondary school facilities.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1482) to authorize loans to private nonprofit schools for the construction of elementary and secondary school facilities, introduced by Mr. CLARK (for himself and Mr. MORSE), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

Mr. CLARK. Mr. President, the bill would provide $350 million in loans to private schools for construction over a period of 3 years—$105 million in the coming fiscal year, $117 million for the following year, and $128 million in the third year. This is the same amount of assistance per school child in private schools as is provided in the administration's bill for each public school child.

The fundamental difference is that aid for private schools would be on a repayable loan basis, not a grant; and would be used for construction only, not teachers' salaries.

Mr. President, we are confronted with widespread disagreement on the most effective way for Congress to resolve our national education crisis.

The President has made clear his belief that the Federal aid for public elementary and secondary schools is absolutely necessary, and has recommended a splendid assistance program to that end which has my complete support.

Spokesmen for the Catholic Church in this country have made clear their view that the Nation's parochial and private schools are entitled to participate in a Federal program of assistance for primary and secondary schools which is national in scope.

There are many private schools in the United States, some of them sectarian and some of them secular in nature, which are presently bearing a substantial portion of our overall educational load. Many of these schools are in dire need for additional funds in order to enable them to properly take care of the pupils who are voluntarily attending them.

The question of whether a Federal construction loan program to assist nonpublic schools is wise or constitutional is a matter of great dispute. Moreover, there is the additional problem of whether such assistance might be used in some areas to support segregated private school systems, unless there were a strong prohibition in authorizing legislation forbidding loans to schools which in fact are operated on a segregated basis.

The bill which I have introduced today is the result of long and careful study and fruitful consultation with legal and educational experts. It represents an earnest effort to achieve a sensible, fair, and just solution to the difficulties the Congress faces in trying to enact a balanced program to cope with our national education crisis. It is submitted in the hope that it will assist the Congress to enact such a program in a calm, sensible, and nonemotional manner, in no way influenced by a controversy with respect to the separation of church and state principles which is embodied in our entire American way of life.

Mr. President, the national interest in a first-class education system for all American children must, in my view, include all American children—those in nonpublic schools, as well as those in public schools. If children are being inadequately educated in private schools, because of overcrowded classrooms, half-day sessions, and substandard facilities, and I believe that to be the case in many instances, the Nation suffers as much as if children are being educated poorly in public schools.

In my judgment, a separate bill to provide long-term, low-interest loans to nonpublic schools, acted on separately from the President's program for public school aid, has these advantages:

First. It will permit the President's program to be considered on its own merits; and a program for a nonpublic school construction loan program to be considered on its own merits. Thus it will be unnecessary to interject into the debate on the administration public school aid bill any consideration concerning the church-state controversy.

Second. It deals with the serious classroom shortage that exists today in the private school systems.

Let me say that with the cooperation of the distinguished senior Senator from Oregon [Mr. MORSE], the chairman of the Educational Subcommittee of the Committee on Labor and Public Welfare, it is anticipated that hearings on this bill will be held on April 13 and 14. I am confident that at that time the witnesses will document the serious classroom shortage which today exists in the various private school systems to which I am now referring.

Third. It provides alternate means for a prompt constitutional test of loans to sectarian schools. In a moment I shall return to that point.

Fourth. It faces up to the segregation problem by clearly prohibiting loans under this bill to schools which practice racial discrimination in their entrance policies. This point also I will explain later.

The bill provides that a private school applying for a loan under the bill must satisfy the Commissioner of Education that "the making of the loan will not violate the first amendment to the Constitution."

If the Commissioner, acting in a semi-judicial capacity, determines that the loan would not involve a violation of the first amendment, the school would receive the funds, although the bill provides for judicial review of the constitutionality of the decision to extend the loan, first, by taxpayer suits and, second, by actions of secular, private schools.

If, however, the Commissioner denied the loan, on the ground that it would violate the first amendment, the school which was refused the funds would also be entitled to court review of the decision.

In each instance, direct and speedy appeal to the Supreme Court would be provided, for a final determination of the constitutional issue.

The bill also stipulates that only private schools not practicing "discrimination in entrance requirements on the basis of race or color" will be eligible for loans under the program proposed. If Federal funds go to segregated public schools, Negroes who are excluded have a remedy in the courts, under the pertinent decisions of the U.S. Supreme Court.

But if Federal loan funds are made available to segregated private schools, members of the Negro community have no judicial means of redress, although their tax dollars are involved and the private school in question may be used to defeat integration in the public schools in the area.

I have supported Federal aid for education ever since I came to the Senate. I am more anxious than ever to see an adequate Federal-aid-to-public-schools program enacted; and that remains my primary objective.

That objective will be advanced if we can separate the church-state controversy from the President's program, by handling it in a separate measure.

Mr. President, I cannot conclude without paying a warm personal tribute to my friend, the senior Senator from Oregon [Mr. MORSE], who last year carried this fight to the floor of the Senate, and in many previous years has indicated his strong support of Federal aid for private school construction. His advice has been invaluable in the preparation of this proposed legislation. I welcome him as a cosponsor. Were it not for the fact that he will be in charge of President Kennedy's education bill when it reaches the floor of the Senate, the Senator from Oregon would be the principal sponsor of this measure, and I would be a cosponsor.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD two tabulations which have been prepared by the Office of Education. The first one shows the enrollment, by States, in full-time public and nonpublic elementary and secondary day schools. The second tabulation shows the projected enrollments in full-time public and nonpublic elementary and secondary day schools, assuming continuation of the 1955–57 birth rates.

There being no objection, the tabulations were ordered to be printed in the RECORD.

1957–58 school year: Enrollment in full-time public and nonpublic elementary and secondary regular day schools, by States

Region and State	Total enrollment, all full-time day schools	Public school enrollment				Nonpublic school enrollment			
		Total	Kindergarten and grades 1 through 8	Grades 9 through 12 and post-graduate	Public school enrollment as a percent of total enrollment in all schools	Total	Kindergarten and grades 1 through 8	Grades 9 through 12 and post-graduate	Nonpublic enrollment as a percent of total enrollment in all schools

[1] Does not include residential schools for exceptional children, subcollegiate departments of institutions of higher education, and Federal schools for Indians.

METHOD: Projected enrollments are based upon Office of Education enrollment data and Bureau of Census unpublished projections of the population aged 5 to 19 by single year of age (equivalent to series II, in "Current Population Reports," p. 25, No. 187). In most cases it is assumed that present enrollment trends (1950–60) will continue.

Mr. CLARK. I also ask unanimous consent that the text of the bill be printed at this point in the RECORD, and that it be held at the desk until the conclusion of the first legislative day of next week, or, if there is no session next week, the conclusion of the Senate session tomorrow, in order that other Members who desire to do so may join in sponsoring the bill.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

SHORT TITLE

SECTION 1. This Act may be cited as the "Private School Construction Loan Act of 1961".

DEFINITIONS

SEC. 2. For the purpose of this Act—

(1) The term "Commissioner" means the United States Commissioner of Education.

(2) The term "State" includes the District of Columbia, Puerto Rico, Guam, and the Virgin Islands.

(3) The term "elementary school" means a school which provides elementary education, as determined under State law.

(4) The term "secondary school" means a school which provides secondary education, as determined under State law.

(5) The term "facilities" means classrooms and related facilities (including furniture, instructional materials other than textbooks, equipment, machinery, and utilities necessary or appropriate for school purposes) for elementary and secondary schools, and interests in land (including site, grading, and improvement) on which such facilities are constructed. Such term does not include athletic stadiums, or structures, or facilities intended primarily for events, such as athletic exhibitions, contests, or games, for which admission is to be charged to the general public. Furthermore, such term does not include classrooms or other facilities used exclusively or primarily for education beyond grade 12.

(6) The terms "constructing" and "construction" include the preparation of drawings and specifications for school facilities; erecting, building, acquiring, altering, remodeling, improving, or extending school facilities; and the inspection and supervision of the construction of school facilities.

LOAN AUTHORIZATION

SEC. 3. The Commissioner is authorized and directed to make loans, from funds provided pursuant to section 11 of this Act, to private nonprofit schools in the States for constructing elementary and secondary school facilities, upon determining that such schools meet the criteria provided in subsection (a) of section 4. The total amount of such loans which shall be allocated to such schools in each State for each year for which funds are provided pursuant to section 11 shall be an amount which bears the same ratio to the total amount provided in such year pursuant to such section 11 as the private nonprofit elementary and secondary school population in such State bears to the total such population for all the States. For the purpose of this section the Commissioner shall use populations for the most recent year for which satisfactory data are available to him. Such loans—

(1) shall be made upon application containing such information as may be deemed necessary by the Commissioner to satisfy himself that the applicant meets the criteria stated in section 4 of this Act;

(2) shall be subject to such conditions as may be necessary to protect the financial interest of the United States;

(3) may be in an amount not exceeding the total construction cost of the facilities for which made, as determined by the Commissioner, and shall bear interest at a rate determined by the Commissioner, which shall be not less than the total of one-quarter of 1 per centum per annum added to the average annual interest rate on all interest-bearing obligations of the United States then forming a part of the public debt as computed at the end of the fiscal year next preceding the date on which the contract for the loan is made and adjusted to the nearest one-eighth of 1 per centum; and

(4) shall be subject to recall upon a final court ruling that the loans in question have been made in violation of the First Amendment to the Constitution; and

(5) shall mature and be repayable on such date as may be agreed to by the Commissioner and the borrower, but such date shall not be more than forty years after the date on which such loan was made.

If any part of the total funds allocated to schools within a State under the provisions of this Act remains unused at the end of either of the first two fiscal years in which funds are made available under this Act, it shall be reallocated at the discretion of the Commissioner for loans under the provisions of this Act to schools in other States. Such reallocated sums shall be over and above the sums provided in the succeeding fiscal year under section 11 of this Act.

CRITERIA FOR LOANS

SEC. 4. (a) The Commissioner is directed to make a loan as long as funds are available as provided in section 11 of this Act, subject to the provisions of section 3, whenever he finds the following criteria are met:

(1) the school applying for the loan normally maintains, or will maintain upon completion of planned construction projects, a regular faculty and curriculum and normally has a regularly enrolled body of pupils or students in attendance where the school's educational activities are regularly carried on;

(2) the school applying for the loan is owned and operated by an organization entitled to exemption under the provisions of section 501 (a) of the Internal Revenue Code of 1954;

(3) the school applying for the loan provides elementary or secondary education as determined by State law;

(4) the school applying for the loan does not in fact practice discrimination in its entrance requirements on the basis of race or color;

(5) the loan will be used for constructing facilities as defined in section 2 of this Act;

(6) the school supplies assurances satisfactory to the Commissioner of its ability to repay the loan with interest; and

(7) the making of the loan will not violate the first amendment to the Constitution

(b) If a loan satisfies the criteria of subsection (a) of this section and there are funds available, the Commissioner is directed to make the loan in the amount applied for (subject to the provisions of section 3 of this Act), unless he finds that this amount is excessive in relation to the number of students in attendance or likely to attend the applicant school or in relation to applications by other schools in the same State.

ADMINISTRATIVE PROCEDURES

SEC. 5. The Commissioner shall not finally deny an application for a loan under this Act except after reasonable notice and opportunity for a hearing to the applicant. If

the loan is denied, the Commissioner is directed to make separate findings on each of the criteria provided in subsection (a) of section 4 of this Act, to state specifically the criterion or criteria which the loan application failed to satisfy, and, if he deems it practicable, to state the amount of the loan which he would deem proper under subsection (b) of section 4 if the criteria of subsection (a) of section 4 were satisfied.

JUDICIAL REVIEW

SEC. 6. (a) Any school whose application for a loan has been denied by the Commissioner under the provisions of subsection (a) of section 4 of this Act may bring a civil action to obtain a review of the final decision of the Commissioner.

(b) Any citizen of the United States upon whose taxable income there was imposed an income tax under section 1 of the Internal Revenue Code of 1954 for the last preceding calendar or taxable year and who has paid any part of such income tax, may bring a civil action against the Commissioner to restrain or enjoin him from taking any action under this Act which the plaintiff challenges as invalid under the first amendment to the Constitution. No additional showing of direct or indirect financial or other injury, actual or prospective, on the part of the plaintiff shall be required for the maintenance of any such action.

(c) Any school which is denied a loan or which has had the amount of the loan it receives reduced because of the lack of funds available in a particular year, may bring a civil action to obtain a review of the decisions of the Commissioner extending loans to other schools insofar as the other loans are claimed to be invalid under the first amendment to the Constitution.

(d) Any action brought under the preceding subsections of this section must be commenced within sixty days after the final decision of the Commissioner. Such action shall be brought in the district court of the United States for the District of Columbia. Upon the commencement of such action the Commissioner shall file in the court the record of the proceedings upon which the findings or decision complained of are based. The district court of the United States for the District of Columbia shall have jurisdiction to hear and determine any such action, and the court shall have power to enter, upon the pleadings and record of proceedings a judgment affirming, modifying, or reversing the decision of the Commissioner. The findings of the Commissioner as to any fact, if supported by substantial evidence, shall be conclusive, but all rulings of law, conclusions of law, and mixed conclusions of fact and law made under subsection (a) of section 4, shall be subject to unlimited judicial review. Any party to such action aggrieved by a final order entered therein by the district court relating to clause 7 of subsection (a) of section 4 shall be entitled to a review thereof by the Supreme Court through the filing in that Court, within sixty days after the entry of that order, of an appeal therefrom. Any party to such action aggrieved by a final order entered by the district court on any other ground shall be subject to review in the same manner as a judgment in other civil actions. Any such action pending before any court for hearing, determination, or review shall be heard, determined, or reviewed at the earliest practicable time, and shall be expedited in every practicable manner. Any action instituted in accordance with this Act shall survive notwithstanding any change in the person occupying the office of Commissioner or any vacancy in such office.

LABOR STANDARDS

SEC. 7. All laborers and mechanics employed by contractors or subcontractors in the performance of construction work financed in whole or in part under this Act shall be paid wages at rates not less than those prevailing on similar construction in the locality to be determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a—276c–5) for construction projects financed under this Act, and every such employee shall receive compensation at a rate not less than one and one-half times his basic rate of pay for all hours worked in excess of eight hours in any workday or forty hours in the workweek, as the case may be; but the Commissioner may waive the application of this section in cases or classes of cases where laborers or mechanics, not otherwise employed at any time in the construction of the project, voluntarily donate their services for the purpose of lowering the costs of construction and the Commissioner determines that any amounts saved thereby are fully credited to the school undertaking the construction. The Secretary of Labor shall have with respect to the labor standards specified in this provision the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 5 U.S.C. 133z–15) and section 2 of the Act of June 13, 1934, as amended (40 U.S.C. 276c).

ADMINISTRATIVE PROVISIONS

SEC. 8. (a) The Commissioner may delegate any of his functions under this Act, except the making of regulations, to any officer or employee of the Office of Education.

(b) In administering the provisions of this Act, the Commissioner is authorized to utilize the services and facilities of any agency of the Federal Government and of any other public or other nonprofit agency or institution in accordance with appropriate agreements, and to pay for such services either in advance or by way of reimbursement, as may be agreed upon.

GENERAL PROVISIONS

SEC. 9. (a) In the performance of, and with respect to, the functions, powers, and duties vested in him by this Act the Commissioner, notwithstanding the provisions of any other law, shall—

(1) prepare annually and submit a budget program as provided for wholly-owned Government corporations by the Government Corporation Control Act, as amended; and

(2) maintain an integral set of accounts which shall be audited annually by the General Accounting Office in accordance with the principles and procedures applicable to commercial transactions as provided by the Government Corporation Control Act, as amended, and no other audit shall be required: *Provided*, That such financial transactions of the Commissioner as the making of loans and vouchers approved by the Commissioner in connection with such financial transactions shall be final and conclusive upon all officers of the Government.

(b) (1) Funds made available to the Commissioner pursuant to the provisions of this Act shall be deposited in a checking account or accounts with the Treasurer of the United States. Receipts and assets obtained or held by the Commissioner in connection with the performance of his functions under this Act, and all funds available for carrying out the functions of the Commissioner under this Act (including appropriations therefor, which are hereby authorized), shall be available, in such amounts as may from year to year be authorized by the Congress, for the administrative expenses of the Commissioner in connection with the performance of such functions.

(2) The Commissioner is authorized (A) to prescribe a schedule of fees which, in his judgment, would be adequate in the aggregate to cover necessary expenses of making inspections (including audits) and providing representatives at the site of projects in connection with loans under this Act, and (B) to condition the making of such loans on agreement by the applicant to pay such fees; and, if such fees are prescribed, the Commissioner's expenses for such purposes shall be considered nonadministrative. For the purpose of providing such services, the Commissioner may, as authorized by section 8(b), utilize any agency, and such agency may accept reimbursement or payment for such services from such applicant or from the Commissioner, and shall, if a Federal agency, credit such amounts to the appropriation or fund against which expenditures by such agency for such services have been charged.

(c) In the performance of, and with respect to, the functions, powers, and duties vested in him by this Act, the Commissioner, notwithstanding the provisions of any other law, may—

(1) prescribe such rules and regulations as may be necessary to carry out the purposes of this Act;

(2) sue and be sued in any court of record of a State having general jurisdiction or in any district court of the United States, and such district courts shall have jurisdiction of civil actions arising under this Act without regard to the amount in controversy; but no attachment, injunction, garnishment, or other similar process, mesne or final, shall be issued against the Commissioner or property under his control, and nothing herein shall be construed to except litigation arising out of activities under this Act from the application of sections 507(b) and 2679 of title 28 of the United States Code and of section 367 of the Revised Statutes (5 U.S.C. 316);

(3) foreclose on any property or commence any action to protect or enforce any right conferred upon him by any law, contract, or other agreement, and bid for and purchase at any foreclosure or any other sale any property in connection with which he has made a loan pursuant to this Act; and, in the event of any such acquisition (and notwithstanding any other provisions of law relating to the acquisition, handling, or disposal of real property by the United States), complete, administer, remodel and convert, dispose of, lease, and otherwise deal with, such property: *Provided*, That any such acquisition of real property shall not deprive any State or political subdivision thereof of its civil or criminal jurisdiction in and over such property or impair the civil rights under the State or local laws of the inhabitants on such property;

(4) enter into agreements to pay annual sums in lieu of taxes to any State or local taxing authority with respect to any real property so acquired or owned;

(5) sell or exchange at public or private sale, or lease, real or personal property, and sell or exchange any securities or obligations, upon such terms as he may fix;

(6) obtain insurance against loss in connection with property and other assets held;

(7) subject to the specific limitations in this Act, consent to the modification, with respect to the rate of interest, time of payment of any installment of principal or interest, security, or any other term of any contract or agreement to which he is a party or which has been transferred to him pursuant to this section; and

(8) include in any contract or instrument made pursuant to this section such other covenants, conditions, or provisions as he may deem necessary to assure that the purposes of this Act will be achieved.

PROHIBITION AGAINST FEDERAL CONTROL

SEC. 10. Nothing contained in this Act shall be construed as authorizing a department, agency, officer, or employee of the United States to exercise any direction, supervision, or control over, or impose any requirements or condition with respect to, the personnel, curriculum, methods of instruction, or administration of any educational institution.

FINANCING

SEC. 11. (a) In order to obtain funds for loans under this Act, the Commissioner may, on or after July 1, 1961, from time to time issue notes and obligations for purchase by the Secretary of the Treasury. The maximum aggregate principal amount of such notes and obligations outstanding at any one time shall not exceed (1) the sum of $105,000,000 until June 30, 1962, inclusive; (2) the sum of $222,0000,000 from July 1, 1962, until June 30, 1963, inclusive; and (3) the sum of $351,000,000 from July 1, 1963, and thereafter.

(b) Notes or other obligations issued by the Commissioner under this Act shall be in such forms and denominations, have such maturities, and be subject to such terms and conditions as may be prescribed by the Commissioner, with the approval of the Secretary of the Treasury, and shall bear interest at a rate determined by the Secretary of the Treasury which shall be not less than the average annual interest rate on all interest-bearing obligations of the United States then forming a part of the public debt as computed at the end of the fiscal year next preceding the issuance by the Commissioner and adjusted to the nearest one-eighth of 1 per centum. The Secretary of the Treasury is authorized and directed to purchase any notes and other obligations of the Commissioner issued under this Act and for such purpose is authorized to use as a public-debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under such Act, as amended, are extended to include any purchases of such notes and other obligations. The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this section. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes or other obligations shall be treated as public-debt transactions of the United States.

(c) There are hereby authorized to be appropriated to the Commissioner such sums as may be necessary, together with loan principal and interest payments made under this Act, for payments on notes or other obligations issued by the Commissioner under this section.

SEPARABILITY

SEC. 12. If any provision of this Act is held invalid, the remainder of the Act shall not be affected thereby.

Mr. JAVITS. Mr. President——

Mr. CLARK. I yield to my friend.

Mr. JAVITS. I should like to ask several questions about this matter, both as a member of the subcommittee and as a Senator from a State which has many parochial school pupils.

First, I wish to ask a question about the procedure. Does the Senator from Pennsylvania believe there would be any objection—if the situation should work out in that way—to having his bill or a similar bill considered even before Senate consideration of the general Federal-aid-to-education bill; or does the Senator from Pennsylvania have any particular view as to whether his bill should be considered before or after that bill, bearing in mind—and of course I know the attitude of the Senator from Pennsylvania, and he knows mine—that it is undesirable to deal with this measure in connection with the text of the major Federal-aid-to-education bill.

Mr. CLARK. Does the Senator from New York have reference to consideration in the committee or on the floor?

Mr. JAVITS. To consideration on the floor, I would say.

Mr. CLARK. My present thought—which will be subject to change if the leadership feels otherwise—would be that if we could get my bill reported by the committee, it should go on the calendar; and I hope the leadership would assure the Members of the Senate that it would be promptly called up for vote after the administration's measure.

Mr. JAVITS. Would the Senator from Pennsylvania agree with me that at that point we would have an obligation, in good faith, to see to it that that happened? I gather that is the view of the Senator from Pennsylvania.

Mr. CLARK. That is my view. As to whether the leadership agrees or not, I have not had an opportunity to determine.

Mr. JAVITS. I join the Senator from Pennsylvania in believing that good faith would require that that be done.

Second, I am glad the Senator has made provision for a constitutional test. There may be a question whether we can give that authority, but it is a fact, and it has concerned me very deeply, that, jurisdictionally speaking, there would be no way for a taxpayer to test the law in this kind of situation, in order to raise the issue of constitutionality.

I gather that is the reason why the Senator has provided in the bill specifical authority which would entitle an individual to sue.

Mr. CLARK. First, while I believe the provisions for constitutional review contained in the bill are valid, the Senator is a good enough constitutional lawyer to know that, if the Supreme Court did not want to hear the case, it could probably find some reason for not doing so. I have great confidence in the present Supreme Court of the United States under the distinguished leadership of Chief Justice Warren. The Court has measured up to its constitutional responsibility in the past on even hotter issues, and I am confident in my own mind it will decide this issue.

The bill provides three methods of review. The first would be used if the Commissioner of Education determined—and, presumably, he would consult competent legal authorities—that a loan made to a private school, owned and operated by a religious group, violated the first amendment of the Constitution of the United States.

The school that had been refused the loan would then be permitted under the terms of the bill to bring a civil action in the District Court for the District of Columbia to review the Commission's decision, and, if the court's order did not grant the relief requested to appeal—not by certiorari—directly to the Supreme Court of the United States.

If the Commissioner of Education, however, were to find the loan did not result in the statute's becoming an invalid one, two alternate methods are provided to those objecting to the loan's being made on constitutional grounds: First, by a taxpayer's suit, and, second, by a civil action brought by a secular private school under carefully delimited conditions.

I am well aware of the argument that the ruling in Massachusetts against Mellon and Frothingham against Mellon, decided back in the 1920's by Justice Sutherland, is a constitutional ruling which Congress could not by legislation set aside.

Again, I say if the Supreme Court wants to decide the question, this bill provides appropriate and available procedures.

Mr. JAVITS. I do not wish to delay the Senator, but I do have a few other questions which are essential to ask in this profound issue.

The Senator from Pennsylvania used the language, "if the Commissioner of Education found a loan made to a private school violated the first amendment of the Constitution." Would the Senator wish to amend that language so it would read "if the Commissioner of Education found the application, under the statute which was then being made, to be an unconstitutional application of the statute as passed"?

Mr. CLARK. The prohibition in the first amendment is against a law respecting an establishment of religion. The bill would require the Commissioner of Education to examine each application and reach a determination as to whether the making of the loan applied for, taking into account all of the surrounding circumstances, would be an unconstitutional application of the statute.

Mr. JAVITS. It is a fact that the decided cases have not ruled that a loan to parochial schools for the purposes of classroom construction is, on its face, unconstitutional. Is that not a fact?

Mr. CLARK. That is correct.

Mr. JAVITS. So, although there are constitutional lawyers, including those of the Department of Health, Education, and Welfare, who have rendered an elaborate opinion, believe such a loan is unconstitutional, the Supreme Court has not so decided. Is that correct?

Mr. CLARK. Exactly, and I want the RECORD to show I disagree with that conclusion in that opinion.

Mr. JAVITS. Exactly. If the Commissioner is to decide the basic constitutional question as to the whole statute, then I think we face one set of circumstances. However, it is different if we say to the Commissioner, "In the event that you find in respect to an application which is made to you, the application of the law which you are asked to make will be such as to run afoul of the separation between church and state, you should so find."

To cite a striking example, suppose the Commissioner is asked to lend money to build a chapel in a seminary in which a reverend or a priest is to be ordained. He might say, "That obviously runs afoul of the Constitution."

On the other hand, suppose the Commissioner is asked to construct a classroom which does not have the remotest relationship even to time off to study religion? He might consider that that would not run afoul of the constitutional prohibition.

That is the question I put to the Senator. I wonder if the Senator, in introducing the bill, would define precisely

what he expects the Commissioner to do, thereby explaining the reason why he has written the particular provision into the bill.

Mr. CLARK. I think it is a little difficult, off the top of one's head, to insure that a colloquy of this sort will properly represent mature thought on so technical and legalistic a point.

I say to my friend from New York that in my judgment the key words are "with respect to such loan."

What the Commissioner of Education must determine is whether the statute "with respect to such loan" violates the first amendment to the Constitution, in that the law "with respect to such loan" becomes a law respecting an establishment of religion.

Mr. JAVITS. I am very glad my colleague has made that point. I agree that if we are to narrow the question and to have a justiciable controversy, this is the way to do it. I think it also gives us an opportunity, even in the subcommittee, by careful study and perhaps by some legal draftsmanship, to try to find a formula which will do what many of us hope can be done, and at the same time give us the minimal risk in terms of doing something which is unconstitutional.

I should like to ask the Senator another question.

Mr. CLARK. Before the Senator asks another question, I should like to say that the Senator from Oregon [Mr. MORSE] and I considered seven separate clauses to cover the point to which the Senator from New York now refers. After long and prayerful thought, after consulting with a number of competent lawyers in addition to the Senator from Oregon, we concluded that the simplest solution was the best.

Mr. JAVITS. I, too, am seeking advice from leading constitutional lawyers in the country, and law schools. I hope we can bring their good judgment to bear on the subject.

I have one final question to ask. I know the Senator's answer, I believe, but it is important for the record.

I do not intend—and I am sure the Senator from Pennsylvania does not intend—to shift the burden of deciding constitutionality to the Supreme Court. The Senator would agree that every Senator, lawyer and nonlawyer alike, should, when he votes, be satisfied in good conscience that he is voting for a measure which he believes to be constitutional.

Mr. CLARK. I think it is implicit in the passage of any proposed legislation by this body or by the other body that Members who vote for passage believe it to be constitutional. Otherwise they have no right to vote for it.

I also believe there are many Members of this body, including the Senator from Pennsylvania, who do not set themselves up as great constitutional authorities, who are quite willing to have their judgment checked by the body set up in the Constitution to give the final word on these subjects; namely, the Supreme Court of the United States.

Mr. JAVITS. I am very grateful to my colleague for his comments.

Mr. HART. Mr. President, will the Senator yield?

Mr. CLARK. I yield to the Senator from Michigan.

Mr. HART. Mr. President, I thank my good friend the Senator from Pennsylvania. I have listened with attention to the Senator's presentation. I am gratified that he and the distinguished senior Senator from Oregon have introduced the bill.

Along with many other Senators, I have had great concern that we should do wisely that which I think is the goal of all of us, raising the level of education in this country. We should do it as broadly as we may within constitutional limitations.

It would appear now that the wisest course for those who seek Federal aid in all possible areas within constitutional limits is to support the separate venture which, I take it, the Senator from Oregon and the Senator from Pennsylvania would agree is a way to describe the bill.

Therefore, I would welcome an opportunity to join the Senators as a cosponsor.

If I may make comment on the colloquy between the distinguished Senator from Pennsylvania and the distinguished Senator from New York, I would not, by my silence, wish to indicate that I am committed yet to the idea that every time the Senate votes a Senator must make a judgment affirmatively with respect to constitutional questions. I think clearly our obligation is to vote "nay" when we make the judgment that a measure is unconstitutional, but I am hesitant to undertake the responsibility of making a judgment of an affirmative nature on constitutionality on every bill. I think when there is a doubt, broad policy judgment then should persuade one, rather than seeking the law books on the Constitution.

Mr. CLARK. It occurs to me that the Senator must obviously be correct, because many extremely competent and able Senators are not lawyers at all. It is most difficult, if not impossible, for a man who is not a lawyer, and actually for one who is not an experienced constitutional lawyer, to have any view which is very meaningful on proposed legislation as to which there is any doubt as to constitutionality.

Mr. HART. The reason I made the comment is that I sense that the bill is directed toward an area which will remain in doubt until the day the Supreme Court gives us the answer. I am hopeful that Senators will not vote in opposition to a proposal merely because there is doubt. I hope that Senators will vote "nay" if they are certain a constitutional prohibition would be violated.

Mr. CLARK. My views are in accord with those of my friend from Michigan. I welcome his support as a cosponsor of the bill.

Mr. President, I yield the floor.

Mr. MORSE. Mr. President, I wish to add to the splendid statement made by the very able and distinguished Senator from Pennsylvania only a few complimentary remarks.

First, I compliment my distinguished friend for the excellent statement he has made on the bill which he has introduced. I also thank him for the great assistance he has been to me in his capacity as a member of the Subcommittee on Education of the Senate Committee on Labor and Public Welfare.

For a long time in the Senate the Senator from Pennsylvania has spoken, in my judgment, with great clarity and with great courage on this volatile issue of Federal aid to private schools. I am proud, as the senior Senator from Oregon, to join with the Senator in sponsoring this measure. It is my sincere hope that the proposal so ably presented by the Senator from Pennsylvania [Mr. CLARK] will be received and acted upon with a minimum of delay, because, in my judgment, we owe it to the people of the United States today, as legislators, to act upon our convictions in matters such as this in order to achieve two goals.

I confirm the announcement that the Senator from Pennsylvania [Mr. CLARK] made as to our plans to hold hearings on the bill before the Senate Subcommittee on Education. Those hearings will be held on the 13th and 14th of April. I am sure this announcement will be formalized. I have talked with a majority of the members of my subcommittee and have been authorized to make preliminary arrangements for the holding of the hearings, and to notify those who undoubtedly will wish to appear as witnesses on the bill.

It is my hope and expectation that we can complete hearings in 2 days. Testimony will be limited to the views of witnesses on the language of the bill or concerning such amendments as the subcommittee will wish to consider in modification of the bill. I make this statement because hearings on the administration Federal aid to education bill have been voluminous on the entire subject of loans to private schools. I wish to make it clear that I shall not, in the public hearing, permit a repetition of the data, evidence, and information already in the record. I shall be perfectly willing to have such material filed as supplementary to statements made, but I shall give instructions to the witnesses to confine themselves to their pro and con arguments with respect to the Clark-Morse bill or any amendments thereto.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. CLARK. Unfortunately I was unable to be present at all of the hearings on the administration bill which were conducted by my good friend from Oregon. Is my friend satisfied that there is at present a clearly documented record establishing the need for assistance to private schools in order to enable them to carry out the task of educating a substantial portion of American youth?

Mr. MORSE. There is a considerable amount of evidence and data in the record, but, of course, the witnesses in support of the Clark-Morse bill can introduce additional evidence on the need at the April 13 and 14 hearings.

My own position, as I made clear in connection with similar legislation I sponsored in the last session, is that this is constitutionally acceptable legislation. Opinions of very able constitutional lawyers may differ on this point, as happens very often, when men of good will seek to offer variant solutions to problems which arise, but based upon my own study, I would hold as a lawyer that the bill offered today by both Senator CLARK and myself meets this first test of any legislative proposal.

I associate myself with the remarks of the Senator from Pennsylvania [Mr. CLARK]. In my judgment, each Senator, in keeping with the oath to uphold the Constitution, that he takes when he comes into this body, has a clear obligation to satisfy himself before he votes in favor of proposed legislation that he believes it to be constitutional. I would not be offering as a cosponsor with the author, the Senator from Pennsylvania [Mr. CLARK], this proposed legislation if I did not honestly believe as a lawyer that our bill would meet the constitutional test. I shall have something to say on that subject in a moment.

The goals, to which I referred earlier, are these:

First, to provide for the educational needs of a substantial segment of our Nation's schoolchildren, who are educated in private and parochial schools.

I have said many times in past debate, there is no question about the public service that private schools perform. There is no doubt about the great service, in terms of many millions of dollars, that the private schools perform for all the taxpayers of the United States each year. If anyone should question that fact, he should for a moment reflect upon what would happen if we closed all the private schools in the United States tonight and if all the schoolchildren in those private schools appeared at the public school doors tomorrow morning.

Then I think the American taxpayers would have a clear understanding of the public service rendered by private schools and the public savings rendered by the private schools. They would know what our total national educational cost would then be, if it were not for the contributions that the private schools are making today to the educational process.

Mr. CLARK. Mr. President, will the Senator yield at that point?

Mr. MORSE. I yield.

Mr. CLARK. I am happy that the Senator has made the point. I thank him for his very kind remarks about me, for which I am grateful. But is it not a fact that under the laws of all 50 States, each of which has compulsory free public education through various grades—usually grade 12—every private school, in order to be able to operate and to permit a child to go there instead of going to a public school, must meet the standards of education laid down by the superintendents of instruction for the public schools in that State?

Mr. MORSE. The Senator is correct. It seems to me his comment also bears upon the fact that, in a sense, private schools can be considered as analogous to public schools in that they meet the public standards which are required in the educational process. If they did not meet those standards fully, they would not be able to operate.

Mr. CLARK. They relieve taxpayers of the States and school districts of the obligation of paying out still more money to educate children who otherwise would have to be taken into the public schools.

Mr. MORSE. There is no question about that.

The second goal to which I wish to refer is to provide, even more importantly, a procedure whereby, with far greater precision than is now afforded, a conclusive determination can be made of the extent to which the Federal Government may legitimately provide services to the private school sector of our society without violation of the first amendment.

The second point I have raised assumes an even greater importance because of the divisive controversy arising in connection with the aid-to-public-schools bill upon which hearings were recently concluded. Let us not mistake the situation. Feelings on this matter run deep and are grounded in historic situations of the past. Basic loyalties are involved and it is our duty to see that procedures are available to all parties concerned whereby they may state their convictions freely, certain in the knowledge that careful consideration is being given in the framing of legislation to those views and convictions. I believe that to avoid this issue, will but cause it to smolder, only to erupt in more heated form another day.

I wish to be very frank about this problem. It is a delicate one. Many people like to avoid it, but it cannot be avoided. In my judgment, the controversy over the religious issue in relation to public and private schools, and Federal aid in respect thereto, cannot be put behind us, in my judgment, until we finally raise it in such form that we can get a final decision from the U.S. Supreme Court on the subject matter. I make a plea tonight to all Catholics, to all Protestants, and all those of other faiths who have views on this subject, to join forces with us in trying to get this matter settled once and for all in this country. We have all the clear responsibility to strive for a decision as to how far, if at all, the Federal Government can go in giving aid to private schools, both secondary and primary as well as to higher education.

I make this plea because, in my judgment, it is not good for our body politic to have this highly controversial and emotional issue repeatedly raised in this country. It tends to split the Nation. It is not good for the Nation. All that we are really dealing with in essence, is the question whether or not it is within the constitutional power of the Federal Government to give any form of aid to private schools.

I believe it is very unfortunate that there are those in this country who would seem to avoid meeting the issue head on. In a democracy I believe in meeting issues head on. I believe that those of us who are offering the bill, who are urging its consideration and its passage, are really performing a service for our country, in that we believe the time is long overdue to have this issue finally determined as a matter of law.

On November 8, 1960, I believe a historic event occurred in this country, because we started to put to rest a highly emotional issue, controversial in nature, which has divided this country for a long time. The fear that if we elected a President who happened to be of the Catholic faith, we would not be able to protect the constitutional doctrine of separation of church and state.

Mr. MORTON. Mr. President, will the Senator yield?

Mr. MORSE. I have always repudiated that view. I have always said that it has no place in a democracy. I have always held to the point of view that any citizen, irrespective of his religious faith, once he takes the oath of office to uphold the Constitution, could be counted upon to keep that pledge.

I am very proud of the record that the brilliant President of the United States has made on this subject matter. I say that we ought to rally behind him and we ought to follow his leadership, now that he is our leader. We ought once and for all to determine the question as to how far the Federal Government can go under the first amendment to the Constitution in giving aid to private schools. I believe that this is the duty of Americans of all religious faiths—Catholics, Protestants, and Jews, and, yes, including those who may not be of any religious faith. In view of the international problems which confront us and will confront us in the next score of years we ought to see to it that we follow courses of action in this country which will keep us united and not divided. This is one way to unite this country. I am satisfied that once the Supreme Court speaks on this subject one way or another, the overwhelming majority of the American people will say, "That settles it for me."

Therefore, I am very proud to join the Senator from Pennsylvania in introducing the bill.

I am in a rather difficult position. The Senator from Pennsylvania has referred to it, when he pointed out that last year I was the author of an amendment to what was then Senate bill 8, in which an effort was made to get the matter settled. This year I have the responsibility of being chairman of the Subcommittee on Education.

I apologize to the Senator from Kentucky. The Senator from Pennsylvania has just told me that the Senator from Kentucky had asked me to yield to him. I did not hear him. Does the Senator wish me to yield on another subject matter?

Mr. MORTON. It is on the subject matter which the Senator is discussing.

Mr. MORSE. I yield to the Senator from Kentucky.

Mr. MORTON. I wish to commend the Senator by saying that in my opinion this Nation has ended the question of religious prejudice in this country, and I hope that all Americans agree, as I know the Senator from Oregon agrees.

I would like to ask the Senator from Oregon how I should vote, in his opinion, on the proposal now before us. I voted against it last year when he offered the amendment. I would like to hear his argument as to why I should vote for his proposal this year.

Mr. MORSE. I will do my very best to persuade the Senator from Kentucky to vote with me. This will be a rather long debate over the next few weeks. Tonight I only want to say that unless I can convince the Senator from Kentucky that the bill is constitutional, the Senator from Kentucky should, and I am sure will, vote against me. I do not believe any Senator should vote with me if he thinks that in fact the bill violates the first amendment to the Constitution. If I thought it violated the first amendment, I would not offer it.

But as to the other substantive reasons, as to why I believe the bill should be enacted, I hope the Senator from Kentucky will bear with me in the debates that will follow in the next few weeks. Tonight I will explain briefly the objectives of the bill and not go into the substantive arguments in support of it.

What, then, are the tests to apply to a constitutional question? Are they not:

First, does the bill violate the first amendment? Does the bill seek to establish religion in contravention of the amendment? My answer is "No," the bill seeks to empower the Commissioner of Education with authority to make interest-bearing loans under carefully worded legislative instructions for limited purposes connected with the education of boys and girls whose parents, for various reasons, prefer them to be educated in private schools.

Whether such education is compulsory or voluntary, whether there is or is not undue tax burden, whether the education provided is in the primary and secondary schools, or is accomplished at institutions of higher learning seems to me to miss the point. The question is rather: whether the proposal meets the constitutional test, in the first instance, and second, if it does, then, whether the proposal is in the public interest.

We have procedures to determine both of these matters in our system of checks and balances.

The constitutional question must be answered by each of us in this Chamber in accordance with our understanding and belief on every piece of legislation with which we are concerned.

The hearings process permits us to have access to the views and reasoning processes followed by others in arriving at our own conclusions.

The President of the United States has his obligation, under the Constitution, on every bill presented to him to exercise a similar judgment, and finally, since no one of us or group of us can claim an absolute knowledge, the procedures of the courts of this Nation are available for a check upon our reasoning and findings. This system works well. If followed, an orderly determination under the rule of law can be made as to the validity of a statute. In the process, we also arrive at our collective judgment as a people upon, not only the legality, but also the advisability of a course of action. This valued judgment, and the method by which we arrive at it, is a most precious assurance that so far as man can devise, justice can be achieved in our country.

Mr. President, as chairman of the Education Subcommittee of the Senate Committee on Labor and Public Welfare, I announce that I plan to hold fair and full hearings on this bill. I want every point of view made a part of the record.

It may be necessary to require the filing of written statements after oral presentations and after a limited time has been allowed witnesses. I wish to make it perfectly clear that I am seeking only to build up a record that can be of use to the Senate once the bill reaches the floor of the Senate, if it reaches the floor, so that we will have before us the best available evidence and data that can be brought before the Senate. The type of information that I believe will be very helpful to the Senate is contained, for example, in a letter which I received today from Prof. Mark DeW. Howe, professor of law at Harvard University.

I wish to read certain excerpts from the letter, because I very well know that this being the first time that any public discussion of the Clark-Morse bill has been held in the Senate, we probably have some duty at least to offer what I think is a prima facie case based upon this constitutional scholar's argument in regard to the constitutional point. Therefore, I wish to read from two pages of this letter. Professor Howe says:

While the first amendment, as interpreted by the Supreme Court in the Everson and McCollum cases, remains the law of the land doubts concerning the constitutionality of the suggested program of loans, as it applies to parochial schools, have obvious justification. I am myself persuaded, however, that a plan of the sort described, subject to some limitations, does not violate the first amendment.

Perhaps I can best explain my position in this matter by dealing first with the constitutionality of loans to nondenominational private schools. It seems to me quite clear that there is no constitutional barrier to Federal financing of the educational activities of private schools which are serving the public interest by providing that kind of instruction which the States prescribe for public schools.

I digress to say that that is exactly the point which the Senator from Pennsylvania [Mr. CLARK] made a few minutes ago. I now return to Professor Howe's letter:

I see no reason, in other words, why Federal grants or loans might not be made to Exeter and Andover, when the aid is directed toward the "public" aspects of their enterprise. I should suppose, however, that it would be of very questionable constitutionality, under the first amendment, for a Federal grant or loan to be made to Andover or Exeter for the construction of a chapel. Obviously a parochial school would have no better right to expend Federal money for the building of a chapel or the decoration of its classrooms with religious symbols, than would a non-denominational private school.

I realize, of course, that many men of good will, and many lawyers of extensive learning, conceding what I have so far asserted, would insist that it is impossible for responsible statesmen, asked to help the parochial schools in a time of need, to disregard the fact that most parochial schools are by the very nature of the faith that led to their establishment, compelled to make all instruction religious education. They would urge, therefore, that if I concede, as I do, the unconstitutionality of Federal aid in the construction of chapels I should acknowledge that the physics and chemistry laboratories, the slide rules and blackboards in the arithmetic classrooms, are chapels and symbols. Perhaps if I were a better or more relentless logician than I am, I should. The fact, however, is that these questions of constitutionality—like almost all others—seem to me ultimately to be questions of degree. And when I consider those questions I am satisfied that a valid line may be drawn between governmental support of activities that are predominantly of civil concern and those which are predominantly of religious significance.

From what I have said you will see that I am not willing to endorse, without qualification, the constitutionality of the suggested plan of loans for all construction programs in private schools. I believe that serious questions of constitutionality would be presented were there to be no limitations with respect to the type of program for which support might be sought. Of course I realize that the opponents of any and all programs of aid to parochial schools insist that my innocence will permit bookkeepers to circumvent the prohibitions of the first amendment. Perhaps they are right. I suspect, however, that this bookkeeping habit has become something like a constitutional tradition to which we must adjust ourselves.
